with as an illegal act. Of course, there are some systems that all true anglers would condemn, but I think the worst of these have been abandoned years ago. I refer to what I denounced then as a pot-hunting practice, and what I witnessed when first I took up a position on the Thames. It was in something of this style:—In a swim where trout had been seen feeding, two anglers, at a short distance from it, anchored their punt. These anglers—if they are deserving the designation—had out four live baits on gorge tackle, with huge floats on the top of the water, and they themselves carousing in the punt, with their pipes and beer, waiting to find one of them in trouble. This can hardly be called fair angling, and I do not think there are any of our respectable Thames anglers that would be seen fishing for trout under similar circumstances. There are great objections made to the use of a lob-worm in Thames trout angling by most of our principal Thames fishers. I am not speaking of the illegality of it, as there is nothing illegal about it; it is simply a matter of opinion. The use of a live bait in the troubled waters of a weir mill cannot be resisted, and I do not think anything can be advanced against it. The practice of live-bait fishing at a weir is strikingly different to angling, or the use of it in the quiet channel. The idea of trout fishing is, that the fish being of an uncommon character, should be deservedly earned by the angler—not by a slow and lazy system, but by real hard work. Hence, there are those who would not angle for them in any other way than spinning. I may take Mr. James Forbes, of Chertsey Bridge, as a consistent angler in this respect. No one possesses a better or finer collection of Thames trout than he does, and every fish in his splendid museum has been caught with strong spinning tackle. There can be no doubt that trout caught in this way are more creditable than any other. Mr. Edward Lukyn, of Sunbury, has some choice specimens of the choice treasures of the Thames, and I believe most if not all, were taken spinning. The handsome trout of 12 lb. caught by Mr. Robert King at Chertsey, last year, was secured by spinning with artificial phantom minnow, and I believe this gentleman prides himself in the adoption of spinning for trout as the most sportsmanlike method. As the present season advances, with brighter and more genial weather, I trust the Thames trout-anglers will be rewarded with some noble captures. I know some who have got "trout on the brain," and are determined to keep at it throughout the season. As regards the upper waters, the efforts of the Maidenhead, Cookham, and Bray Thames Angling Association in throwing into the river some hundreds of good sized Wycombe trout during the past few years are producing wonderful results in that portion of the Thames. Last week, on a bitter cold day, that famous fisherman, Harry Wilder, at Maidenhead, landed two good fish, and Mr. F. H. Lemann and other notable anglers have been doing some good business since the commencement of the season.

B.

EASTER AT "THE LION," FARNINGHAM.

APPRECIATING the short but interesting articles that have from time to time appeared in your journal, giving the holiday experiences of our "brethren of the gentle art" (and which, by the way, invariably have been of northern rivers or waters), I trust I may be pardoned, being a north-countryman, if I do not give the full praise due to a south-country river which I have had the pleasure of visiting during the past week.

Having read and re-read the charming dialogue in "Dear old Father Isaac," between "Piscator" and "Viator," of the beauties of the Dove, I had a great longing, and had resolved, up to Wednesday in Easter week to spend my holiday on the banks of that immortal river; but meeting accidentally on that day, in Cheap-

side, another "chiel frae the north," was informed by him that it was too early in the season for the Derbyshire river, we arranged to visit the "Old Lion" on the Darenth, where we met for the first time three years before. So, Thursday afternoon found me *en route* for Farningham.

The distance, per London, Chatham and Dover Railway is 20½ miles, return third fare, available for four days, 3s. 2d. As the season at the "Lion" fishing opens on Good Friday, and the Darenth is so close to town, the moment I had got the tickets and ascended to the platform, I peered into every compartment on my way to a "smoking," expecting to find every passenger armed with rod, net, and creel, and was surprised in noting my fellow passengers seemed to have "other fish to fry." So I loaded and lighted my pipe and chuckled inwardly, whilst its contents were being consumed, at the thought that my friend and self would have all the river to ourselves.

The railway ride through Kent, "the garden of England," is always pleasant, but it seemed much more so to me then, as we whisked past Dulwich, Bromley, and other delightful suburbs, and I began to sniff the pure country air and to hear the even-song of the thrush and blackbird heralding the spring. Arriving at Farningham Road Station, a 'bus was waiting to convey passengers to the interesting old village, which nestles at the foot of several Kentish hills, about 2½ miles from the station. The drive from the station to the hotel (fare 6d.), is along such a charming road for scenery that it would take a far better pen than mine to describe it fitly. My friend came down by a later train, and we unpacked our tackle, and adjourned to the smoking room to talk over past exploits, and determine to do wonders by daybreak on the following morning. But, alas for human frailty! After smoking the last pipe, and taking a peep at the river by moonlight, and having a boyish race along the lane with a "Farningham boy" for umpire, the writer of these lines retired, determined to get to windward of his friend before the light; but the *air* and the *race* were too strong for him, and he remembered no more till noon on the following day, when the friend, who had never been to bed, broke into his chamber, and informed him that he was sorry for the bilious attack and *all that*, and that he had thrown the first line, and caught some 6½ brace of trout (one turning the scale with a bump at 2 lb., and the others varying from ½ lb. to 1 lb.)

Whilst writing this I have "Blue Dun's" notes of "A day on the Derbyshire Wye" before me, and I feel sure he will be glad to hear that my friend (who is known as a master of the gentle art), did more execution amongst the speckled beauties than any two on the river, and that he used the small yellow and blue duns principally on that day; but I must also, in fairness, say, that he tells me, after many years' experience on almost every fishable river in England and Scotland, he is now of the confirmed opinion that the man who changes his flies to meet the different moods of the fish on the river on which he is fishing, will have the heaviest creel at the finish.

With the kind attentions and solicitude of the host and hostess of the Lion, my indisposition passed away, and I wetted my first line this season about 5 p.m. on the Friday; and having on my stock flight—which I use on every river and at all seasons—a small blue dun, red palmer, and a black gnat. I managed between that hour and 7 p.m. to grass only two brace, the largest about ½ lb., and on Saturday morning, during a cold east wind, I took 4½ lb. brace more, three only of which were of an eatable size. Considering the earliness of the season, that I am only an amateur, and that it was "St. Lubbock's" time I did fairly well.

The Lion is picturesquely situated at the foot of Farningham Hill and woods, and the stream, winding along the fair meadows

of Kent, actually skirts the lawn of the hotel for some 200 yards, making it almost possible for a skilful artist to "catch his breakfast" out of his bed-room window. Since my last visit, three years ago, the hotel has changed hands and for the better. The present host, Mr. Scaddan, has been in the habit of catering for royal and other great personages; and I can confidently recommend any brother anglers who are looking out for quarters for the coming holidays, where good fishing, charming walks, agreeable society, and health-giving breezes may be found, to try the Old Lion at Farningham, and to place themselves under the care of the host and hostess of that, in every sense of the word, "well-found" establishment. There is a modern legend in connection with the Lion trout-fishing, and the late Mr. Phelps. The Lion was a favourite resort of that great artist, and the country labourers and others had become quite familiar with a nice-spoken, kind old gentleman, who was almost always either whipping the stream, or in friendly conversation with them as they passed to and fro to their work; but they had no idea of the talented man who was so constantly in their midst, until one of their body, on taking his wife and children to the "play in London," was struck with the voice of the leading actor, and at last, jumping up from his seat in an excited manner, exclaimed to his better-half, "Why, dang'd if it isn't the old Farningham fisherman."

The fishing rights of the hotel (free to those under its hospitable roof; 2s. 6d. per day to others, and the *fly only* being allowed) extend some three quarters of a mile, and the fish, which are plentiful, and of a bright pink colour when in perfect condition; average ¾ lb., but many are caught of 1 lb., 1½ lb. and 2 lb. weight, and the largest I have seen, now on view in the hall of the hotel, was 4 lb. 2 oz., and was captured in 1878.

Although only an amateur, I have "cast pleasant lines in many pleasant places," but none more pleasant than during my Easter holiday in the Darenth, and I returned to town determined on the first opportunity to re-visit the quaint old Kentish village.

Richmond, Surrey.

AN OLD SUBSCRIBER.

FIRST LIST OF THE AWARDS AT THE NORWICH NATIONAL FISHERIES EXHIBITION.

(The awards for the essays, &c., will be published in the official list which is not complete yet.)

CLASS I.—PISCICULTURE.

In this class, embracing all the appliances in aid of pisciculture, a special prize of £25 was presented by Mr. E. Birkbeck, M.P., the president of the Exhibition for the best plan or model of fish culture establishment. This was obtained by Mr. Thomas Andrews, Guildford. In the same class the other prizes are as follows:—

Armitstead, J. J., Dalbeattie—Bronze medal for earthen tanks.
Cail, C. G., Newcastle—£10 for fish pass or ladder, presented by the National Fisheries Exhibition.
Capel, C. C., Fooks Cray, Kent—Silver medal for pisciculture apparatus, &c.

Chambers, W. O., Lowestoft—Gold medal for fish culture establishment, &c.

Harding, C. W., Lynn—Silver medal for fish hatching apparatus, with charcoal and shingle filter attached.

Silk, W. L. (for Marquis of Exeter)—£5 for hatching boxes and £5 for fish pass.

Spratt's patent, London—Silver medal for fish food.

CLASS II.—FISHING.

Mr. Wm. Jarvis, boatbuilder, Anstruther, is the winner of the £50 prize given by Mr. Duff, M.P., and other Scotch members. This is a beautiful model, and marked "K." He also gets a silver medal for another model marked "Y." Both are steam vessels. Another silver medal goes to Anstruther to Mr. Alexander Cunningham Sharp; and Mr. Murray, Cellardyke, gets a bronze medal for his exhibits. Messrs. Martin and Co., of the same town, get a diploma of honour. The East Coast of Fife is well represented, and the exhibitors cannot grumble. Messrs. D. Allan and Co., Leith, exhibit a very beautiful model in glass case of the steam trawler "Sea King," which gets a silver medal, while Mr. John Mackenzie, Leith, gets another.

Albert Dock Shipwright, Boatbuilding, and Mast and Blockmaking Company (Limited), Hull—Bronze medal for catcher to cutter boat.

Alfred and Son, London—Gold medal and £2 for fishing rod, line, and fittings complete, best suited for general use in Norfolk and Suffolk inland waters; and diploma for artificial baits and general excellence.

Allan and Co., shipbuilders, Leith—Silver medal for model of "Sea King," steam fishing-boat.

Allcock and Co., Redditch—Silver medal for general excellence of exhibits of fishing-rods, lines, hooks, artificial baits, &c.

Barton, C. E., Grimsby—Bronze medal for ice-breakers.

Belfast Ropework Company (Limited)—Silver medal and diploma for bolt-rope, &c.

Berthon Boat Company (Limited), Romsey, Hants—Bronze medal for portable folding fishing-boats and canoes.

Berwick Salmon Fisheries Company (Limited), Berwick-on-Tweed—Diploma for model of coble and wear shot net used at salmon fisheries in the river Tweed.

Blake, A. W., Southtown; and Blake, H. P., Leytonstone—Silver medal for design for screw steam fishing-boat, &c.

Bowman, J., "No chimney lamp and lantern" manufacturers, Huntley—Diploma for metallic buoys for herring nets.

Brancey and Son, Yarmouth—Diploma for herring fishing warps, &c.

Burwood, G. V., Lowestoft—Silver medal for model of smack.

Chaplin, Major Richard, Louth—Silver medal and diploma for models and screw propeller.

Cording, J. C. and Co., London—Silver medal for portable boats, and bronze medal for lifeboat, &c.

Crag, M. J. S., Lowestoft—£20 for collection of nets used in deep-sea fishing, presented by the National Fisheries Exhibition.

Cunningham, A., Anstruther—Silver medal for model of steam fishing-boat.

De Caux, J. W., Yarmouth—£10 for apparatus and gear, complete, for trawler; and £3 for crab and lobster trap, presented by the National Fisheries Exhibition.

Doughty, H., Lowestoft—Silver medal for picture and model of trawling smack bound to post.

Eaton and Dellar, London—Silver medal for salmon rods, &c., and diploma for cane salmon rod.

Elder, J., and Co., Glasgow—Silver medal for half-model of steam fishing craft.

Furlow, C., and Co., London—Silver medal for salmon, trout, and other rods, &c.; and diploma for salmon and trout flies.

Fellows, H., and Son, Yarmouth—Silver medal for plan of steam fishing-boat, &c.

Hardy Brothers, Alnwick—Silver medal and diploma for fastenings, solid cane rod, and knapsack-basket.

Gold, T. E., London—Bronze medal for trout spinning and other rods.

Greene, C. G., Norwich—£10 for collection of fishing implements, tackle, &c., used in Norfolk and Suffolk waters, presented by the Yare Fish Preservation and Angling Society.

Gregory, James, Birmingham—Silver medal for artificial baits in metal.

Holland, G., Failsworth, Manchester—Silver medal for artificial trout-flies.

Hornsey, J. G., and Co., London—Bronze medal for patent steel-fastened solid stock bass brooms and brushes.

Hounsell, H. E., Bridport—Diploma for fishing-nets, lines, twines, &c.

Hounsell, W., and Co., Bridport—Diploma for do.

Hovell, W. B., Norwich—£4 for light portable waterproof packet to contain set of tackle for inland angling, with compartment for luncheon, and suitable for carrying in the hand.

Jarvis, W., Anstruther, Fife—Silver medal for models and plans of steam fishing-boats.

Jex, E., London—Silver medal for model of fishing smack.

Jones, W., Scarborough—£10 for collection of sea fishing tackle (hooks and lines).

Kew, T. J., Wells, Norwich—Diploma for waterproof suit for the use of lifeboat crews and yachtsmen.

Keymer, H. J. C., Gorleston Docks—Bronze medal for bilge ejector and pump.

Little, G. and Co., London—Gold medal for fishing-rods, &c.

Mackenzie, Leith—Silver medal for model of steam fishing-boat.

Marston, R. B.—Silver medal for the FISHING GAZETTE exhibit.

Moyes, J., Cromer—Diploma for crab pot.

Peck, Sir H. W., Bart., M.P.—Silver medal for model of trawler.

Read, G. Deal—Silver medal for model of screw steamer.

Read, Stephen, Great Grimsby—Bronze medal for model of well fishing smack.

Sims, J. and Tooze, H., president and vice of Hull and Grimsby Fishing Vessel Insurance Society—£10 for model of fishing trawler, and bronze medal for internal fittings.

Slater, D., Newmarket-on-Trent—£10 for collection of inland fishing tackle, &c.; bronze medal and diploma for cheap tackle and rods.

Smithdale, T. and Sons, Norwich—Diploma for friction gear.

Smyth, Lieut. Samuel, Aldeburgh—£25 for off-shore fishing-boat, presented by Mr. Samuel Hoare, Cromer.

Steven, R. C., Berwick—Silver medal and diploma of merit for rods, reels, lines, &c.

Thompson, W., Norwich—£10 for model of angler's boat for Norfolk and Suffolk waters.

Wigley, H., Cheltenham—Silver medal for spinning bait.

Williams, F. T. and Co., London—Silver medal for rods of various descriptions, and diploma for hook-tying.

Wright, H. E., Southtown—Diploma for engine and boiler, &c., for fishing boats.

CLASS III.—SOCIAL CONDITION OF FISHERMEN.

Archibald, G., Yarmouth—Diploma for marine clocks.

Birt, J. and A., London Docks—Bronze medal for life-belt for fishermen, &c.

Bowman, J., Huntly—Diploma for lamps for fishing-boats.

Brand, J. C. and E., Yarmouth—£10 and silver medal for fishermen's apparel.

Davidson, D. and W., Aberdeen—Bronze medal for model net for salmon catching.

Brown, Rev. W. Cowell, Sheffield—Silver medal for life-saving appliances.

Chambers, W. O., Lowestoft—£15 for plan of improved fishermen's dwellings; presented by Lord Suffield.

Davies, F., and Co., opticians, London—Silver medal for scientific instruments.

Downes, Brothers, Norwich—Bronze medal for anglers' outfits.

Dyer and Robson, East Greenwich—Bronze medal for signalling and rocket apparatus.

Gray, F., and Son, London—Bronze medal or life-saving waistcoat for yachting and fishing.

Hayward, F. W., Norwich—Diploma for model of lifeboat.

Hilton, W. H., Liverpool—Diploma for patent portable refrigerators for preserving fish, and diploma for safety ship-lamp.

Holmes Marine Life Protection Association (Limited), London—Silver medal for fog alarm and rescue signals.

Hutchinson, A., and Co., London—Diploma for general exhibits of fishing boots, coats, buoys, &c.

Johnson, J. W., and Sons, Yarmouth—Silver medal for dress for lifeboat crew, and bronze medal for fishermen's outfit.

Martin and Co., Cellardyke, Fifeshire—Diploma for waterproof oil clothing, &c.

Negretti and Zambra, London—Silver medal for deep-sea thermometers.

Olsen, O. T., Grimsby—Gold medal and £10 for night-signalling system for fishing fleets, and vessels, and other exhibits.

Ross, F. and T., Hull—Diploma for fishing vessels' side and anchor lights.

Sayer Brothers, London—£25 for model of fishcuring establishment.

Softly, R. T., Yarmouth—Diploma for ditto.

Steedman and M'Alister, Glasgow—Silver medal for cork lifebuoys.

Susmoar, H. and Co., Manchester—Bronze medal for model of construction for the curing of fish.

Tooke, Charles, Lowestoft—£10 and diploma for dress of a lifeboat crew, &c.

Dauble, Amelia—Diploma for guernseys.

CLASS IV.—HISTORY OF FISHING.

Native Guano Co., Limited—£20 and silver medal for processes for rendering innocuous to fish life, streams polluted by sewage and chemical or other works. Presented by the Mayor of Norwich.

CLASS V.—GENERAL.

Blanchflower, J. C., and Sons, Yarmouth—£5 for dried, smoked, and tinned fish.

Carr, W. G., and Son, Berwick-on-Tweed—Silver medal for cod liver oil.

Cole, J. A., Norwich—£10 and bronze medal for stuffed birds and fishes.

Cormack, J., Lybster, Wick—Silver medal for barrel of pickled cod-fish.

Gunn, T. E., Norwich—£5 for collection of stuffed fish caught in Norfolk and Suffolk; gold medal and diploma.

Horsley, C. W., Fakenham—Silver medal for 9 lb. 3 oz. trout caught in the river Wensum.

Howlett, W., Newmarket—Silver medal for cases of stuffed fish.

Ihlee and Horne, London—Silver medal for model cottage.

Maconochie Brothers, Lowestoft—Silver medal for preserved fish.

Methuen, J., and Co., Leith—Bronze medal for smoked herrings.

Mitchell, J., Whitby—Bronze medal for black herrings.

Peary, W. T. L., Penzance—Diploma for marinated pilchards and kippered hake.

Radcliffe, Dick, and Co., London—Diploma for fountain.

Sayer Brothers, London—Silver medal for cured herrings, haddocks, &c.

Sharp and Murray, Cellardyke, Fifeshire—Bronze medal for pickled and red herrings.

Thorns, Frank, Norwich—Silver medal for pike in case; weight, when caught, 30 lb.

Vince, J. M., Yarmouth—Diploma for samples of smoked fish.

Watson, C., Stracey and Co., Yarmouth—Diploma for packages of cured herrings.

Woodger, J., and Sons, Yarmouth—Silver medal for kippers, &c.

Woodger, J., and Sons, Lowestoft—£5 for cured fish of various kinds.

CLASS VI.—LOAN COLLECTIONS.

Gunn, T. E., Norwich—Silver medal for group of perch and roach.

Jardine, Alfred, London—£15 for collection of stuffed freshwater fish taken in the United Kingdom, and diploma and £5 for single specimen of stuffed freshwater fish. Silver Trout Angling Club diploma.

Piscatorial Society—£15 for collection of stuffed freshwater fish taken within the United Kingdom; to be competed for by angling clubs.

Rumph, R., Wells-next-the-Sea—Diploma for model surf lifeboat.

The Board of Trade National Lifeboat Institution and the Meteorological Council received diplomas for their exhibits.

The Castle Steel and Ironworks Company, Milford Haven—Silver medal for model of steam trawler, with Griffiths' patent encased propeller.

Meiter and Co. (Limited), London—Bronze medal for pocket fishing, shooting, and pleasure boat.

RIVER REPORTS.

MID-THAMES.

"Charm'd by the murmurs of the quivering shade,
O'er Isis' willow-fringed bank I stay'd."

WARTON.

I have been staying a good deal lately "O'er Isis' willow-fringed banks" in search of ideal and real trout. I have found any amount of the former—creatures of beauty from eight to sixteen pounds—but have come across very few of the realities of Thames trout. I do not doubt they exist; for in the course of my piscatorial career I have had many a tussle with a mighty one and a mity one (one of the former, 10½ lb., is glaring at me now from his palace of glass as I write), but they are few and far between, and are caught more frequently by accident than design. The weather has taken a delightful turn for the better, and the river is in the best possible spinning condition, with the water warm enough to pleasantly bathe in. From Maidenhead and Bray I have glowing accounts of present prospects, and of innumerable beauties having been observed "on the rampage." At Cookham, just to "keep time" with other fishing incidents and "movements," a boy attached to the ferry has, in trout-fishing, caught a watch, which, as I understand, there is not likely to prove an owner thereto, will become a lever without any chance of escape. At Marlow and Hambleden some nice fish are reported, as well as the feed since the sun has really shone. Thursday evening: River bright, warm, and in good trout trim. Wind in the south and west. Now or never Messrs. Troutmen for a spin in the Thames, before it is ploughed up by "youth at the helm and pleasure at the prow."—MARLOW BUZZ.

Thames (Goring).

Water very low and clear, a good rain would do good now. Prospects looks well for a good fishing season. I have seen a good lot of good perch to-day, and a good lot of perch spawn. Chub and roach are ripe at Goring Bridge; some good chub are to be seen there to-day, I have seen 4 lb.—JOHN RUSH.

Thames (Windsor).

This cruel east wind is again stopping the trout from showing themselves, and but few anglers are trying them. At Boveney Weir, last Sunday, three good fish were hooked and lost, owing to the foul state of the place. Paice, of Eton Wick, with Mr. Lynes, of London, took a pretty little fish of 2 to 5 oz. with the "Spinner," and had another run. I was out on the 14th inst., with the Rev. Mr. Fardell, in the Maidenhead district. We saw several small fish; but beyond a little "Wycombe" of less than 1 lb., could touch nothing. This gentleman has seen several very fine fish feeding near Bray, and when the balmy evenings arrive, I shall not fail to avail myself of his kind offer to again try them, when I hope to report something better. Water in splendid trim, and every prospect of a change for the better as regards wind. Rain and warmth much needed.—B. R. BAMBRIDGE.

[Omitted last week.—ED.]

Coquet (Weldon Bridge).

Good Friday, owing to it being a holiday in the towns, a number of people took to the country for pleasure, some rambling about in search of wild flowers, and others in for flogging the famous old streams of Coquet. The wind from the east, cold, anything but favourable for the game. The old sportsmen arrived at the inn the night before for a good start in the morning, from 8.30 to 10 a.m. There was from 30 to 40 started from Morpeth, Newcastle, Durham, Sunderland, and Blyth. After they all got started, I walked on to the Bridge and looked up and down the river. I thought there would be more men than trout caught. About 3 o'clock the fishermen that were going south with the train returned. I was astonished to see the baskets, from 5 to 7 lb. The holders of the best baskets were Messrs. Webb, J. Ashton, T. Ashton, J. Smith, J. Jameson, A. Murray, H. Sterry (of Morpeth), Mr. Marshall (Durham), Dr. Wilson, J. Robson (Newcastle), R. Thompson (Sunderland), J. Hilton (Long Framlington), and W. Matthews (Longhersley). The largest trout weighed 1½ lb., caught by Mr. Webb, which gave good sport for about 25 minutes. Dr. Wilson killed a salmon, 4 lb., with a small March brown, very fine tackle, which gave him splendid sport for 40 minutes. Mr. Marshall (Durham) killed a trout, 18 oz., which gave him good sport for 15 minutes, with fine tackle; he dressed his own flies. Mr. J. Whales (Durham) on the 16th killed a good basket, 7 lb. He caught one trout, 2 lb. 4 oz., in Sir W. Armstrong's Swiss Lake, which gave splendid sport for about 30 minutes. Monday, the 18th, Messrs. Jenner (Newcastle), splendid creel; J. F. T. Dance, W. G. Gray (Gateshead), good basket; Mr. J. Thatcher (Sunderland), good basket.—A. GLASS.

Dove (Derbyshire).

The weather is certainly improving, but so slowly that we hardly succeed in discovering it. Blustering north-west winds have been blowing nearly all the week, and angling has proved by no means an enjoyable occupation. Still many of our rodsters are so ardent that they will go to the river, no matter what the weather may be. This has been the case this week. There have been a fair number of "splodgers" out day after day, but I can't hear that anybody has done enough to "set the Thames on fire." However, no doubt they have done the best they could, and they will probably derive satisfaction from that.

There is scarcely any fly on the water, and trout don't rise with their wonted freedom. The Derby kill devil, the universal killer, and the Windsor bee have been doing best, but the largest dish that has come to hand only amounted to 4½ brace. There are no signs of mayfly yet, and the March brown is not by any means out in its full strength. When, oh, when, shall we get a genuine genial taste of spring?—THE SPLODGER.

Exe (Exeter).

We have completely turned over again to the cold north-east winds which after the beautiful spring weather we have been having, has altered our fishing most confoundedly. I have no report of salmon being taken during the week, but to-day several rods are out, and as it is a trifle milder, possibly sport may be had. A few trout have been taken, but the gravelling and parr-marked fish are a great nuisance to the *bona fide* angler. They literally swarm, and will take anything, and some hundreds have been taken. Eels are coming along, but not of any size. I heard of one being taken of 2½ lb., and what they call here a "valdon" eel or silver belly, small bass and flounders, are very plentiful, and afford good sport. The river is getting very low and bright, a little rain would be very acceptable. This morning the wind was due south, with little rain, but at the present is north-north-east and cold, so I am afraid we shall get a repetition of last week's weather. Mackerel are plentiful and very fine.—FRANK GOSDEN.

Exe (Tiverton).

FLY-FISHING TROUT.—The river is still very low and clear. Some very fair baskets have been made within the last few dull and showery days, flies killing best, halfstone, hare's flax, and olive dun. The prospects for the coming week are not very encouraging—with rising barometer and the wind gone back to its old quarter N.W. No good sport can be expected until we have had rain enough to move the water.—WM. MUDFORD.

Medway (Tunbridge).

The water is in splendid condition, but no angling will take place before the 16th May. The chub in large quantities have gone on to the spawning beds, and a sharp look out is being kept to preserve them from the poachers, both two legged and four legged. With anything like a favourable summer, there will be some capital sport in the river.—YE MEDWAY WATER RAT.

South of Ireland.

The water has run very low on the Lee, and the fish are dropping out of the streams into the sluggish pools. It is therefore difficult to meet fish except in the evening or very early in the morning. There have been days, however, dark and windy, that have favoured the angler, and on these days fish have been taken. Mr. George Haynes, on one of these days, landed three out of four, he hooked all on the fly, a pattern known as the goldfinch, which is said to be a killing fly upon the Bandon river. Mr. Dale took two, Mr. Barter three or four. Major Nettles last week landed the largest springer taken this year on the Lee with the rod, it weighed 24 lb., and was in capital condition. On the Blackwater there has been very good sport during the past fortnight. I have heard of several being taken between Mallow and Bellyhooly, where there are some excellent salmon fisheries. Complaints were very general throughout the season of the sport experienced in the Blackwater. No spring fish were taken or were seen in the streams. The scarcity was attributed to over-netting on the lower section of the river. There is no doubt the complaint is well founded. There are over 120 drift nets engaged upon the river between its mouth and Cappogrim. The whole river is "laced" with nets at certain stages of the tide, and the wonder is how any fish manage to reach the upper waters. The feeling upon this point is so strong that a determined effort will be made on the part of all proprietors and anglers to limit the drift netting, which has been proved to be so destructive to the interests of angling. If drift net fishing had not been abolished on the Lee, almost in its infancy, the same story would be told of that prolific river. It may interest English anglers to know that day tickets, at the rate of 5s. for each rod, are being issued, on one of the best preserves on the river Lee. The ticket is issued at the railway with the ordinary railway ticket, and the train lands the passengers within a mile of the fishing. The great advantage about the fishing is that the water is never too low nor too high upon it, and that the streams are always well stocked with salmon and peal. We are on the eve of a change. The weather is overcast, and the run of fish in the tideway is immense. Mr. Lane's men, on his fishery at Wellington Pool, this week, brought out thirty-two salmon in a haul. Boats down the river, near Blackwick and Tivoli, had sixteen in a haul, ten, and so on. A flood now would take up a lot of new fish, and there would be again a renewal of sport.—ANGLER.

Swale.

But little has yet been done on the upper reaches of the river. On Good Friday some gentlemen were over from Hawes, but owing to the cold the sport was nil. The day following, Mr. N. Cherry, one of the best local anglers, caught two brace, weighing 2 lb. On the same day I had the pleasure of taking a very handsome dish of trout from one of the North Lincolnshire streams—twelve fish weighing close on 10 lb. Three fish weighed 1½ lb. each, and none were under ½ lb. The brown drake (March brown) and light and dark woodcock were answerable for them. For about two hours the fish rose very freely, and the first swallow of the season went by, but about three o'clock the wind veered to its prevalent quarter—the east—and not another fish, to my knowledge, rose. There will be some rare sport when the weather first becomes genial, as Master Yellowsides is longing for a change of diet. The flies above-mentioned will do for some time yet to come. I cannot conclude this notice without mentioning the fact that last week I also caught a two-pounder on a stream where I placed the first batch of trout in 1876.—THOMAS FORD.

Wye and Derwent (Derbyshire).

All our Derbyshire rivers are now in most excellent condition for fly-fishing, and, despite the piercing cold north-east winds, which have been blowing great guns all the week, there have been a very many anglers out all over Derbyshire, and those anglers who have been fortunate enough to have the proper flies have killed some really fine fish—viz., both trout and grayling. Some of the fish over a pound apiece. The fish have been killed chiefly close to the banks and sides of the streams—in fact, I have found it myself a first-class plan to hit the opposite bank with goad-tail or end-fly, and then draw it gently on to the water; and if there is a speckled beauty there in waiting, I dare bet a hundred to one you rise it, and generally the fish rises there. When you adopt this mode of fly-fishing, many of the over-knowing ones will no doubt take a wrinkle from this. Sport during the week, both with the fly and minnow, has been good, 6½ brace of fine trout being killed off of the Derwent last Monday, with bumble and spider flies, besides several other dishes being

killed off of the Wye, and also off the Derwent, Chatsworth fishery. There has been some fine trout killed off of the Darley Dale Club waters, below Darley Bridge, by one of the members, trolling with the minnow. The present time is a very fair one for anyone wishing to give our Derbyshire rivers a trial, and more so if we could only have a little warm rain, which would improve fishing in all its branches, and would bring the flies out more abundantly on the waters. Sport, both on the brooks and ponds, has been very fair, both with fly and trolling with the Derby trout killer. The weather this afternoon is a very great deal calmer and warmer, with every appearance of rain falling before long. Wind getting down into the south.—GEORGE JAMES EATON.

Yare (Norwich.)

The excitement consequent upon the opening of the fisheries exhibition and the wants of many strangers having to be attended to, have prevented me sending my usual reports during the past two weeks. However, owing to the prevalence of the bleak north-east wind, not many rodsters have ventured out, more especially those who are in any way susceptible to bronchial attacks. Mr. Geo. Hart, jun., of the Thorpe Old Gardens, showed a very fine catch of bream, caught close by his house on Friday last, the two largest weighing 8 lb., being exhibited in the exhibition for several days, and elicited great commendation. Messrs. Blazeby and Howard, of the E. A. P. S., also showed a fine take of roach, caught at Coldham. There were upwards of 200 fish, some amongst them scaling 1 lb. to 1½ lb. each. Mr. Walter Capon, of White Lion Street, was equally successful, at the same place a mixed lot of roach, rudd, and bream falling to his share. Another fine sample of roach, taken at Buckenham by William Day, of Norwich, were shown near the aquaria at the fisheries exhibition on Saturday last, some of the fish evidently nearing 2 lb. each in weight. A nicer lot of fish than these have very rarely been shown. Some peculiar live specimens of the four-spined stickleback are exhibited by Mr. Gunn in the exhibition, and Mr. Alfred Palmer also shows a brace of broad-nosed eel, taken in Norfolk waters, and weighing respectively 6½ lb. and 4½ lb. Many strangers have availed themselves of a day's outing on our various rivers, and have expressed themselves as being extremely satisfied. I have just heard, as I write, that the fisheries exhibition will extend a week longer than was at first proposed.—ANGLER.

Yore (Yorkshire).

Both this river and the Wharfe continue in a very low and clear condition, and not much has been done in the way of fly-fishing on account of the high winds that have prevailed since my last report. Surely "the month of flowers" will usher in an improvement of sport, otherwise the trout season of 1881 bids fair to eclipse its predecessor, which surely was bad enough. One or two local sportsmen have told me that they have seen a few empty shells of the stone-fly creeper floating down the stream, but I have not yet seen any myself; this fact alone is amply indicative of the lateness of the season. A new angling club has lately been established at Middleham, annual subscription £1 rs., they have obtained right of fishing about 2½ miles of the Cover, an excellent tributary of the Yore. I am informed that the members intend in the autumn to erect hatching apparatus for the introduction of a larger breed of trout into the stream. They have secured the services of Mr. J. E. Miller as secretary and treasurer. This gentleman is a most enthusiastic angler, and is one of the most skilled of Yoredale fly-fishers. I feel sure that the office could not have been entrusted to better hands, and heartily wish the new club every success in their undertaking.—FRANCIS M. WALBRAN.

In connection with the National Fisheries Exhibition at Norwich, the Mayor and Corporation of that city have offered a prize of £20 for the best method of treating sewage, chemical, and other matter discharged into rivers, so as to render innocuous to fish life. The prize has been awarded to the Native Guano Company, Limited, of Aylesbury, by whose A. B. C. process the sewage of that town has been successfully treated for some years. The solid portion of the sewage is converted into a valuable product known as Native Guano, and the effluent water passes off into the river so free from impurity (as shown by analyses) that it is in no way injurious to fish life. At the Norwich Exhibition a number of fish are exhibited in a tank filled with the water from Aylesbury sewage, and they are evidently thriving in it. Thousands of dead salmon are now floating in the Tweed, and almost every river in the kingdom is being polluted to the destruction of fish life; but it seems that until the law compels it, nothing will be done to prevent this needless destruction of fish life. The polluted state of our rivers must have an injurious effect on the public health, and instead of being health giving agents, they are gradually becoming the seed beds of disease. When will our legislators take up this vital question?

NORWICH FISHERIES EXHIBITION.—The silver medal and diploma of honour has been awarded to Mr. William Howlett, of Newmarket, for excellence in preserving fish. Amongst the specimens shown were the trout, carp, chub, perch, dace, and rudd, most of them taken from the river Lark by Mr. Howlett.

The Mechi Fund was started on the death of the late owner of Tiptree Hall, with the view of making a suitable provision for Mrs. Mechi and her daughters, through the instrumentality of the Duke of Bedford, the Earl of Leicester, Mr. Samuel Morley, M.P., Mr. James Caird, C.B., and other influential friends of the deceased gentleman, and now reaches £4400. In order, however, to secure an income to Mrs. Mechi of not less than £200 a year an additional £700 is required, and this sum the committee are endeavouring to raise by a further appeal to the general public. Before the termination of Mr. Mechi's avocations circumstances connected with the failure of a bank of which he was a principal director, and to reimburse the creditors of which he voluntarily relinquished a large fortune, had obliged him to resign his aldermanic gown and the honour of the mayoralty in the following year. These incidents in his life, added to the great philanthropic work he carried through in founding and establishing the Royal Agricultural Benevolent Institution, now one of the wealthiest and most important charities in the United Kingdom, will, we doubt not, when they are brought to the knowledge of his countrymen, speedily operate in procuring the comparatively small sum still required in the interests of his widow and family, especially when it is remembered that their present destitute position is in a large degree owing to Mr. Mechi's long and zealous attention to matters of public concern. The Marquis of Huntly, chairman of the fund, and the hon. secretary, Mr. C. B. Shaw, will be glad to receive and acknowledge contributions addressed to them at 26, Charles Street, St. James's, London, S.W.

MINNOW FISHING IN CLEAR WATER.

A GOOD many anglers, fly-fishers particularly, are apt to think that minnow-fishing is coarse and anything but an artistic manner of capturing trout, but I shall endeavour to show that it is one of the most artistic and delightful modes of fishing. I refer entirely to angling when the water is low and clear.

It is a well-known fact that trout, during summer, become surfeited with flies, and are keenly on the look out for anything else, particularly worms and minnows; and in the evening large trout may be observed cruising about the shallow water searching for minnows and loaches and chasing them to the edge. Then is the time for the minnow fisher.

I will now describe the tackle I prefer. A rod about 12 feet long, stiff, strong, and light; silk and hair reel line, with tapered end; trace of the finest picked drawn gut, about 9 feet long, with two small swivels about 3 feet apart, the lower one about one foot from the minnow, with three or four No. 6 split shot. A McKensie worm hook for the body and No. 4 sneck bend for lip hook, tied about half-an-inch apart. The minnow should not exceed an inch and half in length. I prefer them a little over an inch, but, as it is difficult to obtain them always the proper size, a little allowance in size of tackle is necessary. The best minnows have silvery bellies, those which are spawning in the streams being almost worthless for the purpose.

In baiting, the large hook should be passed down the inside of the minnow and out at the side, a short distance from the tail, curving it slightly so as to cause it to spin; the hook may be allowed to protrude freely. The lip hook should be passed through the jaws from the top, closing the mouth.

When the water is low and clear, trout are to be found sheltered behind every large stone, beneath roots, overhanging banks, and even in the open stream, and in such places you must try for them, and my advice is neglect no place where a trout may lie. Some of the best are often caught in places where there is scarcely sufficient depth of water to cover them.

Fish up stream, and selecting a likely haunt—say behind a stone—throw the minnow gently, so as not to disturb the water, about a yard above, and then draw it down as quickly as possible. Be careful to stir nothing but the arm, as after the fish has left his position he will follow even until the minnow touches the gravel, frequently making rushes at it, then dropping back until, as I suppose, seeing it about to escape, he will seize it. Give him a little time, and then strike. Often they seize it when passing, and, in that case, generally hook themselves. Throw up stream and partly across, and spin rapidly down; it cannot be too fast if you keep the minnow in the water. Keep well out of sight—a single glimpse of you and the trout will return to his haunt not to be tempted again for some time.

Minnows may often be caught in pools by laying a landing net on the bottom, holding firmly by the handle, and allowing them to swim over it, then lifting quickly out. I have sometimes caught twenty at one haul in this way.

I have tried to explain this fascinating sport, and can only say, having fished considerably with fly, May-fly, worm and minnow, that minnow-fishing in clear water is to my mind the grandest.

SPLIT SHOT.

A FINE THAMES TROUT.

MR. J. TEMPLE, the artist, looked in just now to say that a trout of 10 lb. had been taken at 12 o'clock this morning at Teddington Weir by Mr. Charlton Adams, out with Stephens. Mr. Adams took the fish spinning. It is rumoured that the weir water holds some aldermanic fish, who could have "shown the way" to this ten pounder—if they had felt inclined.

FRESHWATER FISHERIES ACTS, 1878.

THE first prosecution in Leeds under the above Acts was instituted at the Leeds Police Court on Thursday, the 14th inst., by the Leeds Rockingham Angling Society.—Mr. T. Newby, fishmonger, Boar Lane, Leeds, was summoned by Mr. C. Hogg, a member of the above society, for having unlawfully exposed for sale certain freshwater fish during the close season, contrary to the 11th sec., cap. 39, of the Freshwater Fisheries Acts, 1878. The facts were that, on the 8th inst., Mr. Hogg saw four pike exposed on the defendant's slab, and, accompanied by Mr. Newhouse, another member of the society, enquired the price, which they were informed was 1s. per pound. Legal proceedings were at once commenced, and Mr. Warren, of the firm of Messrs. Ford and Warren, appeared in support of the information. He quoted the 4th subsection of the 11th section of the Act, which is as follows, "If any person during this close season buys, sells, or exposes for sale, or has in his possession for sale, any freshwater fish he shall, on summary conviction, be liable to a fine not exceeding forty shillings." Mr. Fernes, for the defence, contended that pike are not freshwater fish within the meaning of the Acts, and subjected Mr. Hogg and Mr. Atkinson to a severe cross-examination to try and prove this fish to be migratory. Mr. Bruce, the stipendiary, however, convicted, and fined the defendant 5s. and costs.—Mr. Warren asked for the mitigated penalty, as the proceedings were merely taken as a warning to offenders, but in future the full amount will be pressed for, both under this and any other section of the Acts. (Fancy trying to prove that pike are migratory and go to the sea like salmon and eels! Not a bad line that, Mr. Fernes, even for a lawyer.—ED. F. G.)

CASTRATING CARP.

A CELEBRATED American fish culturist (Mr. Fred. Mather, of *Forest and Stream*, N.Y.), wrote some time ago inquiring if I knew the above operation could be performed with satisfactory results. He is inclined to believe it to be a fishy myth, not having been able to ascertain data of a reliable character even in the home of the carp—Germany.

I know it can be done, for I have done it; but with what after result, except that the fish did not seem much upset by the operation, I cannot say.

Of course he knows about the operation performed by a Mr. Tull to Sir Hans Sloane and afterwards George IV. It was, if I mistake not, reported in the *Gentleman's Magazine*, about the same time. I further find the following in a very rare and interesting brochure entitled "A Treatise on Fish-ponds," by J. Hoare (1870), "If you want salmon and trout for the table, it saves time to provide a stock of live trout two years old, and salmon (grilse) about the same age. These should be castrated before being put into the ponds, and if well fed will grow prodigiously and increase in weight, in some instances to 20 lb. in two years. Fish properly treated thus fatten quickly, are of superior flavour, and in season all the year round. By adopting the latter course you save two years, which would be otherwise occupied in growing the fish from the egg." I am afraid that the words I have italicised must be taken *cum grano*, &c. Eh! Mr. Mather?

Do herons attract fish?—Mr. Faulkner may be right in his idea that herons attract fish, but I confess I am quite unable to verify this, I have very patiently watched herons fishing, times out of number and have never noticed that they are any quicker in the succession of captures than the casual passing by of a fish within reach would warrant. They certainly do not shake themselves, either, to get rid of the blue powder referred to. Certainly, they possess a most horrible smell, but it is not out of character, nor, in fact, at times at all dissimilar to, that of other fish-eating birds, such as the dab-chick and grebe, or even wild duck in certain quarters.

The attractions of the "ancient and fish-like smell" of the heron has been said and vaunted, however, often enough before by old and imperfectly-informed writers. So, indeed, has *man's* fat and *mummy* powdered, and oil of *vipers*, and oil of worms, gum ivy, and a whole pharmacopœia of other detestable stinks.

J. HARRINGTON KEENE.

THE PISCATORIAL SOCIETY.

OWING to the failure of the late proprietor of Ashley's Hotel, Henrietta Street, Covent Garden, this Society, for the last few weeks has been without a Clubroom; but, with the well-known liberality of Mr. F. C. Hatfield, he has given the Committee all the necessary accommodation at the Star and Garter Hotel, St. Martin's Lane, to hold their meetings and the transaction of business, by the gratuitous use of two good rooms. The hotel in Covent Garden having now changed hands, the Committee have been able to make fresh arrangements with the new proprietors, and upon more liberal terms. The hotel has been refurnished and decorated; and, in addition to the Clubroom, the small room which is attached to it has been fitted with rails and pegs for hats and coats, and a fixed and lower tariff has been drawn up, and all articles supplied will be guaranteed to be of the best quality. The Society re-occupied their old Clubroom on Monday evening last, when a general meeting of the members was called to sanction the action of the Committee in reference to their entering into a new agreement with the present manager. Mr. R. S. Fanning was voted into the chair, and there were present:—Messrs. F. G. Pearce, James Lander, H. Gray, Alfred Jardine, H. L. Rolfe, T. R. Sachs, T. Gillatt, J. Knechtli, James Pattison, G. Watts, A. Benningfield, W. H. Brougham, F. H. Lemann, F. C. Hatfield, B. Perelli-Rocco, W. J. Wilkinson, M. H. Blaney, W. B. Addington, G. Hammack, H. J. Alfred, Thomas Huggett, W. G. Skinner, W. A. Crump, E. Russell, T. C. Harrison, Col. Crauford, W. H. Corfield, C. P. Wheatstone, J. G. Andrews, S. Handford, E. Blake, S. G. Bate, T. Sparrow, T. J. Head, &c., &c. The meeting fully expressed its approval of the new arrangements, which were considered most satisfactory, there being a reduction of £10 a year in the rent, in addition to other concessions, and the manager, Mr. James Bass, had offered to give all the facilities he could to make the members comfortable. A cordial vote of thanks, after Mr. Pattison's lucid explanation of the arrangements, was accorded to the Committee, and a special vote of thanks was given to Mr. F. C. Hatfield for his kind courtesy and liberality in affording the Society shelter during the time it has been without a room, which Mr. Hatfield, amidst the most favourable recognition, briefly acknowledged. A good portion of the evening was occupied in reports of the National Fisheries Exhibition at Norwich, and the prominent position of the Piscatorial Society and its members in it. We are the more pleased at this, inasmuch as we were the means of inducing the Society, and also Mr. Jardine, to exhibit. The Society had decided not to exhibit, but we fortunately were able to impress Mr. Thomas Huggett and Mr. Jardine with the importance of the exhibition, and the absolute necessity of the Society's supporting it, and they used their influence with the desired effect, and dispelled the fears of the members that the treasures of the Society would be smashed if sent on such a journey. Not only has the Society obtained the prize for a Club collection of specimen fish, but Mr. Alfred Jardine, one of its members, had gained the other prize for a private collection, and another prize for the best case. Mr. H. L. Rolfe, another member, had secured the gold medal for fish-paintings and so on. It was felt the Society had merited great congratulation, and had placed itself in a national position. The meeting terminated with a vote of thanks to the Chairman.

THE NORFOLK AND SUFFOLK RIVERS AND BROADS.

THE Great Eastern Railway Company, acting on the suggestion made by our correspondent "B.," in reference to affording facilities for the London anglers to visit these Broads, has most liberally granted the privilege of giving return tickets to Yarmouth and Lowestoft, after the 1st of May, from Friday until Monday, both days inclusive, at the exceedingly low rate of ten shillings, and fortnightly tickets at fifteen shillings. There can be no doubt that this liberality will be thoroughly appreciated by the anglers, and affords substantial evidence of the desire of the Great Eastern management to afford every facility to the large body of London piscators to practise their favourite sport even at so great a distance from their homes. Since this announcement has been made, Mr. F. C. Hatfield, on behalf of the Central Association, of which he is the founder, has had an interview with the General Manager (Mr. W. Birt) in reference to further concessions to the members of angling clubs, and, after thoroughly going into the question, he has since received a reply granting the privilege of return tickets to Wroxham, from the Friday until the Monday, at ten shillings, but only to those holding tickets of any of the three associations. Mr. Hatfield endeavoured to get the time increased to one week, but at present this will not be granted, as the company will gain by the experience of the value attached to the present concessions, as to the desirability of giving the increased period. Great credit is due to Mr. F. C. Hatfield in so promptly securing the additional privilege he has done, and all may be regarded as a great and important advance of a liberal recognition of the anglers' desire to visit the immense fish farms of Norfolk and Suffolk by the Great Eastern Railway.

THE "FISHING GAZETTE" AT THE NATIONAL FISHERIES EXHIBITION.

WE are glad to learn that the FISHING GAZETTE has been awarded a silver medal at the Norwich Exhibition. We hope to publish shortly the Prize Essays on the "Salmon Disease" and "The Best Code of Rules for Management of an Angling Club," for which we gave prizes; but the jurors have not yet finished their work, and many prizes are still unawarded.

MESSRS. S. ALLCOCK AND CO. AT THE MELBOURNE EXHIBITION.

WE are glad to hear that the great Redditch firm has received the highest award for fishing goods at the Melbourne Exhibition.

ANGLERS should always be provided with something to take away the swelling and poisonous effect of the bites of insects. They should also have with them something to apply to a cut or sprain. Pond's Extract reduces the swelling and inflammation, stops bleeding and pain, and hastens the healing process in case of any wound or sprain; and it has no equal for application to the bites and stings of insects. Therefore never go on a fishing excursion unprovided with a bottle of Pond's Extract. It is for sale at all chemists, at 2s. 3d., 4s. 6d., and 8s. 6d. per bottle.—[ADVERTISEMENT.]

TIRE D HANDS AND ARMS.—Edson's Electric Armlets and Wrist Bands, invaluable for anglers and gun sportsmen and highly recommended for all persons having tiresome writing, sewing, or music practice. They give wonderful energy and strength, enabling the wearer to accomplish tedious work with steadiness and comfort. Price 2s. 6d. per pair, silk web and fine steel clasps. Sent to any address on receipt of P.O.O. payable to J. Edson, the Electric Fabric Co. Patentees, No. 1, Charlotte Street, Bedford Square, London W.C.—[ADVT.]

TO ANGLERS.—W. J. Cummins, Fishing Tackle Maker, Bishop Auckland, is now prepared to forward to anglers his Illustrated Catalogue, which is not only a Trade List but is interspersed with practical hints, useful directions, and valuable information gathered by the river-side from twenty years' experience. The stock consists of his unrivalled Salmon, Trout, Grayling, and Pike Rods, Lines, Reels, Baskets, Artificial Baits, Fly-books, Landing Nets, Gaffs, and last, but not least, his celebrated TROUT FLIES, which for killing powers stand unequalled. Every article kept in stock is of the very best description.—[ADVT.]

GEORGE JAMES EATON, of Starkholmes Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[ADVT.]

NOTICES OF BOOKS, &c.

NOTES OF OBSERVATIONS OF INJURIOUS INSECTS. REPORT, 1880. London: W. Swan Sonnenschein and Allen.

THE above is last year's report of observations systematically undertaken by a considerable number of interested observers for the purpose of collecting trustworthy data of insect life, and the most efficacious preventatives. Considering the character of the work, and the generally-acknowledged difficulty of dealing satisfactorily with large masses of isolated facts, it must be said that Miss E. A. Ormerod, the compiler of this report, has done her work fairly well. Few of the insects described and illustrated here are such as fishes are known to relish. One of them, however, the large white cabbage butterfly (*Pieris Brassicae*), when denuded of its wings and delicately flavoured with aniseed, camphor, and just a suspicion of heron oil, will infallibly lure the least greedy chub to destruction. So, at least, an old German angling book informs us, but our authority goes no further. With the exception of a nearly universal plague of Daddy Longlegs' grubs, last year's returns show, generally speaking, a moderate amount of insect injury to crops. It is also satisfactory to note the general results of the observations of the year, as showing a tendency to corroborate the views of our leading agriculturists. These are that time and money are more profitably employed in promoting vigorous growth of vegetable crops by means of generous and special modes of cultivation applied to the soil, than in attempting to exterminate the destructive insects themselves.

THE DETERIORATION OF OYSTERS AND TRAWL FISHERIES OF ENGLAND: ITS CAUSE AND REMEDY. By J. P. HORE and EDWARD JEX. 1880. London: Elliot Stock.

THE first part of this book is by Mr. Hore, who treats the subject of the lamentable scarcity of oysters and the steady decline of our oyster fisheries. Up to a certain point, to which we shall presently allude, he does this in an eminently agreeable and interesting manner, and his pages well deserve attentive and careful perusal. Some of the historical evidence he brings to bear on his case, extracted from the series of printed State papers relating to domestic affairs, and from MSS. preserved in the Public Record Office, will be novel to most readers. It is certainly very valuable and curious, besides being strikingly suggestive. Mr. Hore attributes the deterioration of our public dredging-grounds solely to overdredging, annihilation of parent stocks, absence of effectual close time, and legal impediments in the way of artificial culture. To most persons unaware of the exceeding intricacy of the question, this statement of the case will appear tolerably self-evident, plausible, and conclusive. But in the face of the evidence brought out by the Select Committee of the House of Commons on Oyster Fisheries in 1876, it would be rash in the extreme to settle the question offhand at Mr. Hore's or anybody else's invitation. The fact is, our knowledge of the oyster, its flavour excepted, is still too scanty to permit indulgence in any but the vaguest of generalisations. When we consider that the mere deflection, or increased velocity of a subaqueous current is sufficient to exterminate an oyster-bed, by cutting off an accustomed food supply held in watery suspension, or by overwhelming it with inorganic matter, it is evident the last word on the subject of oyster cultivation or preservation cannot be spoken yet awhile; certainly not before we are better acquainted than we are at present with the working of tides and currents. We regret it is out of our power to reproduce some of the quaint historical details with which Mr. Hore has ornamented his argument, for these constitute the chief merit of his book. Indeed, so long as he confines himself to retailing the documentary history of his subject, he will find few to challenge his views and many to thank

hin for his painstaking labour. But when he adopts the tone in which his fifth and last chapter is conceived, he must not wonder if some readers should doubt his fitness to deal with the matter at all, and regret a display of mingled petulance and prejudice.

The remainder of the volume is filled by Mr. Jex's polemical treatment of a no less important subject than the above—namely, the alleged Deterioration of Trawl Fisheries. Consisting mainly of letters that have done service in the columns of several of our contemporaries, the pages now before us contain too much of what is known as "talking for'ard and back" to make them pleasant or profitable reading. In face of the fact that supply and demand have very little to do with the maintenance of high prices at Billingsgate, not much dependence can be placed on the exactness of Mr. Jex's figures. So far as they apply to prices below which no salesman like Mr. Jex would care to see them fall, they are probably accurate enough, but so far as they bear on the main issue, seen from a national and not a purely metropolitan point of view, they are valueless. His vigorous protest against the capture and sale of undersized fish is commendable enough.

CORRESPONDENCE.

[We do not hold ourselves responsible for opinions expressed by our Correspondents.]

ANSWERS TO CORRESPONDENTS.

J. D.—Of course the heaviest fish must take the prize if it is a prize for the heaviest.

NATIONAL FISHERIES EXHIBITION.

SIR,—I have pleasure in informing you the Committee have complied with the request of several exhibitors and others interested in this Exhibition to keep it open another week, namely, until Saturday, May 7th.—I am, &c.,
W. OLDHAM CHAMBERS, Hon. Sec.

Fisheries Exhibition Building,
Norwich, 25th April, 1881.

THE MELBOURNE EXHIBITION.

SIR,—Having some time since sent a case of guns, &c., to the Melbourne Exhibition, I have just had the satisfaction of receiving a telegram announcing that my patent hammerless gun, "The Edinburgh," has been placed first by the jurors; and the first prize has also been awarded to my fishing-rods, flies, and tackle.

If you will be good enough to notice this in your own manner in the first issue of your paper, you will much oblige.—I am, &c.,

JAMES MACNAUGHTON.

Gun and Rifle Manufactory, and Fishing-tackle Warehouse,
26, Hanover Street, Edinburgh, 26th April, 1881.

FISHING AT WINCHESTER.

SIR,—To whom should one apply for tickets to fish in the vicinity of Winchester? Is there any book which gives descriptions of the river and streams in England, Germany, or Switzerland, suitable for fly-fishers?—I am, &c.,

L. J.

[We only know Mr. Hammond's water at Winchester, but understand other tackle shops there also let day or week tickets. Get the "Angler's Diary," published at the Field Office, Strand, price 1s. 6d.—ED.]

FISHING NEAR RIPON.

SIR,—I shall be obliged if any of the readers of the FISHING GAZETTE could give me some particulars of the trout fishing at Tanfield, near Ripon. Is the fishing free, or is there an association; and if there is, the charge to visitors, and where may the tickets be had?—I am, &c.,

MAY FLY.

FISHING IN BEDFORDSHIRE.

SIR,—Can any of your readers inform me whether there is any fishing to be had at either Harlington, Flitwick or Ampthill, in Bedfordshire, and, if so, where? Also whether it is good, bad or indifferent. I notice our privilege tickets extend to those stations, and therefore presume there must be angling of some description near. I have asked a friendly "native," but he does not know of any.—I am, &c.,
23rd April, 1881.

LEX.

THAMES TROUT.

SIR,—A few days ago I had a trout weighing 8 lb. 2 oz., and on opening it found in the stomach three perch and two dace, the five fish weighing over 8 oz. The last one he had swallowed was bitten severely, but the others were scarcely touched. I write this letter in hopes Mr. Harrington Keene, or any other gentleman learned in piscatorial matters, will kindly inform me, through your columns, if such an example of gorging has come under their experience in connection with trout. All I can say is that I have been an ardent follower of old Izaak Walton for the last fifteen years, and have never known a similar case. Apologising for trespassing on your valuable space.—I am, &c.,

H. G. BROOKE.

15, Fenchurch Street London, E. C., 28th April, 1881.

TROUT IN MILL-PONDS.

SIR,—I had last year, and have again this year, the opportunity of fishing for trout in a large mill pond, and I observed that the fish rose only in the evening, and then only for a short time.

Will you kindly inform me, through your "Answers to Correspondents" column, whether an expert "fly-fisher (I am the merest novice myself), would be able to capture the fish at any other period of the day; also whether it is a rule that fish begin to rise later in the year in pools than in streams. I have scarcely seen a rise on the pool in question this year yet, although I know that a considerable number of trout have been taken in the streams in the neighbourhood.—I am, &c.,
J. E. B.

Redditch, April 21.

[If there are bushes round the mill pond, and the water is shallow, you may pick up a fish here and there even if they are not rising; also by fishing the most likely parts when there is a curl on the water from a breeze. If the water is all deep you won't get fish unless they are on the look-out for flies and near the surface.—ED.]

AN EXTRAORDINARY INCIDENT.

SIR,—Under the above heading I read your correspondent's, "A. Wellesley Warner's," account as to what had happened to an acquaintance of his whilst trout-fishing in private water. It is possible I might not have troubled you with this communication had I not noticed your footnote thereto.

Allow me to recite a parallel case.

Whilst trout-fishing in a nice water after a flood, in the river Vennat (a tributary to the Eden), Westmoreland, in the spring of 1850, I landed a trout over half a pound, and I noticed the tail of a fish protruding from the side of the trout's mouth, which proved to be a large "miller's thumb," half swallowed. I thought it extraordinary at the time that a trout should take a small fly under such circumstances; but, still more remarkable, the fly was hooked in the back of the small fish. I have often related the affair to others. It is quite possible the trout might have been hooked in the first instance, and at the last moment the hold may have given way, and the hook transfixed itself in the smaller fish; or it might have thought (fish have brains) its prey was trying to escape and so held on—or again, the large head of the "miller's thumb" may have so stuck in the throat and teeth of the trout as to prevent its expulsion. Anyway, the incident occurred as I have related, and in vouching for its truth I may say that I am not easily crammed by angler's stories—no more than yourself—nor their theories either, for that matter.—I am, &c.,
Southport, April 19th.

J. T. HORSLEY.

MESSRS. LITTLE AND CO. AND THE PRINCESS.

SIR,—I desire to inform you, in case it should escape the notice of your reporter at the National Fisheries Exhibition, that H.R.H. the Princess of Wales was graciously pleased to accept a gold-mounted fishing rod of our manufacture, from the president. Both the Prince and Princess complimented me on the superiority of its manufacture, the presentation having taken place in the picture gallery.—I am, &c.,
15, Fetter Lane, E.C. April 21.

G. LITTLE.

THE WOOLWICH PISCATORIALS.

SIR,—The Central return visit will take place on Tuesday, the 26th inst., at the above club at the Cricketers' Arms, Sand Street, near the dockyard station and Charlton Pier. Anglers wishing to view the Royal Arsenal are requested to be at the above club house by 1 p.m. H. J. BELSTEAD, Secretary.

PRIVILEGE TICKETS.

SIR,—The two Committees, one from the West Central Association and one from the East Central Committee, will meet to discuss the yearage upon the new privilege tickets at the Forester's Hall, Clerkenwell Road, on Friday, the 29th April, 1881. The Central Association was invited by the two other bodies to meet also, but they have decided upon rs. amongst themselves, so decline.

I would respectfully suggest that secretaries should begin collecting names of those members who intend taking tickets for the coming season. I will shortly send a list to each society, enrolled upon the association, with full instructions and rules bearing upon the subject. I would point out, the sooner I get the list the sooner members will be able to get their tickets. If instructions are sent to me in reference to change of secretary, his address, or club house, I will insert the information in my circulars for the coming season.

I have great pleasure in announcing the following concessions gained for the London anglers, viz. :—

Great Eastern Railway.—From Liverpool Street and St. Pancras Stations to Yarmouth and Lowestoft.

1st Class.	2nd Class.	3rd Class.	
27 6	20 0	15 0	Available for fourteen days.
20 0	15 0	10 0	Friday or Saturday till Monday.

We have also obtained reductions in last year's fares to several stations upon the London and North Western Railway, additional concessions upon the Great Western Railway, and also the Midland Railway, see the new list of angler's fares.

I am given to understand that we have to thank our old and esteemed friend, Mr. W. H. Brougham, as being the means of gaining the concessions for us to Yarmouth and Lowestoft.—I am, &c.,
T. HOOLE, Hon. Sec. W.C.A.L. and P.A.S.

SALMON DISEASE IN THE TWEED.

SIR,—I notice that the fungus in the Tweed is much the same this year as it has been five or six years back. I was out fishing on Monday last, and I noticed a great many trout with the disease upon the vigg fin. But disease upon the salmon has assumed a different aspect—instead of large trellis of fungus, the whole back becomes as white as a paper leaf. The floods last month brought up a good few grilse. Disease affected the rowners first, and at the present time there are scores of them lying dead, and I say that it is an outrage upon a discerning community. The commissioners of the Tweed ought to be brought before their betters for allowing pollution of the waters to go on by the contaminating influences of stinking fish. They should be all taken out and buried; but the commissioners, it seems, do as they like.—I am, &c.,
J. A.

FOSTER FUND.

SIR,—Amounts received by me up to the 22nd April, 1881:—Royal George, £1 1s.; Mr. Geen, £1; Westbourne Park, £1 1s.; Social Brothers, £1 2s.; Bloomsbury Brothers, 6s.; Acon, 10s.; Norfolk, 10s. 6d.; Kenningtonian, 6s. 6d.; Silver Trout, 10s.; South London, 10s.; Waltonians, 16s.; Metropolitan, 6s.; Prince of Wales, 13s. 6d.; Penge, 10s.; Hampstead, 16s. 3d.; United Brothers, 7s.; Hammersmith United, 17s.; Mrs. Williams, fishing tackle manufacturer, 10s.; Mr. T. Spreckley, 5s.; Stepney, 6s.; Coblen, 3s. 6d.; Marylebone, 14s. 6d.; Duke of Norfolk, 10s. 6d.; Bo-torian, 10s. 6d.; Clapham Junction, 10s.; Cadogan, £1 1s.; City of London, 19s.; Good Intent, £2 11s. 6d.; Sir Hugh Middleton, 9s.

I beg to request most respectfully that secretaries holding collections for the above fund will please forward them to me at once, as date for closing is a long time overdue.

I thank those ladies and gentlemen sincerely who have so liberally subscribed towards the widow and children of one who, when alive, did so much for the London anglers.—I am, &c., J. HOOLE, hon. sec.

PRIVATE PIKE-FISHING.—THE BAIT QUESTION—AND RAILWAY CONCESSIONS.

SIR,—The article under the above heading which appeared in your issue of April 9th, signed with the single letter "B." contains a number of statements to which I cannot—and, I think, with me, the great bulk of your numerous readers cannot—help taking exception. Nearly all of us will recognise under the above initial one who holds a high position in the piscatorial world, and is generally esteemed and respected on account of his exertions on behalf of the angling brotherhood; but the above great qualities—to which I hasten to pay my tribute of praise—do not prevent him, in common with the rest of frail mortals, from falling occasionally into grave error, which we should not shrink from pointing out, lest it be laid to our charge that we sympathise with and uphold them by our silence. Therefore, Mr. Editor, I will, without further preamble or apology, at once launch into the subject of my letter.

Mr. B. is, of course, perfectly legally free to go jack-fishing on the 31st of March in a private water. It is a matter which concerns only the owner and himself; but when he publishes the fact, and tries to justify it, it becomes quite another matter.

I have never, in all my experience, seen jack so late as the 31st of March in what a sportsman would call condition, though I have frequently seen them far too advanced in many cases to be legitimate spoil by the end of February; and this season only it was my misfortune to see several exhibited a few days before the 14th of March which had actually spawned.

Had Mr. B. wanted a few fish for dissection, vivisection, propagation, or even as food for some huge beast or bird, we might have admitted the scientific purposes. As it is, he fails entirely in showing that the cause of science would have been furthered by such capture of gravid jack on 31st March.

I am not prepared to go the length of saying that fish in all waters are equally forward, but I maintain that, in ninety-five cases out of one hundred, they are far too forward to be taken by the 14th of March; and that, by the 31st, they are full to bursting, and in many cases have actually deposited their spawn. I am not, of course, speaking of those waters in the northern part of England of which I have no practical knowledge, and where, doubtless, the fish are not so forward as their kindred in the south. Mr. B. speaks of his wanting to acquire practical experience. This is a very poor excuse, indeed, and one which could scarce be admitted as valid, except on a plea that a poor excuse is better than none at all; but, unfortunately for even this shadow of an excuse, and with strange inconsistency, Mr. B. further on speaks of the fish he saw about a month before at the Piscatorial Society's room (from this same water) as being "as full of spawn as possible." Poor Mr. B.! Having made one fatal mistake by this admission, he makes, if anything, a more serious one still by advocating the course he does in the next few lines: "Still, there may be waters where the jack during March are always in good condition."

Then, with all the vast store of experience I know, and the majority of your readers who recognise him know, he possesses, he makes still another fatal admission. He "knows of at least one such water," and then, on the strength of this one place, and of the exceedingly small percentage of others where it is possible jack may be in good condition during March, and the owners are willing to admit a few friends to angle during that period, he would have us so seriously mutilate the one great valuable clause in the Freshwater Fisheries Act, viz., the one absolutely prohibiting the sale or possession for sale of freshwater fish during the close season, as to render it quite worthless. The licence arrangement would not do at all. It would offer an inducement to prowling netting vagabonds once more to hang about the waters when the fish are on the shallows and helpless. And supposing the dealer holding a licence to be ever so careful, what a discriminating man it would require to judge whether the ultimate destiny of the six dozen large baits ordered by Mr. Moses would be that, after swimming about in their native element for a little while, they would find their final resting place in hungry pikes' maws; or that whether, after swimming about for some time in olive oil over a nice fire, they would find themselves finally at rest in the appreciative inner man and woman of Mr. and Mrs. Moses.

So Mr. B. thinks the tackle-dealers deem it a hardship to be prevented from selling fresh-water fish during the close season. Well, here again he is entirely wrong—live baits are at all times to the dealers (in London, at all events) a regular *bête noir*. There are some things on which he says his profits are already very small; but personally I know at least three most respectable tradesmen who have repeatedly told me that, leaving out minnows, they positively are losers at the year's end by the sale of live fish; and I readily believe it, as I have myself seen over 150 fine dead dace, with a fair sprinkling of roach fished out of tanks constructed expressly for them, and so arranged as to keep up a constant flow of water—the result of a few hours' muggy weather. Hot weather and frost are enemies to live-bait keepers. Then, only too often, the dealer must take the baits, wanted or not, brought to him by the catcher; or else, when he is being wired and written to by customers for so many dozen of lively dace, these gentry will, figuratively speaking, put their thumbs into their noses and spread their fingers out. If Mr. B. likes I will forward him the name of one tackle-dealer who offers to give £5 to any association or individual who will be instrumental in getting a law passed entirely prohibiting the sale of live baits. Of course, such a thing is impossible; but the offer is far more conclusively in favour of the statement, I have made them any argument I could adduce. If, then, the dealer has at all times a dislike for these kittle-cattle, how much would not such a reasonable objection be intensified at a time when it is next to impossible to carry any distance or keep for any time alive, freshwater fish—viz., during the spring and early summer months,

March, April, May, and part of June, when they either have just spawned or are about to do so, and this solely, be it remembered, for the convenience of the select few above referred to, who have the privilege of angling in the exceptional waters where fish are backwards, or in Norfolk and Suffolk where even now towards the end of April, we read, anglers'—save the mark!—are live baiting, trailing, &c.,—why don't they tell the truth? liggering (trimmer fishing)—out the poor gravid or spent fish in large numbers.

With regard to minnows for trout-fishing, I don't know how these little fish, if captured, would live during this and the next two months; but I think that, seeing the comparatively limited number of trout fishers who use live minnows, the danger of having professional trout catchers about the water would not be compensated for by the convenience to these gentlemen, who, be it remembered, are not themselves debarred from catching a few for actual use as I have myself done, and frequently seen others do, in the Thames, Lea, and Grand Junction Canal. This question of live bait is such an important one, that with your permission, Mr. Editor, I will refer to it again at some future time when I propose showing what a terrible depletor of our waters in every sense this artistic live baiting is—far more so than any other three or four causes put together, not excepting the much maligned and misrepresented gross-weight system. Mr. B. speaks of the tackle shops being provided with live baits during the fence season from private waters. Surely, Mr. B. is joking?

The question of approaching that most liberal of all companies, the Great Eastern, with a view of obtaining concessions to some additional stations is now under consideration, but I don't for one moment think the question of Yarmouth, Lowestoft, and Norwich, will be brought forward, or, if brought forward, seriously entertained. Let the following figures speak for themselves. Yarmouth is 121 miles from London; the journey to or from occupies, on the average, nearly five hours, sometimes more, and the single fare at which, as in all cases, most probably if granted, the concession tickets would be issued, is 12s. 7d., third class. Norwich is 126 miles, the average time of journey over 4 hours, single fare, *via* Ely, 10s. 10d.; *via* Colchester, 12s. Lowestoft—much the same as the two above—in many, if not in most cases, a second railway journey from the above centres has to be undertaken to reach the Broads, and, unless I am misinformed, a boat must nearly always be hired before they can be fished. But even if all these very great reasons against asking for a concession which, even if granted, would, I feel sure, be but little used by the thousands of working-men anglers who, form the great bulk of club men affiliated to the associations, did not exist, the very reasons Mr. B. gives for asking for such would set us against the idea—viz., "That it would supply opportunity of unlimited sport (*sic*) to thousands of London anglers, especially at a time when all our metropolitan rivers are closed against them."

Oh! Mr. B., that's too bad. You know the London angling societies and their members—there are but two or three—who allow the taking of fish during the close season, and even these are reconsidering the question, or who would tolerate the exhibiting of fish during such time, while there are several who would expel a member for so doing, and whose rules provide for such an unwished eventuality.

Please, Mr. B., don't do it again. Go fishing in private waters during the close season if you must, but don't impute any such desire to men who are, above all things, sportsmen, and would scorn the desire you impute to them as they would that of doing a dishonest action.—Yours, &c.,

LEO. BONVOISIN.

EELS.

THE mystery has at last been solved. No more "animated horse-hairs," and all the suppositious nonsense about the origin of the eel in estuaries or in fresh water river, stream or pond! That most interesting communication on the generation of eels contained in the FISHING GAZETTE of March 12, will necessitate an alteration in many a standard work on natural history, &c. Gilbert White puzzled himself over the eel, and hinted that "the threads sometimes discovered in eels were perhaps their young." But he was speaking of freshwater-bred eels, and not those bred in the estuaries of tidal rivers, though the generation must come alike from ova? Are eels fish, now?

There are four British species of eel, viz., the sharp-nosed, the broad-nosed, the snig and the grig (*vide* the Rev. J. G. Wood). Hampshire streams abound with eels—far less in size than the Kennet silver-bellied eels, and even Pope has sung the praises of the latter. Eels seem to be everywhere in fresh water; even the rushy water-cuttings on either side of the Great Eastern Railway about Tottenham and Lea Bridge, contain small eels. I once saw an elderly man fishing in the said cutting. He had caught one little eel; but although the bird were singing, and the scent of the new-made hay was wafted far away from the higher ground, and wild flowers grew almost under the fisherman's feet, nothing would take his rapt attention off his float! The Thames freshwater eel will sometimes—in summer, mostly—come out of the river on to the grass. A fisherman living at Sonning some years back assured me that he had himself seen eels very early in the morning in the act of wriggling back into the water on his approach. It must have been a very "early bird" to have found the outlying "lobs" before the Messrs. Slimy! The present head gardener to Sir Joseph Bailey, Bart., M.P., told me that on one occasion, some few years since, he himself found a swan some little distance from a lake, with a large eel in its mouth. The bird, in struggling with the eel, which was too large for its gullet, killed itself and the eel too! Thus the "early bird" sometimes comes to grief. Conger eel is not to be compared with his freshwater cousin for eating, and the latter is excellent whether stewed, fried, boiled, or put into a pie.

SPOTS.

CORRECTION.—A printer's error occurred in the last line but one of the article on the "Classic Isis" last week. It should obviously read "Masonic" bands that Italy set forth to build so many of our ancient and beautiful parish and abbey churches that adorn England even at the present day.

MRS. F. Y. BROCKAS, Artificial Fly Dresser, 4, Mill-street, Conduit-street, Hanover-square, London, W. A stock of best flies always on hand. Flies made to pattern. Lessons in fly making given.—[ADVT.]

CLUB REPORTS.

THE CAMBRIDGE FRIENDLY ANGLING SOCIETY.

The annual dinner of this flourishing society took place on the evening of the 13th inst., at Mr. Chandler's, The Rent Day, Cambridge Street, Hyde Park, Mr. Osmon presiding, and Mr. Greene occupying the vice-chair. Some forty members and friends sat down, among those present were the chairman and vice-chairman of the West Central Association (Messrs. Bonvoisin and Beckett). The host and hostess (Mr. and Mrs. Chandler) provided an excellent dinner for their guests, and it was served in their usual capital style. They had evidently spared no expense to provide an abundance of good things for the occasion. After the removal of the cloth the Chairman gave the toast of "The Queen and Royal Family." This and several other toasts having been given the Chairman proceeded to distribute the prizes, the principal winners of which were Messrs. Welch, Townsend, Warsop, Wilson, Bryant, Dobell, Gower, Wright, &c., after which the remaining portion of the evening was devoted to harmony, several capital songs being sung, everyone being thoroughly satisfied with the evening's entertainment. The total gross weight of fish taken during the season was 713 lb.—W. SUTTON.

April 25.

EXCELSIOR ANGLING SOCIETY.

The annual supper of this society took place on Thursday the 21st, at the society's house, the Hope, Bird Street, Kennington. Mr. S. Hayward occupied the chair, being faced by Mr. R. Wood, hon. sec., and proved in every way a complete success. The handsome and liberal manner in which it was placed upon the table reflected great credit upon the host, Mr. W. Whiffen, and was deserving of the compliments that were paid him during the evening. One of the appropriate features of the occasion was the appearance of some very large and handsome salmon on the table. On the cloth being removed, the chairman proposed the "The Queen," which was duly honoured. The Secretary then proposed the toast of the evening, accompanying it with appropriate remarks, which was heartily responded to. Able speeches followed, with the usual drinking of healths, &c., by Messrs. F. Paine, G. Johnson, J. Godfrey, E. Sparrow, the chairman and secretary, and several other gentlemen. Then followed a most liberal contribution of prizes to the society by members and friends. These proceedings terminating, harmony commenced, and some capital songs, ably rendered; most prominent were Messrs. Hulford, Paine, Smith, Hopkin, Johnson, Sparrow, and Daws, the evening terminating in a convivial and satisfactory manner.—R. W.

GOOD INTENT ANGLING SOCIETY.

The West Central No. 2 District visit took place at the above society on Monday, 25th inst., and proved a success, the following clubs being represented: the Amicable Brothers, City of London, Metropolitan, Norton Folgate, Sir Hugh Myddleton, St. John's, West Central, Hearts of Oak, Bostonians, Hampstead Brothers, Albert, Hoxton Brothers, Alexandra, Stepney, and Never Frets. The roll being called at 11 p.m. by the district officer, Mr. Thorley, there were some capital songs given by the following gentlemen: Mr. Maybury, Mr. G. Birch, Mr. Roberts, Mr. W. H. Beckett, Messrs. Thorley, Raynor, Feacham, Hallam, Hall, &c. Mr. R. Ghurney, advocating the Anglers' Benevolent Society, was received very cordially, and a most pleasant evening was spent.—R. MURPHY.

April 26, 1881.

GRESHAM ANGLING SOCIETY.

Major the Hon. E. R. Bourke and Alderman R. N. Fowler, M.P., have accepted the post of Vice-Presidents of this Society, the monthly meeting of which will be held at Throgmorton Chambers, Throgmorton Street, Bank, E.C., on the evening of Thursday next. As this will practically be the first meeting of the society, a large attendance is anticipated, and some new members will be elected. The chair will be taken at 7 o'clock.

HAMMERSMITH UNITED.

The annual dinner of the above Club will take place at the "Builders' Arms," (close to the stations, Hammersmith), on Thursday evening, May 5th. P. Geen, Esq., will preside, supported by several well-known anglers. Tickets, 3s. each, may be obtained from the hon. sec., 37, King street, Hammersmith. Dinner will be on the table at 8 p.m. sharp. Intending visitors are requested to note the address of this old-established club, as another society held in the vicinity has arranged for a dinner the same evening.—VORTEX.

SURREY PISCATORIALS.

The third annual dinner of this society took place on the 27th, at the "St. Paul's," Westmoreland Road, Walworth. Sixty members and their friends sat down to partake of the good things provided by Mr. and Mrs. C. Bansback, the worthy host and hostess. Among the gentlemen present were Messrs. Beckett, Boalch, Clarke, Duck, senr. and junr.; Plumley, senr. and junr.; Whitby, J. P. Weldon. Linstead, &c., &c. On the removal of the cloth, Mr. Duck, senr., was appointed to the chair, through the absence of Dr. Carpenter; and Mr. Beckett likewise had to take office on behalf of Dr. Maples, who was "conspicuous by his absence," through professional duties. The usual toasts having been proposed and responded to by various gentlemen, Mr. J. P. Weldon responding on behalf of the Press in his well-known and interesting manner. Mr. Whitby, the secretary, stated the condition of the society, which was in a most flourishing condition, considering that it had only been in existence about four years. The gross weight of fish taken during the season of 1880 was 634 lbs., and the value of the prizes competed for during the same time amounted to nearly £70. Mr. Pugh takes the first gross weight, Mr. Beckett second, Dr. Carpenter third. Next came Mr. Medway and Mr. Francis, &c. The prizes will be distributed on some evening appointed by the committee. He (Mr. Whitby) was very happy to state that the following prizes have been promised, to be distributed as the committee might see fit for the next season:—Dr. Carpenter, £5 5s.; Mr. Pugh, £5 5s.; Bansback, £5 5s.; Langlois, £3 3s.; Beckett, £3 3s.; Mr. Linstead, £2 2s.; Mr. Murray, £2 2s.; A Friend, £2 2s.; J. P. W., £2 2s.; Mr. Peters, £1 10s.; Mr. White, £2 2s.; Mr. Howard, £1 1s.; Mr. Cridland, £1 1s.; Mr. Whitby, senr., £1 1s.; Mr. Clarke, £1 1s.; Mr. Norris, £1 1s.; Mr. Jousiffe, £1 1s.; Mr. Walters, £1 1s.; Mr. Humphries, £2 2s.; Mr. Satchiffe, £1 1s.; Moore,

£1 1s.; Boalch, £1 1s.; Whitby, £1 1s.; Cain, 10s. 6d.; W. Varney, 10s. 6d.; "Pixie," a volume of the FISHING GAZETTE; and the committee would be happy to receive as many more. The rest of the evening was devoted to harmony, both vocal and instrumental. The gentlemen contributing to the harmony were Messrs. J. P. Weldon, Giles, Varney, Beckett, Boalch, and many others. Daylight having dawned, brought the entertainment to a close; and all good people went home to bed, of which luxury very little fell to the share of
PIXIE.

April 29, 1881.

THE TUNBRIDGE ANGLING CLUB.

On Wednesday last the Tunbridge Angling Club had a most enjoyable outing at Oxon Hoath Park, West Peckham. Sir Francis Geary, Bart., had very generously allowed the society to drag the lake in his park, for the purpose of procuring stock fish to put in the Medway. The nets were supplied by Messrs. Ground and Son, and the whole of the arrangements were left in the hands of E. Greenwood, Esq., of Hilden Cottage, who carried them out in a way which met with the entire approval of the members, and about the same time reflected credit on himself. A merry party assembled at the club house, the Bull Hotel, High Street, at nine o'clock in the morning, and after pipes had been lighted a start was made. The weather was just the thing for such an excursion; the sun shone brightly, and the country between Tunbridge and West Peckham being at this time of the year very beautiful, the drive was greatly enjoyed. Amongst those present in the park were Sir Francis Geary, Bart., W. N. M. Geary, Esq., R. A. Dallas Beeching, Esq., and Mr. T. Elliott (Tunbridge Wells), W. Kirby, H. Crundwell and W. Wyde (Southborough), Dr. Lawrence, W. W. Rodger, Esq., Messrs. C. Davidson (Larkhall Anglers), G. and T. Woollett, F. Abbot, W. A. Kirby, W. Epsoun, F. Pine, W. Davies, C. Payne, W. Roser, H. Bidwell, J. Waite, R. Lipscombe, &c. Mr. Greenwood held the net in the water, and quite ready for action, and the first draw brought to grass about 15 brace of splendid carp; well fed-fish, bright in colour, and weighing on an average quite four pounds each. Those present—most of them ardent anglers—were delighted, and one of them observed that the carp would prove "real jam" to some of the Tunbridge anglers who insist on fishing with tight lines. In addition to the carp there were a large number of rudd and roach, some half a bushel. After a second haul, which brought to shore some dozen brace more carp, and a second consignment of roach and rudd, an adjournment was made for luncheon, which was served under a fine old oak in the park. A large quantity of good things had been provided, and after hearty justice had been done to them, and also to some good "nut brown" work was commenced again, and the other portion of the lake was drawn, but the only result was some three brace of carp, but a nice lot of roach. The order was then given to strike and turn away for home, but W. Wallace Rodger, Esq., who was present, generously offered to allow the society to drag three ponds in Hadlow Castle Park. This was of course too good to refuse, and a move was made for the ponds in question. Two of these, said to contain some splendid carp, were too foul to drag, and it was therefore determined to leave them till the weather gets warmer, when other means will be taken to get at the scaly gentlemen. The third pond, which is situate on the lawn, was, however, drawn, and about a bushel of roach secured as well as one perch—a perfect picture, which, on being put upon the scales, was announced to be no less than three pounds. He was by general consent restored to the water in which he had grown so well. As it was by this time getting on for evening, a move was made for Tunbridge; and on arrival the take of the day, consisting of some two hundredweight of carp, and a couple of bushels of roach and rudd, were consigned to the river, in the strictly preserved waters of the society near the Powder Mill Lock. The day proved a most enjoyable one, and the result will doubtless afford good sport to many a disciple of the gentle craft.—YE MEDWAY WATER RAT.

WALWORTH WALTONIANS.

A meeting was held by the members of the above Society on the 22nd, Mr. Fox presiding, and it was decided that the challenge given by the Surrey Piscatorial, to play a friendly game at cricket, on May 16th, be accepted, and Mr. Boalch was authorised to procure the necessary articles for the game. Mr. Fox will present to the winning Society a ball, and Mr. Beckett, T. A. P. S., will also present a set of stumps. The following gentlemen will represent the Walworth Waltonians:—Messrs. H. Dale, Delehaye, Piolaine, G. Taylor, Howard, jun., Fox, Weatherhead, Boalch, Beale, Cain, Green, and several other members have also given in their names as a reserve. The prize presented to the Society by Madame Piolaine came to hand on the 22nd, and called forth numerous adjectives and exclamations as to its beauty and usefulness. This prize was competed for at Pulborough, and won by Mr. F. Grigg, Sept. 13, 1880, and consists of a coffee and tea pot, sugar basin, and milk jug, and salver.—PIXIE.

April 25.

LARGE RECOVERY OF STRAY THAMES FISH.—The heading up of the roach, which is much earlier this year, always takes up a large quantity into a side stream near the back weir at Hampton Court, where their progress becomes arrested, and it has become the annual duty of the Thames Angling Preservation Society to take them out and put them into the main stream in order to ensure their safety. This important work was done on Tuesday last, under the personal superintendence of Mr. Thomas Spreckley, and occupied a considerable portion of the day, as the water, though not very extensive, is difficult to drag. The result was the recovery of forty large pails full of fine roach—there could not have been less than four thousand good fish, weighing at least 12 cwt. Amongst those present assisting in the work were Messrs. F. H. Lemann, H. J. Alfred, W. H. Brougham, A. Allison, T. Abbott, Manners, L. Gow, J. C. Chubb, Johnson, &c.

GREGORY'S SPINNING BAITS.—"The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived. Address, James Gregory, Vyse-street, Birmingham.—[ADVT.]

NOTICE.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., must be addressed to the Editor of THE FISHING GAZETTE, No. 12, Fetter Lane, London, E.C. and should reach the office not later than Tuesday morning.

Contributions are solicited, but the Editor will not undertake to return rejected MSS., unless accompanied with a stamped addressed envelope.

Correspondents are requested to write on one side of the paper only and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to no notice will be taken of such communications.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls, and of the following, amongst other Fishing Tackle Dealers in London and the Provinces:—

Messrs. Alfred and Son, Moorgate-street.
Messrs. Price and Co., 8, Seymour-street, Euston-square, N.W.
Messrs. Williams and Co., Great Queen-street.
Messrs. Gee and Co., St. Andrew's-street, St. Martin's-lane.
Messrs. Gee and Co., Gray's Inn-lane (near Holborn end).
Messrs. Little and Co., Fetter-lane, E.C.
Messrs. C. Kewell and Sons, 197, St. John-street-road, E.C.
Messrs. Kewell and Co., 1A, Conduit-street, Regent-street, W.
Mr. J. Richards, 97, Church-street, Paddington.
Mr. W. Leader, 30, Upper Marylebone-street, Portland-place, W.
Mr. — Clark, 35, Wells-street, Camberwell.
Mr. Geo. Read, 91, Goldsmith's-row, Hackney-road, E.
Mr. A. Bulmer, 62, Wandsworth-road.
Mr. F. Oliver, 188, Great College-street, Camden Town.
Mr. J. E. Gold, 24, Waterloo-road.
Mr. D. W. Willoughby, 21, Lombard-market, Battersea, S.W.
Messrs. F. Y. Brocas, 4, Mill-street, Conduit-street, Hanover-square, W.
Messrs. Gillett and Co., 40, Fetter-lane, London.
Mr. Alfred Young, "The Golden Perch," 174D, Oxford-street, W.
Mr. T. Barnett, 26, Church Street, Lisson Grove, N.W.
Mr. J. Smith, 7, Tottenham Court Road, London.
Mr. Edwin Stevens, Newsagent, 220, Kentish Town Road.

News-vendors can obtain the journal through their London Agents.

* * The "FISHING GAZETTE" SPINNER (Registered) is sold by all the above firms.

ANNUAL SUBSCRIPTION.

The Annual Subscription, payable in advance, for the United Kingdom is 8s.; or post free, 10s. 6d.

To any part of Europe, the United States, and Canada, the Annual Subscription, including postage, is twelve shillings and sixpence.

ADVERTISEMENTS.

All communications respecting advertisements must be addressed to the Manager of THE FISHING GAZETTE, No. 12, Fetter Lane, London, E.C.

N.B.—All Remittances must be sent, and all Cheques and Money Orders must be made payable to ROBERT B. MARSTON.

The Fishing Gazette.

SATURDAY, MAY 7, 1881.

THE TROUBLE THAT BIG TROUT BROUGHT.

(Continued from page 202.)

THE grey of the evening was on the waters, and the trees cast a dark shadow where the current grew still and deep beneath an overhanging rock. But even in the gloom my experienced eye could yet discern a darker spot, more like a black bar in the

water—only the black bar had a tail moving lazily from side to side, and that tail was part and parcel of a splendid trout.

"A good two pounds, if he is an ounce," was muttered in my ear. "There! He rose. Did you see that?"

"Did I see it? Rather, and heard it too. A distinct sudden 'flop'—and the big circles sailed slowly away from a fine rise.

"That is a fish!" I said, with an excitement equal to his own. "Uncle, why don't you catch him?"

"Catch him?" and my uncle's face smiled a superior and pitying wisdom. "I have been trying for him ever since the Spring. Ah! my boy, when you have fished so long as I have, you will know a fellow like that is not so easily killed."

"It is to be done, nevertheless," I murmured, half to myself.

"No doubt, by you;" and this uncle of mine made no effort to conceal the sneer. "But I am not so clever. I have tried for that fish dozens of times, I am always trying for him. I have hooked him twice, and twice—in a tone of sad remembrance—'twice has he broken me. But you are so very skilful that I fear his time has come now. Of course the difficulties of the place are nothing to you."

"They were, indeed, a great deal to me, as they might be to anyone else. It was undeniably a hard spot. But my uncle had cast a doubt on my abilities, and in all the conceit of youth, forgetting the possible consequences of glorifying myself at his expense, I resolved to have that trout. Well, gentlemen, I was up very early the next morning, and wended my way up the stream. I had prepared a cast of flies over night, and fishing my way along, I was rewarded with sundry good fish. In truth my uncle had by no means overrated his property, and in very little time I had basketed three brace. They were all of a good size; but this was not enough. I had set my heart on the patriarch, and have him I must. Carefully I dried my flies as I approached the spot, and then paused for a calm review of the situation. It was a nasty place, what one of the deadliest old poachers I ever knew, and to whom I am indebted for many a wrinkle, would have characterised as 'cruel unkind pitch.' The trees grew down, with a gap between them, for twenty yards on either hand, and a few paces from these, leaving just a path, a ledge of rock, jutting far out of the ground, ran like a wall parallel with the water. This was bad enough, but further to complicate matters, from the granite rising again on the far side, a withered old mountain ash bent forth over the pool—a mere stump, but provided with half a dozen straggling old arms, which seemed stretching forth on purpose to arrest the line. However, I was there, so was Master Trout, and evidently in the mood for an early breakfast. I crawled along to get near, for without getting near there was no hope, and then I discovered that the ground, because not bad enough without, was boggy. First on my hands and knees, and then quite flat, I screwed along. If you have never tried it, you can have no idea of the peculiar sensations to be derived from crawling on your stomach through a bog. The damp, first striking that portion of your anatomy, does not seem so bad. It comes with a sort of refreshing chill, a kind of stimulating titillation, like being tickled. But after a while a sense of rather uncomfortable wetness supervenes, followed by a stinging creeping sensation, as though sundry denizens of the morass, frogs and what not, had found their way within your clothing, and were wriggling out with icy claws. Well, I bore this manfully, and made my first 'cast.' The flies were on the water, that is all I can say for it. They came down with such a decided 'flop' that I knew at once it was hopeless, and looked to see my friend hurry away. But no! he had not been alarmed. He was evidently a trout of much experience, and being satisfied

in his own mind that these were artificial flies, regarded their splashing introduction to himself—so very different from the gentle flight of the real insect as a natural sequence. At all events, he watched them float just over his nose, and then past him perfectly unmoved. I daresay you think me absurd, but I tell you that fish possessed a speaking countenance—a face capable of expressing the various emotions which moved his inner consciousness, and the predominant one now was a sort of good-humoured irony, as one saying: ‘Yes, an artificial fly, and neatly tied, too. It is surprising, the pitch of perfection some of these tackle-makers have attained since the days I was a-troutling. A very fair imitation, indeed, of the real thing. Quite good enough to deceive the innocence of youth. But as for me, I am too old to be taken in in that way.’ Doubtless I might have had him with a worm; there was no chance to spin a minnow; and either would have been ignoble, to say nothing of being strictly forbidden, for my uncle allowed nothing but the fly even to himself. At all events, my first essay was a failure, and I went home to breakfast rather crestfallen, but not beaten. No! I would have him yet, and my resolve grew stronger as my uncle, scanning the contents of my creel, observed with quiet sarcasm, that he ‘supposed I had not tried for the big one yet.’

“Well, gentlemen, to make a long story short, I tried my best morning after morning. I had grown so accustomed now to crawling along in the bog that I was getting simply to regard it as a second edition of my morning tub. My clothes had been done for from the first, so it did not matter so much now; but a week passed by, and another after that, and still the patriarch was there.

“I tried for him each morning—my uncle did the same, scaring him sorely every afternoon. Each day he was growing more shy, each day my case more hopeless. But now, viewing the situation more closely, revolving every expedient almost in my despair, I was seized with a sudden inspiration, and, you may be sure, lost no time in putting it into execution. The period was particularly favourable, for my uncle, whose presence might have interfered with it, was on the jury at Carmarthen; and my plan was simply this. As I before explained, leaning from the far side, and overhanging Mr. Trout’s hold, was a ledge of rock; and on this, despite many difficulties from intervening foliage, I contrived to land the cast. I then pulled very gently. To my delight, the ‘dropper’—an August dun—came clear away, while the ‘leader,’ or, rather, large red palmer, just in the way I wanted, took a slight grip of a bit of moss. Of course, to do this, I had to stand in full view of the water, and at the first glimpse my friend dashed away without scruple. But I was glad of this, being so convinced of that trout’s preternatural acuteness that I gave him credit, should he see it, of understanding the whole plot. Then I unreeled the line, passing it round bushes and trees with the greatest care not to get it entangled, or to draw the hook from its frail hold, until I held the end all clear, and something like twenty yards from the pool, and then I made it fast to the bank, and so left it for all that day and night. The next morning I was there again. Everything was undisturbed, and a cautious peep revealed my shy acquaintance. Now for it. Now for the great essay. With a beating heart, again the line was joined to the winch, and now, so had I calculated, a gentle twitch ought to slide the fly from the rock and drop it, light as down, on his very nose. All seemed right. It came away—it fell! No, it did not! a detested branch of that confounded old mountain ash arrested and held it fast. I pulled. It would not come. Harder and harder yet, and then it released itself with a jerk and a spring, which landed it in the boughs far overhead. There was no help for it, and the blessings which I heaped on that old stump were no assistance. All my

trouble had to be taken over again, and I took it. Once more I baited my trap, and waited the next day to spring it. I was getting savage now, and more than ever I would have that fish. I did not go near the stream until noon. My uncle was still with his jury. I had it all to myself, and took a morning’s rest as a precaution against the impending struggle. And so, after luncheon, I entered the lists with this champion for the last time—for his hour was come! I twitched on the line. It came away, just a few inches, and then took hold of a nettle. Was this to be a repetition of yesterday? It seemed so at first. But no. The nettle gave way, tore away, and ‘Oh, yes!’ I exclaimed, ‘my usual good luck!’ as the fly fell into the water, in company with half a dozen leaves. My usual luck! It was grand luck. That did the business, and took him off his guard. He might have mistrusted that palmer under other circumstances, but here he was, and with a reason for it. Here were the very leaves off which he had fallen, and in less time than I can tell it, came a big splash, an awful tug, and then—chaos. I can give no other name to what followed. That trout was here, there, and everywhere.—So was I. So was the rod; until the end came, and found us all three together on the bank at last.”

“And your uncle, what did he say? He could not sneer at your skill, after all.”

It was the auctioneer who spoke. He had feigned no interest at first; but the tale, or rather the earnest way in which it was told, and that, alas! the writer cannot reproduce, proved too much for him.

“What did he say? Oh! quite enough. The capture of that wretched trout cost me a fortune.

“I was met at the door by his old housekeeper. She read my success in my face, and her own grew equally delighted. This woman had not liked me from the first. In fact, although very civil, she yet contrived to make me understand that I was an intruder. But she had taken much interest in my efforts, and urged me day after day not to give it up. Her motive was revealed all in due season; idiot that I was, not to understand it then. Well, my uncle came home. I could not have chosen a more unlucky time to display my fish, or a more irritating mood than my vanity forced upon me—an assumption of carelessness, as if two pounders were an everyday occurrence with me. He had come back angry from his jury. Naturally a man would, who, being wise enough to hold an opinion different from the remaining eleven, had failed to bring them to his way of thinking. However, he kept his temper in to begin with, and inquired how I had done the business. I told him, and then his smothered ire burst forth. He had wanted to take that fish himself, and could not tolerate my success.

“‘You call that fly-fishing,’ he cried. ‘I call that poaching, and you a meansneak. Of course, I could have had him that way, or by means of a dozen similar tricks.’

“‘You would never have had him,’ I answered, in my haste, ‘not if you had fished for him all your life.’

“‘Then I would have gone without him,’ he stormed. ‘I fish fairly, I do. And people who cannot do the same, I am glad to be rid of. Do you understand me?’

“‘I am afraid I do,’ I was commencing humbly, but he cut me short, and pointed to the door.

“‘I will speak, that there shall be no mistake,’ he yelled. ‘I asked you here for company in my old age; I want to adopt you to make you my heir. But I find you far too much for me. I could not be comfortable with one so immensely clever. Go, and take your fish with you.’

“I went, and the speckled cause of my evil destiny, propelled by a vigorous hand, came flying after me. The housekeeper, evidently listening at the door, picked it up, with a happy smile.

" 'I will pack it for you,' she said, 'in some nettles. It is a nice fish to take home.'

"I was going to burst out myself—had it on my lips to consign the two-pounder to a place where his proper cooking would be a matter of seconds; but thought better of it, and so carried it away with me. It was all I had to show for my visit to my uncle, all I was likely to have.

"In six months he died, and left everything to his housekeeper. That is my story, gentlemen. I ought to be very fond of trout-fishing, eh?"

"Yet I can see that you are," said the bishop. He had been thinking for a few moments, and now spoke with a sort of determination in his genial face. "As fond of it as ever. Would you like a few days' good sport?"

"Yes! beyond all things; and No! for I have no time."

"That might be managed. Now listen. Like your uncle, I have some miles of a good water, and also, like him, am a duffer at fishing. I am not ashamed to confess it, for I have been engaged in the boot trade all my life in London," (Alas! for the bishop theory, it vanished at this), "but now am retired, and have a place a few miles from Aberystwith. I am on my way there now, and I ask you to come with me, and show me, if you can, how to fish."

There was a momentary struggle in the stranger's mind, and then he shook his head sadly. For duty was under the seat, packed up snugly in those leather cases—not so tightly, however, but that it could whisper in his ear.

The bishop (I must call him so), read his face, and his own grew more kind, if that could be.

"Now, look here. I ask no favour, and a few pounds are no great object to me. Say how many of your books you would reckon to dispose of in a week, and debit just so many to me. Now, will you come?"

I could not stay for the end, I had reached my own destination at Glan Dovey, and so, hoping for both their sakes that the bishop would have his way, I left them.

This is not all, although I might stop here; leaving the narrative one of those unfinished episodes such as so frequently occur, to those who travel much. It chanced, however, that some few years after, when the writer was, rod in hand, on a wild stream under Cader Idris, that another fisherman, accompanied by a lady, made his appearance. I did not take much heed of him, as he passed me with just a courteous salute, further than to notice that he had the bearing of one who knew what he was about, and although clad in rough sporting costume, to guess at his clerical calling by the white band encircling his neck. But towards the close of the day, we met again, and now he was alone, and looking troubled and perplexed, as he approached.

"I beg your pardon," he said, lifting his hat; and I saw that, although quite young, his hair had many a silver streak. "But I am going to ask you a great favour, for which this lonely spot must plead my excuse. My wife has sprained her ankle so badly that she cannot walk. I am not a giant, as you see, and it is two miles to the nearest hamlet. Will you assist me to get her there?"

Of course I would. I put up my tackle as I walked with him, and then we made, by crossing our hands together, what I think the children call a "king coach," and so bore the lady to Llanvihangel. She was only a light weight, and we got over the ground very well; and when we reached our destination, where a donkey-cart could be procured, her thanks, in a refined and gentle voice, were a sufficient reward; although I had lost the best hour of the day. All the time I had been puzzling over where I had met the husband before, but now he himself solved the problem.

"You do not remember me?" he said, smiling.

"I do, and yet I don't," I replied; "for I am sure this is not our first meeting."

"Forgive my egotism in deeming the tale worth a second thought. But did you ever hear of Reginald Fitz-Eustace Fipps, who had an evil genius in the shape of a big trout?"

In a twinkling it all came back—the tale told in the train—its unfortunate wind-up—and I was face to face with the seedy traveller of that day, but seedy no longer, and without those suggestive leather cases.

"Ah! It is you," I exclaimed, as we shook hands. "I remember now, but I should scarcely have known——" and here I pulled up short on the brink of a rude remark.

"Me in my altered circumstances," he supplemented, quietly. "No, I have much to be thankful for since then. I found a good friend that day."

My thoughts flew back in a moment to the fancied dignity of the Church, and found utterance in:

"You mean the Bishop?"

"Bishop!"

"I beg your pardon. He looked so good, so benevolent, that I fancied——"

"He was good," he answered, gravely; "and very good to me. I owe all I have to that retired London bootmaker."

"And so he died and left you his——"

"No, he is still alive, thank goodness!" he interrupted; "and long may he live to be a friend to the unfortunate. He took a liking to me, found me the means to pursue my studies for the Church, and his purse procured me the living, which I hold near here. Not a gift. He is too much a gentleman to place me under such an obligation. I am paying him in my own time. I am married—married to her who trusted me so fondly, waited for me so long. I am the happiest man in Wales to-day, and can afford to no longer regret that I caught that big trout. Will you dine with me this evening?"

DAVID FOSTER, OF ASHBOURNE.

IN MEMORIAM.

DAVID FOSTER, the famous angler-naturalist, now deceased was born in the year 1815, shortly after the great struggle at Waterloo. His birthplace was Burton-on-Trent, which was at that time a town of some eight or ten thousand inhabitants. The beautiful river, with its shoals of different varieties of fish, was the all absorbing attraction even in his early youthful days. His small figure became well known to the old fishermen and water-keepers who gained their livelihood upon its banks and bosom. Many a day did he spend in their company when he should have been at school. With him his piscatorial propensities seemed to expand, and every leisure hour was devoted to the close observation of the habits and haunts of fish. At the age of fourteen, however, his parents thought fit to procure him constant employment, he was accordingly placed in the surgery of a local surgeon. Preferring, however, to mix physic for fish, he deserted his post after a very short service indeed. His disgraceful conduct was, however, reprov'd by his parents, who next placed him in the shop of a confectioner, but the sweets here speedily turned to bitters when fishing was found to be out of the question. Several more trades were afterwards tried, but with similar results. Finally he was apprenticed to a jeweller, when he suddenly decamped, his parents not knowing his whereabouts for more than two years, and when at last discovered he was found amongst the fish-hook manufacturers at Redditch (the world's mart for fishing goods of every considerable description). Here he was in the employment of the late Mr. Allcock, father of the present head of the firm of Allcock and Co., to whom has been

awarded all the exhibition honours for many years past. Whilst here he originated several improvements in fishing tackle, which were worked out by the firm. During the fishing season he was in the habit of making excursions, which were limited only by the state of the exchequer. This course of life was continued for some years, during which time he had fished the most frequented reaches in England and Wales. The Dove, however, appears to have been his favourite stream for fly-fishing—its beauteous swims, eddies and streams have filled with rapture the souls of famous fishermen in days gone by.

After spending an entire summer upon its banks, he finally settled down permanently at Ashbourne, a few miles from the world-renowned dale which takes its name from the river. Here he dwelt up to the time of his death. More than forty long years has he been the mentor to whom the fly-fishers of the Midlands were accustomed to look for instruction.

Many long rambling excursions, both north and south, have been made at intervals during this period, nature being the book which formed his constant and never-wearying study. A born naturalist, he would converse for hours upon his favourite topic, viz., the lives, habits, and customs of insects, the various stages of the existence of the little winged creatures, their metamorphoses at regular periods were well known to him from long personal observation. Mr. Foster has left MMS. containing ample original matter for such a work as would be readily deemed a really valuable acquisition to angling literature. This it is proposed to publish by subscription in due time.

As the FISHING GAZETTE of June 28, 1878, affirms, Mr. Foster was the originator of several important improvements in fishing tackle, of which the following are the most important. In 1843 the eight-plait waterproof line, now in use throughout the world; in 1849, a machine for drawing or refining gut, which is a practice now resorted to everywhere; improvement in rails, rods, flies, and in short every individual branch of the anglers' equipage. The last few years of his life were devoted almost wholly to angling and to the perfecting of the fisherman's implements; and the new "acme" lines which have been so strongly recommended by the leading British and continental sporting journals since their introduction last fall, are in part fruits of his late exertion.

A rod upon an entirely new and original principle was completed when he was called suddenly away. The business has for some years past been managed by Mr. Foster's eldest sons, who will, of course, see that their father's last, and we believe his most important, inventions will be in due time brought out.

STOCKING THE THAMES WITH TROUT.

THE rearing-pond at Sunbury, in which were a number of trout that had been placed there over two years ago from the nursery of Mr. James Forbes, of Chertsey Bridge, was cleaned out for the purpose of putting the contents into the Thames on Friday last, April 29th. There were a number of gentlemen present to take part in the operations and the disposal of the fish, amongst whom were Messrs. Thomas Spreckley, F. G. Pearce, W. H. Brougham, John Knechtli, W. A. Crump, Arthur Benington, G. F. Spencer, F. H. Lemann, C. P. Wheatstone, H. J. Alfred, F. W. White, Leonard Gow, J. H. Morris, James Temple, Manners, &c., &c. The water having been lowered, the land-nets were in requisition, and the fish had to be taken out oddly. It was a somewhat difficult task, owing to the sharpness of the fish in evading their capture, and it took some four or five hours before the pond and ditches were cleared of their living occupants. The scene at times was somewhat exciting, and the result was above general expectation—the grand total representing 258 good, handsome fish, some measuring nearly nine inches in length.

The last winter destroyed a great quantity of fish, when the stock was frozen in, and in other ways there has been unavoidable loss. The fish were distributed in equal quantities between Kingston and Chertsey, those below Sunbury being turned in by Messrs. H. J. Alfred and W. A. Crump, and above by Messrs. F. W. White and James Temple. The Sunbury contingent were put in by Mr. Thomas Spreckley, close to the residence of Mr. E. Lukyn. It has been one of the most important days, as associated with the art of fish-culture, and now the place is undergoing a thorough clearing out, and with some necessary alteration to receive the fry of the real Thames trout, which are, at present, in the fish-house at Chertsey Bridge, and all will wish success to them during the period of rearing throughout the next two or three years. Thanks to Mr. James Forbes for what he is doing for the sole benefit of Thames anglers.

ANNUAL DINNER OF THE MAIDENHEAD, COOKHAM AND BRAY THAMES ANGLING ASSOCIATION.

THIS association occupies the most prominent position over all the other preservation societies in the Upper Thames, and carries on its work with indomitable energy and perseverance. In the matter of trout it has greatly distinguished itself by the introduction of considerable quantities year by year of fish varying in size from 2 lb. to 4 lb. each, and this last year it has turned in nearly 400 spotted beauties, several weighing 5 lb. and 6 lb. each. These fish are known as the Wycombe trout, and there could not possibly be a better one for the Thames, as they are not likely to stray away, which would doubtless be the case with the ordinary brook trout. Although a considerable sum of money has been expended, the committee consider it has been money well spent; and this is the opinion of one and all. The position of the association on the river is one of the prettiest portions of the Thames, and it is well supported by the proprietors of the various handsome mansions which adorn the banks. His Grace the Duke of Westminster, the noble owner of Cliveden, is the president. Mr. W. H. Grenfell, M.P., of Taplow Court, is not only one of its vice-presidents but takes personal interest in the success of the association, and for the last three occasions has presided at the annual dinner. There are others, such as Lord Boston, Earl Grosvenor, Viscount Stormont, Sir Roger Palmer, Mr. C. C. Ellis, and Mr. V. W. B. Van de Weyer, who are liberal supporters and vice-presidents of the association. The offices of the association are at Skindle's Hotel, Maidenhead Bridge, one of the most famous and best patronised hotels on the banks of the Upper Thames. Most of the London members set apart the day of the annual dinner to be entirely appropriated as a holiday, and one of them—Mr. B. Perelli-Rocco—annually entertains a few of his friends to an Italian luncheon, which, on this occasion, was put down as "asparagus and Italian roast," at his comfortable and hospitable snugery at Bray, which was thoroughly enjoyed. The hour of five o'clock was set down for the commencement of the dinner and covers were laid for forty guests in the Guard's Room, which is only separated from the river by a pleasant grass lawn and most appropriate for an angler's feed. The visitors began gradually to arrive, and Mr. Hoare, the intelligent proprietor of the hostelry, with his staff of waiters, was actively diligent in preparing for the scene which was to follow. There was a capital menu placed for each visitor, and on being scanned over previous to the dinner was unanimously voted as very satisfactory. Shortly after the time fixed Mr. W. H. Grenfell, M.P., took up his position as Chairman, and he was quickly supported by Messrs. Thomas Spreckley, T. B. Sharpe, J. H. Clark, Captain Styan, Captain Haynes, Captain Sawyer, W. H. Brougham, A. Sharpe, J. D. Oakley, B. Perelli-Rocco, F. H. Lemann, C. P. Wheatstone,

P. Geen, W. Morris, R. A. Wood, E. Gardiner, J. P. Wheeldon, &c., &c. Under the personal superintendence of Mr. Hoare the excellent dinner was quickly served up, and as each variety was produced there was a general expression of approval—the cooking was first-rate. The waiting was excellent, the wines were of the choicest vintages, and the favourable opinions which were thus bestowed on the proprietor, were richly and thoroughly deserved. As there was no delay in the service of the dinner—and it takes sometime to do justice to about twenty items on the menu—the business portion of the evening soon commenced, and the order to “smoke” from the presidential chair was cheerfully obeyed. Mr. W. H. Grenfell, M.P., in the opening loyal toast, referred in very graceful terms to the great national loss the country had sustained in the death of Lord Beaconsfield, who was endeared to our beloved Queen, and, apart from politics, held the highest position in every Englishman’s heart. He noticed, in connection with this toast, the sympathy of the Prince of Wales to the sport of angling by supporting the proposition of Mr. Birkbeck for National Fisheries Exhibition and volunteering to open the same, which he had altogether carried out. He had, therefore, great pleasure in asking those present to drink the healths of “the Queen and the Prince and Princess of Wales,” which was most loyally responded to. The next toast, “Success to the Maidenhead, Cookham, and Bray Thames Angling Association,” was given by the Chairman in a practical and excellent speech, alluding most forcibly to the dangerous speed of steam launches, by those who interfered with the sport of the anglers—the evils arising from having too many swans on the river, and the necessity of protecting the undersized fish. The society was doing a good work, and there was no necessity of detailing what it had done, and the state of its financial position, as they were given in the report which had been presented to each of those present. Captain Styan proposed “the kindred Association,” expatiating largely on the success of their own Association, and in its sympathy with the one at Windsor. He regarded the work done by Mr. Spreckley and Mr. Brougham, in the Thames Angling Preservation Society, of an important character, and also by Mr. Butler with the Reading Association, and Mr. Geen of the West Central Association. The toast was replied to by those gentlemen, Mr. Spreckley referring to the recent conviction under the Fresh Water Fisheries Act, as one of great importance, showing there is no difficulty of any one enforcing it during the close season. The other toasts were the usual ones on these occasions, and when brought to a termination the evening was regarded as having been pleasantly spent, and the Association going on prosperously. Previous to the dinner, the annual meeting was held under the presidency of Mr. T. B. Sharpe, who is a devoted friend of the Society. Mr. J. H. Clarke, a valuable member of the Committee, in the unavoidable absence of Mr. W. G. Day, acting as secretary. The business was of a formal character. Mr. C. P. Wheatstone was elected on the Committee, and the balance sheet exhibited the sum of £43 10s. 10d. in the hands of the treasurer. A vote of thanks to Mr. T. B. Sharpe ended the proceedings.

ANGLERS should always be provided with something to take away the swelling and poisonous effect of the bites of insects. They should also have with them something to apply to a cut or sprain. Pond’s Extract reduces the swelling and inflammation, stops bleeding and pain, and hastens the healing process in case of any wound or sprain; and it has no equal for application to the bites and stings of insects. Therefore never go on a fishing excursion unprovided with a bottle of Pond’s Extract. It is for sale at all chemists, at 2s. 3d., 4s. 6d., and 8s. 6d. per bottle.—[ADVERTISEMENT.]

TIRED HANDS AND ARMS.—Edson’s Electric Armlets and Wrist Bands Invaluable for anglers and gun sportsmen and highly recommended for all persons having tiresome writing, sewing, or music practice. They give wonderful energy and strength, enabling the wearer to accomplish tedious work with steadiness and comfort. Price 2s. 6d. per pair, silk web and fine steel clasps. Sent to any address on receipt of P.O.O. payable to J. Edson, the Electric Fabric Co. Patentees, No. 1, Charlotte Street, Bedford Square, London W.C.—[ADVT.]

NOTES AND QUERIES.

RARE AND CURIOUS FISHES OF DEVON.

BLUE SHARK.

(Continued from page 185.)

<i>Squalus glaucus</i>	Linnaeus.
” ”	Gray, Catalogue British Museum, p. 125.
<i>Carcharias glaucus</i>	Cuvier.
” ”	Fleming, British Animals, p. 167.
” ”	Jenyns.
” ”	Yarrell, British Fishes, 2nd edition, vol. ii., p. 498.

THE blue shark, according to Couch, vol. i., p. 28, is a restless, wandering fish, which migrates to our coasts in summer, and is even found at that time to stray so far north as the Orkney Islands, but it leaves us again on the approach of winter; and if, with the commentators on the Halicution of the poet Oppian, we are to believe this fish the “glaucus” of Elian, the season when it abounds with us is the time when it has disappeared from the seas of Italy. I have known it thrown on shore in Cornwall so early as the first week in March, but it is rarely seen before the month of June, when its arrival is made known by the injuries it inflicts on the nets and lines of the fishermen.

Mr. Buckland, in his familiar History of British Fishes, p. 220, states, “The blue shark is an inhabitant of the Mediterranean, and is the species frequently seen following vessels. It migrates annually to our shores, during the pilchard and herring season, and is met with most frequently on the coasts of Devonshire and Cornwall. The whole of the upper parts are a slate blue, the under side nearly white, and it mostly attains in length six or seven feet.”

Mr. E. Parfitt, in his Fauna of Devon, part ii., p. 42, says, “Mr. Reading informs me that a specimen was taken off Plymouth;” and Mr. Yarrell says, “More frequently on the Devonshire and Cornish coasts than on any other part of the British Islands.” A small specimen was taken off Start Point, July 4th, 1871, and sent to Mr. Gosden, fishsalesman, Exeter, a cast of which was made for the Albert Museum. A half-grown specimen, as mentioned by Bellamy, was taken in June, 1839, at Plymouth.

This specimen was sent me by Mr. J. Lemon, jun., of Teignmouth, and was cast for the Albert Museum by Mr. F. P. Perkins. At this date a fine crab shell, covered with oysters, was also presented to the Museum, which I received from Torbay.

FRANK GOSDEN, Exeter.

A KERNELLESS NUT TREE.—Fair Rosamond was confined in the monastery at Godstow, near Oxford, and the local tradition is that in consequence of the ill-usage towards the unfortunate lady, a nut-tree growing amidst the above ruins produced nuts without kernels. I don’t, of course, believe it. Filberts are nothing like so much cultivated in Kent as formerly, cobnuts are grown instead, many of which are plucked green and sold to the dyers.—F.

GREGORY’S SPINNING BAITS.—“The Gregory,” the “Flexible Cleopatra,” the “Oxford,” and the “Colorado,” pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory’s registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name “Gregory” is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived. Address, James Gregory, Vyse-street, Birmingham.—[ADVT.]

TO ANGLERS.—W. J. Cummins, Fishing Tackle Maker, Bishop Auckland, is now prepared to forward to anglers his Illustrated Catalogue, which is not only a Trade List but is interspersed with practical hints, useful directions, and valuable information gathered by the river-side from twenty years’ experience. The stock consists of his unrivalled Salmon, Trout, Grayling, and Pike Rods, Lines, Reels, Baskets, Artificial Baits, Fly-books, Landing Nets, Gaits, and last, but not least, his celebrated Trout Flies, which for killing powers stand unequalled. Every article kept in stock is of the very best description.—[ADVT.]

GEORGE JAMES EATON, of Starkholmes Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[ADVT.]

MRS. F. Y. BROCA, Artificial Fly Dresser, 4, Mill-street, Conduit-street, Hanover-square, London, W. A stock of best flies always on hand. Flies made to pattern. Lessons in fly making given.—[ADVT.]

RIVER REPORTS.

MID-THAMES.

"My business in the State
Made me a looker on."—SHAKESPEARE.

I have simply nothing to report in the way of sport from the Upper Thames. The river is in grand trim for trout work, and spinning men cannot do better than at once try their hand before the rush of pleasure-folk spoils the sport.—"MARLOW BUZZ."

Thames (Halliford).

The weather has now taken a turn for the better, and the river is in good condition for trout; the fish are now showing up more freely; all that is wanting is customers to come and catch them before the weeds grow too high. The takes during the week are as follows;—J. Benham, Esq., fishing with me took a trout of four lb.; G. Palmer, Esq., fishing with me to-day took a trout of 6 lb. 12 oz., and lost another beauty.—GEORGE ROSEWELL.

Thames (Windsor).

Water is slightly discoloured after the recent showers we have had in the Thames Valley, but unless weather is more balmy very little will be done with these mysterious Thames trout; up to the present all the big fish refuse to patronise the surface. Should we get a decided change some of them will come to grief; as it is, what was once the "Merry month of May," undoubtedly so far more like the "ugly month of March." A small fish between 3 and 4 lb. was had on Sunday last by a stranger at Boveney, and the Rev. Fardell, at Bray, has had a brace, but only to return; he has been having runs with splendid fellows, but all of them managed to cheat him. From his taking a good many jack lately, up to 11 lb., on gut tackle, it would appear Bray is well up in the matter of jack, and if only let alone till about August some good sport might be had in those waters.—R. B. BAMBRIDGE.

Thames (Teddington).

Clear sharp stream, and good order for trout fishing. A gentleman by the name of Mr. Adams was fishing on the weir and caught a trout weighing 9 lb. $\frac{3}{4}$ oz., and several have been seen, and one is supposed to be about 12 lb.; one was hooked with a fly and broke away; the one that was caught was on April 29.—J. T. BALDWIN.

Coquet (Cumberland).

On the 27th and 28th April, W. E. Lawson and C. Lawson, of Longhirst Hall, had splendid sport. On the 29th, J. Stott and T. Stott, of Bethal Barns, killed each a good creel. On the 30th, the Hon. C. A. Parsons killed good creel; R. F. Laing and J. D. Milburn came in on the 2nd May (but the river was flooded and not fishable till 4th), and killed each good creel; F. Milburn arrived on the 4th, killed a splendid creel. Since the flood the trout are in good condition. If the weather continues fine there will be splendid sport.—A. GLASS.

Dove (Derbyshire).

Fish have been rising well this week and the river has continued in rare order for the fly. They have been a lot of good takes, and anglers might have done even better had they not been troubled with an immense quantity of flies on the water. Upon the clear mountain streams of Derbyshire the modern notion of using one lot of flies throughout the entire season from March to October is not found to answer. The hare's ear and yellow may prove a killing artificial in Scotland all the year round, as also may the coch-y-bondhu in Wales, but these flies are often rejected by our knowing English trout of the Midland and Northern shires. Daily experience shows that a knowledge of entomology is requisite in order to ensure success on the Dove and kindred rivers, and to meet this I am glad to welcome the recent book published by Mr. Ford, of Caistor, Lincolnshire, on the subject. It is a book in season and of the right sort, and ought to be on the table of every rodster in the kingdom. The flies which have killed best during this week are the bumble or tassell fly, the March brown and the Turkey brown. The last-named has accounted for the largest dish—one of six brace—taken near Birdsgrove. Four and a-half brace have also come from Mayfield with the same lure, and there have been no end of dishes of three brace and more with the March brown and the bumble.—THE SPLODGER.

Exe (Exeter).

The weather during the past week has been truly spring, with a slight touch of proverbial April, the showers not being wanting; at the same time they have not been lasting, but the surrounding country shows unmistakably the good already done with what little we have had. The glorious sunshine and the genial south and south-westerly winds have brought out myriads of various kinds of flies, upon which the few speckled beauties have been glutted, and the anglers' creels have not been so well filled with the real (*salmo fario*) article. But the "*salmo salmulus*" are so very plentiful that numbers are daily taken, and are spoken of as trout in conversation, but I have not seen many shown. I wish we could speak of trout here as they can on the Torridge, of which I enclose a short report. Salmon on the lower waters, are getting more plentiful, viz., the net fishermen are doing much better. Some splendid salmon, bass, pollack, shad, and flounders have been taken in the estuary, also a few eels, lobsters, and crabs from the rocks called the Exeters are coming very fine. Prawns have not yet made an appearance.—FRANK GOSDEN.

Exe (Tiverton).

The river continues low and clear, and very few fish are being taken, with small blue upright, aller bud and olive dun. There will be no good sport until we have had rain to raise the water.—WM. MUDDFORD.

Suir and its Tributaries. Clonmel, (Ireland).

We had a little rain on Sunday, which brought down a nice flush, and coloured the water, but did not rise it perceptibly, so that the salmon fishing has not been much improved since my last report. On the upper waters we hear of but two fish being killed by Thomas Philan, of Kilmanahan, on Lord Donoughmore's waters—one at Newcastle and the other at Knocklofty, below Clonmel, which is always best when the water is at its lowest, there have been a good many fish killed, scarcely any day proving a blank. Dudley's (being free) and the Bridge stream (partly preserved), also Poulakerri (preserved), being the last stand. Messrs. N. F. Hutchins, Richard O. Donnell, also James O'Donnoghue, Tim Russell, and Ned Buttlar, had each their share of fish, and what seems curious, all the fish were the same weight, namely, 12 lb. each. One fish only differed in weight, being 14 lb., killed by Tim Russell in Dudley's on Saturday. The cotmen at Clonmel only got three last week, as the water ran so low. Price per lb. 1s. 6d. The trout-fishing of the Suir was at a standstill. Owing to the eel fry running, on which the trout feed, I refuse to look at a fly. Still, on the tributaries, some good sport was had. Dr. Hewson got 17 at Glenary; Mr. Bradford 19 half-pounders at Grove; while Tim Fletcher and friend got 9 $\frac{1}{2}$ doz. small trout on Sunday. The best flies are wrens and black hackles.—DORA.

Torridge.

I wish the river Exe would but afford us one fiftieth part of the sport obtained on the Torridge. For some weeks past the news has been wafted far and near of the wonderful catches and heavy creels made at that portion of the river near Woodford Bridge, which is distant from Holsworthy seven miles; but by dropping a postcard to the proprietor, Mr. Blake Woodford Bridge Hotel, Brandiscorner, will secure a trap, at any hour, at the station, at whose hostelry numerous disciples have taken up their abode for the Easter holidays, after taking the bait, or hints, I have thrown them from time to time on this splendid trout-fishing moorland stream. Many thanks have I also received from successful strangers, and still the report is most encouraging. Creels of from two to three dozen in half as many days; and Mr. Puddicombe, of scholastic fame in this city (Exeter), informs me that he took no less than three dozen and ten trout in two days, followed up by double figures day after day during his stay. Beside fishing, there are some beautiful drives and picturesque scenery and bracing air, and for angling tourists who would wish for good sport, free from pot-hunting sportsmen, Woodford Bridge for me, who can commence his luring little game within half a minute of the hotel in free water. Numbers of salmon have taken the trout flies, and of splendid condition.—FRANK GOSDEN.

Exeter.

P.S.—A gentleman from the Clifton College, Bristol, took forty-seven trout of fine size and quality in one day's fishing. The same gentleman has taken several baskets of three dozen and thereabouts per diem.—F. G.

Waveney (Beccles).

The river is now in as good order as the most ardent angler can desire, and should the weather remain as favourable as it is at present, the fishing prospects could not be better. On Monday and Tuesday last the wind veered round to the N.E., but it has once more returned to the S.W., and is now quite mild and genial. There have been since, I wrote last, a large number of what even we consider good takes of roach, two or three hours' fishing producing from 7 to 12, and in one case 15 lb. of roach. Mr. Borrett, on Monday morning last took thirty good roach, but were not weighed. Pike and perch have now finished spawning here, and I think that roach will this year be much earlier than usual, as they are getting very forward now, and appear to be working up to the upper reaches of the river and into the weedy shallows in readiness for spawning.—C. B.

Wye and Derwent (Derbyshire).

The weather during the past week has been very rough and blustering with north east and west winds prevailing nearly the whole time, which has made angling anything but an enjoyable occupation; but still, with all these drawbacks, there have been many anglers out on most of our Derbyshire streams, and their takes, as a rule, have been very fair considering the disadvantages they have had to put up with from the weather. Five and a half brace of nice sized trout were killed off of the Derwent last Monday with bumble and spider flies, there were also baskets from three to six brace per angler killed off of the Wye and also off the Rowsley water during the week. The Derby trout killer has been the death of some handsome dishes of good-sized trout off of the Derwent during the week. The bottom fishers on the Derwent have only killed a few fish during the week, with worms for bait. They are anxiously waiting for the ant eggs coming in, which will be in about another ten or twelve days, then good sport is generally had for about a fortnight, as trout are particularly fond of ant eggs. I am truly sorry to say that the grayling have that fearful disease prevailing amongst them again, both on the Wye and on the Derwent. I have seen a number of them on both these rivers, both dead and dying. Sport, both in the ponds and brooks has been first-class. One gentleman writes me that he killed 35 $\frac{1}{2}$ brace of good trout, fishing from 10 a.m. to 8 p.m., every fish being killed by my little gold spinner; and the same afternoon (last Saturday) there were more than 26 brace more trout killed on the same ponds by the same kind of flies. I have also received another letter from another gentleman who has been killing a great quantity of trout with the small green green drake, spider, and dyed hackle flies, with gold twist—the green drake killing the most fish. The night line party have taken a few trout and eels out of the deeps with lob-worms for bait. I heard the cuckoo and the landrail or corn-crake for the first time this year on the 1st of this month.—GEORGE JAMES EATON, Starkholmes, Matlock Bath.

Yare (Norwich).

Since my last report, affairs respecting angling have taken quite a turn. The wind and the weather generally have been extremely favourable, in fact, almost all that an angler could wish for. Numerous reports of good takes have come to hand almost every day, and in some respects the samples shown have been exceedingly fine. The East Anglian Club had a scratch match, at Coldham Hall, on Thursday, April 28. Ten members entered for it, the entire number showing up. The day was gloriously fine, and the fish were well on the feed. The entire catch of the ten members weighed 5 stone, and would probably have very much exceeded that had they not been disturbed by one of the largest sea-going tugs towing some vessels to Yarmouth. These craft do a deal of harm,

not only in spoiling the sport of the anglers, but also the amount of surf they make with the paddle-wheels washes away the banks of the river to a great extent. The names of the competitors who obtained prizes are as follows:—First, Mr. Geo. Hart, 16 lb. 8 oz.; second, Mr. Geo. Cubitt, 13 lb. 8 oz.; third, Mr. A. Palmer, 9 lb. 8 oz.; fourth, Mr. Geo. Webb, 7 lb. 4 oz.; fifth, Mr. R. Palmer, 6 lb. 8 oz.; sixth, Mr. W. Hick, 6 lb. 2 oz. The majority of the fish taken were roach, the rest being a species of hybrids, varying in weight from 4 oz. to 15 oz. each. I wish just to add that W. Miles, Esq., of Birmingham, who is a member of the Bordsley Waltonians, and who was on a visit to the Fisheries Exhibition, accompanied the members on their outing, and fished with them during the entire day. He likewise informed me that a more beautiful take he had very rarely, if ever, witnessed. G. C. Davies, Esq., of the Yare Preservation Society, was also present at the weighing-in, and expressed himself delighted with the show of fish. He also said this was truly a "Norfolk scene," the picturesqueness of the spot adding much to the effect. I am pleased to be able to report this week that Mr. Alfred Palmer, secretary to the club, obtained a "diploma of honour" for his exhibit of two live broad-nosed eels at the Fisheries Exhibition.—**ANGLER.**

P.S.—I had quite forgotten to say the fish taken in the match were exhibited in the Fisheries Exhibition on Friday, and were very much admired.

Yore (Yorkshire).

A great number of anglers have been out during the past week, but none of their baskets have been very heavy; the blue dun has been the favourite fly, and the march brown has also been accountable for a few fish. I have also been informed that a brace or two of trout have been taken with the creeper, but it is not well on the water yet. This wind still keeps in a cold quarter for the time of the year, and the river has run down to almost its summer level.—**FRANCIS M. WALBRAN.**

SCOTCH NOTES.

(From the *Scotsman*.)

LOCH TAY.—On the Kenmore reserved water Mr. Gow, the Earl of Braedallbane's keeper, killed, on Thursday, a salmon weighing 25 lb.

THE TAY.—On the Strath Tay waters heavy baskets of trout were got last week with fly, a number of the trout weighing over 2 lb. each, the favourite lure being a dirty-yellow bodied, woodcock winged, and red hackled fly. The salmon lies are still very unproductive, as the river is running too low. On the Pitnacree Pool, Mr. Hugh Mackenzie, Maskellyn House, Aberfeldy, killed on Friday a lively fish weighing 14 lb.

LOCHLEVEN.—Some very fine sport was got on Lochleven on Saturday. The weather was cloudy, with a fine steady easterly wind and rain in the afternoon. The following were the reports from the boats engaged:—Mr. Miller, Edinburgh, seven trout, 8 lb.; Mr. Rhind, Edinburgh, seventeen trout, 13½ lb.; Mr. Gibson, Glasgow, six trout, 7 lb.; Mr. Usher, Edinburgh, eighteen trout, 14 lb.; Mr. Currie, Edinburgh, twenty trout, 13 lb. 12 oz.; Mr. D. W. Scott, Duddingstone, fourteen trout, 13½ lb.; Mr. Tod, twelve trout, 10 lb. 12 oz.; Mr. Wilson, Moffatt, ten trout, 8 lb. 8 oz.; Mr. Knox, Cambas, nine trout, 7 lb.; Mr. Gordon, seventeen trout, 15 lb. 12 oz.; Mr. Dickson, Glasgow, thirteen trout, 14 lb.; Dr. Winchester and Mr. Cornillon, eighteen trout, 19½ lb. Splendid sport was got by Mr. Townsend, of Glasgow, who brought in the best basket of the season—forty-six trout, weighing 43 lb.; Mr. Wood, Leith, had twenty-six trout 23 lb. and Mr. Wallace and Mr. Anld, Glasgow, twenty-four trout, 24 lb.

THE TWEED—KELSO.—During the past week salmon anglers have not had any sport on the Teed, but a few trout anglers have been fairly successful on some casts. In the Kelso district, the baskets have been exceedingly small, but in the neighbourhood of St. Boswells better sport has been obtained. On Wednesday, a large number of anglers were out, and on Maxton water, James Blake, Kelso, killed nine trout, which weighed about 14½ lb.; and John Rule, Kelso, had about 8 lb. In the Bemersyde water, on the same day, Mr. George Turnbull had 10 lb.; Mr. John Steel, 8½ lb.; and Mr. J. Allan had also a fair basket. On Saturday several dead and dying salmon affected with the fungus disease were observed at different parts of both Tweed and Teviot. Yesterday the Tweed and its tributaries were slightly affected by the heavy rains of Saturday night and yesterday, and should the streams continue to increase in volume, good sport may be looked for.

THE BLACKADDER.—Fishing at this fine trouting stream opened on April 1st, and it has during the month been practised by those who like the sport. The takes have, however, been very poor, as the water is now so small, and the weather has been bitterly cold. The spring competition of the Greenlaw Fishing Club took place on Saturday, and the following were among the highest weights, which, it may be mentioned, were the lowest ever given in the history of the club:—1, Mr. Leitch, 4 lb. 8½ oz.; 2, G. Renton, 3 lb. 2½ oz.; 3, J. Moscret, 2 lb. 3 oz.; 4, J. Foster, 2 lb. ½ oz.—*Scotsman*.

BAKED BREAM.—The Devonshire people have an excellent mode of rendering sea bream a tasty dish. Take a couple of good-sized fish, scale and clean; then stuff the bream full of veal stuffing; place in the dish some milk, with certain pats of butter laid upon the fish; then put a thin crust of paste round the sides only of the baking platter or dish, and clap into the oven. I know of no way to equal this. Some persons place a few potatoes in the dish among the milk.—**SPOTS.**

A "MIXED" PERFUME.—Some years before the Messrs. Suttons', of Reading, had achieved cosmopolitan renown, it was customary to place, in summer time, a lot of beautiful flowers, "all a-growin', all a-blowin'," in front of their shop in the Market-place. But the perfume got rather "mixed" when the Cocks's were a-brewing their sauce, if a south-easterly wind happened to be "blowin'" too! Now, I don't know anything about the successors of the John and Charles Cocks of five-and-thirty years ago, but if either of those gentlemen had been now alive, we should certainly hear of but one sauce from Reading, and that one would be "Cocks'".—**AULD LANG SYNE.**

SPORT AT LAKE CONON, ALGLESEY, DURING THE PAST WEEK.—On April 26th, Mr. Jones, Holyhead, had three trout weighing 2½ lb.; Mr. Owens, nine; Canon Jones, seven; Mr. Edwards, nine. On the 27th Mr. Edwards, Holyhead, and friend, took twelve (some very fine trout); Canon Jones, nine (he lost a three-pounder while spinning); Mr. W. Hughes, four (weighing 2½ lb.); Mr. Owens, four. On the 29th Mr. W. Hughes, while fishing from the shore, took fifteen, weighing about 4 lb. They were all taken with either a minnow or fly. The weather was everything that could be desired, and after this rain much better sport is anticipated.—**M. H.**

THE NATIONAL FISHERIES EXHIBITION.

THE present week, which is the last of the exhibition, has been almost entirely devoted to the "popular" element. The price of admission has been sixpence, and a large number of special fishermen's and workmen's tickets have also been issued. The results must have more than realised the expectations of the committee. The attendances in the daytime have been very large, while in the evening the exhibition has been fairly thronged with visitors from all parts of the county and district. The Great Eastern Railway Company, with their usual enterprise, issued direct tickets to the exhibition from London, Lowestoft, Yarmouth and other places, and the public have been quick to avail themselves of the advantages offered. It may be mentioned that on Monday nearly 4000 persons obtained admission, while on the following day between 2000 and 3000 excursionists arrived from Yarmouth and Lowestoft and Cromer—the great fishing districts of the county of Norfolk. Meanwhile preparations have been made for bringing the affair to a fitting conclusion on Saturday next. The Duke of Edinburgh has been unable to accept the invitation of the President to distribute the prizes and awards, but he has, through Colonel Colville, written a letter expressing his deep interest in the objects of the exhibition. In his absence Earl Ducie, the Chairman of the Commissioners, will preside at the ceremony, which will take place at twelve o'clock, the prices of admission being half-a-crown. The Sheriff of Norwich will then entertain the committee and a select company at luncheon, and by the close of the day the Fisheries Exhibition of 1881 will be a thing of the past. No word of ours is needed to emphasise the complete success of the affair. The committee have already been overwhelmed with thanks and congratulations, and the triumph they have achieved is a guarantee that the exhibition will not be the last of its kind. The angling and fishing interests have been substantially benefitted and encouraged, the progress of science and invention has been abundantly illustrated, and the inhabitants of the eastern counties have been provided during the past three weeks with a very pleasant form of entertainment. Nothing more can well be said, and nothing like as much can have been expected by the promoters of the undertaking.

We have promised to give our readers some account of the departments associated with the marine fisheries, and illustrating the social condition of the fisherman. As they are subjects not strictly on the line of the *FISHING GAZETTE*, a brief and compendious sketch will be all that is necessary. First of all, however, a few general features may be noted as possessing a passing interest. It may be mentioned that Mr. Moreley brought the series of scientific lectures to a conclusion with an additional account of deep-sea dredging. Mr. Moreley acted as naturalist to the *Challenger* in her recent expedition, and was able to illustrate his lecture by a series of excellent designs. He described some of the luminous fish and polyps which had been brought up in the nets. One of these was the representative of the angler fish—the skull of which is to be found in the exhibition—and which possessed a phosphorescent lure for attracting its prey. It is worth noting that among the recent additions to the exhibition has been a splendid specimen of the Swiss lake trout, weighing about 6 lb., which has just been captured at Trowse Mills, near Norwich, and proves to be one of the original stock placed in the river by Mr. Colman, M.P. Its present *habitat* is in one of the Marquis of Exeter's tanks, where it has for companions two specimens of *salmo ferox* and *salmo fario*. In addition to the fishing and shooting boats mentioned last week, we may refer to the exhibit of the Berthon Boat Company, who show a handy portable boat, fitted with air-tight compartments and exceedingly roomy; Messrs. Cording's portable boats; and the quaint coracle in use on Welsh rivers—a survival from very

ancient times. Mr. Loynes' model of a fishing boat, to be employed in excursions on the broads, is a very ingenious affair, being fitted with a tarpaulin and supplied with bedding, cooking apparatus, &c. Mr. Loynes fixes the price at £18, an extremely moderate demand. Messrs. Downes, of Norwich, have obtained a bronze medal for anglers' outfits, which are shown on fully dressed figures, their specialty being the "Norfolk Fishing Suit." We come now to the classes referred to above. Among the most scientific, if not the most interesting of the exhibits, is the invention entitled, "Knott's Patent Refrigerating Car," for preserving fish during long journeys by rail or otherwise. It is such a marvellous example of skilful adaptation as really deserves a notice to itself. Mr. Knott has observed the deterioration which fish undergo by freezing, and he has therefore patented a process by which a constant stream of pure cold air is secured without unduly lowering the temperature. Mr. Knott has adapted his invention for use on trawlers, &c., and he trusts to be able to introduce it thoroughly to the public. He has been awarded the £20 prize given for the best refrigerating van, and has received further recognition from the jurors. The Lifeboat Section, which may next be taken, is a very full and attractive one, especially to the local public and the dwellers on the eastern coast. The first exhibit which claims our notice is that of the National Lifeboat Institution, which, in the space outside the Exhibition, shows a specimen of its celebrated self-righting boat, with gear and fittings complete. It also exhibits models of the same class of vessels—including the two exquisite designs mentioned last week—the models of an improved fishing-boat with covered deck, for use on the Scotch coast; models of various styles of boathouses; a wreck chart of the United Kingdom, for use for showing the lighthouses and the precise spots where wrecks have occurred, and other objects of interest. It is altogether a grand exhibition, and testifies to the splendid work in which the Institution is engaged. A model of the Yarmouth lifeboat—which is not self-righting, but has, nevertheless, done good service—is also shown, and also a design for a new lifeboat possessing great power of self-righting, by W. Hayward, of Norwich, for which he has received a diploma. Next in importance comes the Trinity House collection, which consists of models of the old Eddystone and the Wolf Rock Lighthouses, a fine model of a lighter off the Goodwin Sands, and designs showing the various lights, signals, buoys, &c., employed in warning the mariner of the dangers that beset him, and guiding him safely to port. Life-saving apparatus in great variety, including rockets, storm signals, &c., is also shown; but we have no space to note the heavy features associated with this part of the exhibition. We pass now to the grand display of objects specially connected with our marine fisheries, including models of trawlers, trawling apparatus, drift nets, &c., although here again a brief summary will be all that our space and the interests of our readers will permit. The grand feature is, no doubt, the magnificent collection of models of trawlers, many of which are unequalled for finish and delicacy of workmanship. An invention, however, which claims a word of special notice, is the improved trawling apparatus, shown by Mr. J. W. De Caux, of Yarmouth, which has obtained (in addition to the prize at the Berlin Exhibition) an award of £100 and a diploma. The special advantages of this apparatus have been estimated by Mr. De Caux as follow:—1. It goes upon wheels which roll over, and are not dragged through, the ground. 2. The trawl-beam can be carried at any height from the ground, and it is fixed to, or unfixed from, the wheels, without difficulty or danger. 3. The ground-rope is fitted with rollers, to facilitate its progress over the ground. 4. Inside the net a smaller net is fixed so as to form a funnel to prevent the escape of fish. 5. The cod end of the net is made so that when fishing the meshes are kept

widely open "to allow immature fish and refuse to escape therefrom." 6. At pleasure the net can be disconnected from the trawl-beam at the bottom of the sea, and can be shut up and brought to the surface separately from the trawl-beam. 7. Rollers are placed between the stanchions of the vessel for the bridles and trawl-rope to work over. 8. This apparatus works more easily and more readily than any other trawling gear. 9. In calm weather it fishes when vessels fitted with the ordinary trawling gear are virtually at anchor. 10. In breezy weather only about half the ordinary quantity of canvas is required, and the crew of the vessel, therefore, is saved great trouble and risk. 11. It saves nearly half the ordinary wear and tear of canvas and rope. Coming to the models we are at once attracted by the splendid and costly specimen of a trawler with several improvements exhibited by the Castle Steel and Iron Works Company, Milford Haven, which has been awarded a silver medal, and would doubtless have carried away the palm from every other exhibit had it not been of somewhat too luxurious a character. Mr. W. Jarvis, of Anstruther, has been awarded the special £50 prize offered by Scotch members and others for the best model of a steam fishing-vessel for the North-east coast or long-line fishery. A very complete and handsome specimen of a trawler with her nets, rigging, gear, &c., elaborately shown, is to be accredited to Messrs. Sims and H. Tooze, of the Hull and Grimsby Fishing Vessels Insurance Society. This has been awarded a £10 prize and a bronze medal. Mr. Jeckells, of Lowestoft, has two interesting exhibits, one showing a trawler taking in her nets, and the other being a representation of the formidable "devil" itself, attached to a Dutch trawler and placed so as to sever the nets of an English vessel that is going hard by. We forbear to make the usual reference to this exhibit. Mr. Burwood, of Lowestoft, has a handsome glass case, including models of two Lowestoft trawlers at work on the open sea, their nets, &c., being clearly shown in the water beneath. This ingenious piece of mechanism was much admired by the Royal party, and the exhibitor has been awarded a silver medal. This class also includes models of Deal lugger, gentlemen's pleasure and fishing boats, which we have already noticed, and other minor features, having an interest of their own. There is another department of the exhibition devoted to fish products, &c., in which the far-famed Yarmouth bloater plays a conspicuous part. Models of fishermen's cottages (for which the Secretary, W. Oldham Chambers, Esq., takes a prize) and models of fish-curing establishments have also a position among the exhibits, although they scarcely come within the range of the FISHING GAZETTE. One special feature we find ourselves once more unable to notice, and that is the essays, for which some very handsome prizes are offered.

The awards of the judges have not yet been given in, and will probably not be declared till Saturday. We must therefore reserve them for a brief final notice. The supplementing awards, which were not given in last week's issue are as follows:—

GOLD MEDAL.

Barnard, Bishop, and Barnards, and diploma for Oyster Culture Pond

SILVER MEDALS.

Byram Littlewood, Huddersfield; Elijah Farrow, Lower Sherringham, for Model of Lugger and Lifeboat, cut out with a knife.

G. Read, Deal, for system of Signalling.

W. B. Hovell, Norwich.

R. B. Marston, proprietor of FISHING GAZETTE, for Fish Baits, &c.

F. T. Moore, Liverpool, for "Angler" Fish Head.

BRONZE MEDALS.

David Houghton, Norwich, for 14 lb. Carp.

John Loynes, Norwich, for Fishing Boat for the Broads, &c.

DIPLOMAS OF HONOUR.

Mr. Silk, Pisciculturist to the Marquis of Exeter.

W. Blakey, Norwich, for Foster and Greenhill's Fire Extinguisher.

A. H. Palmer, for Broad-nosed Eel.

R. R. B. Norman, Yarmouth, for 4 lb. Perch.

J. B. Pearce, Norwich, for Barbel.

Edward Nichols, Norwich, for Roach's Teeth.

J. B. Petre, Esq., Westwick-house.

T. R. Sachs, for Stuffed Fish.

Waveney and Oulton Fisheries Protection Society, ditto.

CORRESPONDENCE.

[We do not hold ourselves responsible for opinions expressed by our Correspondents.]

IS SNARING PIKE ILLEGAL?

SIR,—Will any of your readers kindly give me some information on the above subject, as I witnessed a case last Thursday at Brundall, near Norwich, where a man was hunting the dykes and outlets the whole of the day armed with a formidable-looking weapon 'yclept a snare, which, upon close inspection, I found to be a sort of hurdle-stake with a copper-wire noose attached at the end. Thinking I should do some good, I remonstrated with him, but was quickly told to mind my own business, and informed that the fish were as much his property as they were mine—he evidently mistaking my object, thinking, no doubt, as I had a rod and line in my hand, that I wanted to have the sport to all my own way.

Upon inquiring in the village, I was informed that it was the custom to get the fish in this way, more especially at this time of the year, when they take the opportunity of getting up these dykes to deposit their spawn. I, therefore, hope to hear that it is only the "custom" of these "clodhoppers" to destroy fish in this way, and not to be classed amongst the sport of your genuine angler. Apologising for thus troubling you,—I am, &c.,

A TRUE DISCIPLE OF IZAAK WALTON.

FISHING AT FARNINGHAM.

SIR,—In your issue of to-day "An Old Subscriber" relates how he grassed two brace of trout at Farningham at Easter, "the largest about $\frac{1}{2}$ lb." On the fishing tickets it is expressly stated that no trout under $\frac{1}{2}$ lb. is to be taken, and it does not seem to me to be just to those who comply strictly with this regulation if others do not, as I am quite sure is often the case. It seems to me that it would be much better to make the limit $\frac{1}{2}$ lb. and if anyone is seen with a fish of smaller size that he should not be permitted again to fish in the water, and that to enforce this the basket should sometimes be examined, as on the Exe and other rivers. The "Old Subscriber" also states that on a subsequent day he took 4 $\frac{1}{2}$ brace, "three only of which were of an eatable size." As a trout of $\frac{1}{2}$ lb. is a nice fish for the table the "Old Subscriber" must have taken something very small, and it is much to be hoped that he returned his captures to their native element.—I am, &c.,

April 30.

A WANDEERING ANGLER.

FISHING AT USK.

SIR,—Noticing "J. E. B.'s" letter, it was only last year that I was fishing in the streams in Monmouthshire. I was stopping at Usk. The first night I took a shilling license, which gave me permission to fish the streams. I started at about 6 o'clock p.m. (this was about the end of May). I caught nothing till I got to a sort of "mill pond" (I mean the water was broad and quite still), where the fish were rising all over it. This was about 7 o'clock. I got several rises, but caught nothing, till, about 8 o'clock, when it was getting dusk, I put on a large bright coloured fly, and from that time till dark I kept catching fish. The trout all run small in the streams (or brooks as they are called). I went the next day about 2 o'clock, expecting to catch another basket full, but to my disappointment and surprise I found there wasn't a fish moving. So I went on up the stream to the running water, where I caught several. About the same time as the previous night I came back to the pool and found they had just begun to rise, first one then another, till it was nothing but splashes. I caught several, but found they rose very badly as far as hooking them went.—I am, &c.,

FISHING IN BEDFORDSHIRE.

SIR,—There is nothing of note in the neighbourhood of Harlington, Flitwick and Ampthill, in Beds. What fishing there is consists of a few ponds in private occupation, the best of which, at Tingrith and Woburn, would require some influence to fish. The nearest river is the Tod, which runs by Clophill and Shefford. The local proprietors will give occasional permits.—I am, &c.,

THOMAS FORD.

FISHING NEAR RIPON.]

SIR,—In reply to your correspondent, "May Fly's" inquiry in last Saturday's FISHING GAZETTE, on the above subject, I beg to inform him that the fishing at Tanfield is in the hands of the landlord of the Bruce Arms, who

grants permission to fish to anglers staying at his house. I am afraid, however, that "May Fly" would be disappointed with the trout fishing here, as grayling predominate, and in my opinion have seriously affected it. Hawes is a good station on the Yore for trout fishing, so also is Lower Bridge. There is a club established at the former place, weekly tickets issued to strangers on payment of 10s. Should "May Fly" require any further information on the subject I shall be most happy to furnish it on receipt of a private letter, which may be sent to me through the Editor of this paper,—I am, &c.,

FRANCIS M. WALBRAN.

PRIVATE PIKE FISHING—THE BAIT QUESTION—AND RAILWAY CONCESSIONS.

SIR,—In my letter on the above, which appeared in last issue of your valuable paper, the words "professional trout catchers" should have read bait catchers; and the words "trailing, live-baiting, &c."—why don't they tell the truth? liggering," should have been printed trailing, live-baiting, and—why don't they tell the truth?—liggering. In haste.—Yours, &c.,

153, Regent Street, W., May 2, 1881.

LEO BONVOISIN.

GENERIC CHARACTER OF AMERICAN FISH.

SIR,—Would some brother reader oblige by giving the generic character and order of the following fish:—Blue fish, weak fish, puff fish, cow fish, sailor's choice, groupers, mangrove snappers, jew fish, gar-pike, spade fish, catfish, toad fish, frog fish, and sheepheads. They are frequently in American journals, and also as being for sale in the American fish markets. I have looked through "Chambers' Encyclo." and also "Nicholson's," but cannot find any fish bearing the above names. By giving the above information will much oblige a number of friends and subscribers and also

PIXIE.

May 4.

A GRAYLING QUERY.

SIR,—In your issue of April 23rd, an article by "Blue Dun" is published in which the following sentence appears:—"The next two fish I captured were grayling, which I returned to the stream, although I might have lawfully retained them." I should be glad if "Blue Dun" will explain how he could have lawfully retained them.—I am, &c.,

G. S.

Leeds, May 2.

PRIVILEGE TICKETS.

SIR,—In your issue of 15th January, Mr. Johnson, general secretary to the Amalgamated Society of Manchester and District, threw out a suggestion that all the London and Provincial societies should test the feelings of their members, in view of a general application to the various railway companies for an extension of the time allowed, now limited to three days (inclusive), which, as far as Northern anglers are concerned, is of little practical use; for, if they desire to go any distance, the time spent on the journey absorbs fully one-third of the time, so that, where they can so arrange it, they find it more convenient to go by the ordinary trip trains which run at certain seasons, where the time for return allowed is either six or twenty-nine days. And it was to do away with this inconsistency that Mr. Johnson's letter was sent, to endeavour, by the aid of the Southern and Midland societies, to obtain for all, that which the Amalgamated Society alone had failed to obtain.

At the quarterly meeting, on 9th April last, it was a surprise to many delegates to learn that no reply had been received, and I must say that this has been increased on reading that the Central Association of London has taken isolated action to obtain a concession on a particular line to a given district, which, by a general application, might have universally applied to all the different lines and fishing districts.

Mr. Bonvoisin has issued his protest; but he is consistent, for his chief contention is against angling during the close season, and incidentally against the distance and rate; but, whilst sympathising with him to a certain extent on the first, it is a subject for fair discussion as to the injury done by legitimate angling, and not so much my object just now as the extension of time. And now action has been taken by the Central Association, I trust other associations and societies will take the matter up, but act on the suggestion of either Mr. Hoole or of the Bolton anglers. The latter advise a general petition to the different railway companies to grant an extension of time to all fishing stations (over thirty or forty miles) on their lines. This, if done through any given centre, will have a greater prospect of success than by the isolated application of a single association, however powerful it may be.

Mr. Bonvoisin refers to the distance and time occupied in travelling, but we northerners, who fish the Vonnew, are much worse off than our southern brethren, for if we desire to spend the week end at the river side, and leave Manchester at noon, generally reach our destination from 8.10 to 8.50, taking from seven to eight hours on a journey of about eighty miles. Owing to the religious scruples of the Welsh people, some do not fish on Sunday, or, if they do, surreptitiously; and on Monday we have to leave at 2 o'clock, and may reach Manchester again at 7.40 or 9.45, according to the route we favour. Thus we get a day and a half, or half a day, according to the scruples of the angler.

We have no fault to find with the rates charged, as they are very liberal; and if the railway companies could be induced to grant the extension, it would cause numbers to go a distance, where they are now content to try nearer home.

The companies complain that persons professing to be anglers have taken advantage and made business the chief business of their journey; but it they would take the name and number of his travelling card, the society of which he was a member would be bound to take action, and not only prosecute but also expel him. It is the old story—all the flock are ruined by one black sheep.

Trusting to see the subject fully discussed.—I am, &c.

W. R. R.

Manchester, May 3.

CONCESSIONS TO ANGLERS (?).

SIR,—In your issue of the 30th ult., Mr. T. Hoole tells your readers he "is given to understand that we have to thank Mr. W. H. Brougham as being the means of gaining the concessions for us to Yarmouth and Lowestoft."

I take it there is some egregious mistake here, as I hold a time-table of the Great Eastern Railway, just issued, which concedes to the public in general, and not to anglers in particular, the special reduction of fares quoted by Mr.

Hoole as accredited only to the angling fraternity. To Mr. Birt, the present manager of the line, we owe this, and to no other.—I am, Sir, &c.,

A CADGER.

A LARGE LEA TROUT.

SIR,—While fishing last Monday, the 2nd inst., at Dobbs' Weir (Fish and Eels) I had the good fortune to capture a fine trout, weighing 4 lb. 2 oz.—I am, Sir, &c.

H. BROOKWELL.

CLUB REPORTS.

THE BERESFORD ANGLING SOCIETY.

The members and friends of this society sat down to their annual dinner for the season of 1880-81 at their club-house, the Grove House Tavern, Camberwell Grove, on Wednesday, 27th April. The worthy host of the Grove House Tavern, Mr. Searle, provided a capital repast; and, by his personal endeavours, made everything pass off in a most comfortable and pleasant manner. There can be no doubt about the fact that this annual dinner of the "Beresfords" was a great success. About 40 members and friends were present during the evening. W. H. Beckett, Esq., the vice-chairman of the West Central Association, was invited to take the chair, and he filled that position admirably. The vice-chair was occupied by Mr. G. D. Whitaker, the respected chairman of the Beresford Angling Society. The toast list was a short one, and, on the cloth being cleared, Mr. Beckett rose to propose, "Success to the Beresford Angling Society," and said he need not assure the company present that he was glad to find himself with them again, for amongst the company were several old friends. It was the second occasion on which he had occupied the position he did as their chairman that evening. Reviewing the position of the Beresford Angling Society, he said that the society had flourished from the hour of its birth. It was not now a large society, but he had watched its progress, and he attributed its success to the good feeling which seemed to exist between the members. He could say that he had never met a more gentlemanly class of men than the members of this society were. The Beresford was, in fact, a model club, and so he had always spoken of it to many who were strangers to the company present. No doubt, the position of the society was due in a great measure to the able management of Mr. Whitaker, and to the untiring endeavours of their hard-working secretary, Mr. Poulton.—Mr. Beckett then referred to the sport of the past season, which he said had been a very bad one, in fact he hardly called it a season at all, and although the gross weight of this society for the season had been about 100 lb. less than the previous year, yet he considered their doings would compare favourably with that stronger clubs. From the statement laid before him he said it appeared that Mr. Sames, with 100 lb. 2 oz., had won the first club prize for the heaviest gross weight of all fish, Mr. Plummer the second, and Mr. Whitaker the third. Mr. Sames had also won two other season prizes for the heaviest chub over 1 lb. and for the greatest weight of jack respectively; he had also won a tankard for his take of fish on the last day of the season. Mr. Whitaker had also won two other prizes, and Messrs. Wilkes, Baylis, Wright and Frie were the other prize winners. Mr. Beckett concluded his remarks by proposing "Success to the Beresford Angling Society," and the toast was enthusiastically responded to by the members and friends present. Mr. Whitaker replied to the toast, and after referring to his experience of thirty years as an angler, said he had always endeavoured to promote the interests of this society in a proper manner. He thanked Mr. Beckett for his kind remarks, and he also thanked the members for enabling him to get the society into such a position, it was only by the goodwill and unanimity of the members that it had become what it was. He said that the Beresford was a little sociable, quiet club, and so he trusted it would remain; but if anyone would join them with the same sentiments they would welcome him. Unanimity was the great thing in an angling society, they relied principally on that, and their endeavours were most ably assisted by their hardworking secretary, Mr. Poulton, in whom, as a secretary, Mr. Whitaker said he never knew a better, and he was sure he was only stating the feelings of the members in saying so. Mr. Poulton very briefly acknowledged the kind remarks of Mr. Whitaker, and assured the members that it always afforded him much pleasure to be of service to them. At a later period of the evening Mr. Poulton's health was drunk with musical honours. Mr. Whitaker, rising again, said, "Gentlemen, fill your glasses. I have a little toast to propose, although not a little one in another sense; for I ask you to drink the health of one of the best and most energetic working anglers in London. I am sure I am only doing Mr. Beckett, our Chairman here this evening, justice in saying so, for he is on almost every committee which has for its object anything to benefit us anglers. He is treasurer of this, and chairman or committeeman of that. His position as vice-chairman of the West Central Association, and on the committee of the Anglers' Benevolent Society, is enough to recommend him to our notice, were it not that we know full well his many good qualities. I repeat, gentlemen, that in Mr. Beckett we have one of the most genuine and hard-working anglers in London; and a more appropriate chairman at a meeting like this we could not have had. Gentlemen, I ask you to drink Mr. Beckett's health, and I will couple with that toast 'Success to the West Central Association.'" It is needless to say that this speech was heartily applauded, and Mr. Beckett's health was drunk with musical honours, and in such a way as could leave him little room to doubt the sincerity of the respect shown him. Mr. Beckett responded, and thanked the company sincerely and seriously for the manner in which they had drunk his health. There was one thing, he continued, to which he could lay claim, and that was that he had always done his best for angling generally. He had had to work hard, but he did not mind that, if he was to do anything in a good cause, and he asked the support of all present for the Anglers' Benevolent Society, the interest of which Mr. Beckett has very much at heart. He referred at length to the good work this Benevolent Society had done, and would if funds would allow. He said that the names of the recipients of the bounty of this society were not published, for that here charity was to do good without parading the particular person benefited before the public. Mr. Beckett said he considered the course the committee adopted in that respect was the proper one, but if any person wished to be satisfied as to what good had been done by the Benevolent Society, let that person apply to him, and he would give particulars of many cases in which the society had been of the greatest service. Mr. Beckett explained that certain privileges recently granted on the Midland Railway were available to all societies connected with the three associations, and not to those connected with one in particular. In proposing the health of the Vice-Chairman (Mr. Whitaker) Mr. Beckett said the toast

required very few words from him to commend it, for that all who knew Mr. Whitaker, either as a man or as an angler, the subject carried its own recommendation. Mr. Whitaker's health was drunk with musical honours. The toast of the Visitors was coupled with the name of Mr. Morris, the host of the headquarters of the South London Angling Society, from which society the Beresford was an offshoot, in consequence of a split in the camp some years ago; but Mr. Baylis, a worthy member of the Beresfords and an old member of the South London, as also were Messrs. Whitaker, Poulton and Plummer, showed that there was no illfeeling between the two societies, for in proposing a toast, "Success to the South London Angling Society," Mr. Baylis referred to the old club in a kindly manner, and he was glad to see that some of their old friends in the South London were present that evening. Mr. Baylis also referred to the respect he and the other old members always entertained for Mr. Morris, and was glad to welcome him to the Beresford. A gentleman from the Minim Glee Society very kindly attended and entertained the company with the piano. After some capital harmony from Mr. Tozer, Mr. Daughters, Mr. Cox, Mr. Leveridge, Mr. Priestnal, and others, the company separated at a late hour; but if the special license had allowed Mr. Serle to consult the wished of the company, he would not have seen the last of them much before daylight appeared. Mr. Serle's health, by the way, was drunk most cordially and with musical honours.

May 5.

CLAPHAM JUNCTION ANGLING SOCIETY.

On Wednesday evening last the members of the above club sat down to their annual dinner at the club-house, the Lord Ranelagh. The chair was taken by Mr. E. Withers, who was faced by Mr. John Innes. In spite of the absence of several members there was a very fair muster, the actual number sitting down to dinner being thirty. In addition to the dinner placed upon the table by the host, Mr. Innes generously forwarded a splendid salmon weighing about 18 lb., a dish of luscious trout, and a consignment of eels and lobsters for the delectation of members on this occasion, who showed a keen appreciation of the favour done by giving to the fish a *quid pro quo* in the form of a "bite" for a "bite." After the removal of the cloth the number of the company was augmented by the advent of several members who were unable to reach the club in time to sit down to dinner. All glasses being charged, and the "fragrant weed" having been ignited by the devotees of St. Nicotine, the chairman proceeded (after a few prefatory and appropriate remarks) to distribute the numerous prizes to the successful competitors, who proved to be Messrs. Innes, Valentine, Smith, Blunden, Wakeford, Sutters, and Maslin. The vice-chairman then congratulated the chairman upon his success, and proceeded to present him with the numerous prizes won by him during the season. The chairman then in a few well chosen words proposed the health of the vice-chairman, Mr. Innes, and tendered on behalf of the members his thanks for the kindness displayed by him in "weighing-in" such splendid fish for their mutual enjoyment. The toast having been cordially drunk, accompanied by musical honours, Mr. Innes responded. The chairman then proposed the toast of the evening, "Success to the Clapham Junction Angling Society." In the course of his remarks he made some peculiarly happy allusions to the healthful and enjoyable hours to be derived from making fishing their pastime. He also took a cursory and retrospective glance at the past and present position of the club, and said that there could be no doubt that there was already a nucleus of a first-rate club, and if members would individually make self-help their motto, the club would very speedily be the first and best in the vicinity. The toast was received with considerable acclamation and was heartily drunk. The health of the visitors was then proposed by the chairman, coupled with the name of Mr. George Rosewell, of Shepperton, who briefly responded. Following this, a selection of songs, interspersed with recitations, were given by various members of the company, and no little part of the success of the evening was due to Mr. Shepherd's capital rendering of one of Beethoven's symphonies on the "zither," which was deservedly encored; and last, though by no means least, mention must be made of the great pleasure experienced by the company in listening to the really marvellous performance on the violin by Master Townshend, aged five years. This little fellow is a perfect prodigy of musical precocity, and the way in which he played a selection from "Il Trovatore" was really wonderful, his bowing being excellent, and the precision and verve with which he played a few rather florid passages provoked a genuine storm of applause. There is little doubt that this little fellow will be very favourably heard of before long. A very enjoyable evening was brought to a conclusion by Mr. Valentine proposing the health of the Chairman and thanking him for the admirable manner in which he had fulfilled his duties. The chairman briefly responded, and the company separated after chanting "Auld lang Syne."

THE DALSTON ANGLING SOCIETY.

The above society held their annual dinner last Tuesday, May 3rd, when a great number of members sat down to a most enjoyable banquet, served in good style by the host, Mr. Hepburn. The secretary stated that the society was in a most satisfactory state, and the number of members steadily increasing. Mr. Ghurney, of the East Central Committee, in reply to the usual toast, said he was very pleased to see the society in such a flourishing condition. The evening was finished with excellent harmony by Messrs. Anderson, Midson, Malby, Legge, Claydon, Kidd and others.—S. MALBY, sen.

May 5.

EAST ANGLIAN PISCATORIALS.

The usual monthly meeting took place at the club house, the Great Eastern Wine Vaults, on Tuesday evening last. Mr. W. G. Capon occupied the chair, Mr. C. S. Fowler the vice. There was a very large number of members present, the business being to arrange for the first match of the season, and also to elect a secretary in the place of Mr. Nockolds, resigned. After some discussion, Mr. A. Palmer was duly proposed as secretary for the coming season, and elected unanimously. It was then proposed to inform Mr. Nockolds of the proceedings, also asking him to hand in the books, and to show a statement of accounts for the past year. A scratch match was then arranged by a few members, a full report of which is given elsewhere. The remainder of the evening was then devoted to toasts and sentiments, foremost among them being "Success to the National Fisheries Exhibition."—ANGLER.

P.S.—The Rev. W. B. Matthews honoured the club with his presence during the evening.

HAMPSTEAD ANGLING CLUB.

The return visit to the Hampstead Angling Club took place at the club-house, Cock and Crown, High Street, and was a great success. Upon the roll

being called at 11 p.m., the following clubs were present: Bostonians, Cambridge Friendly, Duke of Cornwall, Marylebone, North Western, Prince of Wales, Good Intent, City of London, Cavendish, and Hearts of Oak. During the evening some excellent songs were given by Messrs. H. Hamilton, Ekworth, Shackell, Rosser, Maybury, Amo, Leeland, Sargent and others.—T. J. BEDALL, Sec.

THE ROYAL PISCATORIALS.

The anniversary dinner of the above society took place on Friday, the 29th of April, at the headquarters, the Albion, Rodney Road, Walworth. About thirty gentlemen sat down to partake of the good things provided (which, like good wine, "requires no bush") for them by Mr. T. Hughes. Mr. George Hockley presided, assisted by Mr. W. Canton. On the removal of the cloth, the proposing of healths and the giving of toasts took place. Success to the "Royal Piscatorials," you may bet your "bottom piece," was not forgotten. Mr. Francis Dale, the secretary, then read the results of the past season's sport, and the names of the gentlemen who had won prizes during the same time. Mr. T. Hughes takes £1 1s. for each of the following fish:—Pike, 22 lb.; roach, 2 lb. 6 oz.; dace, 12 oz.; grayling, 1 lb. 12 oz.. He also takes £9 9s. for the gross weight of fish taken during each of the following months—August, September, October, November and December, 1880; £1 1s. falls to him for the gross taken from February 20 to March 15, 1881; £1 11s. 6d. also comes to him for three other prizes. Mr. G. Hockley comes next. He is entitled to £7 17s. 6d. and a barbel rod, for gross weight taken on August 19, 1880, and second gross from August 16, to September 16, 1880; also for the largest chub. Following close behind him comes that well-known gentleman, Mr. G. Lee, who is knock-off with £6 6s. for the largest pike, and second gross weight taken during September, October, and December. Mr. W. Canton is fair heel and toe with the above-mentioned gentleman, he having £6 6s., a time-piece, and a fishing-coat, to carry; "not much trouble in that," I hear some one say. The next on the list is Mr. H. Smithers, who is started on his way rejoicing with £1 2s., two boxes of cigars, twelve silk handkerchiefs, and a ton of coals. Number six is the well-known W. Randall, who is entitled to three prizes, amounting to the same number of guineas. Last, though not least, comes that persevering gentleman and honorary secretary, Mr. F. J. Dale, who was penalised to carry £11 os. 6d., a hamper of spirits, and a case of champagne. The gross weight of fish taken by members during the season amounted to 930 lb. This brought the proceedings of the last year to a close. Prizes for next season was now the standing order of the evening. Three gentlemen set the ball rolling by giving £5 5s. each; fourteen immediately kept it up by giving £2 2s. each then followed six with £1 1s. each, and six with 10s. 6d. each. Several boxes of cigars and hampers of spirits were thrown in as ground-bait. A gentleman gave twelve silk handkerchiefs as a prize to be given to the member who went out fishing the greatest number of times and caught the lowest weight of fish during the season. The same gentleman will also give a handsome dressing-case to be competed for by the members in a handicap competition. The correspondent of a contemporary who, a short time ago, stated that he had a big commission on two gentlemen that he named, against two gentlemen, members of this society, might be able to invest on this occasion if he tried, I thought, on hearing this prize being given. Time now approached when the best of friends must part, and also brought to a close as glorious an evening's amusement of eating, drinking, laughing, talking, singing, and joking, as anybody would wish to have.—"PIXIE."

SOCIAL BROTHERS' ANGLING CLUB.

On the 27th ultimo, the second annual dinner of the above club, was held at the Prince Regent, Dulwich Road, Herne Hill, Mr. Lockyear being chairman, and having Mr. Underdown as his *vis-a-vis*. The viands supplied by the able hands of Mr. Hyde, of Tulse Hill, were of the most *recherche* description, abundant in quantity, undeniable as to quality, and put on the table in a manner most appetising and enjoyable. The wines and other refreshments were supplied by Mr. Monk, the host and treasurer of the club, and proved worthy of the caterer and the occasion. The floral decorations supplied by Mr. Lambert, and themselves being prizes won by Mr. Monk, graced the well-supplied and elegantly-appointed table, whilst round the room were hung trophies of the piscatorial art, all the result of the energy and successful work of the members of the club. After the removal of the cloth, the usual loyal toast was given by the chairman, and responded to by the singing of the National Anthem. The chairman then gave, in a few appropriate words, "The Social Brothers' Angling Club," acknowledged by Mr. Goubot, in very feeling and graceful terms, expressing the intense interest that he had already taken, and would ever continue to take in the welfare of the Club, whose remarks we were glad to notice, were received with every sign of approbation by the members.

The President and Vice-President given by Mr. Pavey, was duly responded to by Messrs. Lockyear and Underdown, the former in nice appointed words, and the latter replied, in answer to the earnest wish of all the members. The Chairman then gave "The Committee and Officers," replied to by Mr. Pavey, who, in the course of his speech, sketched the club's successful career and future prospects. We were glad to learn that even though comparatively a young society, yet it has not only been able fully to pay its way, but has a balance in hand, after paying all expenses, that it numbers some twenty to thirty efficient and honorary members, that its prospects in every respect are bright and satisfactory. Having, in a few graceful and well-chosen sentences, paid a tribute to the kindness and liberality of those gentlemen who contributed the prizes to the several competitors, and given a *resume* of the working of the society. Mr. Pavey sat down amidst the enthusiastic plaudits of the assembled company.

Mr. Pavey was followed by Mr. John Flynn, a member of the committee, whose sympathetic and kindly remarks were thoroughly appreciated by all present. The next toast, "The Honorary Members and Visitors" was given by Mr. Monk, who, in the course of his speech, said that the honorary members were the backbone of all clubs, and passed an eulogium on the visitors present who assisted to enhance the pleasure of the proceedings. He also referred to the absent members, Messrs. Lambert and Stewart, the latter of whom should have sung the "Gipsy's Tent," but whose absence he deplored, through that gentleman's indisposition. This toast was responded to by Mr. Brocklehurst, in a characteristic speech. This ended the first part of the programme, which during the toasts had been agreeably interspersed with songs by Messrs. Monk, H. Hancock, Hall, and Underdown. The presentation of the prizes by Mr. Harris, in the unavoidable absence of Mr. Nugent, was the next feature, to each recipient this gentleman addressed a few appropriate, kindly, and well-chosen words. The prizes were numerous, and, in many

instances, costly, embracing among their number, vases, cups, a handsome cabinet, a superior suit of clothes, and many others of interest and value. When we say that the amount of fish taken in the season by thirteen members only was nearly a quarter of a ton, and that the prize takers were so numerous, their names being Messrs. Monk, Freeman, Briscoe, Goubot, Valler, Bromhead, Lockyear, Irons, and John Flynn, it will be seen how indefatigable and hard-working the members of the club have proved themselves to be. All the aforesaid gentlemen made suitable replies, in acknowledgment of their prizes. The next toast, "Mr. Harris" proposed by Mr. R. Luff, in very flattering terms, was responded to by Mr. Harris, whose rising was the signal for so spontaneous and hearty an outburst of genuine feeling and applause as cannot but have most highly gratified that very genial and deservedly popular favourite, and whose reply was equal in feeling and warmth to the pleasure with which the toast was given, and the evident gratification with which it was received. The presentation of a special acknowledgment of Mr. Pavey's services, placed in the hands of Mr. Goubot, must not be passed over. For, to the great interest shown in its working, to his unwearied attention to duty and his genial manner, is very largely due to the success of the society. In replying, Mr. Pavey, who evidently was moved by this unexpected mark of the favour and love of the members, sincerely expressed his thanks for the honour conferred on him, and augured a still more successful season in time to come. The next toast, "The Press" given by Mr. H. Hancock, in eloquent terms, was responded to in the absence of one of its regular members by a gentleman well-known to the company present, who, in a few eloquent and glowing sentences, well received and appropriately paid a fitting tribute to the power of the Press. The next toast proposed by Mr. Pavey, was to "Mr. Hyde," to whose care and attention we have already drawn notice, and which was responded to by Mr. Hyde, in fitting terms. The last toast was "The Ladies," given by Mr. Monk, and responded to, in a singularly happy speech, by Mr. Hayward. During the second part of the programme the proceedings were enlivened by songs from Messrs. H. and G. Hancock and R. Luff, Messrs. Monk, John Flynn and Irons, and recitations from Messrs. Brocklehurst and James Flynn. We must not omit to mention the very great pleasure which the clever pianist, Mr. Field, gave, as an admirable accompanist to the songs, and which was pre-eminently shown in his solos, beautifully executed and well received. If a capitally arranged programme, a *recherche* dinner, a good and genial company, and effervescing and contagious good-humour on the part of everybody present, are able in themselves to constitute sufficient enjoyment, and to combine to render an evening, both pleasant and memorable, we are confident that the presence of each one of those elements in that Wednesday's gathering must have ensured the most complete and brilliant success.

STOKE NEWINGTON ANGLING SOCIETY.

The above society has removed to the Crown Tavern, Mayfield Road, Dalston, where they have a most excellent club room, and where communications may be addressed. A meeting will be held on Thursday evening, May 12, to transact important business. Gentlemen desirous of enrolling themselves as members will please attend on that evening.—THOS. GRETION, secretary.

May 3.

UNITED LONDON ANGLERS.

The annual meeting took place on Monday evening, May 2, Mr. S. Morgan in the chair. It was decided that the yearage shall be 1s. as before. The Sociable Brothers Angling Society, held at the Alliance Coffee Tavern, Bethnal Green Road. I herewith enclose the lists of fares and stations on the Midland Railway. The next general return visit of the United London Anglers will be paid to the Hoxton Brothers Angling Society, on Monday next, May 9, at the Jane Shore, High Street, Shoreditch.—R. GHURNEY.

May 3.

MIDLAND RAILWAY.

Third class return fishing tickets are issued to members on presentation of their card of membership, from Kentish Town, St. Pancras, and Moorgate Street, to the following stations at the fares shown.

	Kentish Town.	St. Pancras.	Moorgate Street.
	s. d.	s. d.	s. d.
Elstree..	1 2	1 3	1 6
Radlett ..	1 5	1 7	1 10
St. Albans ..	1 11	2 1	2 3
Harpenden ..	2 5	2 7	2 9
Chiltern Green ..	2 8	2 10	3 1
Leagrave ..	3 3	3 5	3 8
Harlington ..	3 9	3 11	4 1
Flitwick ..	4 1	4 2	4 4
Amptill ..	4 2	4 4	4 7
Bedford ..	5 0	5 0	5 4
Oakley ..	5 4	5 4	5 8
Sharnbrook ..	5 9	5 9	6 1

Available for return on the day of issue or either of the two following days.

The committee having directed me to make an application to the Metropolitan Railway for an earlier train on Sunday mornings, I beg to inform you that the general manager has, in the most generous manner, forwarded me several copies for the distribution amongst the clubs, one of which I have great pleasure in sending herewith for publication, another great privilege to London anglers.—R. GHURNEY, sec.

May 5th, 1881.

METROPOLITAN RAILWAY.

Times of running additional earlier trains on Sundays from the following stations to Paddington:—

Time of departure from each station:—Aldgate, 7.42 a.m.; Bishopsgate, 7.44; Moorgate Street, 7.46; Aldersgate Street, 7.49; Farringdon Street, 7.51; King's Cross, 7.54; Gower Street, 7.58; Portland Road, 8.0; Baker Street, 8.3; Edgware Road, 8.6; Praed Street (arrival), 8.9; Paddington (G.W.) dep., 8.30; Westbourne Park, dep., 8.33; Windsor, arr., 9.50; Taplow, 9.39; Maidenhead, 9.45; Cookham, 9.56; Bourne End, 10.3; Great Marlow, 10.15.

3rd May, 1881.

WEST CENTRAL ASSOCIATION OF LONDON AND PROVINCIAL ANGLING SOCIETIES.

A list, with full particulars in reference to the new privilege tickets, has been sent to every society—addressed to club-house—enrolled upon the Association.

Secretaries will greatly oblige by sending it to me filled in with names and addresses of members requiring the tickets for the coming season. If not possible to send full list, send part, and I will, upon application, send a new form.—J. HOOLE, Hon. Sec.
7, King's Road, Mortlake, S.W.
May 7, 1881.

MISCELLANEOUS NOTES.

BULL-HEADS BURROWING IN MUD.

"CREEL" says ("Sniggling," in a recent issue), speaking of the burrowing of the mussel,—“Whether this be so or no, it is well known to naturalists that the same effect is produced by the bull-head, who operates in a similar manner.” Confessedly this statement originated with that second Gilbert White, Jesse (author of *Anglers' Rambles*, &c.); and this fact notwithstanding, I am constrained to deny that the bull-head of our fresh-water does burrow in the mud. They will do so under stones, and even into fine gravel mixed with mud, but the very nature of their breathing apparatus precludes their remaining comfortably buried in mud as eels do. By the bye, has “Creel” noticed how incontinently cannibalistic the bull-head is?

HOW EELS ENTER THEIR HIDING-PLACES.

“Creel” seems to doubt that eels enter their holes tail foremost. I can affirm that they usually do so, probably owing to the fact that the tail is furnished with some curiously delicate and complete nerves of perception. The barb at the mouth of an eel seems only rudimentary, and the tail is, therefore, correspondingly more sensitive.

SIR HENRY WOTTEN AND DALRAVIUS.

Sir Henry Wotton, Provost of Eton (whom my readers may remember was a most enthusiastic disciple of Walton), writing to Sir Thomas Wentworth, says—“I did promise you, when we were last merry at Medley's, a piece of rural philosophy—Dalraivius, the book *de piscinis* which I now send you—having borrowed it of Mr. Hall, one of our bursers. . . . One thing may appear strange to you, that a Bohemian gentleman therein named should in one year, gather *duodecies sesterium* out of his ponds, which, resolved into our money, I take to be about £6000 sterling, and that, for aught I conceive, only by carp and pike—so I understand his *cyprinos* and his *lucios*.” Thus the venerable Provost. What a comment this extract is upon the supineness of English water-owners in the matter of coarse fish culture!

FISH-CULTURE IN ANCIENT EGYPT.

It appears that the Queens of Ancient Egypt were the chief fish-culturists of that mighty Empire, inasmuch as that the revenues derived from the fisheries were the exclusive pin-money of these Royal dames. Diodorus gives the total revenue accruing from this source to one Queen as £70,000 per year.

FISH-HATCHING AT CHERTSEY.

I don't quite see why “Consistent” should be so sharp with “B.” over Mr. Forbes' operations. We are all of us rather inclined to make the wish father the thought; and though his report is certainly *colour de rose*, there is much to be said in unqualified praise of Mr. Forbes' example in the matter of Thames trout culture. “B.” does not, if I am not very much mistaken, pretend to know much about the science of fish-breeding, and has only chronicled in a good-humoured, genial way, the apparent results of praiseworthy efforts at Chertsey. If there were any fundamental errors of precise statement, and “B.” were to assume himself an authority on trout-culture, “Consistent” would be quite right in his strictures. As it is, is it not like punching a man who never had any intention to offend? I think so.

I am not very sure that Mr. Forbes' idea as to stocking the extreme head of a river is not capable of exception in *re* Thames trout. We do not, as a matter of fact, find that trout are either very much more numerous nor larger in the highest reaches of the river than in localities such as Shepperton, Chertsey, Laleham, Penton Hook, Staines, Old Windsor and Windsor. I am quite inclined to think, judging from what I have seen of the stay-at-home nature of the trout, that, after the natural upward migration for spawning purposes, the fish invariably drops down again to its old *habitat*. If this be so, Chertsey and its neighbourhood will doubtless be benefited by the turning in of not fry, but good sizeable fish.

J. HARRINGTON KEENE.

LORD BEACONSFIELD'S LOVE OF FLOWERS.—It is worth mentioning even here that the late Lord Beaconsfield possesses simple but correct tastes. His lordship loved the modest primroses that flowed at Hughenden; and readers of “Lothair” will remember how the author puts it into the mouth of St. Aldegard about his preference for cabbage roses, sweet peas, and wallflowers—that was his idea of a garden. Garden parties he also thought to be inane and most unenjoyable.—F.

HAREFIELD VALLEY FISHERY—CARP FOR THE COLNE.—During the last summer, it being intimated that the carp in the artificial basins of the Horticultural Gardens at South Kensington were growing sickly from the absence of aquatic vegetation and their great increase, I made an application to the council to be permitted to thin their ranks, and transfer the fish thus removed to that portion of the Grand Junction Canal, under the presumed protection of the West London Anglers' Association. The directors of the Grand Junction Canal having, however, granted permission to the purveyors of live fish to the Zoological Gardens to net that portion of the canal, the association, after trying the validity of such permission, and failed at no little cost, gave up any attempt to hold the water against such powerful odds. Under these circumstances 300 carp, the greater part in full spawn, were transferred by Mr. R. Edon, of the South-Kensington Fish Museum, to the Colne at Harefield, into which picturesque portion of that river they were introduced, in the presence of Mr. Neave, the lessee, a few of the members, and the keepers of the fishery. The fish, which fully averaged 2 lb. each, were safely carried in damp moss, and did not appear to have suffered in any respect by the journey.—GREVILLE F.

NEW AND REVISED EDITION NOW READY

(Brought down to the present time).

THE BOOK OF THE HORSE.

By SAMUEL SIDNEY. With 25 FAC-SIMILE COLOURED PLATES from Original Paintings and 100 WOOD ENGRAVINGS. Complete in One Handsome Volume, cloth, 31s. 6d.; half-morocco, £2 2s.

“It is a large subject appropriately treated in a large book—a book not only of the horse thoroughbred, half-bred, and cart-bred, but of everything connected with him.”—THE TIMES.

CASELL, PETTER, GALPIN, & Co., Ludgate-hill, London.

PRICE 12s. 6d. EACH,

FAMILIAR WILD FLOWERS.

FIRST AND SECOND SERIES, by F. E. HULME, F.L.S., F.S.A. Each Series is complete in one volume, and contains forty full-page Coloured Plates, with descriptive text.

“The coloured figures are exquisitely beautiful; they are more like finished paintings than prints, and the appearance of the work is elegant throughout.—GARDENER'S MAGAZINE.

CASELL, PETTER, GALPIN, & Co., Ludgate-hill, London.

PRICE 12s. 6d.,

FAMILIAR GARDEN FLOWERS.

FIRST SERIES. Complete in one volume. By SHIRLEY HIBBERD, with forty full-page Coloured Plates from original paintings by F. E. HULME, F.L.S., F.S.A.

“Refined in colouring and admirably true to Nature are Mr. Hulme's drawings. . . . Mr. Hibberd tells just what is needful respecting the history and culture of each plant, and amateur gardeners will be delighted with the volume.”—GRAPHIC.

CASELL, PETTER, GALPIN, & Co., London; and all Booksellers.

DAY, SON AND HEWITT'S

STOCKBREEDERS'

MEDICINE CHEST.

FOR ALL DISORDERS IN HORSES, CATTLE, CALVES, SHEEP AND LAMBS.

In this chest are the following matchless and world-renowned remedies, all that a Farmer can require to cure disease amongst his Stock and keep them in fine, healthy, and buoyant condition:—

“CHEMICAL EXTRACT,” for Wounds, Swollen Udders, and Ewes Lambing.

“GASEOUS FLUID,” for Colic, Scour, and Debility.

“RED DRENCH,” for Cleansing Cows and Ewes, &c.

“RED PASTE BALLS,” for Conditioning Horses.

“BRONCHOLINE,” for Husk, Hoarse, or Cough.

“GASEODYNE,” for Heaving or Paining.

“ALCOHOLIC ETHER,” for Colds and Chills.

“CARMINATIVE CHALK,” for Diarrhoea in Lambs and Calves.

Price of Chest, with “Key to Farriery,” £2 16s. 6d., carriage paid. Each article can be had separately.

Patronised by Royalty, and used for over 40 years by the Leading Agriculturists of the British Empire.

CAUTION.—See that the Name of DAY, SON and HEWITT is on all Bottles and Packets.

DAY, SON AND HEWITT,

SATURDAY, MAY 14, 1881.

THE NATIONAL FISHERIES EXHIBITION.

Auspicious opening, a great success, and an imposing closing ceremony—these constitute the full record of the National Fisheries Exhibition. Disappointed of the presence of H.R.H. the Duke of Edinburgh, in consequence of the assassination of his

Imperial father-in-law, Earl Ducie, Chairman of the Commissioners, presided on Saturday, the last day of the exhibition, and distributed the medals and diplomas awarded by the jurors. His lordship was supported by two of his brother commissioners, Mr. Calcraft and Mr. Spencer Walpole, his Grace the Duke of St. Albans, and the usual *posse* of local dignities and celebrities. The occasion was in every respect a successful one. The noble chairman in his opening remarks paid a handsome compliment to the president and committee, and a graceful tribute to the memory of the late Mr. Frank Buckland. He showed, moreover, a practical acquaintance with the contents of the exhibition, and verified Mr. Birkbeck's reference to him as one of the best amateur sea fishermen in the country. The speech-making was soon over, and the remainder of the ceremony was of a formal character. There was a tremendous prize-list to go through, including the awards for the essays which had not been publicly declared. All things, however, have their end, and in due time the last medal and the last diploma had passed through the hands of the chairman, the vote of thanks had been moved by the Mayor of Norwich and seconded by the Duke of St. Albans, and the "fashionable assembly" had dispersed. Then came the public to take a parting glance at the show, and by nine o'clock in the evening all was over. The Fisheries Exhibition of 1881 is now a thing of the past, and the soul of the angler and the fisherman had to console itself with the prospect of a similar gathering in 1882. The choice of localities has, we believe, fallen on Edinburgh, and a more fitting selection could not have been made. The new exhibition will, doubtless, have "features" and "characteristics" of its own, and will illustrate, more especially, the finer and more attractive portions of the anglers' art. But it can scarcely be more successful or more popular than the one which has just closed, and with which the name of Norwich will be identified. We are glad to believe that the latter will leave some considerable merits behind it. The cause of the fisherman has been generously advocated and substantially advanced. New methods of fishing and specialties in fishing-tackle have been brought before the notice of the public. A good deal of useful information has been imparted, and nature has been made to yield up some of her pleasantest and choicest secrets. These are results of which any city may be proud, and the Government will have no reason to repent the direct and the indirect patronage they have given to the undertaking. It is worth noticing that the popular interest increased immensely during the last week, the numbers of admissions on the Thursday and Friday being 6,000 and 7,000 respectively. During the whole three weeks no less than 70,000 persons were admitted to the Drill Hall, and the Committee have been able to place a very handsome surplus to their credit. All things considered the awards of the judges have given satisfaction. In only one case has any unpleasant dispute arisen between exhibitors, and with this exception the affair ended as harmoniously as it begun. The "stranger and sojourner" must have met with many a kind friend and genial host in the old city, and the angler who has had a peep at the beautiful river scenery, or dropped a line in the Yare or the Wroxham and Oulton Broads, will have been fully repaid for his trouble.

At the conclusion of the ceremony in the Hall, the Commissioners and the Committee were entertained most pleasantly at luncheon by the Sheriff of Norwich, and in the evening a meeting of those interested in the fishing industry was held to consider the much-debated question of lights on fishing vessels. The chair was taken by Mr. Sims, of Hull, who was supported by a numerous company of boatowners and others. The subject discussed was the new regulations proposed by the Board of Trade in regard to the carrying of red and white lights, and some very strong opinions were expressed on the matter. The general feeling was that the

new regulations were dangerous and impracticable, that the fishermen themselves would not adopt them, and that a return would have to be made to the older and simpler system of carrying a white light at the masthead. It must have been a relief to some of the gentlemen to learn that the President of the Board of Trade had consented to receive a deputation, and that he was presumably open to a change of conviction. Another gathering, which will be somewhat more interesting to readers of the *FISHING GAZETTE*, took place at the Royal Hotel, on Tuesday evening. This was the farewell dinner to the exhibitors—a pleasant wind-up to as successful a public movement as has ever been initiated. About 60 gentlemen accepted the invitation, and those assembled well represented the various interests associated with the exhibition. Good anglers are ever good company, and we need scarcely add that the proceedings were harmony itself. Some capital angling songs were sung, and the speeches were thoroughly in keeping with the occasion. The High Sheriff of Norfolk (G. D. Berney, Esq.), presided, the vice-chair being filled by A. G. Jardine, Esq., the prince of pike-fishermen. The High Sheriff, in proposing the toast of the "Exhibitors," complimented the Committee on the talent and industry they had displayed in carrying the affair to a successful issue. As to the exhibitors their intelligence had been only equalled by their courtesy, and the willingness with which they had explained to visitors various objects of interest. The public had thoroughly appreciated their unselfish conduct in staying a week beyond the stipulated time, and he personally thanked them for the pleasure they had afforded him during his visits to the Exhibition. He coupled with the toast the names of Messrs. Jardine, Horsey, Page, and Eldon. Mr. Jardine made a neat reply, speaking as an old and enthusiastic angler. He had heard of the antiquities of Norwich, and the wealth of its surrounding waters; but he had never seen anything to equal the fine specimens of pike, bream, roach, and rudd, that had been shown as the products of the broads and rivers of the district. The fraternity of anglers in London, who numbered about 80,000, would be pleased to learn how well Norwich had received the metropolitan contingent. He thanked the company for the hearty manner in which they had received the toast. Mr. Horsey, as a trade exhibitor, acknowledged the kindness he had experienced during his stay in Norwich, and paid a high compliment to the Hon. Sec. (W. Oldham Chambers, Esq.). Mr. Page, who represents the Aylesbury Sewage Company, referred to the process, already noticed in these columns, for purifying rivers polluted by sewage and preserving the fish-life they contained. He also added his testimony as to the excellence of the arrangements, and the courtesy with which they had been carried out. Mr. Edon also replied, and touched appropriately on the lamented death of Mr. Frank Buckland. The next toast—that of the "President" (Mr. Edward Birkbeck, M.P.)—was proposed by the vice-chairman, and received with all the heartiness it deserved. Mr. Birkbeck's great services to the exhibition were heartily recognised, and the only matter for regret was that he could not attend to bid his numerous guests farewell. Mr. J. W. De Caux—a successful exhibitor and essayist—of Yarmouth, gave the "Health of Mr. C. L. Buxton," the chairman of the Finance and Executive Committees, and Mr. Buxton suitably responded. Mr. Sandford, of Cromer, proposed "The Gold Medallists," the chief of whom was the Duke of Edinburgh, who showed the exquisite models of life-boats referred to in a former issue. With this toast Mr. Sandford coupled the name of Mr. H. L. Rolfe, who in reply gave a pledge to paint a fish-picture for Mr. Chambers in return for the unlimited work and worry he had undergone. The other toasts were of a complimentary nature, those of the "High Sheriff," and the "Secretary" being especially honoured. Mr. Chambers made a

modest reply, and apologised, quite unnecessarily, for shortcomings which had never been observed. The healths of the Jurors and the Press were heartily received, the representative of the *FISHING GAZETTE* replying for the latter, and the Ladies came in for the recognition which good sportsmen should always accord them. Altogether the occasion was one to be remembered by those who shared in it, and who thus commemorated the close of the Fisheries Exhibition of 1881.

We have given our readers as full and suggestive an account of the exhibition and its features of interest as our space will allow. We have only to add that we did not aim at covering the whole of the vast extent occupied. If we have succeeded in throwing some light on those productions which have a special attraction for the angling community we shall be more than satisfied. It is necessary to add in conclusion that interesting and valuable as the exhibition has proved, it has been by no means exhaustive in character. We look upon it as a promise of something even greater in the future. In regard to one point, we are unable to gratify the curiosity of our readers. The prize essays are not public property, and we cannot, therefore, give them an insight into their contents. A request will be made to the authors to permit of their publication, and, if this is acceded to, we may expect a valuable addition to the literature of fish, fishing, and fish culture.

The following is the list of awards in this department:—

Essay on the Acclimatisation and Cross-breeding of Fish; prize, £10, W. Oldham Chambers, Lowestoft.

Essay on Pisciculture as a Source of National Wealth, prize, £20, W. Anderson Smith, Ledaig, Argyshire, N.B. Bronze medal, James Conolly, 84, Harbour Street, Ramsgate.

Angling Associations, the Best Code of Rules for their Management in a Sportsmanlike Manner; prize, salmon rod and book of 12 dozen flies, given by R. B. Marston, Editor and Proprietor of the *FISHING GAZETTE*, Henry Bradfield, Gaywood Road, King's Lynn.

Essay on Oyster Breeding; prize, £15, W. Anderson Smith, Ledaig, Argyshire.

Essay on the Utilisation of Localities generally Suitable for the Cultivation of Oysters, withheld, no merit.

Essay on the Utilisation of Localities in Norfolk and Suffolk suitable for the Cultivation of Mussels and other Shell Fish (essay marked C and essay marked E equal); prize £12 10s. each, T. C. Wilcocks, of the Field, 4, Caer Badden Terrace, Plymouth, and C. W. Harding, King's Lynn.

Essay on the Artificial Propagation of Andromous Fish, other than the Salmon, and the Restocking the Tidal Waters of our large Rivers Artificially with Smelts, &c.; prize, £10, C. W. Harding, King's Lynn.

Essay on Salmon Disease, its Nature, Causes, and Possible Remedies, prize; £10, Sir James Maitland, given by R. B. Marston, of the *FISHING GAZETTE*. (Recommended by the jurors to be printed.)

Essay on the Parasitic and other Diseases in Fish other than Salmon, no competition.

Essay on the Principle upon which the Legislation on the Fisheries of the Country should be based, and is it desirable that Boards of Conservators should have the Management of all the Fisheries in the Country, with power to impose Licenses; first prize £50, withheld; second prize, £25, Essay marked "Free Trade," J. W. De Caux, Great Yarmouth.

Essay on the Migration and Spawning of Sea Fish, especially Soles, Turbot, Plaice, and other Flat Fish.—Prize not yet awarded.

Essay, accompanied by Maps, showing localities where Mussel Beds can be established, and how existing Mussel Beds can be best cultivated and protected so as to afford an increased supply of Mussels and Bait for the Long Line Fisheries; £30 on special prize list, of which only £15 was awarded, J. C. Wilcocks, 4, Caer Badden Terrace, Plymouth.

Essay on the Causes of the Migration of Salmon from Sea to River, as Influenced especially by Height of Water, Temperature, or other Atmospheric Conditions.—Withdrawn, no competition.

Essays on the Natural History and Habits of the Herring, with Suggestions for the Improvement of the Fisheries of the same in the United Kingdom, to be considered as a Source of National Wealth.—Prize £50, William Watt, 9, Albery Road, Aberdeen.

Essay on the Herring Net, showing the best Mesh for the Capture of the Matured Fish, and Means for making the Use of such Mesh compulsory in Great Britain and other Nations Fishing in the same Waters.—Prize £21, J. W. De Caux, Yarmouth; silver medal, C. W. Morris, Harbour View, Lowestoft; bronze medal, G. Findley, fisherman, Whitehills, Banff, N.B.

The following awards were made for essays for which no special prizes were awarded:—

Mr. Laughrin, Polperro, Cornwall, silver medal, for essay on the Food of Cod and other Fish.

Essay marked "Qui docet discit," diploma, for essay on the Salmon and its enemies.

John L. Cook, silver medal, for a History of Trawl Fishermen and their Condition Afloat.

In conclusion, our readers will be glad to learn that gold medals have been awarded to H.R.H. the Duke of Edinburgh, to the Board of Trade, and the National Lifeboat Institution, for their exhibits, and that diplomas have been granted to many gentlemen who have taken a leading part in starting and managing the Exhibition, as an official recognition of the value of their services.

EEL-FISHING.

No. II.

EEL-SPEARING.

BLAIN does not say much upon eel-spear-
ing, but what he does is far from tending to remove it from the category of manly pursuits. He tells us it is practised by many persons for pleasure even, although to be half-way up the legs and thighs in ooze and mud would not appear delectable in the eyes of the highly-polished angler. We, however, knew a very keen angler, who would leave off throwing his fly in the midst of tolerable sport, to undertake to spear some eels for the miller, from whose running ponds he used to extract largely of trout, perch, roach and dace, but which amusement he readily abandoned for eel-spear-
ing. To the surprise of everyone who witnessed his exertions, now upon the brook feeders, almost knee-deep in the morass, he plunged in his eel spear, and so doing, ever and anon was heard a lusty hurrah, and next was seen, spear uplifted, and bearing sometimes one and sometimes two eels fast clenched between the iron jaws of the instrument, but writhing and struggling to free themselves from a grasp too firm to give way to their exertions. Extraordinary as it may appear, on one occasion, when striking deep into the side of the bank, which circumvalated the water, he felt a more violent and momentary struggle than usual—he had struck an otter in its couch, and so disabled him as to make his destruction inevitable, much to the miller's satisfaction, who had long been a serious loser in his poultry, and who had in vain attempted to discover how his losses were effected, more particularly in his ducks, the young of which were continually missing.

It may here be observed that there exists great doubts whether the loss of poultry, game, &c., is traceable to the otter, which is essentially a fish feeder, and which, in the present case, with so well-stocked a larder close by of his natural food, was not, we think, likely to turn his attention to feathers. How much more reasonable to have attributed the loss of the miller's ducklings to the pike, a fish that is known to have a toothsome relish for this savoury food!

Mr. Edward N. Murta, in 1866, contributed an able article upon our subject to Pennel's Fishing Gossip, which will be found likewise to contain many essays of piscatorial interest from the pens of Frank Buckland, Thomas Tod Stoddart, Greville Fennell, Jonathan Couch, Thomas Westwood, Alexander Russel, and other names distinguished in angling literature.

Mr. Murta descants in high terms of praise upon eel-spear-
ing, which, as he pursued it during broad daylight, he terms "sun spear-
ing." He tells us that ever since he was able to cast a rod single-handed, he has been of opinion that any pursuit which enlarges the sphere of our innocent enjoyments is so much added to the stock of human happiness. If the subject of our juvenile philosophy brings us into closer communion with nature, and opens a wide field for the observation and study of her works, the novelty is so much the more worthy of acceptance and encouragement of all the objects of our restless desires. Her treasures are alone inexhaustible, never tire, and leave no sting behind. Both mind and body, on the contrary, become invigorated by contact with her wonders, just as the fabled athlete acquired fresh strength as

often as he touched his mother earth. All field sports more or less fulfilled the conditions of his early postulate, but none more fully or agreeably than fishing in its various forms. Numerous as these are, and well adapted to all ages and grades of life, he avows that he has long been smitten with the ambition of adding another to the number; hence the essay upon eel-spear-
ing to which his name is attached.

The popular estimate of eels, we are sorry to say, is at par with the prevailing sentiments respecting the barbarous weapon with which they are too often tormented. The naturalists, from whom one might expect fair play, are hardly less unjust. They all continued the formidable name of *Anguilla* in their systems, as if they really believed that eels had anything to do with serpents, or that they were included in the malediction pronounced upon the latter.

When learned men thus perpetuate calumnies, no wonder ignorance follows suit, and dubs, or rather daubs the poor thing with the slang synonym of "snig," which they ought to know is the outcast of the family. His unworthy fate would seem to pursue him to the last. He is thrown amongst burning embers to reduce his fat, skinned alive, broiled, fried, or stewed, and otherwise maltreated, even before it has been ascertained that the vital spark has fled.

Our writer is somewhat hard upon that class of eels who frequent any waters but the most clear and pellucid, and therefore gives his preference to the spear-
ing of the great lake eel; the more, we opine, because the waters of such have the quality to permit his seeing through their profundity to the very pebbles at the bottom, and therefore permit his directing his weapon with surer aim than do disturbed estuaries, in which the eel-fisher plunges his spear here, there, and everywhere at random. Such a lake he would have at least four or five miles long, "as the crow flies," its sides rock and shingle, and its bottom, for the most part, marl, silt, or sand. If a few nice bits of bog break the uniformity of the shore, just to keep the eels warm and comfortable during the long winter nights, it is so much the better. Of the lake eel itself, its back is of a dark olive, which distinguishes the whole of the race, the sides shading off through a pleasant azure grey, into a pure white on his abdominal regions—indeed, a veritable silver eel. His nose bears a resemblance to a duck's bill, a feature which characterises a different variety of the species. On the contrary, his physiognomy is prepossessing, and wholly free from the sinister expression of the snig. His size is generally greater than that of the river kind, growing sometimes to eight and nine pounds. But these weights are exceptional, and not often obtained. From three to five pound would give a more correct approximation of his general weight. For his superior size and beauty he is generally indebted to the localities in which he is found. There no dearth of his natural element cramps his development, or vitiates his tastes by impurities. A mass of water, boundless, perhaps, in extent, to eel intelligence, affords him unlimited scope for exercise, and supplies him with an inexhaustible store of wholesome nutriment. Responsive to the dignity and fostering impulse of local circumstance, he becomes the type, the model representative of his "order." In this state of perfect equality with his more light-prized and organised companions of the lake, he has left popular notions of the economy of eel-life far behind. As he flashes in brightness and power through the crystal element, the common observer would scarcely recognise relationship or similitude to the semi-amphibious snigs of the manor ponds. Like them, however, he hibernates, for in his highest condition he is still true to the instincts of his race. But what a difference between the slimy, sulphuretted ooze in which they hide their diminished heads, and the pure silt and vegetable fibre beds in which their "silver" relative takes up his winter quarters, with pearly shells for his pillow, and the white surge of the lake breaking in music over his

head! Sometimes in spring, according to the temperature of the season, he shakes off his winter lethargy, takes to roam once more through his wide domain. But to descend into a more practical atmosphere.

The instruments for this phase of eel-spearing are a small boat and a spear specially constructed for the purpose. Besides skill in these agents, a knowledge of swimming, or in lieu thereof, a "good conscience" is most desirable. Persons who may never have had occasion to test practically the value of the latter gift may, perhaps, inquire its connection with our pursuit. The reply is simply that drowning is a contingency quite within the capability of an awkward practitioner. In the event of such a sub-mergency, as Mrs. Malaprop might possibly say, either of the accomplishments indicated would, of course, be invaluable. The tyro, therefore, had better look to it; we are not further responsible for untoward results.

The metal part of the lake-eel spear is thus constructed:—Into a small flat bar of best Swedish iron 12 inches long, $\frac{3}{4}$ -inch wide and $\frac{1}{4}$ -inch thick, 12 teeth of best spring or sheer steel 3 inches long, $\frac{1}{4}$ -inch in diameter in the shank, double barbed, and carefully pointed as the best fish-hook, are welded, riveted, or, better, screwed, as the latter admits of a new tooth being easily added, in the event of one being broken or damaged. To the upper side or edge of the bar carrying the teeth described, a light socket for receiving the handle is attached by one or other of the processes indicated for fixing the "comb" or teeth. The latter, in addition, should be carefully tempered, and the whole *blacked* by one or other of the receipts of which each workman has his own favourite. The handle may be formed of any light, stiff, bearing wood. Red deal, free from knots, answers the purpose well. The length should not be less than 16 or 17 feet, and the greatest diameter not more than about $2\frac{1}{2}$ inches. It should be well finished on the bench, and tapered up to the top to about an inch in thickness, when it is terminated by a short bracket or handle turned on the lathe. A coat or two of copal varnish will serve the double purpose of keeping out the damp and giving it a finished appearance. The stem of the bamboo, as handles, might solve the problem of reducing the specific gravity of the weapon sufficient to enable it to float, in the event of its escaping from the hands of the operator.

Any small boat (always excepting punts), well up in the bows to enable the spearsman to stand upright over the cut-water without sinking it too deep in the pool, will answer the purpose. Should it be deficient in this quality, a boulder or two placed astern will help to right the balance. Though the craft is chiefly impelled by the spear alone in the act of looking for the game, a pair of short, handy oars, are indispensable companions. The thorough management of a boat is too obvious a necessity in this amusement to be insisted on here; for though water may be a very pleasant playmate, it is not always safe to trust too far. Observing that there may be risks of immersion, the novice may possibly ask "What kind of dress would be suited to the occasion?" the obvious reply to which would, of course, be "a bathing dress." But he must not be put off with this ambiguous answer. We would recommend a Garibaldi suit for the purpose. The free-and-easy style of costume of the great guerilla will oppose the least possible resistance to the use of the thews and sinews in air or water.

The best season is between the first of June and the middle of July; then the eel, like Curran's emancipated slave, "walks abroad in his own majesty," and displays himself in all his length and strength to the admiring eyes of those who know where to look for him. For this purpose the eel-hunter must be wide awake, and up early. If the tyro lies abed "till the sun burns a hole in the blanket," as Pat has it, or waits till breakfast bell, he had bet-

ter forego the pleasures of this amusement. We are apt to make contrasts between money-grubbing and the pursuits of the country, yet we cannot help thinking there is a principle within us which finds something to admire in the prime of the year—wild scenery and the hopeful hour of the dawn, the cream of the day—quite as much as in a heavy balance sheet or the higher quotation of "scrip."

An absolute calm and cloudless sky must lend their aid to the undertaking. If the leaves of the aspen (*Populus tremula*), of which we are told—incorrectly, of course—"woeman's tongues are made," or the purple spikelets of the quaking grass (*Brisa media*), from which we brush the dew as we descend to the lake, show the slightest movement, the water will scarcely be found in a proper state for our work. Presuming, however, that there exists perfect repose, and the surface of the lake is as unruffled as angels' tempers, and we are on the face of one of those waters best suited for our sport to be found in the midland counties of Ireland, which present shallow shores and extensive flats, covered by not more than ten or fifteen feet of water, we may seize our spear and show how eels are won.

One of the first things Mr. Murta would point out to the novice on crossing his oars, taking the spear in his hands, and standing forward in the bow of the dingy, is the extraordinary distinctness with which all objects are seen at the bottom. This is so remarkable, that Murta is tempted to correct the great chemist, Cavendish's, formula for the composition of water, and prove that, besides hydrogen and oxygen, sunbeams form a very large proportion of its elements.

(To be continued.)

WERE THEY TROUT, OR GRAYLING, OR CONTRABAND?

AN amusing, and at the same time a very instructing, case illustrating the uncertainty of prosecutions in connection with the Fresh Water Fisheries Act has just turned up in the North of Yorkshire. It seems, the other day, the Pickering bench of magistrates had the case of a John Harper before them, who had been summoned by Superintendent Spence, of the Pickering police for taking fresh water fish in contradiction to the provisions of the Act known as the Mundella Act. The defendant was a Pickering man. To prove his case the superintendent called a witness who swore he saw the defendant on the bank of the Pickering beck, with a long pole in his hand, at the end of which was what appeared to be a hook. With this instrument he was drawing out fish from the river. This was on the morning of Good Friday last. The superintendent next called a police-constable who, in his evidence, swore that on the same day he met the defendant in Pickering, and he found that he had in his pocket four small fish, one of which he examined, and pronounced it to be a grayling. This the defendant strongly denied, and told the magistrate the fish were trout. He had laid night lines in the river for the purpose of taking trout, and when seen by the previous witness he was engaged in taking them up. He was quite positive they were trout, and he claimed to be let off, inasmuch as the Act made an exemption in favour of trout. After a discussion as to whether the fish were really trout or grayling, the chairman decided to dismiss the charge, believing the fact that they were grayling was not sufficiently proved. At the same time he thought well to warn the defendant that had the fish been proved to have been grayling, he should have been bound to have convicted him, the penalty for which was a fine not exceeding 40s. and costs.

John Harper evidently had a narrow escape. In the interests of anglers it would be well to point out how easy it would be in a similar case to gain a conviction by the aid of a little scientific

evidence, and also how necessary it is to consider such an element before bringing a prosecution forward. Such a feat would have been put beyond dispute by the evidence of an expert, for instance. Surely there would not be wanting anglers in Pickering who would have been able to have proved that the fish was a grayling or a trout as the case might be; that would be a simple and easy matter for almost any one. But here, let us say, was the unscientific evidence of the policeman, who might perhaps be thought to be able to tell a bullfinch from a bulltrout, but at the same time might be a little doubtful of the exact distinctions between a trout and a grayling, against the positive assertion of a man who evidently knew something about fishing and fish because he had admitted that he had been setting night lines to catch trout. Looking at the case as it stands, there will perhaps not be quite so much wonder in the common mind that he got off than would appear at first sight. But it is most important that in all such-like cases it is well to consider the necessity of bringing forward scientific evidence sooner than allow a case to fall to the ground as this has done, and because of the possibility of something also being behind it.

And there is another view which this case presents which it would be well to call attention to. That is, What was John Harper doing setting night lines at all? It does not appear that he was setting them for any other purpose than to catch fish, and as to what he was going to do with his fish, even if they were trout, does not appear. Possibly, what he was stating, was right after all; but seeing we have to imagine it, we will have done with John Harper, and refer to a practice which is just now causing a good deal of righteous indignation in several resorts of anglers other than Pickering. In very many places it is known the angler for trout, grayling, pike, or any other fish, if he is unfortunate, has little difficulty in securing a supply of the fish he is after to take home with him to gladden the hearts of himself and his friends, if he is so minded. In some places indeed these little pleasures are dangled provokingly even before his very eyes. In a weak moment, alas! he too often gives way to temptation, and unsuspectingly becomes the dupe of the very scoundrel who is doing his best to rob him of his sport. It is sad to think that it is so, and sadder still to find that even the obliging hosts of the snug little hostels we so delight in should, behind our backs, connive at these misdoings in order to seem to us so obliging, and so on. It is time a protest were made against this sort of thing. It is no use naming one locality over another. About many of the more fashionable trout waters the angler may note an idle set of loafers. In some cases they form quite an enigma for his contemplative moments. But few, we fear, suspect his real character. The loafer of whom we speak is ready to show you all the noted swims in the river; tell you of all the latest secrets as to the most recent *locale* of the big fish; show you all the newest novelties in the way of "artificials" exactly fitted for the day, the month, or the water; and put you up to the hundred and one little things you seem to want to know. After a hard and unsuccessful day he will come flatteringly and tell you of So-and-So, a friend of his, who has been extremely lucky in another place, not always mentioned, and who would let you have a few, "just to make up a little basket, you know," for a small consideration; "for he is a hard-working man, you know!" and more after the same fashion. This bait is far more likely to be taken by the angler than the angler's by the fish, in four cases out of five; and thus the itinerant and unsuspecting fisherman is pestered, and thus the angling scoundrel plies his illicit trade and thrives on it. He becomes a noted character in some cases and even gets into the company of noted men; but, as a rule, he is wary, and avoids the older brethren of the craft. He is more in favour with the younger ones, who are more inclined for help and open for assistance;

and, on the whole, he is soon pronounced a hearty good fellow. Strange you never see his friend. He fetches you the fish, or brings them to your inn the next morning, but you know not where they come from. Watch him home, and you will see he has nets and night-lines, and gaffs and spears, and all the paraphernalia of the fish poacher about him. He cares not for rods and lines, and flies and floats. It is fish he wants, and he gets them, almost as sure as the day comes round; and if the supply is not equal to the demand, he goes to his friend, and not till. And his friend is such another as himself. Day in and day out it is the same. A good season is a famine to him, a bad one a harvest. The more fish he catches, the fewer will be left for the angler that has come miles upon miles to fish in the waters he knows so well. He keeps up the celebrity of the place by his oily tongue, and he deludes his victim into the idea that it is Dame Fortune that has been cruel to him. He flatters him with the notion that he is clever, and all because by that means he will become his more pliant victim. But all this is easily seen through if one were disposed to look. It is an evil, and in our opinion one easily stopped. If anglers would make a rule never to buy fish, and never to eat any but what is of their own taking and never ask any advice, but act on their own knowledge as to baits, and streams and fish, they would not only be more successful in the long run, but the riverside crimp would soon find his avocation gone; he would transfer his operations to a more congenial clime—he would have to work—and the prospects of the angler would improve. And even a raid might be made on him and his class. Watch him, and you will soon find him with contraband fish. Do your duty by him, but see you make no mistake in placing your case on a sound footing. The close times give you every chance. A close time for one kind, whilst an exemption for the other exists, tends to improve it; for, on the whole, you are more sure of a conviction. In setting night-lines and nets and in poaching generally others are laid, hold of than those originally intended. But this riverside crimp is no sportsman. He is not the man to put back. He is not above a foul fish for his own consumption, or even one out of season. And more, he is inclined to take all he gets for fear of injured fish leading to the suspicion that something is wrong. He retains all he catches, as a rule; and where that is the case, and the contraband fish is found on him, or in his possession, his conviction and harassment is easy, if not his entire extirpation.

ANGLERS should always be provided with something to take away the swelling and poisonous effect of the bites of insects. They should also have with them something to apply to a cut or sprain. Pond's Extract reduces the swelling and inflammation, stops bleeding and pain, and hastens the healing process in case of any wound or sprain; and it has no equal for application to the bites and stings of insects. Therefore never go on a fishing excursion unprovided with a bottle of Pond's Extract. It is for sale at all chemists, at 2s. 3d., 4s. 6d., and 8s. 6d. per bottle.—[ADVERTISEMENT.]

TIED HANDS AND ARMS.—Edson's Electric Armlets and Wrist Bands Invaluable for anglers and gun sportsmen and highly recommended for all persons having tiresome writing, sewing, or music practice. They give wonderful energy and strength, enabling the wearer to accomplish tedious work with steadiness and comfort. Price 2s. 6d. per pair, silk web and fine steel clasps. Sent to any address on receipt of P.O.O. payable to J. Edson, the Electric Fabric Co. Patentees, No. 1, Charlotte Street, Bedford Square, London W.C.—[ADVT.]

GREGORY'S SPINNING BAITS.—"The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived. Address, James Gregory, Vyse-street, Birmingham.—[ADVT.]

GEORGE JAMES EATON, of Starkholmes Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[ADVT.]

MRS. F. Y. BROCAS, Artificial Fly Dresser, 4, Mill-street, Conduit-street, Hanover-square, London, W. A stock of best flies always on hand. Flies made to pattern. Lessons in fly making given.—[ADVT.]

RIVER REPORTS.

MID-THAMES.

"I well despair, and be at enmity
With cozening hope."

—SHAKESPEARE.

Very much trouting has been attempted during the past week, but no trout of calibre have been tempted to leave their aqueous home. I have several reports of fingerlings being had here and there in the upper waters, the greater portion too small to be retained. From Bourne End, I glean that Mr. Garside out with Mr. J. White on one occasion lately took three trout weighing respectively 4 lb. 14 oz., 2½ lb. and 1½ lb., and that Messrs. Taylor and Fillion had two decent trout, the fish being shown at that comfortable piscatorial den, the Railway Tavern, Bourne End, on the evening of capture. At Marlow and Medmenham, some decent spotted beauties have been described on the feed. Near Reading, on Tuesday, Mr. Davis, of Earley, killed a bitch otter which weighed 15 lb., the usual reward of £1 was paid to the fortunate shooter by Mr. Butler, the hon. sec. of the Reading Angling Association. On Thursday a young dog otter was trapped by Sheppard, of Maple, Durham, who states that since Christmas he has found the remains of upwards of 100 good fish, evidently destroyed by these aquarian poachers.

THURSDAY EVENING.—River as bright as "Old Tom," and fish as wary as "Old Nick." Wind N.E. MARLOW BUZZ.

Thames (Windsor).

Water in beautiful condition, but these big fish refuse to play about, doubtless owing to cold nights and general temperature of water. If warm evenings became the order, there would be a goodly show of the spotted beauties, but up to the present they are very loth to move, and still more so to go at the most tempting bait. A brace of little fish under 2 lb. have been had—one just below Windsor Bridge—but, so far, the season has been the worst I ever remember. A good many fish have been pricked, some of them large. Last Sunday, Lumsden, at Surly Hall, treated one to a mouthful which he will not forget in a hurry. Not having been favoured this season with many runs, he doubtless put the steam on on this occasion, forgetting the use of the very fine tackle which I notice he always uses. In the Windsor weir stream, that excellent local fisherman, James Cray, has been showing his patron fish at a distance, but closer acquaintance was denied, the wily ones living to fight another day. He tells me there are some beauties in this stream, and a capital show of chub this season; and as it was always a capital water for both fly and long corking, it doubtless will keep up its reputation this next season.—B. R. BAMBRIDGE.

Coquet (Northumberland).

Mr. Webb and Mr. Jemmerson, Morpeth, killed a splendid creel of trout: Messrs. Gillespie, Morpeth, killed each a splendid lot. Mr. Fryar and Mr. Farnear, Longhurst, each had good creels from the 9th to the 11th. The river is very small, and the wind from the east.—A. GLASS.

Dove (Derbyshire).

The wind has again got into the east, bringing frosty nights and chilly days, nipping the maturity of insect life, and causing the fish to lie dormant upon the bottom of lake, river, and stream. The steady breeze which has now prevailed for some days has caused the angler in these parts much fruitless exertion, though in the middle of the day there have been some nice takes with the fly. The Turkey brown, a fly of the large brown species, and a small dun (the iron blue) have been the most successful both up stream and down. Some four or five days since some good fish were taken with the brandling worm ("bush fighting"), a local appellation for up stream fishing with the worm at the extremity of a fly-cast, which is drawn across stream to and fro by the rodster who generally uses waders. The May fly or drake seldom or never appears in Derbyshire before the first week or so in June. A few odd stragglers, however, are beginning already to appear in Dove Dale, where this fly is invariably abundant.—THE SLODGER.

Eden (Carlisle).

The water is clear and low. The weather is very fine, but cold east winds, which are very unfavourable for fishing. On the 7th inst. Mr. James Bone, Parham Beck, killed 41 trout, and seven other gentlemen on the same ground killed from two to seven fish each. Mr. David Bone, Carlisle, killed eight trout. There has been very little sport in the rivers as yet. The lakes have been yielding better sport than the streams.—THOMAS PARKINS.

Exe (Exeter).

Fishing in the river, with fly, minnow, or worm, unless under special circumstances, we get some rain, or a fresher down, is pretty well all over, until such changes take place. The spring fishing, on the whole, has been moderately good. Salmon, of good size, and in excellent condition. Trout, although not numerous, have been of more than average size than for the same period of the past few years. Lampreys, just now, are very plentiful; some fine ones came to bank last week, but they are not sought after with any particular zest; few persons apparently actually know the delicious dish they make; they are easily taken, in the salmon pool portion of the river, as they find their way up as far as the foot of the apron of the weir, and, in some instances, affix themselves on the weir, choosing the rapid portion of the stream, although there is no depth of water actually passing over that portion, and they are taken by placing a stocking-foot over the hand to keep them from slipping therefrom when handled. Salmon in the lower waters are about the average, but although they are taken within two miles of the city, the price will not bear comparison to the London markets, being from 1s. 3d. to 1s. 9d. per lb. in excess of London

prices. Lobsters and crabs plentiful. No prawns yet. Some beautiful specimens of the "Conner" or "Ballan lorassi" have been taken in the estuary, with some very fine bass and bream. Weather very hot. Thermometer, maximum 118°, minimum 56°. Wind due north; not the slightest sign of rain; sky cloudless.—FRANK GOSDEN, Exeter.

Exe (Tiverton).

The river is extremely low and clear, and will be so as long as this bright weather continues, and the wind in the same quarter as at present—N.E. Fish sport only in the evening at dusk. A few have been taken with Half-kingdon, yellow May dun, and ostrich palmer. At the petty sessions held at the Town Hall to-day, before the Mayor (E. M. Winton), J. Lane and J. D. Fraser, Esqrs., S. Forward and W. Whitter were charged with illegally fishing in the Exe, at Loughborough, with a net. The case was proved by T. Copp. Fined 10s. each and costs.—WILLIAM MUDFORD.

Ilfracombe.

There have been some fair catches of trout taken this week by anglers from the streams running between Ilfracombe and Barnstaple. The fish are in excellent condition, and average about four to the lb. Salmon fishermen from the Taw and Torridge report very fair catches of salmon taken by the seine or drag net, these fish are in excellent condition and run over the average size. There have also been some fair catches of sea fish taken since the fine weather set in, weight from 20 to 40 lb. per boat per tide of tamlyn cod, whiting, pout, &c. There are a few bass to be seen in the mornings and evenings off the headlands, but no catch of any importance has come under my notice. I saw a fine octopus this week taken by a fisherman, who kept it alive for a day or two in a bucket of sea water. These fish are to be met with among the rocks at low tide in summer. If anyone interested in the public aquariums would wish to have an octopus or any of the squid tribe, or a consignment of sea animals suited for the aquarium, will communicate with me and direct how to pack them, &c., I can supply them during the summer.—HENRY COMER.

South of Ireland.

Angling for the moment has been abandoned. The period has been reached which marks the interval between the spring and the peal fishing, and the rod has been cast aside for the cricket bat and other enjoyable pastimes. The water has become so low, and the weather so bright and warm, that even trout-fishing has been relegated to the list of out-of-season amusements. Deep-sea fishing will now probably take its place; and already I perceive that the patrons of sea-fishing are preparing their gear and their boats. The poachers, availing themselves of the low condition of the river, have already commenced operations, but arrangements have been made to thwart their machinations by the system of night reliefs on the particular parts of the river. A few nights ago—last Saturday night, I believe—four well-known poachers proceeded to Macroom, and were there joined by a band of reckless and daring fellows. They carried nets with them and other impedimenta known only to the poaching art, and made a descent upon a pool which is well known to be full of fish. They found, however, that their movements were watched by the bailiffs, and they sheared off to some other place. The bailiff lost sight of them, but in the morning two gentlemen, anglers, were proceeding in the direction of the river when they met the four city poachers returning with their spoil. The moment the poachers observed who were approaching, they decamped across the fields, and exciting chase followed, resulting in the capture of one, who carried a bag. On examination the bag was found to contain the ropes of a net and only two salmon. A prosecution will not lie on the case, but at all events the poachers have got such a harassing over the matter, that they are not likely again to trouble that quarter. Once the poacher finds "the game is not worth the candle," he will not be likely to try it again. An exciting chase after an otter a few Sundays ago deserves to be mentioned. Some men from Macroom, who were engaged in rat-hunting on the banks of the Lee, put out a large otter, hot pursuit followed, the otter taking to the river closely followed by a pack of terriers. An angler from Macroom was engaged in fishing further down, and he joined in the sport. Seeing a favourable opportunity, the angler could not resist the temptation, which the otter swimming gracefully under water, presented and utilising his gaff, had the animal soon on the bank. Wringing with pain it snapped at the handle, and doubtless would have seized his captor, but for the precaution of keeping it well away until the dogs came up, and after a fierce encounter despatched the ambitious brute. ANGLER.

Suir and its Tributaries, Clonmel, (Ireland).

The weather continues very warm during the day, with fine nights, but pretty cold, with a little easterly wind, so that, as we have had no rain since, we have had very little fishing. Thomas Phelan, Kilmanahan, got one on Wednesday; next day Dr. Cook got a small one of 7 lb. at Newcastle; on Friday Ned Butler got one of 10 lb. at Dudley's; and on Saturday Mr. R. H. Hutchings got one at Poulakerry; he also got another on Monday at Dudley's weighing 14 lb. The Clonmel cotmen only got four last week. Lower down the river they were more successful, getting about six each day. The trout fishing has been very bad since last I wrote. The evening fishing is not quite in yet. However, the only time a few trout have been caught was during the evening, when there is a rise before sunset. We want a nice flood to rise the river and bring up some fish. The brown rail is the best fly at present.—DORA.

Swale.

A start has at length been made upon this icelebrated stream. Mr. Barker, of Grinton Lodge, was out for a short time on three several occasions last week, and bagged twenty-five, nineteen, and twenty-four trout, all with the fly. They fell to the brown drake (March brown), early brown, crimson brown, and Barker's fancy. This result is very gratifying, as it proves that the bursting of Moss Dam was not quite so destructive last year as reported. Mr. M. Cherry also secured higher up the dale fourteen, eighteen, and twenty-nine fish, whilst other anglers had good takes. In my report of a fortnight ago I said that Muker, Thwaite, or Keld might be selected as headquarters by visitors. Your compositor, to the amusement of the knowing ones, rendered the first word "Monkey." Fancy some stranger, rod in hand, asking the natives the way to Monkey. It would be too good; and you may depend upon it the inhabitants would not fail to reply to the casual somewhat as follows:—"Monkey, sir, did you say? Why, we never saw one wild until your arrival." This calls to mind a parallel circumstance which occurred twenty years ago. A Londoner, in green kids, and with silver-mounted cane, &c., was walking with a friend of mine close to the place in question. It was evening: a buxom maiden was milking a bob-tailed cow. This was too good for Master Cockney, so he let fire with a roaring laugh—"Hey, Betty, how's this? Whoever saw a lass milking a bob-tailed cow before?" The milkmaid quickly replied at once—

"It's like thee, sir." "Why, how's that?" said the gent. "'Taint all thar." Now, when a person is hardly *compos mentis*, in the south we say "He has lost a button;" or "He has a slate off." In the Yorkshire dales the expression is "He ain't all thar" (there). Our readers will at once see that it was a case of diamond cut diamond.—THOMAS FORD.

Waveney (Beccles).

The river is in capital condition for the anglers, and if the wind would but keep away from the east it would now be very pleasant rambling by the river-side rod in hand. Some capital takes of roach have been had lately, notably by Messrs. Gill and Upcraft, on Sunday last, who obtained about thirty pounds of roach, several of them weighing over $\frac{3}{4}$ lb. each. On Saturday, the Caxton Angling Club had their first competition for the season. As nearly all the members of this club are employed until past noon on Saturdays, the competitions are necessarily of short duration, three hours being the limit on Saturday last. The highest weights were:—C. Chase, 8 lb. 3 oz.; F. Ulph, 7 lb. 15 $\frac{1}{2}$ oz.; G. Holland, 4 lb. 5 $\frac{1}{2}$ oz.; W. Peachey, 2 lb. 13 oz.; C. Bumstead, 1 lb. 11 $\frac{1}{2}$ oz.; and G. Pye, 1 lb. 8 $\frac{1}{2}$ oz. The takes were composed entirely of roach, the heaviest fly weighing 12 oz., for which a prize was awarded to Mr. Chase. Roach are this week commencing spawning, and are earlier than they have been for several years.—C. B.

Wye and Derwent (Derbyshire).

All our Derbyshire rivers are now in most excellent condition for fly-fishing, and sport during the week has been very good of an evening from 4 to 7 p.m., and some really good catches have been made, chiefly off the Derwent. It is very little use fly-fishing in the middle of the day while the sun is out so bright. The fish feels the heat in the evening, and the killing places have been the rough parts of the streams. The bumble still keeps the best killing fly of the lot used; this fly has done wonders this season; in fact, it has beaten everything that has been used on any of our streams. The only secret there is in this fly is to get the proper hackle and body, and the right size of the fly. There are hundreds of bumbles made now that I would not fish with myself; in fact, we have very few professionals who know the proper colour to put in the flies. It is a very great mistake for gentlemen anglers coming down to Derbyshire to fish these rivers to be ruled or guided by the water keepers; as the keepers, in most cases, generally tell you you are using the wrong flies, on purpose for you to buy some flies off them. Now, take my advice, and when you get your flies from a practical maker, or fisherman, give them a trial before you believe everything that the keepers tell you respecting flies. Bumbles, red ribbed with gold twist, and spider flies, have all killed fish during the past week; baskets from 3 to 7 brace per angler have been made off the Derwent of an evening. The gravel bed, or spider fly, is just making its appearance on the Derwent. I recommend the following way—wren tail hackle, hare's ear dubbing upon yellow silk, on No. 2 Kendal hook. Another way—woodcock's hackle, lead-coloured silk body, made long; woodcock's quill-feather wings, black hackle legs, body hare's ear upon orange-coloured silk. We may expect to see the yellow dun out shortly. Many anglers prefer it made from honey dun hackle, with floss silk, dyed with crab-tree bark and alum. Full body on No. 2 Kendal hook. I always use dotterel feathers myself when I can get them, with a dirty yellow or Esterhazy body. This is the most difficult fly we have to imitate. Sport on the ponds still continued to be good, especially of an evening. Bumble, golden spinner, and sand flies are killers. The tight-line party at Matlock Bath has killed some eels during the week on their lines, with worms for baits.—G. J. EATON, Starkholmes, Matlock Bath.

Yare (Norwich).

Many strangers have availed themselves of the fine weather of the past week, to visit our various fishing waters, in and around Norwich, and several splendid catches have been shown in the Fisheries Exhibition the last few days, amongst them was a magnificent display of roach taken from the Wareney, some of the fish weighing 2 lb. each; also a nice basket of bream taken near St. Benet's Abbey, on the Bure, by a member of the Champion Angling Club, and a member of the East Anglian Club. A magnificent perch was also shown on Saturday, taken by Mr. Cooper, of King Street, evidently weighing 3 lb. This fine specimen was captured at Horning. Several gentlemen anglers from London have tried their luck on the river behind the new mills, and have been fortunate in securing some nice catches. On this same stream also was exhibited last week one of Mr. C. W. Meiter's, of Gracechurch Street, London, portable fishing punts, which obtained a medal at the late Fisheries Exhibition, the trial elicited much commendation, and proved that these boats would be extremely useful and splendidly adapted for our broads and rivers, for angling and other purposes. This boat, when not in use, may be folded up, and carried with ease. It is also fitted on either side with air chambers, so as to make it perfectly safe, and capsizing seems to be an impossibility. A boat weighing 42 lb. is capable of sustaining 42 stones weight.—ANGLER.

Yore (Yorkshire).

Summer weather has come upon us at length, the last three days having been more like July than May; in consequence a great number of anglers have turned out, but little has been done, except in the evenings, owing to the brilliancy of the sun. I expect that by the middle of next week the creeper of the stone fly will be strong upon the water, but I fear that a heavy flood that came down the Yore after I sent my last week's report will have washed a good many away. During this flood a few nice dishes of trout were caught with both minnow and worm, and no doubt the few salmon kelt that remained in the river from last autumn took advantage of it to return to the sea; as regards flies, I do not think that anything better can be used than the March brown, yellow dun, sand fly and spider fly, with the red spinner in the evening.—FRANCIS M. WALBRAN.

TROUT FISHING IN THE WHARFE AND AIRE.—The heavy rains of Wednesday and Thursday last week caused anglers' prospects to look brighter than they have for some time past, and great numbers of trout fishers availed themselves of the "fresh" in the Wharfe on the Friday and Saturday following, when some magnificent baskets were made, one of the heaviest falling to the lot of a Skipton gentleman. In the Aire we hear of one or two good takes—chiefly with the minnow—but the sport was not as good as in the Wharfe, although there was abundance of water of a good colour. Good sport in the latter stream is not to be confidently anticipated till the bed of the river has had a more thorough cleansing than it received from the rains of last week.—*Craven Herald*.

FISHING IN ANGLESEY.

PUBLISHERS of angling guides invariably give out the above fishing as of "no importance." It may appear presumptuous to contradict the stereotyped assertion, but I make bold to do so. From my own experience, and the greater experience of my acquaintances, the above fishing is not only as good, but undoubtedly better than many other counties of Wales. And for the following reasons:—

I. The waters being little known are little fished, consequently the trout have the private seclusion of preserved waters.

II. The climate of Anglesey being milder than many counties of Wales, the flies appear sooner and stay later, and as fish thrive best on flies it follows they are in good condition through the season.

III. The working classes take not the slightest interest in trout-fishing, a fishing-rod being as strange to them as a gun. How different to their brethren of Carnarvonshire! who, in a regular file, incessantly whip the waters till the fish are shy and difficult to be caught.

IV. River-poaching, except when the salmon run up, is unknown, another great point in favour of the fish and the fisherman. And even the salmon-spearing, owing to the renewed vigilance of the police, cannot be carried on with impunity in the future.

V. For the above reasons combined, the trout run up to an extraordinarily heavy size.

The rivers of Anglesey are Crygyl Ffraw, Cefuin, Braint, and Alaw, and the lakes Frogwyd, Coron, and Maelog. They fall far below other waters of other Welsh counties in size, and surrounding scenery; but for fishing "pure and simple" they compare most favourably. For the present, I beg to draw the attention of my angling brethren, kindred souls! to Lake Maelog, situated one mile from Tycroes Station, and seven from Holyhead. It is in close proximity to the sea, and travellers on the Chester and Holyhead line are often struck with its singular beauty. Nestled between two craggy eminences of an oval shape, one mile long by three in circumference, its sudden appearance, in contrast with the uniformity of the surrounding country, is very striking, but the view is transitory. To enjoy its beauty, its exhilarating air, and keen sport, the angler must take a boat, and there in perfect tranquillity, broken only by the sweet accents of a maid calling her kine, or by the whistling of the iron horse (it persistently intrudes into the loveliest scenes of nature), will he realise the highest happiness of the gentle art. This lake is reputed to contain the best trout in North Wales. Without attempting to decide a nice and difficult question, I know from the experience of myself and far more distinguished anglers, that its trout are excellent for sport and for culinary purposes, and run up to a large size. Two years ago, one of the most experienced anglers in the kingdom (and who often contributes to the *FISHING GAZETTE*), was spinning a large minnow with very strong tackle, which were repeatedly broken; the trout, he was certain, weighed from 5 to 7 lb. The rod was held by the inexperienced hand of a lady, which may account for the trying dissolution of partnership. In company with the Messrs. Williams, Aberffraw (about the best anglers in the island), we have often taken heavy baskets with a Totness, when gentlemen with other delusions were sent empty away. I must here remark that the weeds this year are more flourishing than usual, rendering spinning very troublesome. Calling at the hotel adjoining, on April 16th, I found that a gentleman caught 18 trout on the 11th, 19 on the 12th, and 23 on the 13th. Mr. Heywood, jun., Bangor, took one with a fly weighing 2 $\frac{1}{2}$ lb., and Mr. Adkins took 22 in one pool in the adjoining river. Mr. R. D. Williams Aberffraw took a kelt weighing 6 lb. and a dozen nice trout in the river, while a gentleman whose

name I forget took some fine fish in the lake with a fly. Maelog takes its name from St. Maelog ap Caw Cawlyd, who flourished in the 7th century, and who built the church and perpetuated his name in the parish. In the vicinity are *Chromlechau*, Druidical altars, especially attractive to the antiquarian. What a change in the surrounding scenery since the time Suetonius Paulinus penetrated the thick forests, and struck consternation and death into the camp of the fanatical priests! At these very altars, once enshrouded in trees, now as naked as the errors of the ceremonies performed upon them, what human and animal blood has been spilt in vain! What towns, palaces, and villages have been erased! (for here the Royalty of Wales resided for centuries), and what life and bustle has for ever ceased, and been succeeded by unromantic inactivity! I have gone a long way from my subject, but trust the extraneous remarks are legitimate, as an angler should know the sanctity of the ground he often treads upon.

W. HUGHES.

May 2, 1881.

THE GREAT EASTERN RAILWAY AND ANGLING FACILITIES.

THE Great Eastern Railway management is certainly giving the most material assurance of its desire to please its best customers—the passenger public. Another substantial evidence of this praiseworthy anxiety is now before us in a *brochure*, which may be considered quite a novel style of time table, especially issued for the benefit of visitors to the East Coast watering-places, the scale of fares tabulated in which commences with the first of this month, and is intended, as far as we can learn, to keep in effect the whole of the present year. In the watering-places are included Yarmouth, Lowestoft, Cromer, Hunstanton, Southwold, Aldeburgh, Felixstowe, Harwich and Dovercourt, Walton-on-the-Naze, and Clacton-on-Sea. The Friday or Saturday till Monday third class tickets are issued for Yarmouth, Lowestoft, Cromer and Southwold at 10s.; those for Hunstanton and Aldeburgh, at 9s. 6d., and those for Felixstowe, Dovercourt, Walton-on-the-Naze, and Clacton-on-Sea, at 7s. 6d. Fortnightly and monthly tickets are granted in relative proportion. A list of the train service for May and June is appended, and a slight sketch of each of the places of resort is given as a guide to the visitor, together with their individual population according to the last census returns of 1861. There are other important concessions, amongst which are the permission, by a percentage upon the original fare, to extend the time of sojourn, with the privilege of breaking the journey at certain stations *en route*. Saloon carriages and invalid carriages—the latter to convey the sick or ailing from house to house without change of vehicle, in the same manner as a private carriage, it being placed upon a railway truck, the horses meeting the train by telegraph at any required station. Added to this, a similar pleasurable convenience may be secured by private parties, who, upon expressing their wish before starting, will find roomy and well-appointed omnibuses to meet them, capable of carrying six persons inside and two outside, with luggage at the low tariff of 1s. per mile including the driver.

This is a grand step in the right direction, which we feel assured both the public and the Great Eastern will profit by. The minimum railway fare has not yet been found, but every advance towards it ought to be hailed with grateful satisfaction by those for whose interest any advancing experiment towards such a consummation is hazarded. As far as the facilities here given to all classes, anglers included, the FISHING GAZETTE ought to feel indebted; and although we admit that the *brochure* in question, light and unburdened with advertisements as it is, must prove a great boon, we are greedy

enough to wish there had been embraced in it some allusion to the angling to be met with at the several stations named,

We will, however, endeavour to supplement this in general terms. A knowledge of the aquatic resources of Yarmouth and Lowestoft, both for sea and inland fishing, are obtainable at any shop where tackle is supplied. A short run along the Norwich line gives four or five well-known fishing stations on the Yare. Another line carries you into the very heart of the nest of broads; a third puts you down close to the river Bure; and a fourth joins Yarmouth sands on to other of these extensive sheets of water. A few pence carries the angler from Lowestoft to Mutford Bridge on the Oulton Broad and river Waveney, which magnificent expanse of water he will get a view of from the window of his carriage near Carlton Colville, and of that of the true angler's home, the Wherry Hotel, where Mr. Mason or Bedford, Ansdale, or any of his staff of experienced fishermen, will see that he has the best chance of sport which the neighbourhood can afford.

There is little of inland fishing at Southwold, excepting unless leave can be got to angle in the two small broads close to the coast at Bentacre, belonging to Sir Edward Gooch, Bart., or the landowner's permission to wet a line in the little streamlet which runs across the Lowestoft road, and from which we have taken heavy bags of fine roach, bream and eels.

At Felixstowe, which is on the opposite side of the mouth of the Ipswich river, Orwell, there is a lake very well populated with pike and bream, the property of Colonel Tomlin, M.P., to which access is rarely denied to the respectable applicant. The usual fish which frequent our estuaries may be taken in the tidal district of the Orwell; and the pretty little Gippin, above and close to Ipswich, reachable by steamer or rail, will amply repay the use of tackle. Apply at Dorling's Hotel, Walton-on-the-Naze, for information respecting roach, rudd, and tench-fishing near there.

Baits for freshwater fishing are not readily procurable in the eastern counties, excepting at Norwich, but live shrimps are plentiful, the largest of which, perhaps, in England are to be obtained at Southwold, where, by the bye, at the Southwold Arms at the entrance of the town, Mackenzie, the honest Highland landlord, can, we believe, put the visitor on to the waters we have spoken of as situated at Bentacre.

G. F.

THE PRESERVATION OF FISH BY GLACIALINE, AT THE NATIONAL FISHERIES EXHIBITION, NORWICH, 1881.—SILVER MEDAL AWARDED.

A PERUSAL of the official returns of the quantities of fish and other articles of food that are annually condemned as unfit for human consumption, would astonish, if not appal, most persons. During the past ten years many million pounds of fish have been seized by the authorities and condemned, but how many more million pounds have been, not only offered, but sold in a semi-putrescent condition it is difficult to estimate. And it seems to us quite certain that there are far heavier losses in transit by boat and rail, as well as in the household, after purchase, that can never be computed.

It is quite clear that anything which promises to minimize this great loss of valuable food, is worthy the serious attention of all those who wish for an abundant and cheap supply of fish.

Passing leisurely through the avenues of the *annexe* of the National Fisheries Exhibition at Norwich, we were attracted to the Stand of the Antitropic Company, who exhibited their patent Glacialine, and fish preserved by its means.

We noticed on their stand a slab with fine specimens of salmon, turbot, cod, brill, plaice, soles, and smelts. With the exception

of the smelts these had all been gutted. Upon inquiry we found that these fish had lain exposed to the varying temperatures and conditions of the atmosphere of the Exhibition building for twelve days. Notwithstanding the unfavourable conditions (handling of exhibitors, &c.), under which the fish had been subjected they were in perfect condition on the twelfth day. The salmon and smelts looked especially beautiful. The scales on these fish glistened quite as brilliantly as if they had just been taken out of the water.

While we were at the stand a man asked one of the exhibitors:

"How long have those smelts been here?"

"Twelve days, sir!" was the answer.

"Twelve days! I'll take my solemn davey these 'ere smelts were caught yesterday," said he.

"But I can bring you conclusive proofs, sir, that they have been here twelve days and have never been removed."

"Proof or no proof, I don't care. I've 'andled smelts for a matter of fifty years, and I'll swear these 'ere smelts were caught yesterday."

Nothing could have demonstrated the excellent outward condition of the fish better than this fishmonger's observations. However a more crucial test remained, viz., that of eating the fish. The jurors ordered a salmon and sole to be sent to the Grapes Hotel (the nearest hotel to the Exhibition) where they were cooked and served up to lunch. These gentlemen expressed themselves perfectly astonished, for not only was the natural colour of the tissues perfectly preserved when cooked and served up, but the flavour was almost full and unimpaired.

We understand that Glacialine has been extensively used during the past five years in the dairy, larder and ship's cabin with great success, and that its sale has enormously increased every year. We have examined the testimonials which the Antitropic Company publish in their pamphlets, and find among the host of witnesses some distinguished names in science and medicine; others from among the aristocracy, clergy and gentry as well as those of practical men, who have demonstrated the utility of Glacialine in their various businesses by the perfect preservation of milk, cream, butter, eggs and meat; but have only observed one relating to the keeping of fish. The results of the severe trial it has undergone at the Fisheries Exhibition, however, demonstrates clearly its value to the dealer in and consumer of this most perishable of animal foods, and we believe that never was prize more honourably won than the silver medal awarded to the exhibitors.

We will now point out a few valuable purposes which this compound can serve to the angler. For the preservation of dace, minnows, &c., all that is required is to make a solution of the Glacialine in water in the proportion of 1 in 18 by weight; and keep the fish immersed in the fluid. This will serve to keep bait in perfect appearance for a week or two, and if, say, 10 per cent. of methylated spirit be added to the solution, we are informed they can be preserved intact without change of colour for months or years.

When the angler is far away from home—say his *dulce domum* is in London—and he is fishing north of the Tweed, in Cumberland, Wales, or in the extreme south, he is desirous of sending home examples of his cunning skill. At present he is afraid to do so, naturally fearing that what is bright and lovely to look at when fresh caught from lake or stream, may be odious in every sense of the word when it reaches its destination.

No such fears need now disturb the enthusiastic or contemplative angler. By always carrying a canister or packet of Glacialine in his wallet he can send his trout, salmon, or other trophies any reasonable distance, feeling perfectly secure that when they arrive

at home their appearance will be such as to cause no doubt about transferring them to the frying-pan or other culinary apparatus.

The method of preserving is as follows:—Dissolve a packet or canister in a gallon of water, and allow the fish to remain in the solution twenty minutes. They can then be relied on to keep perfectly fresh and unchanged for four to six days in transit, without gutting.

We were very glad to hear that H.R.H. the Prince of Wales, while at the Exhibition, interested himself in Glacialine, and ordered a canister to be sent to his carriage. Also to learn that several yachtsmen, for whose purposes we can imagine nothing of greater utility, laid in a stock. To the members of our yacht clubs the testimony of Lord Clanwilliam's steward, who has used Glacialine on board H.M.S. *Inconstant* in the tropics with gratifying success, will appeal more powerfully than any words of ours.

THE SCOTTISH FISHERIES IMPROVEMENT ASSOCIATION.

THE Scotch Fisheries Improvement Association, which held its first meeting in the beginning of the present year, has been doing good work since. There have been two well-attended meetings of the Council of the Association, and a list of carefully-prepared queries has been sent round to the chief constables of the various Scotch counties, the returns to which contain a most valuable body of information with regard to the salmon fisheries in Scotland. At the second meeting of Council, Sir J. E. Alexander read a paper giving an account of a visit which he had lately paid to Hawick in order to see certain means which have recently been taken for the purpose of counteracting the manifold manufacturing pollutions which have so long contaminated the Teviot. Sir J. R. Gibson-Maitland contributed a list of the various establishments existing in Scotland for the artificial propagation of trout and salmon; and Mr. Archibald Young read a summary which he had drawn up of the returns sent in to the Association by the chief constables of the Scotch counties, a short notice of which may prove acceptable to those interested in the work of the Association.

It appears that, in seven Scotch counties, salmon have forsaken rivers that used formerly to be frequented by them. These counties are Ayr, Forfar, Fife, Linlithgow, Mid-Lothian, Renfrew, and Stirling. With regard to the streams in the neighbourhood of Edinburgh, the Almond and the Avon were formerly salmon rivers, but have long ceased to be so, no salmon having been caught in either for thirty years, owing to the pollution of the water of both by coal and ironstone pits, shale oil factories, paper and lint mills, and other public works. Both rivers, too, are obstructed by dams, several of which have been heightened since they were originally constructed, and all of which are without fish passes. Salmon used to go up the Almond to spawn; but a lofty perpendicular weir thrown across the river, near the village of Cramond, now effectually prevents them from ascending. Owing to legal proceedings taken against some of the polluters, the water, both of the Almond and of the Avon, is somewhat purer now than it used to be, and a few grilse and sea-trout have been seen in the Avon within the last twelve months. The Avon is tidal water for about two miles from the Firth of Forth. It used to be one of the best rivers in Scotland for grilse and sea-trout. But the mills erected on its banks and on those of its tributaries have exterminated or driven them away, and only a few burn trout remain. All the returns tell the same tale—that of rivers once containing salmon but now rendered salmonless owing to pollutions and obstructions, arising, on one hand, from the encroachments of manufacturers, and, on the other, from the supineness of riparian owners.

The returns sent in in answer to the query whether proper ar-

rangements are made for securing the observance of the annual and weekly close times, and the other provisions of the salmon Fishery Acts of 1862 and 1868, for the protection of salmon, give an affirmative answer with regard to 14 counties. But from returns made to the queries relating to District Boards, it appears that there are no district boards in the following counties—namely, Dumbarton, Kinross, Fife, Mid-Lothian, Caithness, Renfrew, and Ross and Cromarty. Yet the last-named county has no fewer than 32 salmon rivers on the mainland and in the Hebrides; and, in the great county of Argyle, with at least 30 salmon rivers, there is only one district board. The result of the returns is, that there are only 22 district boards in Scotland; or, if we add the rivers of which the Duke of Sutherland is proprietor, and to which his factors act as district board clerks, 37. Then there are in addition, the Tweed Commissioners, the Esk and Liddle Angling Association, and the Associated Proprietors of the river Doon. But, allowing for all these, the important fact still remains that considerably more than half the fishery districts in Scotland are without boards, and, consequently, without any official means of enforcing the observance of the Salmon Fishery Acts. The temptation on lessees of fishings in these districts—several of them remote and thinly inhabited—to infringe the Acts, especially in the case of sea-fishing by fixed nets, is immense; and we cannot wonder if it is sometimes yielded to.

The last query addressed to the chief constables related to the powers of the Scotch Commissioners, and was as follows:—"Would you approve of giving to the Scotch Salmon Fishery Commissioners the same powers as those possessed by the Inspectors of Salmon Fisheries in England and Ireland, of making annual inspections of the fisheries, and reports thereupon to the Secretary of State?" There is a gratifying unanimity of opinion in the answers to this question; for though a few of the chief constables give no answer, 19 answer clearly and strongly in the affirmative; and the counties from which these 19 affirmative answers come are the counties which contain the principal salmon rivers in Scotland.

At the last meeting of the Council of the Association a strong opinion was expressed that if the Fisheries Exhibition, the holding of which in 1882 has been suggested in our columns, is to be held at all, it should be held in Edinburgh and not in Glasgow, Edinburgh being not only the capital of the country, but the natural centre of the fishings of the east coast, which are three times as valuable as those of the west coast. At this meeting, a list of queries was determined upon to be sent round to angling clubs and associations, in order to ascertain particulars with regard to them, and their views about an annual close time for trout, and various other points connected with our fresh-water fisheries.—*Scotsman*.

WEST LONDON ANGLING SOCIETY.

THERE are few of the London and suburban clubs that have made greater advance in the piscatorial world than the "West London," the headquarters of which are at the Windsor Castle, King Street, West Hammersmith; and there can be no matter of surprise about this, possessing as it does so genial and active a president as Mr. H. Jacques, assisted in his efforts with so valuable and energetic a treasurer as Mr. M. J. Butler, and so useful and painstaking an honorary secretary as Mr. C. R. Stock. They are, in fact, the very foundation of the society, and who have gathered around them in the short space of twelve months over eighty true followers of the famous Isaac Walton, amongst whom the greatest unity and good-fellowship prevails. Fortunate, indeed, were the founders of this excellent society on finding so commodious and handsome a club-room as the one they now occupy, and with so good a proprietor as Mr. G. Gilbert, who evidenced his interest in the welfare of the club by contributing a donation of five pounds. The first anniversary dinner took place on Thursday evening, May 5th, at the Windsor Castle, Mr. H. Jacques taking his position as chairman, and Mr. W. H. Tremaine in the vice-chair. There was an attendance of between seventy and eighty gentlemen, amongst whom were Messrs. Thomas Spreckley, W. H. Brougham, C. P. Wheatstone, F. C. Hatfield, E. Hickinbotham (of the Thames Angling Preservation Society); Messrs. A. Allison, J.

Chamberlain, W. Haydon, E. Walker, H. N. Hewitt, G. Brixton, W. E. F. Hall, A. H. Phillips, G. Tuxford, Pacey, Cox, W. L. Keane, &c., &c. After the dinner was over, the chairman proposed "The Queen, the Prince and Princess of Wales, and the rest of the Royal Family," in a thoroughly loyal and patriotic manner, which was most loyally responded to, and succeeded by the National Anthem, led on by Mr. Bull. The next toast was "Success to the Thames Angling Preservation Society," the chairman eulogising the character of its work and expressing his opinion that that it was doing a vast amount of good. In coupling with the toast the names of Mr. Thomas Spreckley and Mr. W. H. Brougham, he said every angler was largely indebted to them for their praiseworthy efforts in the protection and preservation of the Thames.—Mr. Thomas Spreckley, in responding to the toast said he thought the time had now come when their work and their doings should speak for themselves as the best test of what they did was right. On the question of private rights he spoke at some length, and he thought where there was no claim to such rights the voices of the 135 angling clubs should be raised, and they would be heard; and as Sir Henry Peek, Mr. Buxton, and others, had got to the public the common right of roads, so would intelligent assemblies like the present, if they were united, recover those pathways on the Thames which were now threatened to be kept from them. In defence of this principle he read a quotation from Lord Derby. Mr. Spreckley then referred to the number of convictions the society had sustained in the past year, and as their cases were not brought before the magistrates upon weak grounds, they had secured the entire confidence of every magisterial bench in their portion of the Thames. He then noticed the efforts that was being made to abolish netting as low down as Kew Bridge, which met with warm approval, and of the success of the society in recovering, only a week ago, no less than 4000 fine roach, and obtaining 258 fine trout out of the rearing pond at Sunbury. In conclusion, Mr. Spreckley expressed the pleasure he felt in informing the meeting of the election of their friend Mr F. C. Hatfield as a member of the committee of his society, and the representative of the Central Association, in conjunction with Mr. Geen, of the West Central, and Mr. R. Ghurney, of the Central Committee. As a supporter of free trade he was certain the election of these gentlemen was a move in the right direction. He thanked the West Londoners for inviting him there that evening, and he was sure the publication of their balance-sheet in such satisfactory detail would gather around the club all the popularity and success it so well deserved.—Mr. W. H. Brougham felt after Mr. Spreckley's eloquent address there was not much left for him to speak about, but there was one subject on which he was inclined to offer a few observations—it was in reference to the supply of fish in the Lower Thames. It had been remarked by an able writer that the river was in a state of piscine insolvency, but he felt the remarks did not belong at least to their portion, as he could assure them such was not the case in the "City waters." Take, for instance, the dace, which were caught most in the tideway. The last season had been an unusually good one, and one of the local fishermen wrote in these words to one of the fishing papers:—"I have been a fisherman at Richmond for twelve years, and I never had a better season." And he could tell them the dace had gone up in greater shoals than ever. There was, therefore, no insolvency amongst the dace. As regards the roach they had already headed up in unusually large quantities. He had been at the netting of the ditch at Hampton Court every year for the last fifteen years, and he had never seen so many or such splendid fish as there had been taken out of it this year. There was, therefore, no insolvency amongst the roach. The capture of barbel last season was certainly below the average, but it was not on account of their scarcity. He remembered about twelve years ago these fish went off for two or three years, and some barbel fishers who were then subscribers to the Society withdrew their subscriptions because "the barbel had left the river." His old friend, the late Mr. G. T. Parson, of Laleham, at that time maintained the barbel were still in the river, and he could see them like stones at the bottom, in a kind of "Rip Van Winkle" sleep. If any of those present would go trout fishing to Hampton Court just now they would catch barbel of 8 lb., 9 lb., and 10 lb. each, three and four in the day. He could not, therefore, believe there was any insolvency amongst the barbel. In reference to jack and perch, the last was not certainly a test season, through floods and frosts, which prevented any attempt being made to catch them; but the trout anglers now were hooking five and six good jack in the day. And so on with other fish, and considering the tons that had been put in the river from Kew Gardens and other places the Lower Thames anglers need be under no fear at present of insolvency amongst the finny tribe. In the able speech of the chairman as to the want of more general recognition of the Thames Angling Preservation Society amongst the angling clubs, he was pleased to tell them that the number had been increased in the last twelve months from eight to over thirty, but even that was small compared with the large number of London angling clubs who fished the Thames.—Mr. H. Jacques gave the toast of the evening, "Success to the West London Angling Club," and congratulated the members on its great success; it had exceeded his most sanguine expectations, and all must feel highly satisfied that it had become established on so sound a basis. The toast was drunk with great enthusiasm. The balance sheet showed that the receipts in subscriptions and donations amounted to £60 4s., and that after the payment of expenses in furnishing—the purchase of a prize medal of eight guineas—the sum of £9 19s. 6d. in club prizes, a contribution of five guineas to the T.A.P.S., there remained a balance at the bank of £17 1s. 9d., the assets being altogether valued at £40 14s. 6d. The prize winners were as follows:—Mr. M. J. Butler, four prizes amounting to £5 2s. 6d., including a

silver cub of £2 10s.; Mr. E. Matthews, three prizes, making three guineas; Mr. J. Pank, three prizes, two guineas; Mr. W. Herbert and Mr. E. Pemell, one prize each of half-a-guinea; and Mr. E. J. Turner, two prizes, value one guinea. A testimonial was presented to Mr. C. R. Stock for his valuable services as honorary secretary. The Apollo Glee Club contributed a choice selection of glees, and an enjoyable evening with some additional toasts and songs was pleasantly spent. The nucleus of a fish museum has been formed by two cases of jack, and altogether there is every prospect that the West London Angling Club will go on prospering and to prosper.

CORRESPONDENCE.

[We do not hold ourselves responsible for opinions expressed by our Correspondents.]

ANSWERS TO CORRESPONDENTS.

TYRO.—Greenheart or hickory is the best wood; 15s. to 20s. is a fair price. We don't know what the socket of a fly rod is, but it may mean the fitting to hold the winch. The spear screws into the butt, and is used to stick the rod in the ground when not in use for the moment, to prevent its being trodden on. Write to Messrs. Hardy Brothers, of Felton Street, Alnwick, for particulars of the Coquet fishing. It is free at Weldon Bridge, or only a very small charge is made.

WEST CENTRAL ASSOCIATION OF LONDON AND PROVINCIAL ANGLING SOCIETIES.

DEAR SIR,—I am instructed by the committee to inform you that the yearage for privilege tickets during the coming season (commencing Thursday, the 16th of June, 1881) will be 1s. each member, and 2d. for a transfer. Will you kindly fill up this form and send it to me as soon as possible before the above-named date, then I shall be able to let you have the new tickets in time for the opening day? I beg to call your attention to the fact that the Association allows one month's credit from date of order.

Please note.—All tickets ordered must be paid for, unless returned to me within fourteen days after issue. We forward all orders postage paid. Wishing you all a prosperous season, I am, &c., T. HOOLE, hon. sec.

P.S.—Please say how many leather cases you will require. Lettered in gold, 6½d. each, post free.

A copy of the above has been sent to each society enrolled with the Association. Secretaries are requested to report non-delivery of the same, when another shall be forwarded. An adjourned special meeting will be held on Friday, the 20th inst., for the election of auditors, and other important business. Delegates are specially requested to attend. I shall send all communications addressed to the society's house during the coming season, unless otherwise instructed. A new list of fares will be issued with each ticket applied for. The list contains the fares and names of all stations to which concessions have been granted the London anglers. I am happy to say we have now no less than seventy-five angling societies enrolled upon our books, being many more than half the total number of societies in London.—I am, &c.,

7, King's Road, Mortlake, S.W. T. HOOLE, hon. sec.

GRAYLING ON THE WYE.

SIR,—In answer to the letter of your correspondent, "G. S.," I beg to reply that, since there is no close time set apart for grayling on the Wye, anglers may keep them all the year round.—I am, &c. BLUE DUN.

May 7, 1881.
[They come under the Freshwater Fisheries Act all the same.—Ed.]

NEW ANGLING SOCIETIES.

SIR,—Notice to gentlemen about to form angling societies.—I will forward copies of club rules, association rules, lists of existing societies, and full particulars concerning any of the above, post free, upon application.—I am, &c., T. HOOLE, hon. sec., W. C. A. L. & P. A. S.

7, King's Road, Mortlake, S.W.

DESTRUCTION OF FISH.

SIR,—From the tenour of the Mundella Act (Freshwater Fisheries) one would be apt to believe that it was passed to protect fish in all streams, whether large or small; but from recent observations that belief has been dispelled, for I can assure you, Mr. Editor, that fishing (so-called, but it is not, for the merest tyro can catch them now) is carried on in our neighbourhood, and not the slightest notice is taken by the police; in fact, they will stand by and look on, and ask "What sport?" Now if the Act is to do any good, why are not the police instructed to summon persons who openly defy the law and moral decency? Surely something should be done, as remonstrance on the part of the club members is unheeded. By inserting the above you will oblige yours truly, Deptford, May 10, 1881. AN UNITED BROTHER.

THAMES TROUT.

SIR,—I have read with some interest the letters of "B." with the remarks they have drawn forth from "Consistent" and Mr. Keen; and although willing to admit I have not sufficient ability to take any decided view, I would respectfully point out what is to me a strong objection to the likelihood of "B's," sanguine expectations of the multiplication of Thames trout in the river being realised by artificial propagation. "B." admits that all the endeavours hitherto to benefit the Thames have been abortive, yet these attempts were zealously undertaken by men thoroughly conversant with the subject. "B." however, now states in effect, without any reservation, that the introduction of young Thames trout will remedy all this, and fully compensate for past failures. But here he stops, disappointing us by not telling us why or how he arrives at this conclusion. We have been assured, and the impression appears to admit of little doubt, that one of the principal causes of failure up to the present time has been the destruction of the fry by predatory fish, in which category are not the Thames trout included? Is there, then, I would ask, anything in the character of the Thames trout that induces "B." to believe that they are less voracious than their congeners—more merciful in their disposi-

tion, discriminating in their diet, or any other circumstance likely to induce them to spare the youthful strangers. If otherwise, I do not see why Nature should be so reversed, and a miracle enlisted in their favour to gratify the desires of man, however beneficial the longed-for consummation might prove.

This is, sir, I trust a reasonable question adapted to your columns, and if "B." can show incontestably that Thames trout have no cannibalistic propensities, or can amicably consort with the youth of their species, it may prove no invaluable addition to the natural history of salmonidae. No other conviction can induce a sensible person to cherish the idle notion, that even waiting for two years can result in the success predicted.—I am, &c.,

COMMON SENSE.

[We think "B." was somewhat too sanguine, but are certain that the more young Thames trout are put into the river the better will the trout fishing become—it is only a question of supply. We wish more power to Mr. Forbes, and that there were others like him.—ED.]

AMERICAN FISH.

SIR,—I can help "Pixie" to some of the scientific names of the fish he alludes to.

"Blue Fish."—*Temnodon*. (Family *Scomberoides*).

"Weak Fish."—*Otolithus regalis*. (Fam. *Scienoides*).

"Gar Pike."—Name applied to both *Scomber esox* and the alligator gar, *Lepisosteus*; the former a sea, the latter a freshwater, fish.

"Toad Fish" and "Frog Fish."—*Lophius piscatorius*. (Fam. *Pediculated Pectoralis*).

"Cat Fish."—*Silurus*. (Fam. *Siluridae*). Several species; as in England, the skate is, I believe, called sometimes cat fish.

"Sheepshead."—*Sargus Ovis*. (Fam. *Sparsides*).

The "Jew fish" is found in the Lagoons in the South; about a year since there was an article on it in the FISHING GAZETTE.

The "Grouper" and "Snapper" are well known and esteemed fish in most seas adjoining the tropics. I cannot recall the scientific names of these last three, but will look them up in the course of the week. Those given above are according to Cuvier's classification.—I am, &c., E. GOSLING.

Budleigh Salterton, May 7, 1881.

SIR,—In answer to "Pixie's" enquiry respecting American fish, he will find a description of them, the family to which they belong, their mode of capture, &c., &c., in a book published by Harper and Brothers, Franklin Square, New York (doubtless they have a London agency), entitled "Fishing in American Waters," by Genio Scott.

In it is thus described, "the Weakfish, or Squeteague, is probably a family of the *Clupea* genus."

Of the Bluefish, it says:—"Professor Mitchell has given to this fish, which affords more sport with the troll than any other, the classical name *Temnodon saltator*. The first from temno, to cut in pieces, probably indicating its sharp teeth; and the last signifying a pantomime dancer, doubtless with reference to its leaping or skipping; but, as if these names are not sufficiently descriptive, he adds those of *Scomber plumbeus*, or leaden mackerel."

"The Sheepshead is a celebrated dinner fish, and seldom ranges higher than from ten to fifteen pounds, its mouth is paved throughout with square teeth of flat surface, like eighth-inch square mosaic, but rather larger at the outer edge of the jaw, where its even teeth resemble those of a sheep, from which it is supposed its name is derived. It is called by De Kay *Sparus ovis*."

I think many of the names quoted in the markets are not quite correct, and fish are called by different names in different districts, and by the fishermen. For instance, the Tautog is the name of an American fish along the coast of New England; but along the shores of Long Island and New Jersey it is called Blackfish.

The Garfish (*Belone vulgaris*), is of the pike family.

Catfish family.—1st, brown catfish, *Pimelodus pullus*; 2nd, common catfish, or horned trout, *Pimelodus catus*.—I am, &c., JOSEPH MAAS.

Belsize Road.

SNARING AND SPEARING PIKE.

SIR,—A correspondent asks, "Is snaring pike illegal," and quotes an instance under his own observation at Brundall. Here on the Bure they use a far more deadly weapon in the shape of a huge spear, ostensibly for eels but really for pike. There is scarcely a ditch in this district that has not been well speared. I have had the pike offered me for sale, and have seen the men at work often, so am quite certain about it.—I am, &c.,

Cottihall, by Norwich.

ANOTHER DISCIPLE.

KING'S LYNN ANGLING ASSOCIATION.

SIR,—The Committee of the King's Lynn Angling Association were very much gratified to hear that our worthy secretary was successful in gaining the prize you gave at the National Fisheries Exhibition at Norwich. Mr. H. Bradfield is a thorough fisherman; it is chiefly through his perseverance that we started our association a few months ago, and we are happy to say it is favourably received and patronised.—I am, &c.,

May 11th, 1881.

FRED LUDBY, One of the Committee.

MARYLEBONE ANGLING SOCIETY.

SIR,—Would you be so kind as to insert in your paper that the next visit of No. 1 District of West Central Association will take place on Monday, 15th of May, at the above house, when we shall be pleased to meet as many of our brother anglers as we can make it convenient to attend. W. F. PEARSE.

May 7th.

SIR HUGH MYDDELTON ANGLING SOCIETY.

SIR,—The handsome oil painting in massive gilt frame—Subject: Freshwater Fish—now on view at the Empress of Russia, St. John's Street Road, Clerkenwell. The drawing for the above picture will not take place till Wednesday, June 29th.—I am, &c., J. CABORN, sec.

May 9th.

QUIET FISHING WANTED.

SIR,—Will you kindly tell me of a moderately* quiet spot—subscription or otherwise—within a short direct ride from Victoria, where I could get a few hours' bottom fishing on Saturday afternoons?—I am, &c., PIMLICO.

* Free from pleasure boats, &c.

FISHING NEAR RIPON.

SIR,—Will you correct a printer's error which occurred in my letter in last week's issue on the above subject. "Predonderate" should be preponderate, and "Lower Bridge" should read Cover Bridge.—I am, &c.,
34, Woodsley Road, Leeds. FRANCIS M. WALBRAN.

CLUB REPORTS.

GOLDEN BARBEL.

On the 8th the first trout was weighed in this society this season by Mr. P. Meur. Several members have been contesting for the honour that fell to the share of that gentleman on Sunday evening, but in vain. No trout could they catch, try what they would—minnows, flies, lobs, and all other kinds of baits.—Trout managed to keep out of the way of the majority of G. B.'s. Bravo! Mr. P. Meur, show the lads how to catch trout, as well as roach, perch, jack, and other kinds of fish possible, then they might be able to find out where *Thames grayling* are to be found. The following letter has been received by Mr. H. West, secretary *pro tem.*, from Mr. C. Whitehead, informing him of the death of his brother, Mr. G. Whitehead, an old member of this society:—"Dear Sir,—I am sorry to inform you that my brother, Mr. G. Whitehead, died on Sunday, the 8th, a little before six in the evening. He was unconscious over sixty hours before he died. He will be buried at Finchley on Saturday next, May 14, in the afternoon. I should be glad to see some of his brother members there if possible. I am yours respectfully,—C. WHITEHEAD."

May 11.

PIXIE.

GRESHAM ANGLING SOCIETY.

The first general meeting of this newly-formed society was held on Thursday evening at the City of London Larder, Throgmorton Street, when there was a large attendance, under the presidency of Mr. S. C. Harding. The hon. sec. (Mr. T. Crumplen) said the committee had experienced much difficulty in securing suitable water, but had at last received an offer from Mr. Godfrey of 2½ miles at Thorney Broad, West Drayton, for £15 a year. The river Ivor, which flowed into it, contained some fine trout, and in the other portions of the stream were good roach, chub and dace, and also excellent bottom fishing. The proprietor reserved to himself the right to allow individual anglers to fish in the water by ticket. Altogether, and in the absence of anything better, he thought it would be desirable to secure this water, and he moved a resolution to that effect. Mr. S. G. Bennett seconded the proposition. Mr. Jardine said in Thorney Broad the roach ran very large, as also did chub. In the season, upon the shallows, they could get superb sport with dace and chub with the fly. They were a very sporting fish, played hard, and it required an adept in the art of throwing the fly to make a basket. The Ivor held some capital trout, thanks to the restrictions placed on Sunday fishing, and the closeness of fence time. They did not allow spinning or worms, but a man who could throw a fly was almost sure of a brace and a half of fine trout. As, however, the club already numbered over 100 members, he questioned whether they should make any other than a temporary arrangement. He urged going further afield, and spoke of excellent fishing at Byfleet, Weybridge, Ripley and elsewhere. They should forage about for new swims, and not waste time over fished-out waters. There were mines of wealth in many of the quiet little eddies not yet tried. After a discussion the resolution was carried, and the committee were empowered to enter upon preliminary negotiations for some water at Tottenham, in the occupation of Mr. Ford. Several new members were enrolled, and it was stated that the prospects of the young society are very cheering.

HAMMERSMITH UNITED.

The annual dinner of this society took place at the Builders' Arms, Hammersmith, on Thursday, May 5th, and may be pronounced a decided success, upwards of seventy members and friends sitting down to a most enjoyable repast, to which ample justice was done. Mr. Geen, of Hill View, Addlestone, and president of the West Central Association, presided in his usual genial manner, and was ably supported by Mr. Henry Toms, chairman of the society. After the cloth was removed the list of prize-winners was announced, among whom the following gentlemen figure prominently: Messrs. Pitts, Walters, Hobden, Peachey, Mackness, Arnold, Aldridge, &c. Then followed the usual toasts and songs given by the members and friends. The following vocalists deserve special mention: Messrs. Brooke, Penney, Burgess, Bacchus, Trafford, Humphreys, jun., and Howe. An interesting ceremony took place during the evening as Mr. Hoole's infant son and heir was toasted in champagne to the evident pleasure of all present. Prizes for the forthcoming season were promised to the amount of twenty guineas, and the company separated at two o'clock, a.m. (the house having a special licence) all apparently well satisfied. Among the visitors were Messrs. Bonvoisin, Gaunt, Humphries, &c.—VORTEX.

TONBRIDGE ANGLING CLUB.

The monthly meeting of this club was held at the Bull Hotel on Monday evening under the presidency of R. A. Dallas Beeching, Esq., of Tunbridge Wells. The secretary formally reported that the carp, roach, and rudd received from Oxon Heath and Hadlow Castle had been placed in the river, and votes of thanks were passed to Sir Francis Geary, Bart., and W. W. Rodger, Esq., for their kind present of fish. The water bailiff reported that the chub were nearly finished spawning, and were getting back into deep water, and that numerous lampreys had been seen in the upper waters.—YE MEDWAY WATER RAT.

11th May, 1881.

UNITED LONDON ANGLERS, CENTRAL COMMITTEE.

The general return visit in connection with this committee took place on Monday evening, at the Hoxton Brothers', the Jane Shore, High Street, Shore-ditch, and resulted in a crowded meeting. Mr. A. Abrahams, secretary of the East London Angling Society, now held at the Bell, Gracechurch Street, E.C., acted as chairman, faced by Mr. T. Feecham, of the Metropolitan Angling Society, in the vice-chair. The following clubs were represented:—Amicable Brothers, Alliance, Amicable Waltonians, Brothers Well Met, Hoxton Brothers, Great Northern Brothers, Golden Barbel, City of London, Odds and Evens, Sir Hugh Myddleton, Convivial, Izaak Walton, Good Intent, Norton Folgate, Hearts of Oak, Woolwich Brothers, Prince of Wales, Eustonian, Canonbury, East London, Little Independent, Bermondsey

Brothers, Stoke Newington, Burdett, Bridgwater Brothers, Metropolitan, Bostonian, Never Frets, and the Piscatorial. Some excellent singing and readings, by members of the various societies, including Mr. W. Randall and Mr. T. Charlton, of the Britannia Theatre. The next return visit will be paid to the Great Northern Brothers, due notice of which will be given by the secretary.—R. GHURNEY.

May 10.

WALWORTH WALTONIANS.

The eighth annual dinner of the above society took place at the headquarters the St. Paul's, Westmoreland Road, Walworth, on Wednesday the 11th, president, Mr. Evans, assisted by Mr. J. S. Weatherhead. The stewards were Messrs. Fox, Bayley, Grigg and Sutcliffe. Forty members and their friends sat down to test the quality of the articles that were provided for the occasion by Mr. and Miss Bansback, with the kind assistance of Messrs. Sutcliffe and Bansback. The test gave the greatest satisfaction to all present, among whom were Dr. Carpenter, Messrs. Beckett, S.P.A.S., Schwartz, Renault, Dabarré, Blake, W. Taylor, G. Taylor, Brown, Winter, Gold, Delehaye, Varney, &c. The walls of the clubroom were neatly decorated with grayling, pike, perch, bream, roach, chub and dace, some of the piscatorial trophies of the late Mr. I. Burnham, Messrs. Boalch, Bayley, Piolaine, and several other well-known gentlemen. Fine art was not forgotten, Mr. Evans supplying, among others, a large portrait in oil colours of the worthy host, Mr. C. Bansback, and the floral display that graced the tables came from Messrs. Boalch and Co. The cloth having been removed, Mr. Evans proposed the health of the Queen, together with the Army, Navy, and Auxiliary Forces, which were both responded to in right loyal manner; after which Mr. Evans sang "Tom Bowling." Mr. Weatherhead next proposed "Success to the Walworth Waltonians," coupling with it the father of the society, Mr. H. Bayley. He also spoke about the benefits that were derived from angling societies, viz., the creating of preservation societies, the means of travelling at reduced prices on nearly all railways, to different parts of the country, and also the resuscitation of that very old science that was so well known to those ancient fathers—the monks of old, viz., the science of breeding and the rearing of fish. England does not possess many gentlemen who are so well versed in that science as was the late Mr. F. Buckland, Mr. Forbes, and a few other gentlemen who have done their best to restock our rivers with fish for the purpose of food and sport. This was responded to and success to the society drank in bumpers. Mr. W. Taylor sang "The Flag at Half-Mast High." Mr. H. Bayley, in responding, stated that there were 27 prizewinners for the 80 prizes given during the last season; and, as a proof that the penalising of winners, as had been done during the past season, viz., 3 lb. for a £3 3s. prize, 2 lb. for a £2 2s., and 1 lb. for a £1 1s. prize, had not prevented some of the members getting prizes, as it was stated it would do at the commencement of the season, as the list of winners showed that some of the members had succeeded in winning 6, 8, 10 and 12 prizes in spite of all penalties. All prizes will be distributed on Friday next, May 21st, at which distribution all members and their friends are requested to attend. The vocal abilities of the following gentlemen added much pleasure to the amusement of the evening—Mr. W. Taylor, Mr. Cain, Mr. Bayley, Dixon, Fox, M. Dubarré and Mr. Lane, who presided at the pianoforte. The following prizes have been promised for next season by the undermentioned gentlemen. Mr. Schwartz, £10 10s.; Mr. Renault, a diamond ring; Dr. Carpenter, a silver watch; Messrs. Bansback, £3 3s.; J. Collins, £3 3s.; Evans, £2 2s.; Brown, £3 3s.; Mrs. Coleman, £1 1s.; Piolaine, £1 11s. 6d.; Cridland, £1 1s.; Peters, £1 1s.; Boalch, £2 2s.; Gold, 10s. 6d.; Beckett, half ton of coals; Bayley, £1 1s.; Fox, £1 1s.; Grigg, side of bacon; Walters, £1 1s.; Harris, leg of mutton; Richardson, £1 1s.; Weatherhead, £2 2s.; Hunt, £2 2s.; Spencer, 10s. 6d.; Beale, £1 1s.; Vicary, £1 1s.; G. Taylor, 10s. 6d.; W. Taylor, box of cigars, meerschaum pipe and ½ lb. of best smoking mixture; Sutcliffe, £2 2s.; Delehaye, £1 1s.; Blake, half dozen of wine; Butt, £1 1s.; Dubarré, 10s. 6d.; Haliday, 10s. 6d.; Towers, £1 5s.; Mr. Rayner, gold scarf pin; Fox, gold scarf pin, for the smallest weight taken during the season; Mr. Irons, £1 1s. I got as far as this when I saw daylight appearing in the east. I thought it was time I departed, as all have to do who are known as the—PIXIES.

May 14.

WOOLWICH INVICTA ANGLING SOCIETY.

The annual dinner of this society took place on Tuesday, the 3rd, at the Society house, Golden Marine, Francis Street. Mr. C. W. Jones occupied the chair, being faced by Mr. G. Pycroft, and proved in every way a complete success. The handsome and liberal manner in which it was placed upon the table reflected great credit upon the host, Mr. W. Davies, and was deserving of the compliments that were paid him during the evening. On the cloth being removed the chairman proposed "The Queen," which was duly honoured. Mr. C. Howlett then proposed the toast of the evening, which was responded to by the Secretary, Mr. C. Foster accompanying it with appropriate remarks, which was heartily responded to. "The Visitors" was responded to in an able manner by Mr. H. J. Belstead, secretary Woolwich Piscatorials. Mr. C. Hatfield responding for Central Association, stated the Association was in a most flourishing condition, and he hoped unity of the above would long continue. Among the gentlemen present were Messrs. Hatfield, Wood, Kage, Lomax, Weaver, Hallem, Howlett, Swaisland, Walker, &c. Mr. Wood kindly distributed the prizes to the following members: Messrs. Jones, Foster, Pycroft, Percy, Meddock, Knight, Walker, J. Clark, J. W. Clark. We have great pleasure to state that upwards of £17 for prizes have been promised for the next season. The rest of the evening was spent in harmony, assisted by Messrs. Meddock and Foster, with piano and violin. Votes of thanks to the Chairman and Vice terminating the evening in a convivial satisfactory manner.—C. FOSTER.

May 5.

TO ANGLERS.—W. J. Cummins, Fishing Tackle Maker, Bishop Auckland, is now prepared to forward to anglers his Illustrated Catalogue, which is not only a Trade List but is interspersed with practical hints, useful directions, and valuable information gathered by the river-side from twenty years' experience. The stock consists of his unrivalled Salmon, Trout, Grayling, and Pike Rods, Lines, Reels, Baskets, Artificial Baits, Fly-books, Landing Nets, Gaffs, and last, but not least, his celebrated Trout Flies, which for killing powers stand unequalled. Every article kept in stock is of the very best description.—[ADVT.]

A MONSTER PIKE.—One day last week a monster pike was captured at the west end of Loch Vennachar. It weighed 32½ lb. The head has been preserved for stuffing.

NOTICE.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., must be addressed to the Editor of THE FISHING GAZETTE, No. 12, Fetter Lane, London, E.C. and should reach the office not later than Tuesday morning.

Contributions are solicited, but the Editor will not undertake to return rejected MSS., unless accompanied with a stamped addressed envelope.

Correspondents are requested to write on one side of the paper only and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to no notice will be taken of such communications.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls, and of the following, amongst other Fishing Tackle Dealers in London and the Provinces:—

Messrs. Alfred and Son, Moorgate-street.
Messrs. Price and Co., 8, Seymour-street, Euston-square, N.W.
Messrs. Williams and Co., Great Queen-street.
Messrs. Gee and Co., St. Andrew's-street, St. Martin's-lane.
Messrs. Gee and Co., Gray's Inn-lane (near Holborn end).
Messrs. Little and Co., Fetter-lane, E.C.
Messrs. C. Kewell and Sons, 197, St. John-street-road, E.C.
Messrs. Kewell and Co., 1A, Conduit-street, Regent-street, W.
Mr. J. Richards, 97, Church-street, Paddington.
Mr. W. Leader, 30, Upper Marylebone-street, Portland-place, W.
Mr. — Clark, 35, Wells-street, Camberwell.
Mr. Geo. Read, 91, Goldsmith's-row, Hackney-road, E.
Mr. A. Bulmer, 62, Wandsworth-road.
Mr. F. Oliver, 188, Great College-street, Camden Town.
Mr. J. E. Gold, 284, Waterloo-road.
Mr. D. W. Willoughby, 21, Lombard-market, Battersea, S.W.
Mrs. F. V. Brocas, 4, Mill-street, Conduit-street, Hanover-square, W.
Messrs. Gillett and Co., 40, Fetter-lane, London.
Mr. Alfred Young, "The Golden Perch," 174B, Oxford-street, W.
Mr. T. Barnett, 26, Church Street, Lisson Grove, N.W.
Mr. J. Smith, 7, Tottenham Court Road, London.
Mr. Edwin Stevens, Newsagent, 220, Kentish Town Road.

OR

Mr. B. R. Barabridge, 74 and 75, High Street, Eton, Bucks.
Mr. Cowan, 33, South Frederick-street, Edinburgh.
Mr. H. Whitty, 15, Basnett-street, Liverpool.
Mr. C. J. Greene, 54, London-street, Norwich.
Mr. R. Ramsbottom, 81, Market-street, Manchester.
Mr. James Gregory, Vyse-street, Birmingham.
Mr. Wm. Bailey, Jun., 29, London-road, Nottingham.
Messrs. Nutting and Co., 70, Edgbaston-street, Birmingham.
Messrs. W. C. and J. Penny, Booksellers, Froome.
Mr. E. Perks, Evesham-street, Redditch.
Mr. J. Walsh, Bookseller, 5, Harpur-street, Bedford.
Messrs. H. and C. Treacher, Booksellers, Brighton.
Messrs. Gaynor and Son, 10, Royal-terrace, Richmond, Surrey.
Messrs. O'Handlen and Co., 48, Victoria and Temple-streets Bristol.
Mr. Wilkes, Gunmaker, Leeds.
Messrs. Cayless and Sons, Midland Tent Works, Loughborough.
Miss G. Wells, 1, Sussex-street, Nottingham.
Mr. Wm. Atkinson, Fishing Tackle Maker, Lancaster and Kendal.
Mr. John Wells, 4, London-road, Nottingham.
Messrs. Mitchell and Co., 50, Market-street, Manchester.
Mr. J. Croisdale, 56, Briggate, Leeds.
Mr. John Keeling, the Golden Salmon, 7, Digbeth, Birmingham.
Mr. John Heywood, Manchester.
Mr. John Cocks, Baker Street, Weybridge, Surrey.
Mr. Wm. Reid, Northgate, Darlington.
Mr. R. Pearsall, 11, Great Western Arcade, Birmingham.
Mr. G. T. Gibbons, 10, Bridge Street, Salisbury.
Mr. Thos. Heppleston, Manchester.
Mr. J. Perry, Minster Parade, Reading.
Mr. S. Dale, 7, St. John Street, Nottingham.
Mr. H. Booth, 88, Prospect Street, Hull.
A. W. Warner, 121, Broad Street, Birmingham.

Newsvendors can obtain the journal through their London Agents.

** The "FISHING GAZETTE" SPINNER (Registered) is sold by all the above firms.

ANNUAL SUBSCRIPTION.

The Annual Subscription, payable in advance, for the United Kingdom is 8s.; or post free, 10s. 6d.

To any part of Europe, the United States, and Canada, the Annual Subscription, including postage, is twelve shillings and sixpence.

ADVERTISEMENTS.

All communications respecting advertisements must be addressed to the Manager of THE FISHING GAZETTE, No. 12, Fetter Lane, London, E.C.

N.B.—All Remittances must be sent, and all Cheques and Money Orders must be made payable to ROBERT B. MARSTON.

The Fishing Gazette.

"HORTON'S CREEK."

A COMPARISON.

THROUGH one of the lovely vales of Hertfordshire flows a stream that in our boyhood's days was famous for its fine trout. Seldom fished, they were bold and of good size. Times

and again have we watched them at the foot of some tail-race, or above the weir. The stream ran along the valley for miles through fine estates, taking its course under noble beeches, oaks and maples; through smooth, grassy park lands, under stone bridges, or single plank footbridges a few inches above the water.

Sometimes running out wide and, without any noise, again narrowing into a brawling, purling brook, tumbling into ripples over its pebbly bottom; sometimes its waters were dammed up to furnish power to an old-fashioned flour and grist mill; again it ran on through quiet meadows, or skirting the edge of an old graveyard, whose grand old church had in its belfry a sweet chime of bells. Blessed memories! How often can we in fancy hear old "Rosseau," "Mariners," or "Sicilian Vespers," ring out in the evening air! How often do we, when sitting down to an organ, find our fingers striking the grand chords of these long-remembered tunes! They come to us as a dream, while the memories of "those evening bells" crowd upon us—but to my stream.

It ran along through rich pasture lands until it was scarce two feet wide. Here a pond was made, and a primitive sheep-washing basin. Everywhere along its banks was it pleasant, its waters were cool and inviting; everywhere along it could beautiful trout be seen—in the ripples, in the quiet, deeper water of the mill-pond under the stone bridges, in the deeper shadows of the maples—even up in the sheep-pond could young trout fry be seen.

Very often in the wider reaches of the stream have we seen a fisherman trying to drop a fly on the farther side, where in a weedy channel, a big trout lay hiding, rising once in a while to suck in some fly that the shifting breezes had driven down on the water. How often have we determined to practise this gentle art until we could "cast the fly." What an exultant moment that when the gentleman gave us the landing-net, and bade us exercise due care in handling the fish. Those days live green in our memories though twenty years have passed since that time, and we have fished in other lands; yet the inspiration caught beside that little stream remains with us to-day, and we love trout as of old. We have learned to cast the fly, and have fished noble rivers and taken trout in abundance. We delight in the finest tackle one can obtain, and claim some knowledge in using it.

We want to introduce your readers to another trout creek, that is so interlaced and overgrown with fallen trees that it is a difficult matter to find five feet of clear water. A more uninviting place you could not find, yet there are trout in abundance. Flies cannot be used here, so put them up into your book. We said in a former letter it is the custom to fish down stream! We intend doing so. For four summers we have fished this creek, and know its peculiarities: so, instead of starting from its mouth and walking up through the brush—truly a difficult task—we take the road and walk about a mile, then plunge in through the forest for the river bank. We are fortunate in coming to this point, so at once rig up the tackle. Our worms are fresh and in good condition despite the 400 miles ride, for we brought them from Chicago. Worms cannot be found for many miles from this place. So, putting on a bright red worm and a heavy sinker, we climb out on a log lying across the creek; we drop our bait into a fork formed by the spreading branches. A gentle sideways motion, and we feel a sharp tug, but can see nothing; yet our nerves are tingling—these jerks mean trout! It comes again, a quick but gentle strike, and a twelve-ounce trout is making a big fuss at his end of the line. Take him in gently and drop him into your creel, there are some more of them there. Try along under the log further into the stream. Ah! he's backing out! See the bronzed back and mottled sides; look at the red-tipped ventral fins vibrating; all his suspicions are aroused at that squirming thing. A light forward movement of the right foot and body causes the log to tremble. He detects it; sheers back a little

more, catching a glimpse of you. A flash of brown and red, and he's gone. A beauty too! It's no use trying there any more. Creep in shore, crawl-fish fashion, and try lower down stream.

You find a big hemlock that lies across the creek. Gently, now drop your bait in close down. That's a hole in there! Whew! that's a big fellow. Try him again. Ah! he feels the steel enter his soul. Careful now,—you can't use a landing net here. Take off your fishing hat, slip it under him as you lift him. What a beauty, though!—fourteen inches long, if he's an inch! Slip him into your creel, there's more in that hole. A few minutes' patiently handling your rod, and another comes out—not so large; still, a good one. Try once again—still another. Drop your hook in close to that tree below you. So! You lost him, did you? Try again; you have him this time!

We must do some rough climbing here. The high winds have swept through here some time in a broad swath, piling trees one on top of another for fifty feet wide, so we take down our rod and climb up over trees ten feet from the ground; mixed up in a confused heap and broken like pipe-stems—trees a foot in diameter. After climbing, slipping, and considerable tumbling, we reach the ground again. We rig up our tackle and drop the bait into a triangle formed by trees falling across each other. We can see trout here. There's one hungry fellow moving. By Jove! he jumps for it clean out of the water, and took the bait, too. Hurry! Put on another worm. A little cautious this time, that fellow means business. I guess he's an old hand that's been to school. He wants it, yet is holding off. Pshaw! there's a little wretch of a fingerling in there. See him making a dash for the bait while the big one stands off a little. Something bit then. The moment it reaches the surface we find we have hooked the fingerling, he's a fierce biter for a youngster. We gently unhook him and pitch him into the creek again to wait until we come another year. We put on a ventral fin as described in a previous letter. Our big trout is quietly hiding in this hole, so, dropping the bait slowly to the surface of the water, just sinking it, then moving it to and fro. Ah! he's got it; but we count him ours, in spite of his vigorous fighting, so carefully gather him in.

A little further down stream we lose three or four in succession. Our hook has blunted from sticking into logs so much, we put on a new one and the fun commences. We have fifteen nice trout in our basket when we come to a big log extending clear across the creek with only just the top out of the water, and very slippery from the fungus growth hanging to its sides. We drop our bait down close to the bank under the roots, it sinks about a foot when it is taken by a good trout, we drop in again further along the log and get another, then we miss two or three. We creep out further, trusting to the over-hanging branches to steady ourself. There is a big tail visible just beyond our reach. We stretch out to the utmost and drop in just above him, he strikes for it almost as soon as it touches the water, we hook him, but he's not coming in, but fights like a good fellow. We attempt to lead him out into clearer water, hanging heaving to the branch over-head. Vain hope! Snap! it goes. Our feet slip out from beneath us, and in a moment we are up to the waist, the water pouring into our pants, into the watch-pocket, and into a roll of greenbacks. Our rod and line had hung in the submerged branches of the hemlock. We felt we were sinking—for there's no bottom in this creek, but a soft black ooze—so, clinging to the tree and brush, we pulled up from the mud and swung astride the log. Recovering our rod, we found the trout gone and the hook caught on a snag, while we were cold and muddy.

We broke our leader in trying to release the hook, so putting on a new one and a fresh bait we tried again down stream. By this time our teeth were chattering, a cold chill ran up our spinal column. Great Caesar! isn't that water cold. Though mid July

the sun does not penetrate some places in this stream; after taking a couple more we counted tails and found we had nineteen trout in our basket. We at once determined to make for our stopping-place and change our clothes. A few minutes' hard pushing and climbing over logs and brush we are in the road again tramping for home, steaming hot under the mid-day sun. A change of clothing, a trout dinner, an unlimited amount of chaffing from the good wife and our kind friends about jumping in to put salt on the tails of trout, then we are ready for an afternoon's boat ride on the beautiful bay.

As the sun was sinking behind the tall tree tops we put our fly-book into our pocket. Slipping on a pair of wading boots, we determined to try our hand with a fly-rod. The creek empties into Pine Lake a few hundred yards from the house, over a sand bar, so, rigging up a cast of flies, we waded in. Our tail fly was a grizzly king, the dropper—a professor. A few casts reveal the fact that trout are laying there in plenty. They rise to the fly but do not take it. After whipping some time we notice a fly floating on the current—a dusky brown, locally named a “Miller's Moth.” We stopped casting to watch it. Ah! there's a sight; just below where we have been casting, a dozen trout fairly leaped from the water for the fly.

We instantly changed our cast—putting on a single orvis “White Miller”—for a tail fly, and laid out about 30 feet of line. The moment the fly touched the water it fairly boiled. Twenty trout must have broken water for it. We hooked one and brought him in. The evening breeze was just coming up with a southing moan that indicated a sharp gale. At present it only ruffled the water and favoured the catching of trout, except as it came sucking around the point into the bay, right into our face, making it difficult to cast a long line. Yet from that time, so long as we could see where our fly dropped, we would hook and bring in trout, losing many in our excitement, and snapping off flies. When darkness drove us indoors we had about 40 as handsome trout as we ever wish to see.

This was our last day's fishing. That night a fierce north-west gale came up, and as our time had nearly expired we sadly packed our fishing tackle, and bade our friends a regretful “Good bye.” Such are samples of days spent on these northern trout streams while you can intersperse your fishing days with a delightful sail or rowing on a lake nineteen miles long and four wide, with your family or other friends.

W. DAVID TOMLIN.

Chicago, U.S.A., April 4, 1881.

REMINISCENCES OF AN OLD FISHERMAN.

BY COL. F. G. SKINNER.

WE have a dear friend, who shall be nameless—because in the way of field sports, in every branch of which he pretends to great skill, he is in fact a most pretentious humbug: One day when he accompanied us on a trouting expedition to a tributary of the Rappahannock, in the mountains of Virginia, he pretended to be very much disgusted with our use of grasshoppers and worms as bait, and denounced us as a mere pot-hunter. Arrived at the stream, we took different directions, he up and we down stream; he with his book of flies, we with our “wurrums” and “hoppers.” We had not been long separated when the thought occurred to us that our friend was humbugging us in some way, because the stream was so narrow and over-arched with shrubbery and trees as to render it impossible to cast a fly. So laying down our rod, we stepped stealthily up stream, and, as we anticipated, caught him *in flagrante delicto*, bobbing with a worm with which he had secretly provided himself before we left home. The following is a capital story told by L. B. Proctor in *Bench*

and Bar, of Judge Fitzhugh—who, by the way, is of Virginian stock, and is no such fly-casting Pharisee as our unnamed friend :

Judge Fitzhugh's favourite amusement was trout-fishing. His nice appreciation of the piscatorial art gave him the name of "The Walton of Western New York." While fishing he always used the fly; there are many who still remember his skilful manner of throwing it. He entertained the most sovereign contempt for any other mode of capturing trout—the aristocrat of the brook, as he termed that fish. One day, when on a fishing excursion, he met a fisherman whose well-filled basket proved his success.

"You have a fine basket of trout there," said the judge.

"Yes, sir, but I should have caught more, only my bait gave out," said the man.

"Bait! bait! What, are you one of those fellows that kill a quart of angle worms or a peck of grubs to catch one fish? One of these fellows who can't appreciate the nature of a trout any more than an ape can literature?" said the judge.

"I mean to say that I caught these fish with angle worms for my bait, and I'd like to know what that is to you?" said the man.

"Don't you know that it is unmanly and vulgar to fish for trout in that way? I would as soon eat carrion as a trout caught with a hook baited with angle-worms," said Fitzhugh.

"Who the deuce are you that goes about telling folks what they must fish with? Maybe you haven't read the Declaration of Independence," said the fisherman.

"I am a gentleman, sir, and you are not. A man can't be a gentleman that fishes for trout with angle-worms."

"Is it any of your business what a man fishes with? You talk as though you owned all the fish in this country. You don't, though. I've a great mind to throw you into the creek, but you are such an ugly-looking cuss you'd scare all the fish out of it. I should like to thrash my cow-yard with you," said the man, in a towering passion.

"Attempt any violence upon me, and I'll make live bait of you in a minute. I tell you it is my business what a man fishes with. It is the business of all civilised and Christianised people. Fishing with angle-worms degenerates trout to a common sucker—a crab—it baffles science; it teaches that splendid fish the habits of a common bull-head, that any idiot can catch. Fishing with a fly is a fair game between a man and a trout; it gives them both a chance to exercise their skill."

"What odds does it make how you catch a trout if you only get him? I catch fish because I like to eat them," said the man.

"That's because you are nothing but a cannibal. Fishing with a fly is a fair game between the man and a trout; it gives them both a chance to exercise their skill. A trout darting for a fly reminds me of the swoop of an eagle; there is something daring and brilliant in his movements; he charges on his prey like a hero, and if caught he dies gallantly, not sucking a stinking angle-worm like a hungry lubber," said the judge.

"See here, what's your name! By golly, you talk well. I'd like to hear that over again. Tell a fellow your name."

"My name is Fitzhugh—a name I have never disgraced, and never shall until I am caught in the flunkey business of catching trout with angle-worms."

"Are you Judge Fitzhugh, the man that can catch trout, with a buncombe fly on his hook, where there ain't any, just as well as he can where there's plenty of them?"

"They call me Judge Fitzhugh."

"Well, I'd half a mind to thrash you just now, you was so confounded sassy. They say you are the sassiest man in the world,

and I believe it. Those shaggy eyebrows and those great black eyes, and that black hair—well, I guess I don't want to get hold of you, so let's be friends. Judge, do you think I could learn to catch a trout with a fly?"

"Yes," said the Judge, amused at the man's manner and words, "go with me and I will give you a lesson." They were soon by the side of one of those beautiful streams in Northern Steuben, that in those days swarmed with the finest trout. Soon Fitzhugh's line went whizzing through the air, the swift-winged fly alighting on the water fully thirty feet distant. The next moment a splendid trout lay panting on the grass. The man watched the skillfully-thrown line with its darting insect, now alighting over the edge of a swift-whirling eddy, now skipping over bright ripples, now floating on the smooth current, then gyrating near a shelving rock like a "strong swimmer in his agony," tempting the silly tenant of the brook to spring at the glittering bait, to find himself caught, full surely, by the fatal snare.

The man lingered until Fitzhugh's basket was nearly filled, then, with admiration glowing on his face, exclaimed: "Judge, that's a big game between you and those trout—a pretty one, too—there's science in it. Blame me if you don't get the best of it, though, every time. Maybe they'll be too smart for me at that game; but I've done with angle-worms hereafter. Angle-worms be hanged, if I never catch another trout. I'll try my hand at the fly next time I fish. Good bye, judge," and the man's form was soon lost in the deep forest.

Some time during the ensuing winter, Judge Fitzhugh received two splendid saddles of venison from some person unknown, neatly packed in a box. On removing the cover of a paper was discovered, on which was written the following:

"From the fellow that don't fish with angle-worms any more, but goes it strong on the fly. This meat is for your first lesson with that article."—*Chicago Field*.

THE SECRET OUT AT LAST!

IF Mr. Thomas Ford's deductions, founded upon actual experiments (as stated lately in FISHING GAZETTE) be correct no wonder that Thames trout, or at least fish of good size and weight, should always be so comparatively scarce. A few trout have been caught this season near Maidenhead, and it has been surmised they might very likely have been Marlow fish; but it reads somewhat disheartening, if not even romantic, to reflect that trout artificially "cultivated" at Chertsey had better be turned into the river among "the Cotswolds!" Somebody, however, must benefit by the turning in of trout in any river. I should, if I were myself a Chertsey-bred trout, yearn to be off and away from, the rush of the steam-launches and the splashing and dashing, and the lumbering barges, and the rowing boats, and the hundreds of pike, and shoals of perch, and the (occasional) netting poachers, to rest awhile in the quieter gravelly waters at Cookham, or Maidenhead. Gaining strength and growing into a decent, respectable fish, I would push on again and rest at Reading awhile—then on and on for Pangbourne and Goring, and away for the (in summertime) continuously clear waters to the Bensons, and Nuneham and to Oxford; and, thence with luck, ascend to the very "Cotswolds" themselves and make my respectful bow. Putting this and that together, I would return to select my permanent home in the Upper Waters—anywhere, anywhere west of Maidenhead Bridge!

No wonder that Pangbourne and its very trouty neighbourhood had always been favourite trysting spots for the Thames trout-angler. Who, or what respectable trout would willingly live in the "troubled waters" of "Mid" or "Upper" Thames, if he could possibly work his way gradually to the calmer "sweet waters"

beyond. Really, Mr. Thomas Ford seems to have knocked the fish-hatching business into a "cocked hat" in so far as there exists much hope for increasing Thames or other trout in that especial portion of our dear old river hitherto considered by London and suburban trout-fishers and spinners as their own favourite water.

Sixty full grown fish that a friend of Mr. Thomas Ford's had placed in the small "beck" (stream) in Lincolnshire, two or three miles down the stream; other (small fry) had been placed in the same water, and yet another lot (of fry) from Mr. Capel's, of Foot's Cray, Kent, and still there is not now a single trout in the lower reaches—namely Mr. Ford's water! Somebody, I repeat, must get these trout by and by. The above facts seem, at first sight, to be most astonishing; and yet the migration of fish nearer and still nearer to the river's head or source appears to be natural enough. How many, again, of the Marlow-bred fish will ever fall to the Marlow anglers in their own local reach? The same question might also be asked about the Reading-bred trout, and the problem of their return to Reading after their Hegira to the land, of the Stonebrash, of fleecy sheep, and of new-made blankets bleaching in the summer's sunshine in the green pastures! And what would be the odds against a Chertsey-bred or Reading-bred trout getting ultimately back to Chertsey or Reading respectively to tell his wondrous tale of travel to and from "the Cotswolds!" Fifty to one? Eh? Or one out of every fifty! But what is most singular of all is that trout other than the native fish should be actuated by the same instinct of seeking, in Mr. Ford's Derbyshire stream for instance, the upper gravelly waters. Was the lack of flies and other food on the sand, one cause? Or was migration, the chief or all-pervading instinct for the foreign or Kent-bred fish to follow the lead of the natives and of the sixty large migratory fish? It would really appear that the motto of all the "spotted beauties" was "Upward and Onwards!" Mr. Ford's very interesting communication must set a lot of people thinking, supported as it is in part by "Consistent's" letter. But could not Mr. Forbes mark his fish, and the Marlow and the Reading trout-hatchers also mark their fish on turning them into the Thames? If this were done, some reliable data might be arrived at a year or two hence as to the whereabouts of the trout when some of them are ultimately captured. The subject is replete with deep interest and concern to all anglers. But wherever large pike and perch abound as in the Thames, very many trout will get destroyed. They know this well enough at Hungerford, where only aristocratic beauties are permitted to occupy the waters.

Happy the trout that, in mountain tributary, or "beck," or village streamlet, are "born to blush unseen," save by the loving eyes of the local fly-fishers in the squire's son, or the vicar's, or the doctor's, and such-like favoured few; but nobler far is the lot of those bonny trout who, braving all dangers among stone walls and floods and such like, have in their best days settled down permanently in some quiet Thames-side weir or pool, and their bigger brethren of the Kennett in favourite "Trouty Tails," or shady swims—each and all enjoying life with zest and the good things that a bountiful Providence had provided for them, until the citizen-angler shall come in turn with his varied temptations, and when the iron had entered into their souls to fight for liberty; but when all was lost (save honour) to know that their fame would be enshrined in the annals of Sport, and themselves immortalised in—plaster and paint!

A PILGRIM FRY-ER.

GEORGE JAMES EATON, of Starkholmes Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal books. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[ADVT.]

RANDOM CASTS;

OR,

EXTRACTS FROM THE NOTE-BOOK OF "AN OLD ROD."

(No. I.)

IN submitting to the readers of the FISHING GAZETTE the following extracts from my note-book I must be allowed to say, by way of introduction, that if they contain nothing that is new, they, at all events, will contain nothing but what is true. They will, for the most part, consist of records of angling incidents which have occurred to myself; and, where this is not the case, of incidents the truth of which I can vouch for. If the perusal of these notes should afford any amusement or instruction to my readers I shall be more than repaid for any trouble I have had in writing them out; for the very trouble has been a pleasure to me, as it enabled me, now that I am, to a great extent, "laid on the shelf," to recall many of the most pleasant hours of the past, and to "fight my battles o'er again." This much by way of introduction; and now for my sketches, the first of which I shall call

MY FIRST SALMON.

In a book which I had some time ago, the following passage occurs:—"Men who, having gone through the ordeal, can speak with weighty experience of it, tell me solemnly that the very most nervous and anxious period of a gentleman's existence is when he asks a lady to marry him." Now I doubt, nay, I deny this. Nervous and anxious the period is, I freely admit—most nervous, most anxious! *Experto crede!* Yet there is "a period" (if one may use the expression) even more nervous and more anxious which occurs, not to all, but to some men, and which can occur but once, to wit, the hooking and killing of the "first salmon." Numbers of anglers have given to the world the record of the capture of their "first salmon"; let me add my story to the rest—and here let me add, *en parenthese*, that, since that time, I have killed with the rod over two thousand salmon, and that none of these, nay, hardly all put together, have created in me as much anxiety and excitement as that one "first fish." And now for its history. Many years ago, in fact long enough ago "for young men to grow grey, and for old men to wither and die," I went to stay in the West of Ireland, with a relation, for snipe shooting; which in those days, and in that part of the country, was very good, as I, myself, killed in two consecutive morning's shooting (*i.e.*, shooting from about ten o'clock to half-past one each day) 63½ couple. Whilst staying with him I met a gentleman from the County Galway who, discovering that I was rather "mad" on the subject of angling, and possessing some of the best salmon and white trout fishing in Ireland, asked me to come over again in the summer to stay with him, and try the salmon fishing. Need I say that I accepted his invitation with great delight, my one ambition being to kill a salmon!

It so chanced that I was only able to get away from other engagements for the first three weeks or so in May (about the very worst time in the whole season for that part of the world). Well, I set off from Yorkshire full of hope, and haunted by visions of terrific struggles with, and brilliant victories over, gigantic salmon, &c., and in due course arrived with my friend Captain J. at — Castle. Alas! when, after my journey of near 500 miles by rail and sea, and then a drive on an "outside car" of about another 50 miles we reached our destination—one of the most, if not the most hospitable of Irish houses (and this is saying a great deal)—we found, to our grievous disappointment, I may almost say despair, the river almost dry! No rain—a very singular thing in that part of the country—had fallen for nearly

two months, and so no fish had been able to run up the river. We were therefore reduced to fishing for "brown" (or common) trout (*salmo fario*), of which there was any quantity in the river and neighbouring lakes, but to fish for which was considered extremely "infra dig;" boating, sketching, pic-nic-ing, and flirting with a lot of pretty girls—daughters, nieces and friends of our host.

So the time passed, and passed not unpleasantly. I had travelled more than 500 miles to kill a salmon, and the time I could spare was so nearly expired that I was obliged to return to England almost at once. The very afternoon before my departure the rain began, and when it rains in Connaught it does rain! Before night the river had risen nearly 2 feet, and gave the salmon and white trout (*salmo trutta*) a chance of passing the weir, &c., at its mouth. Next morning, my fishing attendant, "Mick," came to my bed-room about half-past 4 o'clock, and told me he had seen two or three salmon rising at "the Captain's Point" (a favourite salmon pool in the river). Full of ambition to kill "a fish" as salmon only were designated, and knowing that, for that season at all events, it was my last chance, I jumped out of bed, dressed by "telegraph," and in a little over half an hour was at the pool where Mick had seen the fish. I put up a fly, which he said would "coax them," soaked my casting line for a few minutes, tried it to see that it was all sound (a precaution, let me impress upon all anglers, of the utmost importance), and then made a cast, not with any idea of trying for a fish, but just to see if the casting line was pretty straight. To my intense surprise—I may almost say to my horror—the instant my fly touched the water there was a "boil" at it. I saw the back and tail of a fish break the water; my line tightened, instinctively I struck, and found myself "fast" in my first salmon! Words cannot express my sensation! A thrill, half pleasure, half pain, seemed to run through my backbone from end to end! My heart almost stopped beating for a few moments, and then began to beat as if it would jump out of my breast! To me, for the time, the whole world was that salmon, or that salmon was the whole world (I can't tell which). But why attempt to describe what is indescribable! "Whiz" went the reel, out ran the line, as my fish, on feeling the hook, rushed across the river, there some thirty or forty yards wide. I knew not what to do! I had read reports of salmon fishers having to give their fish scores and scores of yards of line; of their having to run up and down the rocky and rugged banks of a river for miles; of their having to spend hours in tiring out their prey; and I believed those reports then. I don't believe them now. I had gathered from the experience of salmon fishers that "the rush" of a salmon must never be checked, and most careful was I not to check the rushes of mine. Every time my fish showed the slightest inclination to run out line, I gave him all, aye, more than he wanted. I let him do what he liked. I am sure that for every yard of line I ought to have given that fish I gave him ten! I am convinced, from subsequent experience, that I ought to have killed him in less than ten minutes; and yet I spent a good hour of mingled hope and fear before I ventured to drag my now completely exhausted quarry to the side of the river, and Mick gaffed for me my first salmon, a fish of only about 8 lb. I sent him as a present to a very dear friend; but I believe that had I followed "the bent of my inclination" I should have carried that fish about with me the whole day; had him to bed with me at night; and then have had him stuffed in a glass case so that I might constantly look on "my first salmon."

AN OLD ROD.

MRS. F. Y. BROCAS, Artificial Fly Dresser, 4, Mill-street, Conduit-street, Hanover-square, London, W. A stock of best flies always on hand. Flies made to pattern. Lessons in fly making given.—[ADVT.]

THE NORWICH EXHIBITION.

IN addition to the awards given at the Norwich Exhibition, Messrs. Allcock and Co., of the Standard Works, Redditch, have had a special award of a gold medal and special diploma for sea and river hooks, swivels, &c., and for improvements and inventions of the same articles.

THE "BELL'S LIFE" SPINNER.

MR. R. B. BAMBRIDGE, of 74, and 75, High Street, Eton-on-Thames, has recently improved this artificial bait of his make, and it looks now just as neat and nice as a trout could wish.

Mr. Bambridge guarantees that "its opening action is perfect" (it spins from tail only); and as he is an old hand at killing Thames trout by spinning, he may be relied on to know what "perfection" in spinning means.

A YEAR OF LIFEBOAT WORK.

IN recounting briefly the annual work of the National Lifeboat Institution, we may mention that the Institution has now been in existence fifty-seven years, and that at no period since its foundation has it more entirely possessed the confidence of the public than now; and its need was never more strikingly exemplified than during the past twelve months, more especially in the fierce gales and blinding snowstorms of January last on our eastern coast, which witnessed some of the most daring exploits of our lifeboatmen that have ever been recorded—exploits which not only testified to their humanity and courage, but to their wonderful physical endurance. In evidence of the same, it will suffice to state that on several occasions during those storms the lifeboats' crews were at sea from fifteen to twenty-four hours, and in one instance for twenty-six hours, exposed to the full fury of the storm, in the bitterest cold, in some cases without food throughout those long hours, and with their clothes stiffened with ice. Shortly afterwards His Royal Highness the Duke of Edinburgh, Admiral Superintendent of Naval Reserves, was kind enough to present the medals and votes of thanks awarded by the Institution to the crews of the Ramsgate Harbour lifeboat and steamer, in acknowledgment of their bravery and long exposure, on the 5th and 6th of January last, in rescuing the survivors of the crew of the barque *Indian Chief*, wrecked on the Long Sands.

Again, the perilous character of the lifeboat work is at once realised by the fact that in accomplishing it eighteen noble fellows perished during the storms of last winter from the lifeboats. Towards the maintenance of the widows and orphans of the brave men the Institution subscribed £1,800, to be added to the local contributions raised on their behalf.

Twelve new lifeboats were sent to the following stations last year: Co. Durham, Whitburn; Yorkshire, Saltburn; Kent, Kingsgate; Sussex, Hastings; Cornwall, Sennen Cove; Cardiganshire, Aberystwith; Ayrshire, Ardrossan; Aberdeenshire, Fraserburgh; Louth, Giles's Quay; Waterford, Tramore and Ardmore; and Cork, Ballycotton. Five other boats are about to be forwarded to Wells, Norfolk; Rye, Sussex; Braunton, North Devon; St. Anne's, Lancashire; and Newcastle, County Down.

The Lifeboats of the Institution were the means of saving five hundred and seventy-seven lives during the past year from wrecked or endangered vessels, most of them under perilous circumstances, when ordinary boats could not with safety have been employed. The services of the Lifeboats of the Institution during each month of the year were as follows:—January, 13 launches, 8 lives and 2 vessels saved; February, 34 launches, 81 lives and 4 vessels; March, 17 launches, 46 lives and 2 vessels; April, 13 launches, 13 lives and 1 vessel; May, June, and July, 17 launches, 46 lives and 3 vessels; August, 12 launches, 13 lives; September, 17 launches, 50 lives; October, 61 launches, 137 lives and 7 vessels; November, 39 launches, 120 lives and 5 vessels; December, 22 launches, 63 lives and 3 vessels. Total number of lifeboat launches during the year, 245; lives saved, 577; and vessels saved, 27. In addition to these lifeboat services, 120 lives were saved from shipwreck by shore-boats and other means, making a total of 697 lives preserved in 1880, for which honorary or pecuniary rewards were made by the Institution. There were voted last year one gold, six silver medals and clasps, fifteen votes of thanks inscribed on vellum, and £4287 in cash, for saving these lives. Happily, 430 lives were also saved last year by means of the rocket apparatus belonging to the Board of Trade, which is worked so efficiently by the Coastguard and the Rocket Volunteer Brigades. The number of lives saved since the establishment of the Institution to the end of the year 1880, either by its lifeboats or by special exertions for which it has granted rewards, is 27,603. In view of facts like these the Lifeboat Institution cannot fail to maintain its hold on the support of the British public.

TO ANGLERS.—W. J. Cummins, Fishing Tackle Maker, Bishop Auckland, is now prepared to forward to anglers his Illustrated Catalogue, which is not only a Trade List but is interspersed with practical hints, useful directions, and valuable information gathered by the river-side from twenty years' experience. The stock consists of his unrivalled Salmon, Trout, Grayling, and Pike Rods, Lines, Reels, Baskets, Artificial Baits, Fly-books, Landing Nets, Gaffs, and last, but not least, his celebrated Trout Flies, which for killing powers stand unequalled. Every article kept in stock is of the very best description.—[ADVT.]

RIVER REPORTS.

MID-THAMES.

"The pleasant'st angling is to see the fish
Cut with her golden oars the silver stream
And greedily devour the treacherous bait."
—SHAKESPEARE.

THE late and still continuing rains have done the Thames an immensity of good in the way of freshening up, for it had become very low, bright and stale, and fish of calibre declined to be tempted with any bait, whether natural or fearfully and wonderfully made artificial ones—even the FISHING GAZETTE spinner did not seem to be in it, no matter how deftly manipulated. Matters will now, I trust, take a turn for the better, as I hear from most of the likely stations that trout are on the feed—some decent ones having succumbed within the past few days. At Maidenhead and Marlow some nine fish have been had within a week, but the heaviest fish does not much go over 3 lb. At Temple, last evening (Wednesday), Mr. Low, out with Coster, after being worried with three chub and a jack, landed a pretty little fish, which scaled 2½ lb. At Hambleden, a gentleman out with a Henley fisherman was, after toiling and spinning some time, rewarded with a beauty of 4 lb. At Henley, no trout have lately been had, the great attraction at present being the enormous quantity of chub and barbel which are to be seen working into the new pool at Marsh lock, hundreds of people daily watching the moving mass of *finny-uns*. Wind, S.W. —MARLOW BUZZ.

Thames (Goring).

Water in good order now for trout a little freshened up by the rain. Prospects looks well for the coming season; barbel and chub are np here very thick; barbel up to 12 lb. are to be seen from Goring Bridge any day; a trout was taken here on Saturday 3 lb.—JOHN RUSH.

Thames (Richmond).

The river is in a very bad state now, as is always the case at this season of the year, with the grasswater and the fish spawn. I am very sorry to report that I saw a man throwing in a lot of filth and mud in the river at one of the best harbours we have got in our water. I spoke to him, but he took no notice of me. Such filth as he was putting in the river would kill full-sized fish, let alone small fry, as the water is alive with them at this spot. I have written to the Thames Conservancy to ask them to do all in their power to stop this injury to the spawning of the fish, and I think it should be marked by every true angler to stop all in his power the injury which might be caused to the fish, as they afford us good sport and pastime. There has only been one trout taken in our waters at present with the bait. Last Sunday there were three taken by hand at Kidd Mill at Isleworth. The largest was 5½ lb. They started the mill on, and the fish were either worked out of the hole or came through the mill.—JOHN BUSHNELL.

Thames (Windsor).

At last I have the pleasure of reporting the demise of a brace of Thames trout, the whereabouts of which I have given in the GAZETTE at various times. One of them, taken at Boveney, proved to be a rare old stager, and doubtless has cheated many a good angler; as on examining his mouth the point of the lower jaw fitted, when closed, into a well-made socket, so to speak, in the upper, which must have taken years to form, and would in a measure account for his bad condition. His weight was 7½ lb. and ought to have gone 14 lb., length 2 feet 4 inches. From this you can imagine what sort of fish he was, especially when I say that the same fisherman, Richard Gray, took one two years back, only 17 inches long, that went 7½ lb. The other, taken just below Victoria Bridge, by his brother, James Gray, the well-known fisherman here, was a good fish, but ought to have been 2 lb. heavier, he, however, was close on 8 lb., measured 2 feet 2 inches. This fish has been hooked several times, but last Tuesday morning, with a strong ripple on, found him extra hungry, and the hook, which was only a single No. 6 Kendal, in lip of a lively bleak, was fairly embedded in his gullet. The handsomest fish of the week was a 2½ lb. fish taken spinning in the Windsor Weir on Monday evening, by James Gray, and was as pretty a little fish as I have ever seen. At Monkey Island I hear a nice fish has been had close on 8 lb., besides a smaller one; and below, at Magna Charta Island, Clifford, Esq., has been putting steel into a bouncer of about 8 lb. The water has been very low and bright, but as I said last week was worth trying, and now that we have had some good showers I quite expect something big will happen next week, especially if the sun comes on as it did a few days back, which will bring the fish up to the weirs and give the weir fishermen a chance. At present I think but very few fish are in the weirs, and should be looked for in the open. Lumsden has been having a run of very bad luck, getting two runs in one morning this week, one being a clinker, weight and whereabouts I must not mention, as he tells me he means having him yet.—R. B. BAMBRIDGE.

Bure (Norfolk.)

The genial weather and the long days are beginning to draw our anglers out a longer distance from home than they have lately been, most of them having been quite contented to stop as near the city as possible; indeed, during the past few weeks, they have been amply rewarded by so doing, as the roach-fishing has been exceptionally good, and many are the fine takes which have been shown at the various clubs and elsewhere. But roach-fishing may now be considered at an end for some time, as they are all busy spawning. We must, therefore, leave them and forage about for something larger; and, to accomplish this, we must go in another direction to what we have hitherto been. We

will, then, give Thorpe, Coldhams, and the neighbouring waters a short rest, and pay the river Bure, or, as we call it, the "North River," a few visits. Such was the determination of two members of the East Anglian Association last week, who, after deciding upon South Walsham (near the famed and historical St. Benet's Abbey), as their trying place, left the club house at 6.30 a.m.; and, after a pleasant ride of about eleven miles and a row down the "old dyke," were soon hard at it, and, although having to contend with a rather blustering north-east wind, they returned home and exhibited one of the finest catches of silver bream that has been shown for many a long day, not one fish weighed less than 1½ lb., the largest fish, 3 lb. 9 oz., being taken by quite a young angler (in experience), Mr. W. A. Campling, and which fish, being a splendid specimen of the silver bream, is now in the hands of Mr. Gunn, naturalist, for the purpose of being preserved. The entire catch weighed about 3½ stones, and caused quite a commotion during the time they were on view at the club house. Undoubtedly, should the weather prove fine, many other like results will be chronicled.—ANGLER.

Colne (Thorney Broad).

The water is in splendid order for fishing for trout, dace, chub and perch. If weather continues fine there is every prospect of good sport. Messrs. Lester and Hoblin Schradre have been among the trout, each taking one; Mr. Hoblin taking the largest, 6 lb. Mr. T. Hawkins last night took one trout, 4 lb., and Mr. Burgher some good dace, and another angler some good perch, the largest 2½ lb. Our roach will be up to spawn in a few days.—E. GODFREY.

Coquet (Northumberland).

Owing to a change in the weather the rivers was flooded on Sunday, and on Monday the river was in good condition. T. Bowlin, Esq., New Hampton, killed a splendid dish of trout, the largest 1½ lb., and about ten o'clock the river came down again, and was flooded up to Wednesday, when in a good condition for minnows.—A. GLASS.

Dove (Derbyshire).

There is nothing much to report this week respecting trout-fishing on the Dove. We have not had a great number of anglers out, owing to the cold and strong north-west wind and rains. The best dish I can hear of is one of five brace, which were captured in Dovedale. The Turkey brown proved the executant. The May fly is coming out very fitfully; the unsettled weather no doubt keeps it back. It will not be well on the water before the middle of June, if even then. The river is now in grand condition, the rains having freshened up the water capitally.—THE SPLODGER.

Eden (Carlisle).

The river is flooded, and the water muddy. The weather is fine, with rather boisterous wind. Should the weather continue fine, we may expect good fly-fishing in the course of a day or two. On the 14th inst., Mr. John Robinson, Cargo, killed two sea trout with the fly. This being all the sport I have heard of coming to the rod this week, but there have been some heavy takes of salmon and sea trout with the nets.—THOMAS PARKINS.

Exe (Tiverton).

Owing to the recent heavy rains the river is very thick and unfit for fishing; if no more rain it will be fishable to-morrow or Saturday; should it continue to rain, and so keep the river in flood, we shall get some salmon up. A good many trout are being taken in the tributaries with the worm and minnow, which is prohibited in the Association waters. Wind south-west, barometer falling.—WILLIAM MUDFORD.

North Lincolnshire.

I was out on the 7th inst., on the Laceby stream, and bagged a nice dish of thirty trout, all with the fly. My cast was made up of the following:—Brown drake (march brown), freckled dun and Ford's favourite, which three flies killed about equally well. With a view to improve the fishing hereabouts, I have this week, in connection with a friend, turned adrift about 10,000 trout fry. May they increase, multiply and replenish the waters is the fervent wish of—THOMAS FORD.

Severn and Teme (Worcestershire).

These streams are in good order for angling, though the bottom fishers cry out for more rain. There is no doubt twenty-four hours rainfall would liven it up for the use of the worm and gentle. But the sportsman who takes his fly-rod and a good assortment of flies to the river side, and lands half a dozen brace of trout, has the real taste of what angling is. I shall name these for the present month:—The stone fly, May fly, red spinner, whirling blue, black gnat, and the peacock palmer. As the rivers are fine use fine gut and small flies, and take care not to approach the stream where you intend fishing unless you are low down. Do not stand upon the bank, but wade if you can. Some few trout have been landed this week, but it is no easy matter to kill a basket of trout just now.—J. A. GRIFFIN.

Suir and its Tributaries. Clonmel (Ireland).

We have had the much wished for rain at last. It began on Saturday, and has continued more or less every day since. The river, in consequence, is slightly flooded and very much coloured, and we hear reports of a fresh run of salmon, great quantities of which were taken by the nets below Clonmel; none, however, up to the present, have fallen to the rods, the water being rather too coloured for fly-fishing, but as it is clearing we expect it to be fit on about Friday. The trout-fishing has been greatly improved by the rain, and great sport was had on the different streams about. The Tar, the Anner, the Lernaun, the Clodiagh, and the Nire, each contributed their share. Mr. Harrison, Captain Dixon, Major Chalmers, Mr. Park, and several others were amongst the most successful. The evening fishing is nearly on, when the different coloured rail flies are best. The rise does not last long, and generally stops at night-fall. The best flies for day fishing at present are black hackles, such as the hawthorn fly and black midge. The spider wrens are also favourites.—DORA.

Wye and Derwent (Derbyshire).

We have had a good deal of heavy rain at the beginning of the week, which caused both the above rivers to have nice little flushes on Wednesday. This rise of water will benefit all kinds of fishing; sport, both with the fly and bottom, has been first class. The latter end of last week F. C. Arkwright, Esq., got 14 brace in one day, and the next day he took 8½ brace of trout. Every fish was killed on the Wye, and with my claret bumble; and several other gentlemen have had some first-class baskets off of both river with bumble, dun, little red and spider flies, the bumble killing the most fish. The bottom fishers on the Derwent have done exceedingly well during the week with both worms and ant eggs for baits, and baskets from 4 to 12½ brace per angler have been

made, and some very fine trout amongst them. A clergyman from Darley got a trout 2 lb. 3 oz. with worm for bait. The largest and best fish have been taken in the deep at Matlock Bath. The tight line party at Matlock Bath have taken a few trout and eels during this flush with large lob worms for baits. Several otters have been heard in the Derwent, between Matlock Bridge and Whatstandwell during the last week. The disease is still prevailing amongst the grayling on both these rivers. There is no appearance of any May flies or green drakes on these rivers yet. Sport on the brooks and ponds has been first-class with both top and bottom, and some excellent baskets have been killed. Fishing prospects first-class on all the Derbyshire rivers.—GEORGE JAMES EATON, Stalkholms, Matlock Bath.

SCOTCH NOTES.

(From the *Scotsman*.)

LOCHLEVEN—DUNDEE (WALTON) CLUB COMPETITION.—This club held their first competition for the season on Saturday. The weather still continued unsettled, a blustering west wind blowing. There were eight boats engaged, with fifteen competitors, whose aggregate baskets contained 37 trout, weighing 38 lb. 14 oz. Only twelve of the competitors weighed. The following gentlemen were found to have gained the prizes:—1, Mr. R. Gow, 6 trout, 8 lb. 3 oz.; 2, Mr. G. Caird, 4 trout, 6 lb.; 3, Mr. Cargill, 5 trout, 5 lb. 14½ oz. The heaviest trout was killed by Mr. Caird, and weighed 2 lb. 8 oz. Private parties reported the following:—Mr. D. Ireland, Dundee, 11 trout, 12½ lb.; Mr. D. Ross, Al'oa, 10 trout, 11 lb.; Messrs. Arthur and Macgregor had 6 trout, 5½ lb. Several other boats reported four and five trout each. Mr. Townsend, of Glasgow, reported a splendid basket containing 26 trout, 26 lb.

MOY.—At Moy, Badenock, on the 13th inst., Mr. M. L. Van Gruisen, of Liverpool, caught 10 lb. trout in an hour and a half.

LOCH LUBNAIG.—On Thursday, Mr. Buchanan, Ruinacraig, caught on this Loch three dozen trout, weighing 14 lb., the heaviest one weighing 2 lb., and on Friday a salmon, which weighed 17 lb.

THE SPEY.—During the past week the river has been in capital trim for anglers, but notwithstanding the sport was poor. On the Carron section of the river, Mr. Wordie landed three salmon, weighing 8, 9, and 10 lb. On Tulchan water on Thursday, Sir George Chetwode landed one salmon.

DENNY AND DUNIPACE CLUB.—The first competition for the season under the auspices of this club took place on the river Endrick, near Fintry, on Saturday, and brought out a considerable number of competitors. Trout were reported scarce and the water light, consequently the baskets were small. The prize-takers were:—1, Mr. Charles Robertson, who also gained special for heaviest trout; 2, Robert Shearer; 3, William Henderson; 4, Thos. Tough; 5, John Morrison; 6, James Kerr.

LOCH TAY.—On the Killin Hotel water the takes were—14th May, Mr. Russell Earp, London, two salmon, 18 and 21 lb.; on the reserved water at Killin Mr. F. McDonald, Salisbury, one salmon, 19 lb.

UNITED LONDON ANGLERS.—IMPORTANT NOTICE.

Members holding privilege tickets are informed that the authorities of the railways considering it necessary that the tickets should be changed, the new tickets to be submitted will come into operation on Thursday, June 16, 1881. Instructions to secretaries: Secretaries are requested to send the names and addresses in full of members requiring the new privilege tickets to the secretary of the Central Committee as soon as possible, and all tickets applied for will be ready for delivery at the Central Committee room on Tuesday, June 7th, 1881, from nine till eleven o'clock. It is to be understood that all tickets applied for will be charged, as no deduction can be made from the list of tickets made out. The charge for new cards and yearage will be 1s. The present "drab" tickets will be cancelled on Wednesday, June 15, and the new tickets "cerise," come into operation on Thursday, June 16th, 1881. Tickets will be forwarded by post on application. N.B.—The committee in soliciting the support and patronage of angling societies, beg to inform them that the whole of the cost of the preservation of the river Lea, an annual subscription to the Thames Angling Preservation Society and other institutions, for the benefit of the London anglers, are paid from this Association. Members of all clubs that have been enrolled on this committee, are entitled to their privilege tickets without any extra enrollment fee. Tickets on the Midland Railway are now issued from Moorgate Street, St. Pancras, and Kentish Town. Add to list on Great Western Railway, Windsor and Moulsoford, and on Midland Railway, St. Albans and Bedford. Great Eastern tickets to anglers are granted to Yarmouth and Lowestoft for four days at 10s. for the return journey, also to Wroxham at the same fare on production of members' privilege tickets.—R. G. GHURNEY, Secretary.
10, Baches Street, Charles Street, Hoxton, N.

IMPORTANT CONVICTION UNDER THE FRESH WATER FISHERIES ACT.—It is not generally known that proprietors or occupiers of land through which any stream passes have the power of enforcing the Act against all persons during this close season of fishing or attempting to fish by lawful or unlawful means. The Thames Angling Preservation Society has made a grand example this week in this respect, and the result will be followed without doubt in the issue of summonses against offenders without the necessity of the assistance of the society where the water is out of its general jurisdiction, but at the same time the keepers have orders to assist in obtaining summonses where it may be desired by the proprietors. The case referred to was heard at Sunbury on Monday last, the society having taken out a summons against a man named Henry Dabney for wiring jack in some water on land in the occupation of Mr. Rane, the stream being connected with the Colne at one end and running into the Thames at another. It was situated some distance from both rivers, and Mr. Hickson Briggs prosecuted on behalf of the Thames Preservation Angling Society. The Bench, after hearing the case, fined the offender in the sum of 40s., including costs. The result gave so much satisfaction to a number of land proprietors who were present, and who had streams running through where wiring was going on to a great extent, determined upon seeking the protection of the Fisheries Act without further delay. This act on the part of the Thames Angling Preservation Society will be the means of saving hundreds and thousands of jack which go up these streams during the close season.

ANGLING IN LINCOLNSHIRE.

I HAVE lately made a flying visit to some portions of Lincolnshire, to ascertain whether the operations of the Fresh Water Fishery Act of 1878 have been carried on in those districts, and I am glad to report a general expression of approval has been accorded to its working. At one of the Great Northern side stations, between Peterborough and Grantham, I found one of the porters was an adept in the angling art, and he assured me the effect of the Act upon roach fishing was proving of a very beneficial character. He is evidently a great enthusiast in angling, and gave me some illustrative notions of his skill in fishing, which appeared to be the result of practical experience. When he found out who I was, and that my life was devoted to his favourite pastime, he conversed with me up to the time of the arrival of the train; and having about twenty minutes to wait, I related to him some of our work in connection with Thames fishing; and when I told him of the recovery of over four thousand good roach, he was in perfect raptures, assuring me how delighted he would have been to have witnessed such a sight, and of putting them back again into the metropolitan stream. He told me of his method of striking roach, and he had a very illustrative manner of expressing himself. As soon as he recognised a bite, he struck the wrist of the hand which held the rod with his other hand with a force sufficient to lip-hook the fish, and he was invariably successful, contending it had a superiority over the ordinary or common mode. There was a peculiarity about it which, I am afraid, would not gain great favour amongst our Thames roach fishers; but giving him the benefit of experience, he would not be far wrong, if, indeed, he was wrong at all. I have always an idea that a good angler makes a good servant, and in this respect, as far as he was concerned, I gleaned from my friends that he was always civil and obliging. In my rounds, I came in contact with a country rector, who is fairly well up in angling, and especially amongst the trout; and I hope, one of these days, he will give me an account of some of his doings in the Lincolnshire streams.

But the practical character of my visit in anticipation of the general angling season, which begins on the sixteenth of the next month, was to find out, as I have said before, the effects of the Fishery Act in its legislation in the country; and without specifying particular places, I may say generally that it has found favour even amongst those who at the first were opposed to it. They take the same view as the railway porter I have previously referred to, and I will use his own language. He said, "If you catch a roach when it is in spawn it is not that single fish you destroy, but a thousand inside it, and if you kill another, there goes another thousand, and so on." And his argument was practical and right. It is the principle we want all to teach, and undoubtedly this man, whenever he has a chance, inculcates it to every angler he becomes associated with. His teaching will find acceptability amongst all true disciples of the rod; and, in teaching them, he will, no doubt, cause the teaching of others. It is this that is doing so much good on the Thames by the members of the London angling clubs, who are now taught by the Central Associations to regard the seasons and sizes of fish. I put in an appearance at Sleaford, and regretted no action had as yet been taken to resuscitate the old association, but there was a strong feeling in favour of it, and the respected agent of the Marquis of Bristol was quite prepared to give every facility. Like most other things, it only wanted a leader, and some one who would well work the office of secretary. The Sleacan, indeed, be made a good trout stream, and I was asked the question whether it was possible to do so. I hope on the next occasion of my visit—for this was only one of a few hours—I may have an opportunity of seeing several anglers

who I know are ready to do their part in the work, and endeavour to stimulate them all into action, and practically carry out the ideas I gave in the FISHING GAZETTE in the autumn of last year.

B.

NOTICES OF BOOKS, &c.

UNITED STATES COMMISSION OF FISH AND FISHERIES. (PART VI.) REPORT OF THE COMMISSION FOR 1878. Washington: Government Printing Office, 1880.

SINCE the first establishment of the United States Fish and Fisheries Commission, in 1871, its record, as contained in the successive volumes of its reports, is nothing more or less than a continuous history of successes. Its original object, as authorised by law of Congress, was an investigation into the causes of the alleged decrease of the fishes of the sea coast and lakes, and the recommendation of measures for their restoration. Not long after, however, it found itself compelled to enlarge its sphere of operations, and, by undertaking the propagation and culture of desirable food fishes, to give practical proof of the value of its scientifically conducted ichthyological researches. Under the able direction of Professor Spencer F. Baird, whilom assistant secretary of the Smithsonian Institution, the Fish Commission has since performed work of very high character in every one of its many departments. Its labours are now watched with jealous admiration by all manner of men in all countries, no small number of whom could testify to its constant courtesy and readiness to impart every information in its power. It is also no small achievement of the Commission to have raised up and fostered the well sustained and progressive interest in its doings that is now day by day being shown by the nation. But it has besides performed the far greater feat of maintaining favour in the sight even of Congressmen, who, if reports speak truthfully, have very little claim to represent either the best interests or the highest intelligence and culture of the nation. However, be this as it may, it must be conceded that Congress has always shown itself prepared to appropriate large sums for Fish Commission purposes. Beginning in 1871, with the modest appropriation of £1,600, rising to £10,000, and £15,000 in succeeding years, in 1879 the amount reached £31,200. In 1880, a preliminary appropriation of £25,000 was awarded to the Commission, and doubtless supplemental estimates will be met with equal readiness. In addition to these figures, no less than £165,000 has already been expended by minor Fish Commissions, under the separate control of individual State Legislatures. Still it is possible and quite justifiable to view the conspicuous generosity of Congress towards the central Fish Commission, in some less pleasing light than that cast by pure disinterestedness or desire for the advancement of science. For many and various are the disguises and shapes that political log-rolling assumes, and into this category the above specified instance of Congressional openhandedness very perceptibly falls. In proof of this, it is only necessary to remember that one object of the Commission, and in the eyes of Congress perhaps its most important one, is to secure statistics for the proper treatment of international questions connected with the common use, by Canada and the United States, of the waters of the North Atlantic. Unfortunately, however, the ingrained obliquity of moral perception, upon which Congress unblushingly prides itself, renders proper treatment and final settlement of international questions impossible. This much at least every impartial critic will readily admit, who has studied the history of the Fortune Bay and other fishery disputes that have from time to time arisen between the British and United States Governments. Until more equitable sentiments prevail in Congress, the utmost

we can do is to look forward hopefully to the fulfilment of the time foreshadowed by the Commissioner in the concluding paragraph of his report. Referring to the successful issue of the experiments conducted by the Commission in the artificial culture of useful sea-fishes, he finishes thus:—

“We have at our command the means of so improving and increasing the American fisheries as to obviate the necessity in the future of asking a participation in the inshore fisheries of the British Provinces, and thus enable us to dispense with fishery treaties or fishery relations of any kind with the British or other Governments.”

May that happy day soon come, and the Fish Commission ever prosper! is a sentiment that will strike a responsive chord in the breast of every true Briton and Canadian.

The figures cited above almost suffice to show the present extended scale of piscicultural operations in America, but should farther proof be required, it is only necessary to point to the most recent of the appliances placed at the disposal of the Commission. This is nothing less than a splendidly-appointed steamship, named the *Fishhawk*, which, having been specially built to meet the requirements of the Commission, is a model of what such a vessel should be. Her size is 484 tons, and she is provided with every useful appliance that the ingenuity of man has devised or found necessary in prosecuting scientific researches at sea. Perfectly equipped as she is, both as regards her executive and scientific crews, it will not be for want of means if the *Fishhawk* fails to add largely to our present knowledge of practical ichthyology.

The present report, the sixth volume of the series, although relating to the eighth year of the existence of the Commission, is intended to include an account of its labours during 1878, and so far as these concern the propagation of salmon, during a part of 1879. The report falls into two parts—inquiry and propagation of food fishes. The former includes the history, condition, and statistics of the great fisheries, and the proper method of prosecuting them; the latter gives the history of the measures taken to actually increase the supply of desirable fishes in particular waters, either by artificial propagation, or by transfer from other localities or both combined. Among many important suggestions for the improvement of old fisheries and the development of new ones, it is noteworthy that the introduction of beam-trawling is here strongly recommended. Curiously enough this system, as well as that of catching cod by means of gill-nets, as practised in Norwegian fisheries, is unknown in America. The adoption of this last method is particularly advocated as a means of relieving fishermen of one of their greatest embarrassments, namely that of procuring bait. Professor Baird's advocacy of the beam trawl shows him also no believer in the damage which the use of this instrument is alleged to produce. The acknowledged depletion of the finny inhabitants in coast-waters he attributes to very different causes. According to him,

“The most plausible solution of the problem is to be found in the very close relationships between the so-called anadromous fishes and those permanently resident in the ocean. The anadromous species are represented by the salmon, the shad, the fresh-water herring, or alewife, and some other kinds, which, although spending the greater part of their life in the ocean, periodically enter the fresh waters in greater or less numbers, and ascend as high as they can for the purpose of finding suitable places wherein to deposit their spawn. This done, the parent returns, leaving the young to follow. . . . It is not thought that either the parent fish or the young go to any great distance from the mouths of the rivers, and it is believed that the fish born in one stream never think of entering any other than that in which they first made their appearance. Bearing in mind the countless myriads of these fishes formerly entering our rivers, and noting the extent to which they are preyed upon by the more rapacious inhabitants of the sea, we may understand why such multitudes of the larger fish formerly approached the shores in pursuit until deterred by the increasing shoalness or freshness of the water. Even then, however, they would remain near the shore, lying in wait for the parents and their young returning in such vast quantities during the later months of the year. In all probability these constituted a chief inducement to the movement of the predacious fish to the coast in such numbers during the spring and summer. In autumn and winter the sea-herring and the fish of the cod family visit the shores for quite another purpose,

namely, to deposit their eggs. But from whatever motive, the fact remains, that years ago throughout the twelve months an ample supply of the finest fishes was within the reach of every one, so that a fisherman, with a small hand-line and an open boat, was able to support his family without any difficulty. Now, with the continued reduction of the salmon, shad, &c., the summer fisheries have dwindled and nearly disappeared, leaving only those of winter, with its inclement weather, to furnish occupation to the fisherman, and compelling him, in the most dangerous season of the year, to prosecute his work in expensive vessels, and exposed to perils and privations of a terrible character. Assuming, then, that the chief agency in the decrease of the ocean-shore fisheries has been the reduction in the number of the anadromous fish, *i.e.*, those passing up from the ocean into the fresh waters to spawn.

we need not follow the Commissioner's words any further, or repeat his enumeration of the causes that have led to that reduction. Our knowledge of the effects produced by pollution of rivers and artificial obstruction of their channels is unfortunately too complete to warrant additional demonstration of fact. Although Professor Baird's report touches many subjects on which we long to dwell, and contains many striking passages we should like to quote, we cannot stay to do so at this moment. As it is, his contribution fills little above a twentieth part of the bulky volume, exceeding a thousand pages, now before us, and we still have to consider the large number of highly valuable appendices contained within its boards. First and foremost amongst these should be singled out two admirable illustrated monographs on the Marine Isopoda and the Pycnogonida of New England and adjacent waters. The first-mentioned animals being an order of crustacea, the second, a group of articulated organisms occupying a position between the crustacea and the arachnida in our zoological system. The authors of these monographs, Mr. Oscar Harger and Mr. Edmund B. Wilson, have certainly spared neither time nor trouble in making their work complete. The full index and valuable list of authorities provided by them will alone support proof and carry conviction of this. A report on the shore cod-fisheries of Cape Ann, Massachusetts, by Mr. R. E. Earll, will be found very pleasant reading, even by those lacking a pisciculturist's enthusiasm. The same remark replies to some translated reports and articles on sea-fisheries, emanating from Norwegian, Swedish, and German sources. These include a "Report on the American Fisheries," by Mr. Frederick M. Wallem; "The Salt Water Fisheries of Bohuslän," by Mr. Axel Vilhelm Ljungman; and another by the same author, entitled, "The Great Bohuslän Herring Fisheries." This last is specially valuable as an historical account of these renowned fisheries, from early ages upwards. Two articles on the subject of deep-sea research, the first by Professor G. O. Sars, on the Norwegian deep-sea expedition of 1878, and the second by Professor G. Karsten, on the scientific investigation of the Baltic and German Ocean, will well repay perusal. A paper by Baron de la Valette St. George, entitled "The Enemies of Fish," which was read before the German Fishery Association in 1879, gives an astounding list of the perils that fishes encounter. It is sad, though, to see the beautiful and brilliant kingfisher singled out for special condemnation. Mr. C. G. Atkins contributes a paper on "Cheap Fixtures for the Hatching of Salmon," which intending pisciculturists should not fail to study. These last would also do well to read Mr. Robert A. Pope's account of the introduction and culture of the carp in California. The profits derived from carp-culture are very considerable in Germany. In one district alone, that of Lower Lusatia, an annual carp fair takes place every autumn, when upwards of 400 tons weight of carp changes hands at very remunerative prices to the breeders. In Bohemia, also, considerable attention is paid to aquiculture in combination with agriculture. In this country, all the conditions necessary to success in this particular branch of industry are to hand, but no one seems inclined to avail himself of them. Surely, in these days of agricultural depression, when large amounts of

unemployed capital are seeking permanent investment in this kingdom, it might have been supposed that promoters of joint-stock companies would, ere now, have turned their attention to this promising outlet for capital. But no; hitherto all their intellect and business capacity has been mainly absorbed in promoting companies for the manufacture of scrap-leather jam, spurious mocha, cabbage tobacco, and similar indelectable superfluities!

In conclusion, as we part from this report, we may say that, like its predecessors, it deserves the warmest praise that can possibly be bestowed upon it. To those persons who are interested in practical ichthyology, it will be an indispensable work of reference; while to those who are merely anxious to increase their general knowledge of a very large subject, it will afford much pleasant as well as profitable reading.

THE ESSAY ON THE BEST RULES FOR THE MANAGEMENT OF ANGLING CLUBS.

WE hope to have the pleasure of printing Mr. Henry Bradfield's Essay—which won our prize at Norwich—on the above subject next week.

NOTES AND QUERIES.

RARE AND CURIOUS FISHES OF DEVON. PORBEAGLE SHARK.

(Continued from page 221).

<i>Squalus cornubicus</i>	Turton's Linnæus.
<i>Lamna</i>	Cuvier.
<i>Isurus oxyrinchus</i>	Rafinesque.
„ <i>cornubicus</i>	Gray's Cat. British Museum.
<i>Longnax</i>	Lacepede.
„	Risso.
<i>Lamna cornubica</i>	Fleming, British Anl., p. 168.
„ „	Jenyn's Manual, p. 500.
„ „	Yarrell's British Fishes. Vol. iii., p. 515.
„ „	Donovon.

COUCH informs us, in vol. i., page 41, of his British Fishes that the Porbeagle Shark is a common visitor on the western coasts in the summer, and not unfrequently it wanders along the eastern borders of England, and even of Scotland. An instance has been known of its having been taken even in the Orkney Islands, and, according to Risso, it is an article of food in the Mediterranean, and he goes so far as to say that, as such, it is much esteemed. This is a piece of luxury to which our fishermen and the public have not yet attained; and consequently with us it is only used as manure. It usually proceeds in small scattered companies, preying on pilchards and herrings, and other small fishes that abound. The teeth, which present a formidable array of spears, are less formed for cutting than for seizing and holding their prey, which, therefore, it appears to swallow whole. I have also found, in one instance, the remains of three good sized hake in the stomach.

Mr. Buckland's History of British Fishes, page 225, states: The porbeagle is said to be a common visitor on the western coast in summer, and not unfrequently it wanders along the eastern borders of England and even of Scotland—(but nothing is said of the southern portion of England). In September, 1867, Mr. Gerard, articulator to the British Museum, informed Mr. Buckland he had a porbeagle measuring eight feet six inches, which was caught off Margate in a mackerel net, and in March, 1870, one was taken at Wick, seven and a half feet in length.

Mr. Parfitt, in his Fauna of Devon for 1876, page 41, writes that the porbeagle is *rare*, but taken on the south coast; at the same time he gives us no example, but states Mr. Reading knew of two

or three specimens taken on the north coast at Clovelly, in 1871, and "on April 27th, 1836," Mr. Bellamy says "a specimen was taken, which measured eight feet in length, and contained five young ones.

It was in November, 1870, that I received my example from Torbay; this was also sent me by my friend, Mr. A. Banfield. It measured five feet four inches; the remains of several fine whittings were found in its stomach, thus showing, with the hake above mentioned, they are great destroyers of numerous kinds of fish, besides herrings and pilchards. This porbeagle appeared a great curiosity here (Exeter), and as I could not hear of any one having seen a porbeagle before, coupled with Mr. Parfitt's statement, viz., that it was *rare*, and having heard of only one being taken since, in 1874, I may conclude by saying that it is by no means common on the southern coast. This fish, when dressed, is by no means bad eating, if cut out very short, and shredded abroad in uniform size pieces, similar to the large claws of a crab. The only peculiarity at all noticeable was the sweet flavour, making it appear as if the cook had made a mistake, and administered an over abundance of sugar, instead of salt to the liquor in which it was boiled.

FRANK GOSDEN, Exeter.

UNITY AMONG ANGLERS.

THE cynic might perhaps smile at the number of excellent and well-patronised "spreads," in addition to the more humble, though not less jovial and hearty, meetings that have taken place among many of the Metropolitan and other Angling Clubs. Unity is indeed the watchword. No doubt an angler might enjoy fair sport who isolates himself from his brother fishermen; but, as things go in this sublunary workaday world, he who joins a society or club will have a better chance of sport than the isolated one, assuming both to belong to a similar station in society, and of equal intelligence, because the club organisation is best suited for excursions into the country for sport, where sport is more likely to be obtained. All the older members, however, will do well to set an example of moderation in public-house club rooms. The offering of prizes creates a wholesome stimulus to enterprise and excellence in the "gentle art," apart from the lessons to be learnt by the river-side, especially in summer and autumn. A bishop once went angling, and on his return he was asked if he had caught any fish. "No," said he, "but I have *found a sermon!*" Comment is superfluous.

SPOTS.

UP-STREAM WORM-FISHING FOR TROUT.

WE strongly advise our fly-fishing friends who may find the water too low and bright for fly-fishing, to try fly-fishing with the worm. Use a twelve-foot trout fly rod, two yards of gut collar and a Stewart worm tackle, have a supply of worms from two to three inches long; any bright lively worms will do, but we prefer the marsh or perch worm (dark red colour, flat tail). Wade up stream, and, using a line a foot or so longer than the rod, throw the worm boldly up stream by an over-hand movement as in fly-fishing, so that it drops with a flop about twenty-five feet in front of you near the edge of the current, behind stones, and in all like trout-feeding places. As soon as it reaches the water let it come down of itself, merely drawing your rod back over your shoulder ready for another throw, and making about six or eight such throws in a minute. It is far the deadliest way of fishing with the worm, and is quite sportsmanlike. You can fish the edges of the long deep pools in this way very successfully; often, especially, if there is a breeze on the water.

CORRESPONDENCE.

[We do not hold ourselves responsible for opinions expressed by our Correspondents.]

ANSWERS TO CORRESPONDENTS.

E. J. T.—The matter is plain enough; the man was trespassing unless, he could produce the ticket entitling him to fish; he could be summoned before a magistrate for trespass. The keeper has no right to take away any of his tackle, nor take the law into his own hands at all.

F. B.—Crayfish and Crawfish are identical, the name is a corruption of the French name. See our notice of Huxley's book on the Crayfish.

THAMES TROUT.

SIR,—I had no intention of referring again to this subject, which has caused several communications in THE FISHING GAZETTE; but I am desirous, first of all, of thanking Mr. J. Harrington Keene for his remarks in reference to the observations of "Consistent," and secondly, to state that my sanguine expectations arise from the fact that the Thames trout to be hereafter placed in the Thames, will be of a size able to defend themselves, and not, as formerly, as small fry. My anxiety in all matters is in the interests of the anglers, and for them I hope to labour as long as I live. B.

TROUT IN MILL PONDS.

SIR,—On reading your correspondent J. E. B.'s communication, which appeared in last Saturday's issue, it brought recollections of days gone by, when I used to be very partial to pond fishing—indeed, there was nothing else in the neighbourhood to be had then—for the once famous trout stream which ran through the valley was so polluted by dye-works as to completely destroy all life; but the ponds attached to the numerous mills contained good trout. The owners and tenants, however, as a rule, were very niggardly in granting leave, even for half a day, and when you did succeed in obtaining the desired permission, it was often accompanied with such a look of woe, as if the party had unthinkingly parted with his last hold of existence. One person stipulated that I should give him all the fish I caught, or pay him the market price, and actually placed an old man on the bank to watch me the whole time I was there. His pond was afterwards rented by an angling society at two guineas per annum, paid in advance, and it was reported that a few days after the receipt of the money, he drew off the water and captured all the fish—and, knowing the man, I have no doubt as to its truth, for the members never caught a fish in it afterwards. I learn, however, with regret, that the ponds in these valleys are not now of much account, and I suspect the reason of it need not be far sought. It is a great pity, for the little rivulets that supplied the

ponds, swarmed with loaches—hence the lusty trout. I look back, nevertheless, with pleasure to the many days and half days I have had there. I forward you a little book which I hunted up, containing two cuttings from a local newspaper of an account of my doings in that quarter the year after the Mutiny. I think, even now, they are worth reproducing, if your space permit. The eight trout there mentioned all took the same hackle fly—the body being dressed as the sand fly, but with a feather from the back of a partridge. The last fish broke away with the fly, through slipping or backing at the knot, and it had then become quite dusk. There was a nice ripple at the time, and the greatest swarm of Harry Longlegs I ever saw. The pond was about two acres in extent, with a raised bank on two sides, walled all round to prevent water washing off the banks, and quite exposed without a bush. As a rule, in pond fishing I have found casting close, or a foot or so from where the ripples break against the slanting sides, to be the best. Of course, without a breeze, there is not much chance of a rise, until the gloom of evening.—I am, &c.,

Southport, May 11, 1881.

J. T. HORSLEY.

[The cuttings refer to the capture, in 1858, by Mr. Horsley, of a $4\frac{1}{2}$ lb. trout, with minnow—eight trout weighing 12 lb. with fly on single hair, and without landing net, in two hours; and finally a splendid fish of 4 lb. taken with small fly, after twenty minutes' hard struggle, and without a landing net. All these fish were taken in a mill pool, near Southport.—ED.]

TROUT IN SEWAGE WATER.

SIR,—It may be interesting for your readers to know that we have a bit of fishing in the Black Country, and that I caught with the gentle on May 5, three dace that weighed $\frac{1}{2}$ lb. each, all clean; two trout, $\frac{1}{2}$ lb. each, and one trout, $1\frac{1}{2}$ lb. One small trout returned, and a roach $\frac{1}{2}$ lb. returned; the roach was full of spawn. I caught them in a tributary of the river Penk, at Four Ashes, in Staffordshire, which runs into the river Trent. On the fourteenth, I caught eleven trout in another tributary that runs the sewage from Wolverhampton into the river Penk but I may say we have tanks to catch the sewage, and by that means, it purifies the water. I may say the stones were stained with a yellow tinge from the sewage, but the water was pure enough to contain trout from a quarter of a pound to a pound. You may make what use you think proper of this communication, and I beg to remain.—I am, &c.,

Dudley Street, Wolverhampton.

JAMES DICKSON.

QUIET FISHING NEAR LONDON.

SIR,—In answer to your correspondent, "Pimlico" in your last issue, I think he can get his requirements at the lake, in Wimbledon Park.

Apply, Mr. Woolgar—keeper—Lake Cottage, Wimbledon Park; or Mr. Osborne the agent to the estate, Wimbledon Park.—I am, &c.,

Covent Garden Market, W.C., May 14, 1881.

THOMAS POOLE.

FISHING IN THE TRENT WANTED.

SIR,—Will you kindly insert the following in your paper? "I am thinking of spending the last week of June, in Derby, and should like to have a day or two's bottom fishing in the Trent. Will some brother angler, knowing the neighbourhood, kindly inform me which is the nearest place I can reach from Derby, where the angling is free; whether I can obtain baits; or shall have to take them from Derby; which is the best house to stay at; and any general directions connected with the fishing? By so doing, he will confer a great favour on yours, &c.,

SEVERN BANKS.

Tewkesbury, May 16, 1881.

LITERARY QUERIES.

SIR,—Can any reader of the FISHING GAZETTE furnish me with transcript of title and collation of the edition of Gilbert's "Angler's Delight," published by Fox, of Holborn, in 1776; or tell me anything of an edition of the same work, under the title of "The Young Angler's Companion," which is said to be dated (1682)? I possess a copy of the latter without date, pp. 36, and same printers and publishers as edition of 1676.—I am, &c.,

Downshire Hill, N.W., May 19, 1881.

THO. SATCHELL.

CLOSE TIME FOR GRAYLING—GRAYLING FLIES.

SIR,—In taking up a number, by chance, of that excellent serial, "Scribner's Monthly," I find an excellent paper on the Michigan grayling, signed by one Thaddeus Norris.

In it I find the following:—

"The game laws of Michigan, recently enacted, forbid the spearing and netting of grayling at all times, and do not admit of them being taken even with hook and line from January until June. These fish acquire condition soon after spawning, and are better in autumn, and in season nearly all winter. So, after the 1st September, the sportsman can unite shooting and fishing." A capital legislative enactment.

The same writer, speaking of his fishing excursions, says:—"My customary tackle on these excursions is a 12-foot rod of about $8\frac{1}{2}$ oz., leaders 8 feet long, and flies on hooks ranging from No. 7 to No. 10 (O'Shaughnessy). I have found most of the flies used on Pennsylvania streams effective, and one can scarcely go amiss in his selection. One summer I used for two weeks the same whip, viz., "Professor" for the stretcher, "silver widow" for first, and "white-winged coachman" for second dropper. The first is tied with guinea-fowl feather for wings, an amber or yellow dyed hackle feather for eyes, a yellow floss body wound round with gold tinsel, and three sprigs of scarlet ibis for tail. The second has black wings, black hackle, and black body wound with silver tinsel. The third has white wings, red hackle undyed, and body of peacock hue."

Would any of these dressings do for our rivers of the midland counties? and could any of your contributors tell me the best fishing stations on the Ribble or its tributaries, and also if grayling are to be found in them? I should feel obliged for information on the above.—I am, &c.,

H. NEVILLE.

Manchester, May 18th, 1881.

TIRED HANDS AND ARMS.—Edson's Electric Armlets and Wrist Bands Invaluable for anglers and gun sportsmen and highly recommended for all persons having tiresome writing, sewing, or music practice. They give wonderful energy and strength, enabling the wearer to accomplish tedious work with steadiness and comfort. Price 2s. 6d. per pair, silk web and fine steel clasps. Sent to any address on receipt of P.O.O. payable to J. Edson, the Electric Fabric Co. Patentees, No. 1, Charlotte Street, Bedford Square, London W.C.—[ADVT.]

CLUB REPORTS.

BOSTONIAN ANGLING SOCIETY.

The half-yearly supper of the above society will take place on Tuesday, May 24, at the clubhouse, when we shall be pleased to see all that can make it convenient to a tend.—H. TAYLOR, hon. sec.

THE EAST ANGLIAN PISCATORIAL SOCIETY (NORWICH).

The committee of the above club met on Monday evening last, to name a place for the first match of the season, and also to draw out a code of "match rules." As the reach-fishing is now finished for a time, and as there is not much to be done amongst bream on the Yare, the committee decided to name Acle on the Bure as the most likely spot. Here good bank fishing may be had, besides, having to get to it by road, a most pleasant trip is anticulated. Ten pounds in prizes are already promised, and several others are expected. A special meeting of the members takes place on Monday next, and the date of match is fixed for Thursday, May 26th. Gentlemen intending to compete in the match must at once send in their names to the secretary, in order to give time to make arrangements for conveyance, &c., &c.—ALFRED PALMER, hon. secretary.

May 17.

NORTH-WESTERN ANGLING CLUB.

Change of Secretary.—Mr. Amies having resigned the secretaryship, all communications to be addressed to Fred. Hill, secretary.

PORTSMOUTH WALTONIAN ANGLING SOCIETY.

On the usual weekly meeting of the above society, held at the Golden Fleece, Commercial Road, May 12th, Mr. A. L. Emanuel in the chair, Mr. James S. Dyer read another of his very interesting gossiping papers on angling, entitled "The History, Culture, and Capture of the Salmon." There was a very large muster of the club, and the paper was received with the greatest satisfaction. A vote of thanks was recorded to be added to the minutes of the society, proposed by Mr. A. L. Emanuel and seconded by Mr. J. Buck. This will be the fourth paper Mr. Dyer has contributed to the society during the past twelve months, and now, especially during the fence months, very agreeable evenings are spent.—DAGGERWOOD.

WALTONIAN ANGLING SOCIETY.

The annual dinner of this old-established and eminently prosperous society took place on Wednesday, May 11, Mr. Marriott in the chair, faced by Mr. Starr as vice. The dinner was placed on the table in a manner which reflected high credit on Mrs. Shepherd, our worthy hostess, and was done ample justice to by the members and guests assembled. After the usual loyal toasts, the pleasant duty devolved upon the chairman of presenting the various prizes of the past season to the fortunate winners; tackle, tea services, clocks, plated ware books, pictures, &c., were among the articles represented. The toast of the evening, "The Waltonian Angling Society," coupled with the name of our most popular secretary, Mr. Packman, was proposed, in a felicitous speech, by Mr. Webster, and responded to with the greatest enthusiasm. Some singing of an excellent character enlivened the evening, in which Mr. Hart, a guest, and Mr. Waltham, a member, specially distinguished themselves. The "West Central Association," proposed by Mr. Starr, was also enthusiastically received, and responded to by Mr. Geen, in a very humorous speech; Mr. Bonvoisin also responded on behalf of himself and Mr. Hoole, who was unfortunately absent. Other toasts and songs followed, including the "Health of Mr. Webster," the late chairman, who had travelled many miles to be present. Towards the close of the evening the Chairman was enabled to announce upwards of forty prizes for the ensuing season, and after a most enjoyable evening the proceedings were closed with a vote of thanks to the chair and vice-chair, which was responded to in a manner which could not fail to be highly gratifying to the gentlemen concerned.

May 16.

ON Friday, May 6th, Moses Riceman, baker and fishdealer, Leeds, was charged under the Fresh Water Fisheries Act with selling freshwater fish during the close season. Mr. Grisdale prosecuted on behalf of the Leeds Rockingham Angling Society. A member of the society saw a large number of perch exposed for sale in the defendant's shop, the price asked being $3\frac{1}{2}$ per lb. The defendant stated that he had received the fish from a person named Underwood, of Manchester, and that he was entirely ignorant of the law. Under the circumstances, and on condition that the defendant agreed to make a donation to the Leeds General Infirmary, the society did not press for a heavy penalty, but desired that a stop should be put to the practice of illegal selling. Mr. Grisdale, therefore, asked Mr. Bruce, the stipendiary, to inflict a nominal penalty. A fine of 1s. and costs was imposed.

BRIGHTER THAN SILVER!—Some very excellent, three-parts grown fresh herrings were on sale at a cheap rate last week in London. The thought struck me while eating a couple for breakfast, what a capital bait one would have made to lure Sharky. He'd surely have mistaken the young herring—brighter than silver—for a nice Thames-bred dace, and "negotiated" it accordingly.—CALLER 'OU.

ANGLERS should always be provided with something to take away the swelling and poisonous effect of the bites of insects. They should also have with them something to apply to a cut or sprain. Pond's Extract reduces the swelling and inflammation, stops bleeding and pain, and hastens the healing process in case of any wound or sprain; and it has no equal for application to the bites and stings of insects. Therefore never go on a fishing excursion unprovided with a bottle of Pond's Extract. It is for sale at all chemists, at 2s. 3d., 4s. 6d., and 8s. 6d. per bottle.—[ADVERTISEMENT.]

GREGORY'S SPINNING BAITS.—"The Gregory" the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived. Address, James Gregory, Vyse-street, Birmingham.—[ADVT.]

FISHING IN THE RIVER NIGER.

THE following interesting letter has been received by Mr. G. F. Spencer, the President of the Larkhall Angling Club, from a member of the society:—

To George F. Spencer, Esq.,
President, Lark Hall Angling Club.

Since arriving in Africa I have had but little time to indulge in the piscatorial art, and it must be remembered that angling is not carried on under the same pleasant circumstances in this country as it is in England. In the Niger there are no post cards, or fishermen to send them to, with instructions to have some favourite spot ground-baited overnight, and a punt in readiness next morning.

There is but little sport attached to fishing with a rod and line in this river, as the fish, when hooked, show but little fight, but succumb almost immediately to their fate, and I have found by experience that by far the most amusing and exciting method of capturing the finny tribes that inhabit the Niger is by spearing them.

Having a few hours to spare one fine morning, a few days ago, I determined to try my luck with a spear, and selected a light one 12 feet long, preferring this to a heavier kind, about 6 feet in length, and with a long line attached to it. As I intended taking my rifle, I did not care to hamper myself with the line, owing to the smallness of my canoe, which was made of silk cotton wood, and so exceedingly limited in space, that, when paddling, my legs below the knees were dangling on each side of it in the water. This position is cooling to, but causes some considerable anxiety about, one's extremities, on account of the alligators.

My preparations completed, I started against the stream, keeping close in shore, and, after paddling for about half an hour, reached a native village. The mud huts, with mat roofs, look picturesque at a distance, but, on close inspection, are not so pleasing either to the eyes or nose.

As a number of village maidens were bathing, the novelty of seeing a white man in such a frail craft as that in which I was seated caused considerable excitement; and as these damsels were standing up to their knees in water, and were in the same condition as Mother Eve is reported to have been before she was weak enough to partake of that apple, I thought I might as well rest here and admire their forms if not their faces.

It was at this village that a few months ago I witnessed a most unpleasant catastrophe, and which I was powerless to avert.

Whilst standing on the bank watching a girl washing some clothes in the river, she suddenly gave a fearful shriek, and at the same instant I saw the tail of an alligator appear above water, and then the girl being borne off into mid-stream, her head and shoulders visible. Her shrieks alarmed the men, who came running down to the water's edge, and began launching their canoes. The first to go to the rescue was the poor girl's lover, who made his canoe fly through the water. He neared her fast, and ranged up alongside; dropping his paddle, he stretched out his left hand and almost seized her, his right, which grasped a spear, was raised over his head to strike, when in an instant the girl disappeared, and he was struggling in the water, his canoe overturned by a stroke from the alligator's tail.

Leaving the girls to their ablutions, I resumed my paddle, but this unpleasant reminiscence did not tend to alleviate my anxiety regarding my lower limits. Up to this time I had not seen a single fish rise, and on coming to a creek, after making a few casts with my spear, but without any satisfactory results, determined to leave the river and see if there was any sport to be found in this creek; and after working up for about a mile, found it branched off at right angles, and just as I was following the bend noticed a large alligator lying on the sand, about seventy yards from the water. But as its tail was towards me it was impossible to kill it in that position; so landing, proceeded to crawl along the sand to get between it and the water. This mode of progression requires a good deal of perseverance, particularly when the sand is loose and dry; but I at last reached a spot from whence I could get a fair shot, and although my chance of inflicting a mortal wound was doubtful, I was in a position to effectually prevent the creature taking to the water; and after waiting a few minutes to get my breath I fired.

As I expected, my shot did not prove fatal, but it took effect on one of its legs. As the alligator started for the water, on three legs, coming directly towards me, I quickly reloaded and started to meet it. Then it changed its course and made for the creek, considerably to my right. After a sharp run I again cut it off, and again went straight for it. This time the alligator evidently determined to run the gauntlet, as it did not try to avoid me. When within twenty yards, and just as I was thinking of stopping to take aim, my foot slipped in a hole and I was brought up, or, rather, down, rather quicker than I intended, as I found myself full length on the sand. I had no time to get up as the alligator was almost on me, with his jaws wide open, so raising my rifle I fired, and the bullet, passing through the roof of his mouth, entered his brain, and it fell dead at my feet. Leaving the carcass I regained my canoe, and was not long getting back with the stream.

I immediately sent some boys for the alligator's head, intending to send it to you, the president of the club, but, unfortunately, the natives were before my boys, as they found no vestige of it.

Will write again as soon as I get time.—I am, &c.,

D. W. SARGENT.

Akassa, River Niger, West Africa.
March 15th, 1881.

"BEAUTY'S" BANE.—At the lower portion of the old town of Watford is a tributary of the Colne, over which is a little bridge on the rural roadway that leads towards and past the pretty red brick Gothic residence of Edward Majoribanks, Esq., M.P. Under the said bridge a trout (as it was told to me by the angler's wife, both of whom lived in the cottages close by) had taken up its quarters. The humble rodster in question had tried and tried in vain to tempt the trout from his lair, until early one summer's morning ('tis the old tale over again) the "beauty" found his bane in very "taking" bait. Another "early bird" happening to pass along, the angler besought his assistance, and the five-pounder prize was landed by the aid of a gardener's basket.—INVALID.

LOCAL ART.—In the Royal Academy this year Mr. Nattness, of St. Leonard's, Mortlake, a member of the Richmond Piscatorial Society, has succeeded in getting four of his water-colour studies well hung on the line. No. 621 consists of trout and grayling, which are particularly good, and as the artist is a practical piscator his knowledge of angling has been of great service to him. The notion of fish is frequently taken from the slab of the fishmonger, and none but an enthusiastic follower of Isaac Walton could have imparted the exquisite beauty which these fish possess. The other studies of the "Refectory of Cleve Abbey," "Entrance to Haddon Hall," and the "Interior of an Old Church," are fine examples of an artist's talent.—B.

THE KINGFISHER.—Observe the grace with which the pretty kingfisher rises, but without at all diminishing the rapidity of his flight, to "top" the highest rod of that withy pollard! In the sunshine the bird looks like a bright cerulean gleam when making for some favourite haunt, where, upon friendly overhanging bough, he watches the gudgeon and the dace swim past, and, quick as lightning, dives and soon emerges with a fish in his powerful beak. Now and then a kingfisher might some few years since have been observed about the New River, near the reservoir in Lordship Lane, Stoke Newington, but bricks and mortar and branch railways have driven most of the birds further and further away from the suburbs of London.—RUSTICUS.

THE following message, intended to break bad news gently, was sent to the widow of a man who had just been killed by a railroad accident: "Dear Madame,—Your husband is unavoidably detained for the present. To-morrow an undertaker will call upon you with full particulars."

400,000 MARKS or £20,000 Sterling. TO BE WON.

THIS is the amount of the Chief prize to be won in the most fortunate case in the HAMBURG MONEY LOTTERY guaranteed by the Government of Hamburg.

This Money Lottery contains 51,700 prizes, together amounting to

9 Millions 324,080 Marks.

All these Prizes will be drawn in Seven Divisions, closely following each other.

Among the 51,700 prizes are the following Chief prizes:—

Marks.		Marks.	
1	of 250,000	12	of 15,000
1	of 150,000	1	of 12,000
1	of 100,000	24	of 10,000
1	of 75,000	5	of 8,000
1	of 50,000	3	of 6,000
2	of 40,000	54	of 5,000
3	of 30,000	5	of 4,000
4	of 25,000	105	of 3,000
2	of 20,000	263	of 2,000
		etc., etc.	

The price of the tickets is officially fixed at

**6 SHILLINGS FOR A WHOLE ORIGINAL TICKET,
3 SHILLINGS FOR ONE HALF ORIGINAL TICKET.**

Immediately after receipt of the amount, the Chief Lottery Office Isenthal and Co., Hamburg, forward the ordered tickets for all the drawings of the first division, in closed envelopes, direct to the applicant. The amount for the tickets is to be joined to the order, in English Postage Stamps or Cheques on known Banks in England. Every dispatch of tickets will be accompanied (gratis) by plan of the Drawings. Every applicant is noted in the Lottery Register, and will receive, immediately after the Drawing, the official Drawing List, whereby the numbers drawn up and the value of prize of each respectively is ascertained. The payments of the amounts won are made immediately under Government control by the Chief Lottery Office, Isenthal and Co.

It is respectfully requested that all orders for this Money Lottery are sent before the beginning of the Drawing, and not later than

30th MAY, 1881,

and addressed to the

Chief Lottery Office,

ISENTHAL AND CO., Bankers,

HAMBURG (GERMANY).

The Fishing Gazette.

SATURDAY, MAY 28, 1881.

MY FIRST TROUT.

BY AN ENTHUSIAST.

HOW well do I remember catching my first trout, and what an incentive it was to me to continue angling! For I had got tired of catching only roach and dace, when, one summer, I was asked by an old friend to go down to Worcestershire and try

trout-fishing, which I readily agreed to do. In due course, I found myself in that picturesque and well-wooded county, and had been trying to capture "spotted beauties" in an excellent and well-known stream, both with the fly and worms, for more than a week, without basketing one, when one dull, close morning—having been working carefully up stream for some time with a choice, well-scoured brandling, without any success—I came upon a long, deep reach of water. The thick bushes that grew along its high banks made it somewhat difficult to cast a line over, especially for a beginner, but having been told that there were some big trout in it, I was determined not to miss such an opportunity; and having quickly put on flies, was proceeding to throw over the pool, when I saw the rise of a heavy fish right under a thorn bush that drooped over it a little higher up.

Now was a golden and easy chance; so, following the advice of a veteran angler who was with me, I decided to change again, and dib for him with a grey drake; and, having forthwith wormed my way into the bush, I waited patiently for him to rise again. As I had to do so for a long time, he must have been frightened; but at last he began again, and then, gently lowering my line, I trembled the fly in the water just above the place where he last rose. Immediately there was a splash, and a tremendous tug at my line told me that a big fellow was hooked!

Being a novice, I did not know how to play him properly, and he got among some roots; but on my companion coming up at that minute, he helped me to dislodge him, and eventually I safely landed a fine, highly-conditioned trout of over 1 lb. in weight. Of course, as it was my first, I was very excited and pleased, and, though it has been my luck to kill and land many a heavy, and heavier one since, yet I shall ever vividly remember how and where my first was caught.

E. R. L.

NETTING FOR FISH.

DRAGGING UNDER AN OLD CHARTER.

IN some portions of the river Colne—notably at a place called Longford—the inhabitants, by an old decree or charter, claim the right of netting three days in each week after the 10th of May, when it is believed the roach have spawned; and this right so exercised has in previous years been the means of a large destruction and reckless waste of fish—most of them having either been sold, some for money and some for beer, and others to rot and perish. This year I received a letter from the indefatigable secretary of the Association at Windsor, asking me if anything could be done to put a stop to the wholesale netting; and I made a purpose journey to the royal borough to give him my opinion, which was this, that the netting could not be stopped, but the selling of the fish could. I gave him a number of large placards headed "Prohibition of the Sale of Freshwater Fish between the 15th day of March and the 15th day of June inclusive," and then giving the sections of the Freshwater Fishery Act of 1878, commonly known as "Mundella's Bill"; and if one or two convictions could be made for the selling of the fish it would soon put an end to the netting. On the following day Mr. Stevenson sent two of his river keepers with the bills for distribution, and this was prior to the day of beginning to net. I have heard nothing officially since, but from another source I have ascertained the movement has had a wonderfully beneficial result. I met a friend of mine this last week who always knows what is going on and has frequently bought some of the trout that have been netted out. I asked him what had been done this year in reference to the netting, and he told me the river had been as usual netted, but the roach not having spawned the fish were all put back again. They had got a nice quantity of 5 lb. and 6 lb. trout, but regarding these as freshwater fish, had been informed

they could not sell them. Instead of accepting money for one of them, they simply asked for a drink of beer, as they stated it was against the law to sell them or any other fish. I inquired whether he thought they were going to observe the law which prohibits the sale of freshwater fish during the recognised close period, and his answer was "Undoubtedly." Here is a grand example of the good being done by the Freshwater Fisheries Act! It is, as I have always said, "the kernel of the nut," and goes very far to prove the value of fish legislation. For years this most destructive netting at Longford has been most painful for me to hear, and it can be better imagined than described how gratifying it has been to my mind to learn of this great and important change; and I am not the only one who has regretted the existence and result of such a chartered right of netting in the Colne. I know my good friend, Mr. T. R. Sachs, will be pleased to read this communication, for he has often spoken to me about this merciless netting, and I think there are few practical anglers better possessed with truer sportsmanlike feelings than he has. The time will come, I hope, when the sizes of fish will become a matter of legislation, and one general standard adopted. Mr. Mundella, I know, felt that his Bill was only a partial one, but that it was putting in the thin end of the wedge to future legislation.*

DRAWING FOR STRAY ROACH.

I will now leave the subject of the Colne netting, and if occasion requires I will again refer to it. There has been another removal of roach out of the back stream at Hampton Court, and the complete restoration of large quantities of fish into the channel of old Father Thames. From information received it appeared that "Clay's Ditch," the name by which it is locally known, had received another migration of roach, and it was desirable to have them removed. As it was not expected to find so many fish as on the previous occasion, there were no invitations issued, and in addition to two or three of the river keepers, there were only Messrs. Thomas Spreckley, W. H. Brougham, H. J. Alfred, F. H. Lemann, Alfred Nuthall, F. C. Hatfield, and W. T. Cosier arranged to take part in the proceedings. A great improvement had been made in the net by the introduction of large leads in lieu of the common method of brick ends for sinking the net. On the previous occasion, when Mr. H. J. Alfred, of the firm of Messrs. Alfred and Son, as usual took part in the dragging, the suggestion of leaden weights was made, and instructions given for a dozen to be got in readiness for the next netting. It was left to Mr. Alfred to carry out the idea, and in a conical form the weights of 1 lb. each were made and used with great success on this occasion. The ditch is rather a peculiar one to drag, as under the bay there are so many large stones and a deep hole underneath, and requires repeated nettings to get the fish out, but it was evident the leads were most valuable as rolling more easily over the obstructions. The netting was done under the direction of Mr. Thomas Spreckley, and with Mr. F. C. Hatfield as his first-lieutenant, the work was done in the most business-like manner, but there was nothing like the quantity of roach as on the previous occasion. The result was something like fifteen pails full of roach estimated at 1500 fish, in addition to a brace of good chub and a small trout of six inches in length. The latter was evidently one of those from the Sunbury Rearing Pond which were put in the Thames about three weeks ago. It was an exquisitely-marked fish, and was put in at the Back Weir at Hampton Court. The two nettings at "Clay's Ditch" have caused the recovery of 6000 good roach averaging six ounces each, and were all placed in the Thames at the back of Tagg's Island Hotel, at Hampton Court, which should be a good adver-

tisement for this capital hostelry. On our return to the hotel, Mr. T. G. Tagg submitted for our inspection his new style of a canoe, which he designates the "Niagara canoe," the idea of which was first taken during his trip to the rivers and lakes of Canada and America, and which during the last winter he has made it his special duty to improve upon. The patent swivel-shifting outrig of his own invention possesses great ingenuity. His largest canoe can be paddled by one, two, or three persons, and can be rowed with great ease and comfort, and is adapted for fishing, shooting, and travelling or pleasure excursions. It is said to be a great improvement on the Canadian and North American canoe which is being sent to this country for sale. It was considered by all of us most favourably, and Mr. Tagg was highly complimented on the skill and workmanship of the canoe, which it was felt would receive high appreciation from aquatic men. B.

RULES FOR THE MANAGEMENT OF AN ANGLING ASSOCIATION.

[Through the kindness of the author (Mr. Henry Bradfield, Secretary of the King's Lynn Angling Association), we now print his essay which at the recent Fisheries Exhibition at Norwich won the prize given by the FISHING GAZETTE for the best essay on the subject of Rules for Angling Clubs].

THE RULES OF ANGLING ASSOCIATION.

THE name of the Association is "The Angling Association."

The objects for which the Association is formed are:—

For acquiring the rights of fishing in Waters in the neighbourhood of the [City, Borough, &c.] of ;

And for the preservation, for legitimate sport, of the Fish in such Waters;

And for the culture of Fish by artificial or other means, for the stocking of such Waters, and for doing all such other things as are incidental or conducive to the attainment of the above objects.

GENERAL MEETINGS.

1. The Annual General Meeting shall be held in the month of January in every year, on a day appointed by the Committee, to receive the Accounts, to form, revise, or conform Rules; to appoint the Officers and Committee, and to transact the general business of the Association.

2. The Committee may, whenever they think fit, and upon the receipt by the Secretary of a requisition in writing signed by five Members, and stating the object of the Meeting, they shall forthwith convene a Special General Meeting.

3. The Quorum at General Meetings shall be ten Members.

4. The President of the Association shall be the Chairman at every General Meeting of the Association, and if at any Meeting he is not present, the Members present shall choose one of their number to be Chairman of such Meeting.

5. The Chairman may, with the consent of the Meeting, adjourn any Meeting from time to time, and from place to place.

6. Questions arising at any Meeting shall be decided by a majority of votes. In case of an equality of votes at any Meeting, the Chairman shall have a second or casting vote.

COMMITTEE OF MANAGEMENT.

7. The business and affairs of the Association shall be conducted by a Committee of Management, consisting of the President, Treasurer, Secretary, and nine Members, who shall be elected at the Annual General Meeting in every year, but in the event of no new Election, the Committee of Management of the last year shall continue in office as if re-elected. Any casual vacancy occurring in the Committee of Management may be filled up by the Committee.

COMMITTEE MEETINGS.

8. The Committee shall meet for the despatch of business on the Monday in every month at o'clock in the , and at any other time they may think fit; five shall be a quorum. Questions arising at any Meeting shall be decided by a majority of votes. In case of an equality of votes, the Chairman shall have a second or casting vote.

9. The President shall be the Chairman at every Meeting of the Committee, and if at any Meeting he is not present, the Committee present shall choose one of their number to be Chairman of such Meeting.

MEMBERSHIP.

10. Members shall consist of persons residing, or having places of business or property in the [City, Borough, &c.] of or within miles thereof; and there shall be ordinary and honorary Members.

11. The name of every candidate for election as a Member shall be sent in to the Secretary, who shall give written notice thereof to every

* If the Mundella Act would abolish netting and all poaching it would be a "grand Act" indeed, but we hope soon to see angling with rod and line excluded from its interference.—ED.

Member of the Committee previous to the next Committee Meeting; and the Committee shall at such Meeting proceed to the election or rejection of such candidate. Every candidate shall be proposed and seconded by Members of the Association.

12. No person shall be considered a Member until he shall have paid his annual Subscription to the Treasurer, and shall have subscribed his name to a Memorandum of his approval and adoption of the Rules of the Association.

13. Any Member selling his fish, lending, or refusing to show his Ticket, violating any existing Acts of Parliament for the preservation of Fish, or who shall at any time infringe any of the Rules of the Association, shall forfeit his Ticket, and shall be liable to be expelled from the Association, upon a resolution to that effect, passed by a majority at a Meeting of the Committee.

SUBSCRIPTIONS.

14. The annual Subscription of ordinary Members shall be per annum, which shall be paid to the Treasurer within the month of January in every year, and they shall receive therefor a non-transferable Ticket.

15. Every Subscriber of per annum shall be an Honorary Member, and have all the privileges of an ordinary Member, and shall be entitled in addition to obtain, on application to the Secretary, a Ticket entitling any friend of such Honorary Member to the privilege of fishing in all the Waters of the Association, subject to the Rules of the Association.

16. Any person not being a Member can, by applying through a Member of the Committee to the Secretary, have a Weekly Ticket at , to be available only in the company of an ordinary or honorary Member, who shall be responsible for his due observance of the Rules of the Association. Such Ticket to be returned to the Secretary on its expiration.

ACCOUNTS.

17. The Committee shall cause true Accounts to be kept of all moneys received or paid on account of the Association, and shall lay before the Members at the Annual General Meeting a Statement of the Income and Expenditure for the past year.

AUDIT.

18. The Members shall elect at the Annual General Meeting in every year an Auditor, who shall audit previous to the next Annual General Meeting the Accounts for the past year.

ALTERATIONS, &c. OF RULES.

19. The Committee shall, if they deem it necessary for the official management of the Fisheries or affairs of the Association, rescind, revise, or make new Rules, provided that such rescission, revision, or new Rules be passed and accepted by at least three-fourths of the Members of the Committee present at an ordinary monthly Committee Meeting, and the same shall have effect until confirmed, or otherwise at a General Meeting.

20. The rescission, revision, or making of new Rules in General Meeting shall be passed, and accepted by at least three-fourths of the Members present at the Annual General Meeting, or at a Special General Meeting called for that purpose.

FISHING.

21. The taking of Fish by any other means than by Rod and Line is prohibited, and proceedings shall be taken against any person taking Fish by Netting, Snaring, Fouling, Snatching, Trailing, Gleaving, Setting Trimmers, Bank Runners, or Night Lines.

22. No Member shall use more than one Rod.

23. TROUT.—The fence time for Trout shall commence on the 15th September, and end on the 15th April. The taking of Trout by any other means than by Fly fishing with an artificial fly is prohibited. No Trout shall be taken between one hour after Sunset and Sunrise. No Trout shall be taken under 1 lb. in weight, and if caught under that weight, whether killed or not, shall be immediately returned to the Water. No Member shall take more than brace of Trout in any one day.

24. GRAYLING.—The fence time for Grayling shall commence on the 1st December, and end on the 31st July. The mode of taking Grayling, the hours of fishing, weight of fish, and number to be taken in any one day shall be the same as those hereinbefore respectively set forth with regard to Trout.

25. PIKE.—The Fence time for Pike shall commence on the 1st March, and end on the 1st September. The taking of Pike by any other means than by Spinning is prohibited, and no Gorge hook shall be used for any bait. No Trout or Grayling shall be used for bait in any case. No Pike shall be taken under 2 lb. in weight, and if caught under that weight, whether killed or not, shall be immediately returned to the Water. No Member shall take more than Pike in any one day.

26. OTHER FRESH WATER FISH.—The Fence times for Fresh Water Fish (other than Trout, Grayling, and Pike) shall commence on the 15th March, and end on the 30th June. No Fresh Water Fish (other than Trout, Grayling, and Pike, and for which heavier weights have been hereinbefore respectively fixed) shall be taken under ½ lb. in weight, except Dace and Gudgeon, which shall not be taken under ¼ lb. in weight, and if caught under those weights, whether killed or not, shall be immediately returned to the Water.

27. Any Member taking fish during the Fence times hereinbefore respectively set forth, or otherwise in contravention of Rules 21, 22, 23, 24, 25, and 26, shall forfeit his Ticket, and be liable to be expelled from the Association as aforesaid.

28. Every Member, or other person fishing in the Waters of the Association shall show his Ticket, and the contents of his bag or basket when requested by one of the Committee or a Bailiff so to do; and a Member, or other person, shall show his Ticket, and the contents of his bag or basket on any Member producing his Ticket and requesting him so to do.

29. Any Member who, whilst fishing, or in going to, or returning therefrom, shall do any wilful damage to fences or otherwise, shall pay for the same or forfeit his Ticket, and be liable to be expelled from the Association as aforesaid.

HIRINGS.

30. All Hirings of the Association shall be in the names of the President and Secretary,

NOTICES OF BOOKS, &c.

THE NATURAL HISTORY OF BRITISH FISHES; THEIR STRUCTURE, ECONOMIC USES, AND CAPTURE BY NET AND ROD. By Frank Buckland. London: Society for Promoting Christian Knowledge. 1880.

A SPECIAL interest, but unfortunately one of deep melancholy dye, attaches to this work, apart from the fact of its being written by one whose great merits have endeared him to every reader of this paper. This doleful interest is centered in the preface, which contains nearly, if not quite, the very last words that were penned by the author only forty-eight hours previous to his death. Under these circumstances, therefore, it is impossible to take the volume in hand or peruse but very few of its lines, without being continuously reminded of the magnitude of the loss that every lover of animal life or student of Nature has been called upon to bear. And if Mr. Buckland's death thus powerfully affects those whose acquaintance with him extends only to an intimate knowledge of his written works, what, then, must be the feelings of those who were privileged to enjoy the charm of personal intercourse with one of the most tender-hearted and kindest of men? Absolutely crushing must be the thought that they shall never again bask in the warmth of his manner or hear the ringing sound of his laughter; never again listen to his ready repartee or watch the gleam of humour in his eye; never again revel in the happy powers of apt illusion and playful illustration that enlivened his general conversation or hall-marked each contribution from his pen. But it is time to pass from these saddening reflections to a more detailed consideration of the book under notice. It is well known that the modern doctrines of Evolution and Development found an uncompromising opponent in the late Mr. Buckland, and certainly, in the preface to this last of his literary undertakings, his language is unmistakeably and unequivocally hostile. He firmly believed that if his accumulated facts and observations were placed before a jury consisting wholly of engineers, he would obtain a verdict in favour of his views. So remarkable is the passage in which this opinion is expressed that it must follow here *in extenso*; and also for the additional reason that it gives a complete idea of the scope of the work and an index of what the reader may expect to find embalmed with much costly spice of humour in its pages.

"I am very willing to prove my case by holding a court at any time or place, before any number of people of any class. I would empanel a jury of the most eminent and skilful railway and mechanical engineers, while the only witnesses I should call would be the fish fresh from the deep sea trawler, the City fish-market, or the fishmonger's slab. I would adduce from them evidence of 'Design, Beauty, and Order,' as evinced in such as the electric organs of the torpedo—the gun-lock spine of the file fish—the water reservoirs and spectacles of the eel, the teeth of the gillhead, bream, and throat-teeth of the carp, bream, &c.,—the anchor of the lump-sucker and remora—the colouring of the perch and bleak—the ichthyophagous teeth of the pike, shark, and silvery hairtail—the tail of the fox shark—the prehensile lips of the dory

and sprat—the nose of the barbel and dog-fish—the resplendence of the Arctic gymnetrus and scabbard-fish—the dagger in the tail of the sting ray—the nest of the stickleback—the armour plates of the sturgeon—the nostril, breathing powers, and store of fat in the salmon—migrations of the salmon, herring pilchard, sprat, and mackerel, &c.—and, above all, the enormous fertility of fishes useful as food to the human race.”

“I am satisfied that I should obtain a verdict in favour of my view of the case, namely, that in all these wonderful contrivances, there exists evidence of design and forethought and a wondrous adaptation of means to an end.”

On the real finding that such a jury would be likely to deliver, it is of course idle to speculate here. The chances are they would be unable to agree. But on one point they would be certainly unanimous, namely, that never in the whole history of man has any single theory been the means of promoting scientific research, and enlarging the boundaries of human intelligence, in anything approaching the extent of that which has been so conspicuously accomplished by the theory of development.

Every page teems with instances of the author's remarkable and acute observing power, as well as of a strong desire to make everything plain and easy to his readers. Each statement is couched in clear and precise terms, and with close regard for orderly sequence of detail. The diction is racy throughout, and, eminently characteristic of the author, who shunned the jargon of science as the deadliest of plagues, is, moreover, abundantly enlivened by the quaint allusions and mirth-provoking comparisons for which he has ever been famous. In proof of this, the reader is invited to turn to the account of an attempt to stuff a monster angler fish, very far gone on the road to decay. How the monster's stomach was successfully charged with a bucketful of sawdust, a broom-handle being used as a ram-rod. How, also, the noxious odour ascended from the area to the bedroom floor, and speedily brought down strong conjugal remonstrance on the head of the operator. Then how a hamper was fetched, and the great mass of corruption hanging by a rope thrown over the coal-cellar door was cut down, packed, addressed, and sent off to the museum at Kensington. And, finally, the last sight of that hamper, as it stood on the pavement *outside* the Parcels Delivery Office, not *in* the shop, with a dog sniffing inquiringly through the cracks of the hamper, and the bluebottles flying about over the vicinity. Or else let the reader turn to a description of the author's visit to General McDouall's tame codfish pond at Port Logan, near Stranraer, Wigtownshire. Here he made many curious observations on the morals of fishes, and tested their gastronomic powers. When he had used up all the mussels which on that occasion were served out as food to the codfish in captivity, he tempted them with bits of paper, pieces of tobacco, official red tape, and pieces of his mackintosh. This last-mentioned item is eminently suggestive of his habits, for, perhaps, no man ever lived who had a greater disregard for minor articles of clothing and property. His colleague, Mr. Spencer Walpole, has told us, in “Macmillan's Magazine” for February, how, on one occasion, he started “on the herring inquiry in Scotland with six boxes of cigars, four dozen pencils, five knives and three thermometers. On his return, three weeks afterwards, he produced one solitary pencil—the remnant of all this property. The knives were lost, the cigars were smoked, one thermometer had lost its temper, and been thrown out of the window; another had been drowned in the Pentland Firth, and the third had beaten out its own brains against the bottom of a gunboat. No human being could have told the fate of the pencils.”

In the face of publishers' paragraph at end of preface, it would be ungenerous to point out in detail the large number of errors

remaining uncorrected. Otherwise a very lengthy list would be the result, consisting for the greater part of ill-spelt proper and foreign names, the latter largely predominating. A word or two must also be said about the cover, for surely a more imbecile attempt at surface decoration has rarely been held up to invite execration at the hands of the public. Yet, paradoxical as it may sound, it still has one redeeming merit. The reader will infallibly hasten to get at the contents of the book with all the greater speed and be more than ever loth to close it.

REPORT OF THE JOINT COMMITTEES, selected from the Committees of the Duchess of Marlborough Relief Fund, and the Dublin Mansion House Fund, to administer the sum of 100,000 dollars, voted by the Parliament of the Dominion of Canada towards the relief of distress in Ireland in the year 1880. Dublin: City Printing and Lithographing Company. 1881.

THE Report now before us is that issued by the Committee appointed to administer the munificent donation of 100,000 dollars, voted by the Canadian Parliament towards the relief of the distress existing in Ireland, at the beginning of the year 1880. As the distressed agriculturists were already being helped by other charitable funds, the Canadian Committee determined to undertake the relief of the starving fishing population on the north and north-western coasts. The funds at their disposal were therefore expended in the erection of fishery piers and harbours in distressed districts, and in the provision of boats and fishery gear for necessitous fishermen. Towards carrying out the first of these objects, Parliament granted £45,000, and with this sum and £10,000 contributed by the Canadian Committee it has been found possible to give very considerable impetus to Irish fisheries generally. The remainder of the fund was absorbed in providing 192 new boats, and repairing 437 old ones; and in supplying nearly 4000 persons with new nets and lines. It is calculated that this distribution of fishing gear has given lucrative employment to over 4000 persons, and estimating only two persons dependent on each one of these, has been instrumental in providing food for about 8000 additional souls. The committee have thus every reason to be gratified with this very successful outcome of their task.

PRIZE ESSAYS: NATIONAL FISHERIES EXHIBITION, NORWICH, 1881.

“The Artificial Propagation of Anadromous Fish, other than the Salmon, and the Restocking the Tidal Waters of our large Rivers Artificially with Smelts, &c.” By CHARLES W. HARDING. King's Lynn: Thew and Son, 1881.

“The Utilisation of Localities in Norfolk and Suffolk suitable for the Cultivation of Mussels and other Shell Fish.” By the Same.

AFTER careful perusal of the first of these essays, it is somehow difficult to resist the conviction that the competitors, taken collectively, can only have reached a somewhat debased standard of merit to have made success in the present instance possible. And inasmuch as the author fails to bring forward anything beyond tolerably well-known facts, and, moreover, deals with these in a manner hardly calculated to heighten their effect, we shall best consult the interests of our readers by proceeding at once to the examination of his conclusions and suggestions. These last are not wanting in comprehensiveness or breadth; on the contrary, they are about as wide as man can make them. But on the other hand, they disclose such inadequate perception of the real functions of the State, or the duties and powers of Constitutional Government, that we lose ourselves in wonder and dismay. High-handed interference by Government, and plenty of it, is here set forth as

panacea, the sole specific remedy for a condition of affairs engendered by inexperience and popular ignorance. We confess to thinking otherwise. Accordingly, as we proceed, we are not exactly unprepared to find the Executive is to be charged with the responsibility of providing at least two fishes for every one swimming at this moment! After all, this is a mere trifle compared with the next suggestion, which takes the form of a special Act of Parliament, such as the world has never seen or imagined. Whilst strictly remaining within the four corners of this remarkable piece of amateur legislation, always supposing it were possible to enact it, we should see the Executive engaged in abolishing every kind of individual and proprietary right, destroying the natural liberty of industry and labour, spending freely and losing largely, and generally taking a permanent departure from every fixed principle of economic science. In practice, the different sections of this [contemplated Act would be found as antagonistic as the Kilkenny cats; only, unlike as happened in the case of these celebrated quadrupeds, the contingent remainder of conflicting interests would belarge; though how this is to be dealt with, we are not at present told. Besides undertaking the above, Government is generally to work the fisheries of the United Kingdom! Now, after recommending this gigantic addition to the duties of Government, we really had hoped our ardent advocate of bureaucratic enterprise would have stayed his hand and sought out dignified repose. But such is not the case, we find. In his opinion, it is further desirable to make the scope of his projected Act more general still. The pelagic fishes must also be brought under Government control! . . . This is indeed a large order; and, happily, it is not for us to promise that it shall be executed with punctuality and despatch.

If, for ample reasons indicated, it is impossible to bestow aught but negative praise on the first of these essays, a like award cannot in any sense or shape be made to fit the second. In this case, we find the author dealing with matters with which he is evidently minutely and practically acquainted, and, consequently, there is a refreshing sense of fitness about his observations and remarks which was strangely inconspicuous before. It is only when he, so to speak, strays outside the tidemarks of his subject, and hazards ill-digested suggestions on the subject of public and private fishing-rights, that he is likely to call forth much adverse expression of opinion.

THE GENERAL FISHING SEASON.

THERE will doubtless be some who, under the plea of ignorance, will regard the first of June as the opening day of the general angling season in the Thames and who will find out their mistake when reminded by the river keepers they are violating the law. In some instances, there may be those who have the old first of June so firmly stereotyped in their minds, as to forget that, under the Freshwater Fishery Act, as well as the bye-laws, angling in the Thames is not permitted until the 16th day of June; and, therefore, it is as well to give all the publicity it is possible as to the change. Whit-Monday, which falls this year on the 6th of June, is a grand day for the gathering of rods amongst the holiday sportsmen, but they will find to their discomfort that if they attempt to assemble on that day, they will be violators of the new law, and liable to a summons. "Why stop these poor men from catching a few bleak?" was once addressed to me by some apparently benevolent individuals, when I was quietly informing the offenders or law-breakers they were doing wrong. The question is an easy one to answer—"Because they are doing wrong, and should be taught to do right." There is more benevolence in such a reply than giving permission to continue doing wrong, and the moral effect undoubtedly good. There

has never been any harshness exercised in dealing with these would-be sportsmen, nor has there ever been an attempt to make a conviction amongst them. Under the old bye-laws, Whit-Monday this year, being so late, would have been a lawful day for angling, and the scene at Hampton Court, of fishing-rods, would have been of an astonishing character. I remember once meeting with an old Scotchman, and reminding him his attempt to fish was illegal. He first said he was fishing for trout. I told him neither his bait or his position on the stream had any indication of trout fishing. He then discreetly remarked, "If I am doing wrong I will give it up." And he did so. He neither wanted to break the law or the sabbath, and so, after a little chat with him, he wended his way to the railway station, and thanked me for my courtesy. I have never found these holiday sportsmen at all abusive; but naturally disappointed at having invested in a brand new fishing-rod, and not being able to use it. This year I expect the river keepers will be actively on the alert, simply to caution those who are found practising the gentle art against the law, and it will be fair to assume the friendly caution will, as heretofore, be obeyed. Let there be no mistake amongst the general body of anglers as to the commencement of the season, which is Thursday, the 16th day of June, and may they all have a good season!

B.

A NEW PLUMMET.

MR. HENRY W. T. HINES, of the Bazaar, Adelaide Street, Norwich, sends us samples of a very ingenious plummet, which he has invented, and which he calls a "spring plummet." The novelty consists in the use of a spring catch for attaching the plummet to the hook. We need not point out to our readers the advantages of a plummet which can be instantly attached to the hook and instantly taken off, and yet which can hardly by any means come off of itself. In addition it enables the angler to plumb the depth without removing the bait, except in the case of one which, like paste, must cover the point of the hook. Every angler will use this plummet when he sees it.

SCOTCH FISHERIES IMPROVEMENT ASSOCIATION.

THE first annual meeting of this Association will be held in Edinburgh on Tuesday of next week. The Association was constituted only on the 5th of January last, a council being appointed and rules adopted. The first report, therefore, of this young Society will be looked forward to with some interest, the more especially as we understand that an elaborate report and appendix of documents showing what the Association has been doing, has been prepared and printed, and will be immediately in the hands of the members.

AN ANGLER'S WISH.

Only to roam, where babbling brooks
Tell to o'erhanging woods, in joyous strain,
Their simple tale, yet musical withal.
Where the o'erhanging canopy of spring
Only lets fall a checker'd, shimmering light,
Yet ever and anon, sway'd by the breeze,
A flood of sunshine plays upon
The wavelet's whitened crest.

To hear the song
And busy hum of myriads of airy things;
Light as the western wind that fans and cools
The cheek of pallid care.

To hear the blithesome, careless call
Of mocking blackbird—or from yon tall ash
To hear the love-song of the tuneful thrush.
Man, learn to love the creatures of that care,
Who hath created, and whose all they are.

RIVER REPORTS.

MID-THAMES.

The river seems to have been so low and bright that trout work has not been worth the candle. Rain has fallen heavily within the last twenty-four hours, and this will do an immense amount of good, not only agriculturally, but piscatorially. Fish are now, in clear runs, well on the feed, and any one possessed of plenty of nice baits must succeed if they only know their book.

Thursday evening.—Rain still falling, and hourly improving the chances of success. Two trout taken at Henley, and one of 2 lb. at Hurley.—MARLOW BUZZ.

Thames (Halliford).

River very low and bright, which makes the fish feed very shy, owing to the want of rain. Although the large ones show up better they will not be tempted. Since my last report I have, with different gentlemen, taken four more, making my total number seven, viz., J. Wilson, Esq., fishing with me three days, took two trout, one weighing 4½ lb. and another 2 lb.; E. J. Withers, Esq., fishing with me on Sunday last, took a little beauty of 5½ lb., and a gentleman fishing with me on Tuesday caught a small one of 1 lb.; which I returned to the river immediately.—GEORGE ROSEWELL, fisherman.

Thames (Kingston).

I have had no news to send you lately. There is plenty of trout and fine fish, but no one comes to fish for them. I saw four fish last evening in less than a quarter of a mile of water, and two of them up to 10 or 12 lb., and as fine a lot of bream and roach as you would wish to see, bream from 1 lb. up to 5 lb., gudgeons any quantity, and a fine lot of rudd on the shores of all sorts, these last few hot days makes them show themselves. There has only been a local private boat or two out trout fishing here.—JOHN JOHNSON.

Thames (Windsor).

Since my last scarcely any rain has fallen, and it has been blowing pretty hard. River is very low and bright. James Gray has had another nice trout, this time a six-pounder, taken yesterday at Old Windsor weir, and in the Windsor weir stream a pretty little fish of 2 lb. was grassed on Sunday. Within 40 yards of my place a nice fish feeds. I should say he is about 5 lb., and not far off is another of less weight, which one young gentleman has twice severely pricked. Whilst at Boveney the other day I noticed a number of small trout, and at the rafts, Windsor bridge, several have taken up their abode, from an inch to about ½ lb. This looks well for the future, as they are undoubtedly fish bred in the river. At Boveney weir, I am sorry to say, another good fish has been lost, going away with flight trace and about twenty yards of line, through the silly practice of laying down a rod to fish for itself, without having a check-winch. I will not mention the name of the angler, but doubtless, had he had a check-winch—not the hard check (which is one of the great faults in a good many of these winches) but a medium, doubtless his tackle would have been secure and a good Thames trout to boot. Another trout has fallen to the fly-rod of Captain Haines, R.N., of Maidenhead, this time a beauty of 4 lb., making several taken this season, all with the fly.—B. R. BAMBRIDGE.

Barle and Exe (Dulverton).

These rivers now are in very good order for fishing, but are fining down quickly, so that in a few days (unless we have rain) will become very low and clear. Should we have rain, for which there are at present indications, fishing during the next few days will be good. Last Friday we had a heavy fresh down, which, (after a lapse of some time, when the rivers have been so low that fly, and even worm, "up stream," were of little use), gave anglers fresh hope, and consequently many turned out when the flood was on with the worm, and some very good baskets were taken. On Saturday these rivers, which fine quickly, were in rare order for the fly, and good takes were made, chiefly with the black gnat.—W.

Coquet (Northumberland).

On the 20th, Dr. Bouling, of New Hampton, killed 17 trout of 5 lb. weight; On the 24th, T. Dixon, jun., of Newcastle, killed a good creel; A. Hutchinson, sen., Bukinfield, a good creel. On the 25th, T. Dixon, jun., a good creel; Dr. Bouling, a good creel. The river is flooded to-day, and the wind from the north. To-morrow the river will be in condition for minnows. A gentleman from Yorkshire killed a splendid basket on the Brinkburn Water. Staying at the Inn.—A. GLASS.

[We can strongly recommend anglers who think of fishing the Coquet to stay at the Angler's Inn, Weldon Bridge (drive from Morpeth). After these rains there will be good sport there, and Mr. Glass knows how to make one comfortable at most moderate charges.—ED.]

Dove (Derbyshire).

This stream is in rattling order for the fly. The water is certainly low, but no lower than we usually expect it at this season of the year. The May-fly is now coming out all over, and, while this is on, the trout will take little else. Sport has been good this week, and the fish have run large. The average of baskets has been about five brace. Some gentlemen angling at Hartington have done better than this, several of them catching from seven to nine brace each. The best killing flies, so far, are the blue dun and Turkey brown, but there are so many insects on the water that the rodster scarcely knows what to fish with. The best plan is to open and dissect the first trout caught, and on finding what it has been taking, try the nearest imitation. The May-fly will be pretty well on by the 1st of June. I cannot hear that the bottom fishers have been doing a great deal. The weather is glorious, and the country looks splendid everywhere.—THE SPODGER.

Exe (Carlisle).

The water is in fair condition for angling. Since my last report we have had fair weather, but rather strong winds. To-day (Wednesday), we have been visited by a rather severe thunderstorm. On the 18th instant Mr. Jno. Caruthers killed 10 lb. of trout; Mr. R. Archibald killed 5 lb. of trout; Mr. R. Wm. Waters killed 4½ lb., all killed by worm. Same day, Mr. R. Bone, Beaumont, killed a very nice basketfull, weight not known.—THOMAS PARKINS.

Exe (Exeter).

Since my last we have had a welcome change in the weather, having had a little rain, which brought down a moderate freshet, and we therefore hoped to have had some good sport; but the Exe so quickly lowers that we have looked for sport in vain. The days are so excessively hot and bright that very few anglers care for toiling in the burning sun. A few trout have come to bank, but they were very small. Several carp of 5 lb. and 6 lb. each have been netted. They were not in first-rate condition; they should have weighed 9 lb. or 10 lb. each when filled out. Mackerel are in abundance in the estuary. The salmon fishermen in the lower waters and pools are doing moderately well, and some fine bass, shad, pollack, mullet, and eels have come into the market; also large quantities of flounders, and, very curious, a great number of piebald and mottled skins among them—some black both sides. It is not uncommon to see these fish so marked, but I have never seen so many in one catch before. The wind is beginning to blow hard from the south south-east, and clouds of dust are covering everything, so very probably we may get some rain directly, which will cool the atmosphere and quench the parched ground, and provide, let us hope good sport.—FRANK GOSDEN.

P.S.—Mr. Charles Blake, of the Royal Museum Hotel, Exeter, has just received a splendid dish of two dozen trout, averaging six ounces each. They were taken at seven o'clock this morning (Monday, 23rd inst.) at Woodford Bridge, on the Torridge, by a gentleman staying at Mr. Blake's, Woodford Bridge, Hotel. The handsomest trout of the dish I am now preserving to place with the pike preserved by me last week.—F. G.

Ilfracombe (N. Devon).

Streams about Ilfracombe are very low, and good catches of trout have been taken by hand this week. Some good hands have bagged from three to four dozen both morning and evening. Average weight, four or five to the pound. Anyone wishing to try their hand at bass-fishing can get good sport at Ilfracombe. These fish are very plentiful and in good condition. They take the minnow, or glass bait well. Catches, about one hundredweight per boat per tide. There is good sport, as usual, from the piers with rod and line for whiting pout, grey mullet, small pollack, dabs, &c.—H. COMER.

Lea (Ferry Boat).

Condition of the water very good. Unequalled by any fishery near London, the shoals of fish being larger than ever seen before. These waters will open for roach on the 1st of June. Messrs. Chapman, Herbert, Williams, Stone, and others took some beautiful chub, from 1½ lb. to 3½ lb. during the close season. There have been a great many trout taken which have been returned, and this with the promises of great many more will make this a magnificent trout stream. The reservoirs again poured forth their hundreds to stock this water, amongst them being some handsome bream over 3 lb. they were turned loose in the pool and should work up the river.—H. GAME.

Lee (Co. Cork).

The late rains increased the waters in the Lee and Blackwater, and for a few days during last week, and the early part of this week, there was good angling. Mr. George Haynes killed two on Sunday, and on Wednesday morning landed three. On the same day Mr. Bowen, of Carrigwehen, landed six, and Mr. Augustus Warren two. On the Bandon river Mr. Duncombe took two one day, and several other anglers were equally successful on the same river. For two or three days on the Blackwater there has been capital sport. Mr. O'Connor, Low Mallow, took three one day, one of them being a fine fish of 18 lb. Several other heavy fish were also taken, one gentleman having landed a splendid new fish of 23 lb. Trout angling during the week has been very good.—ANGLER.

South of Ireland.

A movement has been started by the net fishermen of the Lee, to co-operate with the Fishery Conservators for the preservation of the river. A society has been formed under the name of the "Cork Harbour Fishermen's Society," and its principal aim is to stamp out the system of illegal fishing, which has been going on in Cork harbour ever since the introduction of drift nets, and their prohibition as a legal engine. During the close season, and throughout the whole year these illegal engines are used with a persistency and daring defiance that required something beyond the ordinary preservation to grapple with. On Saturday the new society formally inaugurated their rooms. They had invited members of the Fishery Board to be present. Several of the Conservators attended, including Sir Oriel Forster, C.B., Sir Augustus Warren, Bart, Major Nettles, Captain Rye, and others. The chairman of the meeting, Mr. Min-tern, one of the net fishermen, explained the object of the Society. They desired to co-operate with the Fishery Conservators for the preservation of the river, and they proposed to procure a good steam launch with sleeping accommodation, which they would man themselves with a staff of six or seven men and bailiff, and thoroughly protect the lower harbours. Sir Oriel Forster and Sir Augustus Warren speaking on behalf of the Conservators, highly approved of the Association, promised their substantial support, and co-operation. They were glad that the fishermen appreciated a maxim, which they were endeavouring to teach, and that was that in good preservation lay the best interests of all clubs. The chairman stated that since the society was established the members had not wet a single drift net. He wished to say that if drift net fishing were practised in the Lee, eight out of every ten fish that run would be destroyed, and the species of salmon would be extinguished after a few years. The net men seeing that, desired to put it down with a strong hand. A sum of £50 has been already raised by the fishermen towards the purchase of a steam launch. The result of the meeting, regarded with mutual satisfaction by the Conservators and fishermen, was that a treasurer and committee, were appointed to make arrangements for collecting subscriptions, and making enquiries for procuring a suitable launch.

Swale.

Owing to the prevalence of very bright sunshine and high winds the weather has not been of a very favourable character for trout-fishing. Despite these drawbacks some good dishes have, however, been made. Mr. Barker was out

for a few hours between Ramsholme Bridge, and Keld and killed a nice basket of 23, with purple brown, spiral brown, drake, mottled brown, and orange brown. Some were over $\frac{1}{2}$ lb., and many more would have been caught but the high wind was unfavourable. In a stream that I am stocking I caught on Saturday last one fish of 2 lb., and another of 1 lb. Another of about 2 lb. was nearly choked with that nuisance of a trout stream—sheepwashing. This formed a good supper for a local shepherd.—THOMAS FORD.

Suir and its Tributaries. Clonmel (Ireland).

Owing to the easterly winds and bright sun every day very little fishing has been done for the past week, but two salmon have been taken by the rods, and the nets in Clonmel for last week got but eight. There is great poaching going on every night; while but eight salmon were caught legally, nearly 15 cwt. were exported from Clonmel Station. The trout fishing affords some good sport; any cloudy day, and almost every evening there is a good rise, and many good trout have been caught. The killing flies are still black hackles and rails.—WOOD.

Tees and Greta (Barnard Castle).

I am afraid we are going to draw a blank this season in our neighbourhood—Tees and Greta—for trout fishing. One of our professionals here told me on Monday that he had not caught 8 lb. of trout this season. He rarely uses anything but artificial flies, with such result that he is accustomed to look at 3 lb. or 4 lb. of trout as a poor day's work. While fishing in the Tees yesterday I netted a viper out of the river as it was swimming slowly down. It seemed in a semi-torpid state, both in and out of the water. It measured 14 inches in length. A high wind was blowing, with very bright sunshine. The air was cold; water warm for the first time this year. Many times the surface of the water was quite in a boil with very small trout jumping and playing about. They would jump over any fly you offered them, but they would take no hold, neither to a fly sunk nor on the surface. All I caught were small and foul-hooked, and were returned to the water. Is it not extremely early for vipers to take to the water?—W. S. L.

[We fancy the viper must have got in by accident. In fact, we were under the impression that they never "took to the water" of their own accord. Do they?—ED.]

Wye and Derwent (Derbyshire).

The weather during the past week has been very close and hot in the middle of the day, with thunder hanging about, which has caused the fish to feed but very muddling in the middle of the day to the artificial fly. The best feeding times have been early in the morning and late in the evening, and some handsome baskets of good-sized trout have been killed, chiefly with the yellows, light dun, little black spider, red, ribbed with gold turt, and same fly for late evening fishing. The yellows are now out nicely, both on the Wye and Derwent, and the fish have begun to take them very freely. We have three kinds of yellows—viz., the May yellow, the Sally, and the yellow dun. Two of these have upright wings and one flat. Now, all these three flies may be dressed from one bird—the dotterel—and I have found, and proved, there cannot be made a better fly. Dotterel feathers are very scarce this season, and those that have been fortunate enough to get some may think they have a treasure. These flies kill well up to September. There are a good many flies made and sold nowadays that are made from starlings and golden plover feathers for real dotterel flies, but these flies are soon detected by good fishermen. Sport, the latter end of last week, was first-class, both with fly and bottom fishing, and baskets of from four to thirteen brace per angler were made. There were several large trout killed in the deeps at Matlock Bath, and also on the Derby Dale club waters that were from 1 lb. to nearly 2 lb each fish. Trout are now in excellent condition and show wonderful good sport after being hooked. Dabbling on most parts of the Derwent has been followed with good success with the small blue bottle natural flies under the bushes and trees. This plan is a very deadly way of killing large trout in hot, bright thundery weather; $6\frac{1}{2}$ brace were killed on Wednesday, off of the Chatsworth fishery by dabbling. Rain is hanging about to-day (Thursday), and if we have a nice little downpour good sport is certain to follow, with both bottom and top, as there seems to be a very fair quantity of trout in most of the Derbyshire streams just now.—GEORGE JAMES EATON, Starkholmes, Matlock Bath.

Yore (Yorkshire).

There have been one or two nice little freshes down this river since my last report, which have improved angling greatly. Some very fair dishes of trout have been taken with the minnow and the stone fly, which is just making its appearance, will, I expect, be answerable for some good catches during the next ten days or so. I regret to hear that the river Swale has been poisoned at Richmond, it is supposed by a quantity of refuse escaping from some bleach works. One man picked up 17 lb. of dead trout, and two lads over 10 lb. It is a thousand pities that mishaps such as this cannot be guarded against effectually. Weather, at time of writing, like the middle of summer; river very low and clear.—FRANCIS M. WALBRAN.

UNITED LONDON ANGLERS.

In consequence of the first Monday in June being Bank Holiday, the usual monthly meeting will be postponed till Monday, June 13th, on which evening the half-yearly balance-sheet will be presented. All privilege tickets ordered will be ready for delivery at the club-house on Tuesday, June 7th, from nine till eleven o'clock, so as to allow secretaries an opportunity of distributing to the members at their club meetings previous to the opening of the fishing season, on Thursday, June 16th. The old tickets will be cancelled on June 15th, 1881. A new angling club has been formed at the Admiral Hotel, Francis Street, Woolwich, with the title of the Admiral Brothers. Secretary, Mr. T. Howard; president, Mr. J. Williams. This society is likely to prove a very influential one, they having a very commodious club-room, capable of holding over 100 persons. It is to be added to the list of the United London Anglers' Central Committee.—R. GHURNEY, secretary.

N.B.—Secretaries who have not sent in their lists for the Foster Fund, will oblige by returning them at once.

TIRED HANDS AND ARMS.—Edson's Electric Armlets and Wrist Bands. Invaluable for anglers and gun sportsmen and highly recommended for all persons having tiresome writing, sewing, or music practice. They give wonderful energy and strength, enabling the wearer to accomplish tedious work with steadiness and comfort. Price 2s. 6d. per pair, silk web and fine steel clasps. Sent to any address on receipt of P.O.O., payable to J. Edson, the Electric Fabric Co. Patentees, No. 1, Charlotte Street, Bedford Square, London, W.C.—[ADVT.]

THE PISCATORIAL SOCIETY.

ALTHOUGH the general angling season has not yet commenced, and very little trout fishing has been done, the members mustered in great force on Monday evening last, in the club room at Ashley's Hotel, Henrietta Street, Covent Garden, where, under the new management, they appear more comfortable, and Mr. Best has proved himself a good caterer, with a lower tariff, to the very great satisfaction of the members. The chair was occupied by Mr. H. J. Inderwick, and amongst his supporters were Col. Crawford, Messrs. F. G. Pearce, T. Gillatt, James Pat-tisson, B. Perelli-Rocco, F. H. Lemann, T. Huggetts, W. H. Brougham, James Lander, H. Gray, C. P. Wheatstone, J. R. Sachs, D. Goodger, W. B. Adlington, J. Hill, R. S. Fenning, J. G. Andrew, E. Wilkinson, E. Russell, E. T. Walker, E. Fireman, J. Ross Faulkner, A. Bryant, G. F. Hughes, &c. The minutes, as usual, were read over and confirmed, including a vote of thanks to Mr. Alfred Jardine, for a large framed photograph of his exhibit at the National Fisheries Exhibition at Norwich. There was not any special business to transact on Monday evening. Mr. C. Wheatstone addressed the meeting in reference to a promise he had made to present the society with a painting of fish, which he had now great pleasure in performing. The painting, which was in a handsome gilt frame of good size consisted of roach and perch; the roach in the foreground was admirably executed and perfectly life like in its expression, whilst the perch were exceedingly natural, and all well grouped. The background, with the fishing-creel laden with fish, and the lilies and rushes gave a completeness to the picture. The artist is Mr. R. Richards, who took a silver medal at the Piscatorial Exhibition at the Westminster Aquarium, and whose father is a good fishing member of the "Stanley Anglers." The painting was passed down the room, and the exclamations of admiration from one and all were of the most satisfactory character. A cordial vote of thanks was given to Mr. Wheatstone for his valuable present, and which, as a work of so much merit, would be prized by the members. Mr. F. H. Lemann then rose, and referring to the safe return of the society's exhibit at the Norwich Exhibition, remarked that he had contributed out of his private collection four cases of fish—one consisting of a chub of $5\frac{1}{2}$ lb., another of $4\frac{3}{4}$ lb., a perch of $2\frac{1}{2}$ lb., and a trout of 7 lb.—and he had now much pleasure in asking the society to accept of these cases as a contribution from him to the museum. This announcement was received with very great applause, and Mr. F. H. Lemann was warmly thanked for his splendid gift of such noble specimens of his skill in the capture of the fish. The presentations of Mr. Wheatstone and Mr. Lemann put those present in the best possible humour, which had the happy effect of increasing more largely the offers of private prizes, and for some time the honorary secretary (Mr. James Lander), was occupied in making records of them. The evening altogether was a most enjoyable one, and the greatest unity and good fellowship prevailed.

THE "BELL'S LIFE" SPINNER.

In our notice of Mr. Bambridge's capital "*Bell's Life* Spinner" last week, in the words "Mr. Bambridge guarantees that its opening action is perfect"; for "opening" read "*spinning*." The use of the word "opening" was of course a printer's error—but it is not so very inappropriate, for the bait will certainly prove a regular "eye-opener" to many a trout and salmon.

TO ANGLERS.—W. J. Cummins, Fishing Tackle Maker, Bishop Auckland, is now prepared to forward to anglers his Illustrated Catalogue, which is not only a Trade List but is interspersed with practical hints, useful directions, and valuable information gathered by the river-side from twenty years' experience. The stock consists of his unrivalled Salmon, Trout, Grayling, and Pike Rods, Lines, Reels, Baskets, Artificial Baits, Fly-books, Landing Nets, Gaffs, and last, but not least, his celebrated Trout Flies, which for killing powers stand unequalled. Every article kept in stock is of the very best description.—[ADVT.]

SOURCE OF THE THAMES.

DURING a recent visit to Cheltenham and its delightful neighbourhood, accompanied by an intelligent friend, I made a pilgrimage to the source of the river Thames.

It is between three and four miles from Cheltenham, across the lofty and grand Leckhampton Hills from the summit of which the surrounding country, to a distance of thirty miles, may be seen. The view from thence of the celebrated Malvern Hill, Tewkesbury Town, &c., is particularly beautiful.

The crossing of the Leckhampton Hills I found to be as beautiful, curious, and interesting a pedestrian excursion as I ever had in my life. In ascending the hills, one portion of which is called "The Devil's Chimney," it being a peak or pillar that stands grotesquely alone—there is a delightful view of and over Cheltenham. The marks of elaborate cultivation everywhere appear. The busy haunts of men, and the gay restlessness of fashion; the new and wide roads—the Cheltenham and Gloucester iron railway—the varied promenade of the several Cheltenham spas—their grand portico and buildings, all give note of the immediate neighbourhood of civilisation, fashion and bustle.

Having crossed the Leckhampton Hills, on the route to the "Seven Springs," which form the source of our river Thames, a vast expanse of country is beheld, that presents hardly any proof of being inhabited, except here and there a dwelling of humble size, and the divisions of the land into fields, which is chiefly done by stones piled one above another, to the height of two or three feet, which in the distance look like so many footpaths. Far and near have, to the eye as well as to the ear, the quietness of a desert. Nothing is either seen or heard to move; if the birds sang they appeared to tune in muffled notes. Not a soul is beheld travelling along the roads; neither cart, wagon, horse, nor farming man was to be seen. The road itself, especially the cross one from Cheltenham over the hills to the "Seven Springs," presented very imperfect marks of human traffic; and though I never in my life before was at a spot that struck me as being so dreary, owing, in some degree, to the extraordinary and unexpected transition and contrast, as compared to the perpetually active and smiling Cheltenham, I must own I was never more gratified. The trees, in some parts overhanging the road, so as to form a grove, at the same time completely shutting out the sun's rays; then the Leckhampton Hills, with their lofty and barren sides, which gave no solace even to a wandering party of sheep, presenting an aspect that seemed to defy all efforts to mount them; and at last coming to a cottage or small dwelling, rurally cultivated, but so lonely in its appearance, that it might be taken for some hermit's abode. It immediately impressed itself on my mind, as if Parnell had some such spot in thought when, in the opening lines of his *Hermit*, he describes the place of the recluse's dwelling:—

"Far in a wild, unknown to public view,
From youth to age a rev'rend hermit grew;
The moss his bed—the cave his humble cell,
His food the fruits, his drink the crystal well.
Remote from man, with God he pass'd his days,
Pray'r all his business, all his pleasure praise."

This rural and lonely hut, it will be borne in mind, is near to the "Seven Springs;" and as we approached those springs, which, on account of their mighty results, we viewed with something like sacred awe, the aged inhabitant of the hut was returning from them with her antique shaped pitcher, filled with water. I asked leave to drink, asking at the same time whether it was "strong," and the piece of antiquity, for the pitcher and the bearer were alike venerable, with much *naïveté*, replied, "Oh no; not stronger than other water, though it is clearer and softer. We can get no water like it." And the lonely hut is a "lodge." There is a gate by the side of it, guarding the road, and that road

leads to what I suppose we must call the "mansion," the residence of a Mr. Somebody. I could not comprehend the pronunciation of the name; but some idea may be formed of the populousness of the place, when it is stated that the mansion is three miles from the Lodge.

The situation of the "Seven Springs" is remarkable. The place is in the parish of Culberly, but neither church nor village was to be discovered; and it is about as far from Frogmill as it is from Cheltenham—four miles. The springs are close by the roadside, in a considerable angular glen, the point of which reaches the roadside; and at the bottom, about fifteen feet below the surface of the road the "Seven Springs" almost imperceptibly make their way through so many crevices of what might be termed unhewn flagstones, piled rudely one above another, and covered with a hill. There is no regular way down to the springs; no pathway, no railing. You scramble down as well as you can, or as the cattle would do.

The considerable hill, or embankment, over the "Seven Springs" is surmounted with many ash and other trees and shrubs; and as those products are on the other side, which is almost perpendicular, of such place, they naturally recline over the springs, thus forming a wild and imposing umbrageous shade over the unquestionable source of the Thames. Though there are seven springs united, they form a small current, which winds its way along a fine, picturesque and secluded valley; so small, even at a considerable distance from the source, that I with ease stood astride this portion of the river Thames, and its appearance for a great way is so peculiar, bushes growing on each side of it, and forming over it a protecting arcade, as it were, that in many places it was requisite to put aside the bushes to discover that stream about which only we felt anxious.

In this romantic manner, so guarded by the growing over of the bushes, it continues for about half a mile; and then a mill suddenly and provokingly burst on the view, destroying the charm produced by the extraordinary seclusion, by displaying wheels, which the stream thus early in its career works.

These "Seven Springs" unquestionably constitute the highest source of the Thames. The stream forms a junction with the Isis at Salperton, about six miles off; and this junction was completed so recently as 1786.

G. M.

PROPOSED AMENDMENT OF THE MUNDELLA ACT

WE are delighted to be able to state that Mr. Stuart Wortley and Mr. Dodds have undertaken to bring a Bill into the House of Commons to amend the Freshwater Fisheries Act of 1878, with a view to legalise rod-fishing at all times. We were at one time greatly in favour of the Mundella Act, but are now convinced that fishing for fish which are in season should be always permitted, and that any rules as to close season should be left to the discretion of the local fishery boards. For our own part we should very much like to see the Norfolk and Suffolk Act, with a few modifications, applied to the country generally.

We shall be glad to have the opinions of those who have watched the operation of the Act.

We cannot learn that better sport than formerly has anywhere been had in consequence of this Act, and we firmly believe that the average weight of individual fish will decrease under its operation, though their numbers may greatly increase; that is—where we formerly had a good proportion of large fish and small, we shall gradually get all small fish. If netting and all forms of poaching were put down by the Act, and fair angling allowed for any fish in season, we should soon have better sport, and the few fish taken out of season by ignorant or unprincipled anglers, would not greatly matter. Anglers generally would combine to put down such unsportsmanlike acts.

CORRESPONDENCE.

[We do not hold ourselves responsible for opinions expressed by our Correspondents.]

AN INTERESTING RELIC.

SIR,—Only a short time since I had the pleasure of looking through a small but ancient volume that was placed in my hands for perusal, and seeing therein some directions for catching fish, I have ventured to make a few extracts, which may perhaps interest and amuse some of your readers, as they seem to show that great interest was taken in the capture of the finny tribe by our predecessors more than two hundred years ago, and also give us an idea of the systems pursued. The work itself, to quote from its title page, was “printed for Samuel Lee, at the Feathers, near the Post Office, in Lombard Street, 1680.”

“THE ART OF TAKING FISH.—Take time, savary, and elder leaves, of each a like quantity, take the suit of an ox or sheep, the lees of wine, and make this in a mortar, then break it into little bales, and throw them into the water an hour before you intend to fish, *approved*.—*Albertus*.”

“Take dolphium, beat small, and sift it through a fine sieve and throw it into the water, and the fish will so flock to it that you may take them with your hands, *approved*.—*Pliny*.”

“Take a good many dew worms, and distill them in a common still, with a slow fire, then rake the liquor and put it into a glass vial, and put to it four ounces of quick silver, and stop it very close, then put this glass on a long pack-thread, that you may let it into the water without breaking. When it is in the water it will give such a light that all the fish will flock to it, *approved*.—*Pliny*.”

“TO TAKE FISH WITH YOUR HANDS.—Take nettles and petanphylon, or for want of that cinquefoil, and stamp it together with the juice of houselike, and take it into your hand, and go into the water, and stir it too and fro in the water, and the fish will flock to your hand, and you may take them, *approved*.—*Cornel. Agrippa*.”

“TO CATCH ELES.—Take sea stone wort one ounce, called in Latin *Scelopendrium marinum*, and of sea-onions one ounce, called in Latin *Squillorum Fluvialium sefanum* a dram, mix them together, and throw in the water as before.—*Tarentinus*.”

“TO CATCH CRAB FISH.—Take frogs, cut them in pieces, and put them into a basket and hang them in the usual places, where the crabs are, and they will come into the baskets.—From a fisherman of his own experience that used the trade.”

Many more instructions and recipes are given, a number of which refer to the “turning-up” of fish; but as they might possibly result in some one trying them and getting into trouble thereby I refrain from quoting further. Although the work itself is only a trifle over 200 years old, many of the ways of taking fish which it mentions must have been in operation for many years, as several are signed as “approved” by Cornelius Agrippa, a learned physician and reputed magician, who died in 1534.—I am, &c.,
CAXTON.

Beccles, April 6th, 1881.

THE THAMES TROUT.

SIR,—I see in your recent publications several letters from your correspondents about increasing the number of Thames trout. This is a subject worthy of much consideration on the part of all anglers, who take an interest in the preservation of that handsome fish, which has of late years become very scarce and almost extinct.

For nearly twenty years I have been well acquainted with Thames fishing, and have devoted much time to the capture of trout in that river. I well recollect that the first time I had a view of Sunbury weir, when there were seated upon it half-a-dozen anglers fishing for trout. Then there appeared to be some prospect of catching one of these noble fish, as one angler with whom I am well acquainted caught, during that season and in that neighbourhood, eighteen Thames trout. Since then the times have sadly changed, and the prospect of Thames trout fishing appears to be now most deplorable. I now, like numerous other anglers, seldom fish for trout in the Thames. I have four times during this month been to examine the river between Sunbury and Hampton Court weirs, which used to be one of the best portions of the river for trout fishing, and I have seen only five anglers fishing, and only one fish on the feed. On my last visit I certainly heard a more favourable report, and that seven very large trout had been seen at Sunbury, also six near Hampton Court, and that they were the largest trout that had been seen in those places for many years. I received this information from two persons who are well acquainted with the river, and on whose statement I can fully rely. However, each succeeding year both trout anglers and trout appear to be deserting the river. I have a strong belief, with your correspondent “B,” that artificial breeding would greatly contribute towards increasing the stock of this fish in the river; but for the trial to be thoroughly efficient and successful, a most careful and liberal course must be pursued to effect this desirable object. This would involve a far greater expenditure and more careful attention than any private person would probably be disposed to bestow on it. The existing fish-breeding establishment at Chertsey is no doubt a very praiseworthy effort towards restocking the Thames with trout; but from the great extent of the river, and the public interest involved therein, it is questionable whether such an undertaking should any longer be allowed to rest solely upon this unreliable and temporary effort to improve the Thames fishery. If a well-managed fish-breeding establishment were founded and supported by public contributions, the trout ova being obtained from our own Thames fish, and the young fish retained in captivity until they were from $\frac{1}{2}$ lb. to 1 lb. weight, then turned into the river would no doubt effect the desired purpose of adding greatly every year to the now impoverished stock. The river, by this means, would become and might be made one of the best trout rivers in the kingdom, as I believe no other river has produced or can produce trout of such great weight and beauty as those from the Thames. It is no doubt useless to pursue the practice of turning brook trout into the Thames, as from many years’ experience of failures it is well known that they are not suitable for the river, and they no doubt return to those smaller streams which are naturally conducive to their existence. The small and unprotected breeding stream at Sunbury is not a suitable place for retaining or rearing the young trout previous to their being turned into the river. This has been amply proved year after year by the great destruction and loss of fish. The stream is much exposed to the winter floods, and it is at the mercy of any poachers who may choose to steal these valuable fish. This year I am told that only 250 trout were taken out of this stream, being all that was left of 2500, which were pre-

viously put there. I hope that the Thames trout which have been recently bred at Chertsey will not be placed in this stream; if so, they will certainly share the same fate as all their predecessors, and I trust that a more secure place will be found for these most precious fish. If some strenuous efforts were made to establish a well managed system of fish culture in the Thames, not only for trout, but for all descriptions of fish that would be likely to thrive in the river, no doubt the attention and interest of many very influential anglers and naturalists would be drawn to the improvement of the fishery, and many who now look with dismay upon the apparently hopeless state of Thames trout fishing, and who consequently care not to contribute towards the support of the Thames Angling Preservation Society, may be induced to take an interest in that society, which has done, and is doing, much good to promote fair angling, and to protect and preserve the greatest aquatic highway of England for the healthful enjoyment of the public.—I am, &c.,
R. D. E.

SIR,—“A Pilgrim Fry-er,” in his very interesting banter of Saturday last, does me too much honour, I fear, if he really thinks that I have solved so intricate a problem.

In your issue of the 7th inst., Mr. Keene is not very sure that my idea of stocking the extreme head of a river is not capable of exception, *in re* Thames Trout. Here, I think, it is simply a case of “the wish being father to the thought.” Mr. Keene is an authority on the Thames, but my experience has been gleaned on other waters. This may be an objection in many respects, but a subject like the present is sometimes better approached from a distance—any way, one has then a guarantee that the view will, in a measure, be impartial.

Like most of my brother contributors, I am a truth-seeker; but, whilst I shall ever hold the conviction that the proper place for the deposit of trout fry is in the upper reaches of a stream, I am still interested in the settlement of the question:—“Where do the few comparatively large trout found about Hampton Court, Chertsey, &c., come from?”

I may, I think, start with the theory that trout were found in the Thames at the time when the vine flourished on the present site of Drury Lane and the fig-tree blossomed on the sunny heights of Holborn. Nay, I may go a little further, and say that the spangled beauties leaped as merrily after the gauzy wings when the mammoth and mastodon wallowed in the waters, and the turtle deposited its eggs upon the shelving shores, as they do now.

It so, let me ask—

(I.) How is it they have been so slow to fulfil the sacred injunction, “increase and multiply”?

(II.) If they do perform such family functions, what becomes of their young?

(III.) If they do not increase and multiply—why not? They must, if they are indigenous to the district, have themselves once been youthful. I dismiss the idea of their castration as untenable.

(IV.) Is it possible that these fish have, like other animals when they become senile, lost their procreative propensities?

(V.) Bred (?) on the higher runs of the Colne, Kennet, Loddon, Wey, &c., have they, in their old age, dropped down to spend the close of life in deeper and stiller waters?

I should like to enlarge more fully upon this interesting subject, but time forbids. If spared to see the close of the trout-fishing season, I may perhaps return to the matter, and give a few of my own ideas thereon.—I am, &c.,
THOMAS FORD, of Caistor, Lincolnshire.

THE MUNDELLA ACT.

SIR,—I should like to ask the following of the London anglers. What have you gained by the Mundella Act? I ask what use is it if there is no one to put it thoroughly in force? For netting is as rife as ever. Please read extract of this week’s *Field*.

“The roach here have made another shift, and have gone up in masses to the upper waters. They appear more plentiful than usual this spawning season. It seems a great pity no action is taken in the Colne, where the householders have the right to net three days in each week after the 10th of May, to discourage the practice. It can easily be done under the Freshwater Fisheries Act of 1878. If it cannot prevent the netting it can stop the sale of the fish; and I take it the netting goes on more to get the proceeds of the sale of fish than anything else; and if that clause could be put into operation it would soon discourage the netting.”

And you are contentedly sitting at home, waiting for the good you expect from the close season, but never to come. What have you really obtained? For years you have had a close season on the Thames and Lea, both of the rivers well looked after, no thanks to the Mundella Act. Does the Mundella Act prevent the netting at Pullbrough, or upon the canals? Oh dear, no! for liberty has been obtained to net to supply food for animals at the Zoological Gardens, Aquarium, &c. So, in conclusion, I ask what have you really gained? Have you much to be thankful for, is the question asked by A SOUR BUT.

[We are happy to say that it is most probable that energetic steps will be taken to modify the Mundella Act before long.—ED.]

May 23, 1881.

GLACIALINE FOR PIKE BAITS.

SIR,—Just when baits are wanted for trolling or spinning they are never to be had; but when fishing for roach, &c., one often gets a lot of little “brats,” which one throws back in disgust. It occurred to me that glacialine would do splendidly to preserve these small fish for future use, and thus the pike fisher would always have a stock of dead baits by him.—I am, &c.,
12, Rendezvous Street, Folkestone.

THE AVON SMELT.

FISHING IN SOUTH STAFFORDSHIRE WANTED.

SIR,—Can any reader of the FISHING GAZETTE inform me where I can get a day’s trout-fishing in South Staffordshire? By so doing they will confer a great favour on yours, &c.,
ANGLER.

CRAY FISH AND CRAWFISH.

SIR,—If, as you inform me through your columns, crayfish and crawfish are identical, what is the difference in name between those small frustacea of the same shape as the lobster but much smaller, used for garnishing, &c., and those of the same shape as the lobster, but larger, a lighter colour when boiled, and without the claws of the lobster?—I am, &c.,
F. B.

Holborn Viaduct Hotel, E.C., May 21, 1881.

[We think our friend must be running his head against the big sea-crab; but have they not claws?—ED.]

FISHES OF DEVON.

SIR,—Referring to Mr. Gosden's notice of the Porbeagle shark, "*Squalus Cornubicus*," one was caught off here last summer by, I think, one of the Beer drifters. It was about 4 feet long, and perhaps weighed half a hundred weight. The smell from it was disgusting, worse than that from a blue shark, which is bad enough. I should think the sense of smell must be wanting in those people on the coast of the Mediterranean who, according to Risso, highly esteem it as an article of food.

A female lump fish, "*Cyclopterus lumpus*," was brought to me a few weeks since. It was taken in a crab pot in the bay. The power of sucking is retained after death to an extraordinary degree. On the second day a considerable weight could be raised by it. This power is also possessed by the smaller suckers, "*Liparis*," &c.

On the 11th of May I caught a very handsome specimen of the painted ray, "*Raia microcellata*," in the Trammell. This fish was unknown to our men, and is not, I think, common anywhere. Will Mr. F. Gosden kindly favour me with his address.—I am, &c.,
E. GOSLING.

Budleigh Salterton, May 23.

FISHING AT WELLS.

SIR,—Can any reader of the FISHING GAZETTE kindly inform me through your columns whether there is any trout-fishing near Wells? If so, whether one can get permission for the day, and who from. By doing so they would much oblige
A FLY-FISHER.

51, New Street, Salisbury.

FISHING IN THE RIBBLE.

SIR,—I can inform your correspondent, H. Neville, that Ribchester-on-the-Ribble and Red Pump-on-the-Hodder, which joins the Ribble near Stonyhurst, are the best for salmon-fishing. There are no grayling, however, in any portion of these rivers that I am aware of. What the natives call grayling are in reality dace or roach. I warn your correspondent that the Ribble in the above neighbourhood suffers very much from pollution, notwithstanding the praiseworthy efforts which have and are now being made for its abatement, and unless he is there in the "nick of time," on the subsidence of a flood, his chance of a fish will be very small. I have not fished the river for the last eighteen years, yet I am afraid the conditions are much about the same; but by getting the landlord of the De Tabley Arms, at Ribchester Bridge—standing on the top of which I once hooked and killed a salmon—to write or telegraph me, I have occasionally, by acting promptly, had grand success. The Hodder is quite free from any contamination, and a trout or salmon may be killed there when one is not to be stirred in Ribble.—I am, &c.,
J. T. HORSLEY.

Southport, May 24.

FOSTER FUND.

SIR,—I have to acknowledge with thanks the following subscriptions towards the above:—Cadogan, 21s.; Cambridge, 16s. 6d.; King's Cross United, 7s. A number of societies have not yet sent in their list. I shall esteem it a great favour if they would do so, to enable the Committee to close the list.—I am, &c.,
J. HOOLE, hon. sec.

FOSTER'S ACME LINES.

SIR,—Seeing your recommendation in the FISHING GAZETTE last August of the "Acme Wire Line," I bought one, which I have had in constant use, and which has given me the greatest satisfaction.

Passing down the Strand the other day I saw a line extensively exposed for sale, composed of horsehair, silk and wire, it being a twisted line, and, liking the appearance of the same, I was induced to purchase. I gave this line a fair trial on Saturday last with two other gentlemen, but found it anything but satisfactory. I hope the defects of such inferior imitations will not prejudice the public against the original, and I am convinced that the caterers to the angling community will soon be contented and pleased to push the sale of Foster's acme wire line, which is a credit to the inventor and a boon both to shopkeepers and anglers.—I am, &c.,
W. H. COOPER.

63, Church Street, Manchester, May 25.
[We have had one of Foster's lines in constant use since last year, both for fly fishing and spinning, and are perfectly satisfied with it. It is less liable to kink than any line we ever used.—ED.]

WORMS AND GENTLES.

SIR,—Will some anglers unfold themselves in these matters for the benefit of those anglers who want to know?—

- (1) Give a list of all worms useful to the angler.
- (2) Where to find them.
- (3) How to keep them when obtained.
- (4) How to breed them.

The writer is quite in a mist about the cockspur worm.—I am, &c.,
33½, King Street, Hammersmith.
THOS. MACKNESS.

THIS SPRING'S TROUT FISHING.

SIR,—The writer of a leading article in the *Daily News* of to-day appears to consider that there never was such a bad spring for trout fishing as the past. I presume he is not a Hampshire fisher, although he alludes immediately afterwards to what a Hampshire fisher says about the dearth of flies; but in this case the old adage, "Out of evil comes good," is verified. I have known the natural fly so thick on the water that trout would scarcely look at the artificial fly; and I have known, as in this season, the natural fly so scarce that nearly every well-delivered cast, with a good artificial fly of the right sort, produced a rise. I seldom leave business until the evening, but I find, on comparing my diary for 1880 with that of 1881, that in the former year up to this date I had killed 18½ brace of trout, while this year I have killed 48 brace. This difference I attribute in great measure to the scarcity of natural flies; but this scarcity is not likely to continue. The last winter was so severe that immense numbers of small birds were either starved or frozen to death, and our beautiful Hampshire valleys are now almost songless, notwithstanding the Small Birds Protection Act. As flies increase much more rapidly than small birds, I quite expect by the end of this summer we shall be overdone by the former, or that an all-wise Providence will in the meantime have adjusted the balance again.—I am, &c.,
Fareham, May 23.
RED PALMER.

CORRECTION.

SIR,—In your footnote to my communication which appeared in your last issue, the words "near Southport" should have been "near Delph, Saddleworth." There are no mills near Southport.—I am, &c.,
J. T. HORSLEY.
Southport, May 24, 1881

BLACK BASS OVA WANTED.

SIR,—I shall be very much obliged if any of your readers can tell me if I can obtain the ova, or young fry of the black bass from any one in this country, or of any one with whom I might join in obtaining a parcel of ova from America.—I am, &c.,
H. DREWFIELD, hon. sec.

May 23.

[Apply to Mr. W. L. Silk, Burghley House, Stamford.—ED.]

CLUB REPORTS.

FIRST SURREY ANGLING SOCIETY.

This society held its first meeting on Wednesday last, May 18, 1881. Mr. Bates was voted to the chair, and Mr. Bignall facing. The chairman in his remarks said they had met for the purpose of forming an angling society. It was proposed and carried that this society be called the First Surrey Angling Society, and it was also proposed and carried that this society be enrolled in the Central Association, St. Martin's Lane, Charing Cross. Fourteen members were enrolled on the books. Mr. F. Johnson was elected secretary (pro tem.), seven gentlemen were elected for the committee, which met on Monday night for the purpose of forming the rules, which will be submitted to the next general meeting, Wednesday, June 1. Anglers living in this neighbourhood please to note the entrance fee to this society is 1s., weekly subscription 2d.—F. JOHNSON, secretary.

GOLDEN TENCH.

Owing to the extensive alterations taking place at the Somers Arms, we have had to remove the club to the Victoria Tavern, Charlton Street, Euston Road, King's Cross. The meeting nights the same as usual, Sunday and Wednesday. N.B.—Secretaries, please notice the new address.—T. S. WEBB, sec.

May 23, 1881.

GREAT NORTHERN BROTHERS.

Our eighteenth annual distribution of prizes will take place on Tuesday, May 31st, when we shall be pleased to have the favour of our brother anglers and friends. I also beg to inform you that the next general visit of the angling societies is appointed to take place at the Robin Hood, Southampton Street, Pentonville, on Wednesday, June 1st, when the pleasure of your company and as many of your members as can make it convenient to attend will oblige.—J. A. FITCH, sec.

May 21.

KENTON SOCIETY OF ANGLERS.

The annual meeting of this club took place on Wednesday last, the 25th inst. at the Palmerston, South Hackney. There was an excellent attendance of the members and their friends to witness the giving away of the prizes for the past season, and to do justice to the capital supper provided by the worthy hostess (Mrs. Partridge), the winners of the handsome prizes given by the club, and its friends were Mr. Down, Mr. J. Huntley, Mr. Spencer, Mr. Halton, &c. The worthy chairman of the society in his unavoidable absence, forwarding a gold medal value 20s. as an extra prize for the largest jack, which Mr. J. Huntley obtained. Messrs. Youens presided at the musical department. Mr. Youens, sen., giving an exquisite solo on the violin, which was much appreciated, the vocal abilities of the guests were put to a severe test. Mr. Fowler, one of the visitors particularly distinguishing himself. The meeting broke up at a late hour, after a most pleasant evening's entertainment.

[Will Mr. J. please note that stamps cut from post wrappers will not frank letters.—ED.]

LOUGHBOROUGH SOAR ANGLING CLUB.

President, Hussey Packe, Esq., J.P.; vice-presidents, Major-General Burnaby, M.P., J. F. Ealand, Esq., J. Harriman, Esq.; hon. treasurer, Mr. R. Hibbins, Baxter Gate; hon. secretary, Mr. Wm. L. Cayless, Fishing Tackle Depot, Nottingham Road; Committee, Mr. Pegg, Mr. Turner, Mr. Guess, Mr. Warren, Mr. Goodwin, Mr. Stubley, Mr. Bishop, Mr. S. Burton, Mr. Wignall, Mr. Giles, Mr. Johnson, Mr. Keeling. Annual subscriptions, payable in advance—Honorary members' tickets, £1 1s.; ordinary tickets (available for pike fishing), 11s. 6d. each; ditto (available for all fishing except pike), 6s. each; day tickets, 1s. each; ditto (if to include pike fishing), 2s. 6d. each. The Midland Railway Company issue return tickets, at reduced fares, to the following stations:—Syston, 10d.; Rearsby, 1s. 2d.; Frisby, 1s. 5d.; Brooksby, 1s. 3d.; Fiskerton, 2s. 11d.; Trent, 10d.; Castle Donington, 1s. 3d.; Weston-on-Trent, 1s. 7d.; Burton-on-Trent, 2s. 11d. All tickets, books of rules and further information, may be obtained at Cayless and Sons, Fishing Tackle Depot and Soar Angling Club Offices, Nottingham Road, Loughborough.

LIVERPOOL ANGLING ASSOCIATION.

A special meeting of this association was held at the club-room, "The Strawberry Hotel, West Derby Road, to consider the amount of pecuniary assistance that should be voted out of the club funds to the "River Dee Free Fishery Defence Association." There were present, T. Davis, Esq. (president) Richard Woodfall (vice-president), Mr. Pratchett (chairman), Mr. Jones (treasurer). The room was very crowded, the members numbering 110. The chairman stated the case for which their aid was solicited, and was followed by Mr. H. Leeman in a neat speech—another member, Mr. Fearnett, delivered a stirring appeal, urging the duty of Lancashire and Yorkshire supporting the association in their defence. The chairman called on the treasurer to inform the meeting the amount of cash at the credit of the association. His statement showed a balance in the bank and in his hands of £25. The proposition was put to the meeting and was unanimously agreed to, that the sum of £6 6s. be forwarded to the treasurer of the "River Dee Free Fishery Defence Association," the manager of the National and Provincial Bank of England, Wrexham. Another very pertinent question came before the meeting, which suggestion emanated from the manager of the Great Western, London and North-Western, Midland, and Lancashire and Yorkshire Railway Companies, as to the necessity of members' privilege tickets for the present year being officially stamped, failing this, the companies' booking clerks will refuse issuing the tickets at reduced fares. On Thursday next, the 26th, the business of the association will be—the date and locality of the first angling excursion of the season; one of the following places will most likely be selected, viz., Comber-

mere (the seat of Viscount Combermere), Vale Royal (the seat of Lord Delamere), Morbury Mere, or the river Vyrnwy.—*Correspondent.*

MARYLEBONE ANGLING SOCIETY.

The return visit was paid to the Marylebone Angling Society at the Prince Albert, Sherborne Street, Omega place, Marylebone, on Monday, 16th May. The chair was ably filled by Mr. Prosser, of the Marylebone, faced in the vice by Mr. Dixie, of the Golden Barbel. The club-room, a large one, was filled to excess. Messrs. Prosser, Dixie, Chambers, Mellish, Woods, Roberts, Adams, Brice, Dobell, Payne, Hyde, Lovett, Hugget, Chambers, Parker, Sangster, amongst others, contributed some capital songs. Mr. Evans, of the Westbourne Park, gave some splendid music on the ocarina. Mr. Bonvoisin in responding to the toast of the "West Central Association," said that both he and his colleagues have always met, with the greatest courtesy and respect from the clubs of the association, and asked those present to give their greatest interest to the Anglers' Benevolent Society. The subscription was only 1s. 1d. per annum, and the advantages were greater than those of any other society, and he hoped that every holder of tickets of the association would become members. He also referred to the close season, and said for a great many years fish were caught when spawning, and we found we could stand it no longer, but Sheffield was the first to move in it, and got Mr. Mundella, M.P., to bring in a bill for the close season. He begged of members to look to the 15th of March, and lay by their rods, for fish were then unfit to take; they gave no sport, and were unfit for food. (Hear.) In London we have set a noble example in paying attention to the close time. In Norfolk and Suffolk fish were caught even now in large quantities, and they did not hide them but seemed proud of them. Some were caught and exhibited at the late Norfolk Exhibition, some of them measuring only 3 and 3½ inches long. Mr. Green obtained some, and when at the supper of the Hammersmith United drew attention to them. (Shame.) In conclusion, he impressed on those present not to forget the Anglers' Benevolent Society, and so long as the close season lasted to respect it. (Cheers.) The roll was called at 11 p.m. by Mr. Osmond, the district officer, when it was found that sixteen clubs were represented, viz., Bostonian, Cambridge Friendly, Duke of Norfolk, Golden Barbel, Hampstead, Norfolk, North-Western, Duke of Cornwall, Globe, Prince of Wales, United Marlboro' Brothers, Westbourne Park Piscatorials, St. John's Wood, Cavendish and City of London. Our annual supper takes place on Tuesday, 31st of May.—W. PEARCE, sec.

May 24th.

NORFOLK ANGLING SOCIETY.

The next return visit of No. 1 District, W.C.A., will take place at the Norfolk Arms, Burwood Place, Edgware Road, on Monday next, 30th inst., at 9 p.m., when the pleasure of as many members of societies as can make it convenient to attend will be esteemed a favour. The new room will be opened on that occasion.

PRINCE OF WALES ANGLING SOCIETY.

Important Notice to all angling clubs on the Central Committee list. Mr. F. Robson is not secretary of the P. W. A. S. If the secretary of clubs will alter the address in their list of the P. W. A. S., it will greatly oblige the members. The present address is Victory Tavern, Newnham Street, Edgware Road, and the present secretary is W. Lee. Our annual supper takes place on Tuesday evening, May 31, 1881.—W. LEE, sec.

SURREY PISCATORIALS.

The distribution of prizes among the successful members of this society took place on Wednesday, the 25th. Dr. Carpenter presided, assisted by Mr. Medway. Mr. Beckett stood with the pole for something, viz., £16 16s., a pair of boots, and a copy of H. L. Rolfe's well-known picture; Mr. Duck, £5 15s. 6d. and half sack of flour; Mr. Boalch, £5 5s., roach rod and waterproof legging; Mr. Pugh, 1st gross weight, £4 4s., a dressing case, and a rod, and winch; Dr. Carpenter, £3 3s.; Mr. Medway, a portrait by Mr. Evans, and £2 2s.; Mr. Whitby, hon. sec., £2 2s.; Mr. Bansback exhibited that which he had purchased with the money prizes that he had won in the two societies, the articles consisting of a clock and two vases to match, with glass shades; Mr. Barnes, £1 1s.; Mr. Langlois won the £10 10s. cup; Mr. T. Clarke is entitled to £3 3s.; Mr. Barnes and also Mr. Murray won prizes. Gentlemen who have won prizes, and were not present this evening, are requested to remove their prizes as soon as possible. I return my sincere thanks to Messrs. J. Maas, and E. Gosling for their response to my query, "American Fish."—PIXIE.

May 25.

WOOLWICH BROTHERS' ANGLING SOCIETY.

On Monday evening, the 16th inst., about fifty members and their friends met at the Prince Regent to celebrate their sixth anniversary. The dinner was served in Host Beech's usual excellent style, which was appreciated by all present. The chair was occupied by E. Taylor, and the vice by T. Bennett. After the removal of the cloth the usual loyal and patriotic toasts were given and responded to. The toast of the evening—"Prosperity to the Woolwich Brothers' Angling Society,"—coupled with the name of Mr. John Shipston, the secretary, was given by the chair, and duly acknowledged by the secretary, who congratulated the club on its success during the year. The results of their fishing excursions, although only moderate, had yet provided them with some good sport, and as an encouragement for future exertions he was enabled to announce a good prize list for next year's competition. The amount already in hand for prizes is over £20, and which, he believed, would be largely augmented before the opening of the season, when the allotment of the prizes would take place. (Cheers.) Votes of thanks were recorded to the Host and Hostess, the Chairman, and Vice-chairman, and responded to. Kindred societies were duly acknowledged, and were responded to by Bro. J. Bridges (Manchester Unity of Odd Fellows); Bro. J. Bennett (Ancient Order of Foresters); Bro. H. Hoskine (Kent Order of Odd Fellows); Bro. J. Wilmore (Free and Accepted Masons); and by the chairman on behalf of the visitors. The proceedings were very much enlivened during the evening by the musical talent and good singing of a number of the brethren and visitors present, and the company broke up at a late hour by singing "God Save the Queen" and "Auld Lang Syne." During the evening the prize list was increased by Mr. Beech, £2 2s.; Miss Beech, £1 1s.; Mr. J. Shipston, £1 1s.; Mr. E. Taylor, 10s. 6d.; Mr. W. Hart, 10s. 6d.; Mr. A. Taylor, 5s.; Mr. Plaistead, 10s. 6d.—JOHN SHIPSTON, sec.

May 26.

WALWORTH WALTONIANS.

On the 16th the members of this society met the members of the S. P. A. S. at Dulwich, and played a friendly game at cricket. Both societies were well

represented, the former as "The Patriarchs" (as their years are something under seventy), and the others as "The Juveniles" (they being a few years over seven). After much fun and amusement "The Patriarchs" were declared the victors. On the 20th the distribution of prizes took place. Mr. J. Boalch, hon. sec., was entitled to twelve prizes, including first gross prize, £11 11s., a felt hat, a tea service, and half a sack of bran—"no wonder he got the first gross weight." Following up close came Mr. J. S. Weatherhead, he succeeding in getting second gross weight prize, £7 7s., a writing-desk, a work-box, a guinea hat, a cigar case, and two gallons of gin; comment on the last-named article is useless, it has all gone. Now come "M. le Pere" for a set of tankards, a guinea hamper, a box of cigars, hat, bottle of brandy, and £6 6s. Mr. Delahaye, jun., wanted a £1 1s. hat, two meerschaum pipes, a £2 2s. pair of boots, half a sack of flour, half ton of coals, and £10s. 6d., and he got them. Next came Mr. W. Brown, the big trout gentleman; he was contented with a pair of shoes, two gallons of gin, a tackle case, and £2 12s. 6d. Now followed Mr. Beale, who, with £4 4s., a box of cigars, and a £1 1s. hat, retired contented; Mr. J. Collins, £1 11s. 6d. and a box of cigars; Mr. Cain, £2 2s., a cruet stand, and a cigar tube; Mr. F. Grigg some handsome work of art presented by Mdm. Piolaine, and £2 12s. 6d.; Mr. Evans, £1 11s. 6d.; Mr. Fox, the grand prize of the season, a silver cup, given by Mr. T. A. Taylor, a £1 1s. hat, a bottle of brandy, and £1 1s.; Mr. Piolaine, a side of bacon, about 80 lb., and a ladies' workbox; Mr. Bansback, a portrait of himself taken by Mr. Evans, and £3 3s. The following also received prizes: Messrs. Schwartz, Renault, Bedford, Green, jun., Howard and Son, Irons, and Pearson. Harmony and the meals brought the evening to a close.—PIXIE.

May 25.

WEST LONDON HOSPITAL.—A grand bazaar in aid of this seriously encumbered charity will be held, under the distinguished patronage of H.R.H. the Duchess of Teck, by kind permission of Messrs. Charles Cadby and Co., at the spacious pianoforte shows-rooms, in the Hammersmith Road, on Friday and Saturday, May 27 and 28. Doors open from two p.m. Friends of the charity are earnestly besought to render the project a financial success.—R. J. GILBERT, secretary, &c.

400,000 MARKS or £20,000 Sterling. TO BE WON.

THIS is the amount of the Chief prize to be won in the most fortunate case in the HAMBURG MONEY LOTTERY guaranteed by the Government of Hamburg.

This Money Lottery contains 51,700 prizes, together amounting to

9 Millions 324,080 Marks.

All these Prizes will be drawn in Seven Divisions, closely following each other.

Among the 51,700 prizes are the following Chief prizes:—

	Marks.		Marks.
1 of	250,000	12 of	15,000
1 of	150,000	1 of	12,000
1 of	100,000	24 of	10,000
1 of	75,000	5 of	8,000
1 of	50,000	3 of	6,000
2 of	40,000	54 of	5,000
3 of	30,000	5 of	4,000
4 of	25,000	105 of	3,000
2 of	20,000	263 of	2,000
			etc., etc.

The price of the tickets is officially fixed at

**6 SHILLINGS FOR A WHOLE ORIGINAL TICKET,
3 SHILLINGS FOR ONE HALF ORIGINAL TICKET.**

Immediately after receipt of the amount, the Chief Lottery Office Isenthal and Co., Hamburg, forward the ordered tickets for all the drawings of the first division, in closed envelopes, direct to the applicant. The amount for the tickets is to be joined to the order, in English Postage Stamps or Cheques on known Banks in England. Every dispatch of tickets will be accompanied (gratis) by plan of the Drawings. Every applicant is noted in the Lottery Register, and will receive, immediately after the Drawing, the official Drawing List, whereby the numbers drawn up and the value of prize of each respectively is ascertained. The payments of the amounts won are made immediately under Government control by the Chief Lottery Office, Isenthal and Co.

It is respectfully requested that all orders for this Money Lottery are sent before the beginning of the Drawing, and not later, than

30th MAY, 1881,

and addressed to the

Chief Lottery Office,

**ISENTHAL AND CO., Bankers,
HAMBURG (GERMANY).**

N.B.—Correspond in English.

WEST CENTRAL ASSOCIATION OF LONDON AND PROVINCIAL ANGLING SOCIETIES.

An adjourned special meeting was held on Friday, the 20th inst., when the following business was transacted, viz.:—Messrs. Adeand West re-elected, and Mr. Vincent (in place of Mr. Becket, resigned) elected as auditors for the next twelve months. Mr. Fowler elected as auditor for the Anglers' Benevolent Society. A new society, named the Princess of Wales, was enrolled. Five guineas was voted to the funds of the Reading and District Angling Association. Mr. T. Hoole was unanimously elected to represent the association upon their committee, the secretary having written to say that his association would be pleased to accept a representative. The question of additional concessions upon the Great Eastern Railway was discussed and deputed to the committee to arrange preliminaries conjointly with the United London Anglers' Committee. The charge of 1s. for the new privilege tickets, as arranged by committee, was confirmed. Mr. G. Treadwell was kind enough to offer his services, free, as reporter for the association. Letters were read from Manchester, Derby, Sheffield, Reading, and District Associations, &c. The new ticket was exhibited, and admitted on all sides to be the best extant. The new list of fares is much improved, having full particulars in reference to the public and private portions of the river Lea, &c. The secretary requests that applications for the privilege tickets be made as soon as possible, so as to enable him to get the orders executed in time for the opening day, he would remind secretaries that, association issue hundreds in excess of any other body, it takes considerable time to get through the work. We send all tickets ordered, postage paid, addressed to the club house. The association, it is admitted, has done wonders for the anglers since its formation. Six railway companies now grant concessions, four out of which this body has obtained, in addition to having obtained the concessions from fishing tackle, and mackintosh, manufacturers. The other two railway concessions were gained by the United London Anglers' Committee. We subscribe to River Preservation Societies alone nearly £50 per annum, besides offering large rewards for the conviction of poachers.—H.

LONDON AND NORTH-WESTERN RAILWAY.

WHITSUNTIDE EXCURSIONS.

CHEAP EXCURSIONS will be run FROM LONDON as under:—

From	Whit Monday, June 6th.		Saturday, June 4th.		Friday night, June 3rd.
	(c) a.m.	(d) a.m.	(c) a.m.	(b) a.m.

* From District Company's Station.

- (a) For Carlisle, Windermere, Kendal, Barrow, Whitehaven, Grange, Cockermouth, Morecambe, Lancaster, Carnforth, and the English Lake District. For 3 or 6 days.
- (b) For Abergavenny, Dowlais, Merthyr, Tredegar, Llandovery, Builth Road, Brecon, Swansea, Llandilo, Carmarthen, &c. For 6 or 8 days.
- (c) For Blackpool, Preston, Blackburn, Wigan, Bolton, Birkenhead, Carnarvon, Bangor, Blaenau Festiniog, Holyhead, Rhyl, Denbigh, Corwen, Chester, Crewe, Nantwich, Hereford, Leominster, Ludlow, Craven Arms, Llanidloes, Montgomery, Newtown, Aberystwith, Barmouth, Dolgelly, Oswestry, Welshpool, Minsterley, Shrewsbury, Wellington, Newport, Stafford. For 3 or 6 days.
- (d) For Liverpool, Manchester, Warrington, Stockport, Birmingham, Wolverhampton, Oldham, Ashton, Halifax, Bradford, Dewsbury, Leeds, Huddersfield, Buxton, Derby, Burton, Tamworth, Macclesfield, Stoke, Leicester, Nuneaton, Kenilworth, Leamington, Coventry, Walsall, Stour Valley, and South Staffordshire Stations. For 3 or 6 days.
- (e) Day Trip to Birmingham, Wolverhampton, Walsall, Dudley, Wednesbury, Leamington, Kenilworth and Coventry.

For Fares and full particulars as to times of return,

see Bills, which can be obtained at any of the Railway Stations, the various Parcels Receiving Offices, and at Gaze's Tourist Office, 142, Strand.

G. FINDLAY, General Manager.

Euston Station, May, 1881.

WHITSUNTIDE HOLIDAYS.—SOUTH-EASTERN RAILWAY.—All EXPRESS and ORDINARY RETURN TICKETS for distances over Ten and under Fifty Miles, including those between London and Beckenham Junction, issued on June 3, 4, 5, and 6, will be available for the Return Journey by any Train of the same description and Class up to and including June 10th. The Cheap Return Tickets issued on Week-days between London and Westenhanger, Hythe, Sandgate, Shorncliffe, Folkestone, Dover, Ramsgate, and Margate, will be similarly extended.

The Cheap Saturday to Monday Return Tickets, to the Sea-side, issued on June 4th, will also be available to return up to and including June 8th.

This Extension of Time does not apply to London and Gravesend Cheap Tickets, nor to those between London and Shalford and Stations to Wellington College inclusive.

WHIT SUNDAY AND MONDAY.—Special Cheap Excursion Trains from London and New Cross to Dover, Folkestone, Shorncliffe, Hythe, Sandgate, Hastings, St. Leonards, Tunbridge Wells, Margate, Ramsgate, Deal, Canterbury, &c. Fare there and back, 5s. Third Class. Children under 12, Half fares.

Special Trains for Blackheath, Greenwich, Gravesend, &c.

CHEAP TICKETS by Night Services for Excursions to Paris and back, via Folkestone and Boulogne; the cheapest, shortest and quickest short sea route; or via Dover and Calais. Fares, Third Class, 31s. 6d.; Second Class, 47s., available for 14 days, from Charing Cross and Cannon Street Stations. Tidal and Mail Services as usual. For further particulars see handbills, &c.

LONDON AND BALE IN 20 HOURS.—From Charing Cross and Cannon Street Stations, New and Accelerated Through Services to and from Bale, &c. For Fares, times of departure, &c., see bills.

MYLES FENTON, General Manager.

GREAT EASTERN RAILWAY.—SEA-SIDE.—Two Months' Return Tickets are now issued by all trains to Yarmouth, Lowestoft, Cromer, Hunstanton, Southwold, Aldeburgh, Felixstowe, Harwich, Dovercourt, Walton-on-the-Naze, and Weeley (for Clacton-on-Sea).

Fortnightly, and Friday, or Saturday to Monday First, Second, and Third-class return tickets are now issued at REDUCED FARES by all trains to Hunstanton, Cromer, Yarmouth, Lowestoft, Walton-on-the-Naze, Weeley (for Clacton-on-Sea), Dovercourt, Harwich, Felixstowe, Aldeburgh, or Southwold.

WILLIAM BIRT, General Manager.
London, May, 1881.

LOBSTERS AND CRABS.—The merchants say there has never been so many crabs before as during the present time, one of them has had nearly a quarter of a million. Lobsters also are very numerous. This is another result of Mr. Birkbeck's kind and good work on behalf of the fishermen. How I wish poor Mr. Buckland could have lived to see it; at all events, they will never forget him or what he said to them.—ESOX LUCIUS.

ANGLERS should always be provided with something to take away the swelling and poisonous effect of the bites of insects. They should also have with them something to apply to a cut or sprain. Pond's Extract reduces the swelling and inflammation, stops bleeding and pain, and hastens the healing process in case of any wound or sprain; and it has no equal for application to the bites and stings of insects. Therefore never go on a fishing excursion unprovided with a bottle of Pond's Extract. It is for sale at all chemists, at 2s. 3d., 4s. 6d., and 8s. 6d. per bottle.—[ADVERTISEMENT.]

GREGORY'S SPINNING BAITS.—"The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Alcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived. Address, James Gregory, Vyse-street, Birmingham.—[ADVT.]

GEORGE JAMES EATON, of Starkholmes Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[ADVT.]

MRS. F. Y. BROCKAS, Artificial Fly Dresser, 4, Mill-street, Conduit-street, Hanover-square, London, W. A stock of best flies always on hand. Flies made to pattern. Lessons in fly making given.—[ADVT.]

SEA FISHING.

C. and R. BROOKS' MACKEREL SPINNERS, 3s. 2d. per doz., post free.

C. and R. BROOKS' RED and GREY SAND EELS, For Pollack, 4s. 2d. per doz., post free.

"UNPARALLELED SUCCESS."

ADDRESS:

C. AND R. BROOKS,

Practical Fishing Tackle Makers,

STONEHOUSE, PLYMOUTH.

Catalogues free.

Just published. Price one Shilling.

TROUT-FISHING,

With FLY, MINNOW, WORM, &c.

BY

THOMAS FORD,

130 different Flies, with ways of manufacture and seasons for use. Post free from Author, Caistor, Lincolnshire. Agents wanted. Best Trout Flies, 2s. per doz. Fly List, one stamp.

ANGLING BOOKS, SPORTING BOOKS, and MISCELLANEOUS BOOKS.—274 Angling Books, 26 Lots of good Fishing Tackle, 140 Sporting Books, and 550 Books, various. A Catalogue for two stamps.—Address, W. MILLER, 6, Stanley Road, Kingsland, London.

WEATHER GLASS for SIXPENCE.—Directions how to make the same with absolutely no difficulty or expense will be given on receipt of six penny stamps, by Mr. MACDONALD, 1, Crane Court, Fleet Street, E.C.

LIFEBOAT SERVICES.—During the Storms of the past seventeen months the NATIONAL LIFEBOAT INSTITUTION has contributed, by its Two hundred and seventy Lifeboats and other means, to the saving of Eleven hundred and fifty-five lives from various shipwrecks, and Forty vessels from destruction. CONTRIBUTIONS are thankfully received by Messrs. Coutts and Co.; by all the other Bankers; and by the Secretary, Richard Lewis, Esq., 14, John Street, Adelphi.

FOR SALE.—One Double-hand Trolling Pike Rod, with Reel and Line (Farlow's); one Single-handed ditto Punt (Carter's) Landing Net, Gaff and Handle; one Single-handed Trout Fly Rod, with Winch and Line, in four pieces; Superior Fly Book, about three dozen Flies and Gut-lines; three Cases Pike and other Trolling Tackle, Basket and Strap. All in good condition. Price for the lot invited.—Apply to W. WILLIAMS, 11, Bute Street, Cardiff.

NOTICE.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., must be addressed to the Editor of THE FISHING GAZETTE, No. 12, Fetter Lane, London, E.C. and should reach the office not later than Tuesday morning.

Contributions are solicited, but the Editor will not undertake to return rejected MSS., unless accompanied with a stamped addressed envelope.

Correspondents are requested to write on one side of the paper only and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to no notice will be taken of such communications.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls, and of the following, amongst other Fishing Tackle Dealers in London and the Provinces:—

Messrs. Alfred and Son, Moorgate-street.
Messrs. Price and Co., 8, Seymour-street, Euston-square, N.W.
Messrs. Williams and Co., Great Queen-street.
Messrs. Gee and Co., St. Andrew's-street, St. Martin's-lane.
Messrs. Gee and Co., Gray's Inn-lane (near Holborn end).
Messrs. Little and Co., Fetter-lane, E.C.
Messrs. C. Kewell and Sons, 197, St. John-street-road, E.C.
Messrs. Kewell and Co., 1A, Conduit-street, Regent-street, W.
Mr. J. Richards, 97, Church-street, Paddington.
Mr. W. Leader, 30, Upper Marylebone-street, Portland-place, W.
Mr. — Clark, 35, Wells-street, Camberwell.

Mr. S. Dale, 7, St. John Street, Nottingham.
Mr. H. Booth, 88, Prospect Street, Hull.
A. W. Warner, 121, Broad Street, Birmingham.

Newsvendors can obtain the journal through their London Agents.

* * The "FISHING GAZETTE" SPINNER (Registered) is sold by all the above firms.

ANNUAL SUBSCRIPTION.

The Annual Subscription, payable in advance, for the United Kingdom is 8s.; or post free, 10s. 6d.

To any part of Europe, the United States, and Canada, the Annual Subscription, including postage, is twelve shillings and sixpence.

ADVERTISEMENTS.

All communications respecting advertisements must be addressed to the Manager of THE FISHING GAZETTE, No. 12, Fetter Lane, London, E.C.

N.B.—All Remittances must be sent, and all Cheques and Money Orders must be made payable to ROBERT B. MARSTON.

The Fishing Gazette.

SATURDAY, JUNE 4, 1881.

THE PROPOSED AMENDMENT OF THE FRESHWATER FISHERIES ACT.

OUR announcement last week that a movement was on foot to amend the Mundella Act, has caused no slight stir amongst anglers, and especially amongst our club friends. In our corres-

pondence columns this week will be found some important letters on the subject. We wish it to be distinctly understood that our only object in calling attention to this important matter is to get at the real views of the majority of anglers. "The greatest good of the greatest number" is our motto, and if the anglers of the country as a body decide that they are satisfied with the Freshwater Fisheries Act as it now stands, we shall be perfectly willing to support their views. No harm can possibly occur from a fair and calm consideration of the matter, and by hearing both sides of the question. As we stated last week, we consider the interests of anglers generally would be improved if the act were amended, and for our own part, we are convinced that legitimate angling for freshwater fish is possible all the year round. By legitimate angling, of course, we mean the taking of fish in season. We would not for a moment sanction the taking of fish which are out of season, and we confess we are under the impression that this was not done in Norfolk and Suffolk, although rod fishing is permitted there all the year round. We have written for further information upon this point, and if Mr. Geen and Mr. Bonvoison's charges against the East Anglian Anglers are true of the body generally, we will at once admit that such a state of things is anything but creditable to our eastern friends. If we had our way, we should like to see—

1st. Angling for roach, chub, bream, carp, &c., permitted until these fish spawn, which is a *much later* period than the 15th of March.

2nd. Angling for dace permitted much *earlier* than the 16th of June.

3rd. Angling for eels permitted all the year round.

This would enable an angler to fish all the year round.

At present angling is stopped just at the time when roach, bream, chub, carp, &c., are in best condition, and at the time of all the year when there is best sport with them, for they do not take the bait nearly so well in the summer months on account of the quantity of natural food in the water, and in November, December, January, and February the inclemency of the weather permits of very little angling of this kind.

We should, on the other hand, like to see fishing for jack prohibited until the 1st of August.

Mr. Geen gives us a friendly rap for saying that we considered the present close time, if strictly enforced, would tend to the deterioration in size of our freshwater fish, we may be wrong, but we think not; and for these reasons. We have frequently noticed that where a water is stocked with fish if those fish are not thinned out they will increase enormously in number, but that the breeding of immature fish which follows produces a puny race; another cause of the smallness is insufficiency of food, for a water will not support more than a certain quantity of fish in full vigour and capability of growth. We have noticed this in the case of trout in streams and lakes, in the case of roach in rivers and ponds, and also in the case of jack and carp in rivers and ponds. The close season for roach, although nominally only three months is practically much longer, for it is an acknowledged fact that they will not take a bait well in the hot months. This, however, is a question which only time can settle. In a large river like the Thames in which the spawn is so largely destroyed by the constant navigation, such an effect would be long in making itself apparent; in lakes, ponds, and quiet rivers much sooner. On the Continent the fact that over crowding prevents the growth of fish is well known to every pisciculturist. Mr. Geen will laugh at the idea of our metropolitan waters being over crowded, but we make bold to say that if you pit the fecundity of fish against the skill of the angler only—not the net—the fish will win in the long run, for how many anglers can catch fish? But it must be remembered

that this Act applies to almost the whole country, and we could name rivers which are naturally so prolific of fish that even netting hardly keeps them down. The object of the angler is the same as that of the farmer: he wants a good crop, and that means fine individuals, not a larger number of a smaller kind, though of no more aggregate weight.

THE GRESHAM ANGLING SOCIETY.

THE inaugural dinner of this new City club took place at the Mason's Hall Tavern, on Monday evening last. Mr. Thomas Crumpton, in the absence of Lord George Hamilton, M.P., the president of the society, occupied the position of chairman, and Mr. F. W. Backhouse, the vice-chair, supported by Messrs. Alfred Jardine, H. L. Rolfe, H. J. Alfred, F. H. Lemann, W. H. Brougham, J. P. Wheeldon, C. S. Bentley, C. E. Aveling, W. Beckett (West Central Association), S. C. Harding, J. G. Thompson, C. S. Austin, J. E. Harding, T. Skinner, D. A. Darling, C. G. Darling, L. Blunsum, &c., altogether numbering over one hundred guests. A very excellent dinner was placed upon the table by Messrs. Wood and Romain, in which fish was made a principal feature as suitable to a large and influential gathering of piscators. The attention of the waiters, under personal superintendence, was most satisfactory, and the various items on an elegantly printed *menu* were admirably served up. After effective justice had been done to the good things so well provided—and it occupied a considerable time—the chairman proceeded to give the first toast, which is never omitted in a company of anglers, “The Queen and the rest of the Royal Family,” and which was proposed in a thoroughly loyal and patriotic speech. This was followed by the National Anthem, and then Mr. Alfred Jardine introduced the toast of the evening, “Success to the Gresham Angling Society.” In a very able and practical address he referred to the auspicious commencement of the society, which had really become a City enterprise, and was regarded by the citizens as a great event, who now looked upon it as a City institution. In the short space of three months it had grown to larger dimensions than older societies of forty years’ standing, and as there were some young men amongst them he hoped in time they would have better experiences in fishing than he had had, and that was not offering them a bad wish. As an angling society they would actually feel interested in promoting its prosperity, and they would not forget the claims which the Thames Angling Preservation Society, as a City association, had upon them. They should give it their liberal support, and in doing that there would, in such an union, be common interest between them. He thought their early consideration should be to encourage the conservation of the river Thames. He was glad to find in their rules that the sizes of fish were of a good standard, and that there were signs of doing away with gross weight competitions. It was far better to offer prizes for large fish, as the anglers would then return back to the river the small ones and only retain about half a dozen of the best. It would do good to the river, and save the unnecessary distribution of the finny tribe. Mr. Jardine’s remarks were listened to with great attention; they were frequently warmly applauded, and he concluded by asking those present to drink success to the society as heartily as they could, which was promptly and vociferously obeyed. The Chairman proposed the toast of “Anglers and Angling Societies,” remarking that angling was an old art, and humorously referred to the two signs in the zodiac, of fishes and scales, having something to do with anglers. As regards the anglers, they were, as a rule, men possessed with the virtue of patience—an angler loved the

quietude of his sport, and he was altogether a wise and contemplative being. They had amongst them men of literature and science, and angling was conducive not only to art, but to common welfare. After referring the advantages to be derived from anglers combining into societies, he coupled with the toast the name of Mr. W. H. Brougham, who would then address them, and he believed there was also a representative from the West Central Association. Mr. W. H. Brougham observed that the toast he had the pleasure to respond to was of a very comprehensive character, inasmuch as it enhanced an aggregate of something like 12,000 London anglers and 140 angling clubs. He considered in looking after the small fish of the Thames, which were designated as “Brougham’s Babies,” he had a numerous family under his charge, but now he had in addition that evening the position of representing an immense shoal of full-grown sizeable anglers. He had from boyhood been an angler, and a successful day’s perch fishing had stamped his determination to continue a piscator. Although he had little time now to angle, he had a large amount of time to give in the interests of angling, and he hoped to labour as hard as he could for the anglers to the end of his life. He contrasted the anglers of 21 years ago with those of the present day—there was now a grand change in the direction of true sport, and he could not help thinking they were largely indebted to the Central Associations for it, as they had laid down a standard for the sizes of fish to be adopted by all clubs affiliated to them, and that standard had been approved by the Thames Angling Preservation Society, and he hoped would soon be embodied in the Thames bye-laws. In conclusion he thanked the Gresham Angling Society for the honour they had done him in electing him as an honorary member of the club, and any assistance or service he could render them would be willingly given. Mr. W. Beckett, of the West Central Association, also replied, and expressed the pleasure he felt that the bank anglers had not been forgotten on that occasion in remarks made by previous speakers, as his association represented the great bulk of anglers who fished from the banks. Mr. S. C. Harding, in giving “The Press,” regarded it as a mighty engine in the political and social machinery of the world, and they were all closely identified with it. He then humorously strung together the names of some of the leading newspapers, and afterwards spoke of the immensity of the work employed in getting up one daily paper with articles, paragraphs, reports, and such like, concluding a skilful and energetic speech by coupling with the toast the name of Mr. J. P. Wheeldon.—Mr. Wheeldon suitably replied.—The only other toasts were “the Chairman,” which was proposed by Mr. Alfred Jardine, and “the Visitors.” Mr. C. J. Winterbottom presided at the pianoforte—there was some capital singing by Messrs. A. Jardine, J. P. Wheeldon, J. C. Harding, W. Firkins, and Bokenshaw, and J. E. Aveling sang with good taste the song of “Welcome Anglers,” which was composed by Mr. T. Crumpton specially for the occasion. Mr. Harker ably discharged the duties of toastmaster, and thus the inaugural dinner was a manifest success.

WELCOME ANGLERS.

Sung by C. E. Aveling.

Words by T. Crumplen.

Welcome, Anglers! welcome, all!
It is a gladsome sight
To see the many happy friends
Who grace our board to-night.
Though some may yet prefer the chase,
Or other sports, may be,
Let those who like them have their way—
An Angler’s life for me!
An Angler’s life, an Angler’s life,
An Angler’s life for me!

In rosy morn we find him
 As at the close of day,
 Where the rippling stream or river
 Pursues its peaceful way;
 There nestled in, 'twixt thorn and flow'r,
 True type of man is he
 Who plods in sunshine and in show'r—
 An Angler's life for me!
 An Angler's life, an Angler's life,
 An Angler's life for me!

Then, silent, musing, rod in hand,
 Dame Nature seems to tell
 Her secrets, till the Angler's mind
 Is bound as by a spell;
 Yet still, with no uncertain eye,
 But deftly as can be,
 He'll watch the quill, or throw the fly—
 An angler's life for me!
 An Angler's life, an Angler's life,
 An Angler's life for me!

THE RIVER WHARFE.

BY FRANCIS M. WALBRAN.

THERE are few districts in the north of Yorkshire, or indeed throughout the whole of it, that can boast of more varied or picturesque scenery than is to be found in Wharfedale, and doubtless many of my readers have read accounts of its beauties written by far abler pens than mine; or perchance may have thrown the mimic fly upon the surface of its rippling streams, or at some time or other yielded to the entreaties of certain members of the fair sex, and in their company explored the many pleasant glades and shady nooks of Bolton Woods in the sweet summer time. It is not my intention now, however, to enter into the merits of such delights, though I by no means despise them, and have, apart from my fly-rod, spent many such happy days in the district; but my object in writing this article is to afford information to those anglers who are strangers to this pleasant Yorkshire valley, and who may wish to pay it a visit during the present season.

The river Wharfe owes its source to two small streams which rise in the north-west moors of Yorkshire, and which unite near the village of Kilnsey; these two streams would both of them yield excellent trout-fishing, but for the incessant poaching that is carried on between the village just named, and Kettlewell a place higher up the stream; at Kilnsey, however, an excellent angling club has been established through whose energy and perseverance, poaching has been effectually put a stop to on their portion of the river, and has caused it to be considered the best trout-water in Wharfedale, or, in fact, in the county. The number of members is limited, I believe, to thirty, annual subscription £4 4s., but strangers who take up their quarters at the Tennant's Arms, are allowed to fish the club waters on payment of 5s. per day. The inn is a well appointed one, and, providing that the angler meets with decent weather and the water in good order, I do not think he will complain about lack of sport, if he can handle a fly-rod at all. There are no grayling in the Kilnsey water. I believe that an attempt was made some years ago to introduce them, but was unsuccessful, whether from the nature of the stream, or some other cause, I cannot say; however, I do not consider that the members of the club need regret the failure of their experiment, as I feel confident, from long and careful observations that I have had the opportunity of making on the river Yore, that where grayling predominate the trout as surely decrease. The river next flows past the villages of Grassington, and Burnsall, at the latter place another angling association has been formed, which preserves a fine stretch of water. Here grayling abound and attain a good size, so that the fly-fisher has variety in his sport, though his pannier at the close of the day may not contain as many trout as it perhaps might do on the Kilnsey length. The day tickets on the Burnsall water are issued

by the landlord of the Red Lion Inn, at a charge of 2s. 6d. per day, the secretary of the club being Mr. C. J. Critchley, of Ilkley, who will readily supply any further information respecting the rules, &c.

We next approach what is justly considered the most beautiful portion of Wharfedale, viz., Barden Tower, Bolton Woods, and the far famed ruins of Bolton Abbey. One of the many delights that are known to the fly-fisher is the beautiful English scenery that his favourite sport leads him to, and here indeed he will find it in all its varying forms, for I can say without fear of contradiction that there are few beauty spots in England that can rival Bolton Woods viewed in early spring, when the tender green buds are bursting into life, and its many dells and coppices are resonant with the twittering of feathered songsters; when the mossy banks are stellated with clusters of primroses, wood anemones, and violets, and when the river, swollen by recent rains, thunders over the moss clad rocks, the whole force of its current rushing through a narrow passage about four feet in width, where, in days gone by, tradition states that young Romilly, the "Boy of Egremont" met with an untimely death whilst attempting to leap the chasm with a leash of hounds:

"He sprang in glee, for what cared he
 That the river was strong, and the rocks were steep?
 But the greyhounds in the leash hung back,
 And checked him in his leap.
 The boy is in the arms of Wharfe,
 And strangled by a merciless force;
 For never more was young Romilly seen
 Till he rose a lifeless corse."

This dangerous point in the river is named the Strid, which, I suppose, is a corruption of the word stride, and even now may be found persons who are fool-hardy enough to attempt the feat, though they must be aware that a single false step means sudden death.

Very beautiful, again, it appears in the full glory of midsummer, when the banks of the stream are clothed in thick foliage, and the stately fox-glove rears his head among the tangled masses of bracken and ferns. Then the cool shade of its many glades forms a pleasant resting place for the tired angler, who perchance has been wading up stream all day in the heat of the sun, fishing with the little red worm on drawn gut in the diminished streams. Many a pleasant day has been spent by me in this delightful district, and I trust that many others are in store. Permission to fish in this portion of the river, viz., from Bolton Bridge to Barden Tower may be obtained by staying at the Devonshire Arms. The trout are pretty numerous, but, owing to the fact that the river about here is very hard fished, they are very shy and require the most delicate of casts and a light hand in throwing it. From Bolton Bridge down to Ilkley, known as being a fashionable resort for hydropaths, the river is preserved by the various landed proprietors, from whom permission is somewhat difficult to obtain. Below Ilkley Bridge are a succession of fine streams, to fish which tickets may be obtained from Mr. Kendall, landlord of the Rose and Crown Hotel, at a charge of 2s. 6d. per day; here also, as on the Bolton water, the fish are very wary, but at times some capital dishes are brought to bank, chiefly, however, by local experts, many of whom reside in the district. A stretch of preserved water again intervenes between the end of the Ilkley length and the market town of Otley; here the premier angling club of the Wharfe exists, secretary and treasurer, Mr. R. M. Pratt, who is most indefatigable in his exertions to maintain the welfare of the club, and is indeed well worthy of the respect and esteem in which he is held by his brother anglers. This club is, I believe, limited to thirty members, and they only are allowed to fish, no day tickets being issued; the rules, too, are strict, no wading being allowed before June, and several other restrictions; however, in

the end the members reap the benefit, and I wish with all my heart, that the same rules could be enforced on several other of our Yorkshire streams that I could name. This club's water extends to the village of Arthington, but at that place tickets are also issued by the landlord of the inn at rs. per day, and the river consequently being fished incessantly, little is to be done, even by a skilled angler, unless it be either in a coloured water or on a very favourable day.

The cream of the fishing ends here, although there are some fine streams near Harewood and Collingham, but the river is preserved by the Earl of Harewood and other riparian owners. I believe that a Leeds club known as the Rockingham Angling Society rents a length of water somewhere near Collingham, but am unacquainted with the precise locality. Mr. Hellawell, a member of this club, caught a splendid specimen of a river trout about two years ago, it weighed close on 4 lb., which is an extraordinary size for the Wharfe. The flies that kill the best, are those made hackle-wise, and a very skilful maker of them is Mr. Brumfitt, of Otley, who is also a thoroughly practical fly-fisher; Mr. J. G. Eaton's flies also answer well on this river, as I can testify to from experience.

In the upper portions of the valley, the tourist angler will find the peasants very hospitable, and at the various inns named he will meet with the best of Yorkshire fare, coupled with the utmost civility and attention, so that I think any angler who pays a visit to the Wharfe will be likely to repeat it, and will bear away with him many pleasant recollections of the happy hours spent upon its banks.

[Having very pleasant memories of fishing on the Yore and Swale, we can strongly recommend these fine streams to the notice of our readers. The scenery in Wensley-dale on the Yore is delightful, and the fishing very good.—ED.]

THE ARMY OF ANGLERS.

IN view of the approaching conflict between the army of anglers and the finny tribe, it is as well to notice the advance of the gallant band of piscators who are now occupying every portion of the area of the great metropolis and its suburbs. The very centre of the city is now occupied by a noble force, having its head-quarters in the vicinity of the Bank of England, with a company of something like 140 good and true disciples of the rod. Everywhere are new companies springing up, bearing different designations, under well-known leaders, until we find the present strength estimated at twelve thousand skilled anglers, with something like one hundred and forty head-quarters, extending to Richmond on the west, Walthamstow on the east, Camberwell on the south, and Haverstock Hill on the north, meeting regularly once, and some twice a week, under the discipline and guidance of three grand Central Associations, that of the West Central possessing such pioneers as Messrs. P. Geen, Leo Bonvoison, W. Beckett, J. Murphy, and Thomas Hoole. That of the East Central with Messrs. S. Morgan and R. Ghurney, and that of the Central with Messrs. F. C. Hatfield, J. C. Murray, and R. Stebbings. These associations have made capital arrangements for the transit of members of clubs affiliated with them on the following railways:—Great Eastern, Great Northern, Great Western, London and North-Western, London and South-Western, and Midland Railways, whose concessions have been most liberally given. Thus their action of operation is by no means confined to the neighbourhood of London. Mr. W. Birt, the general manager of the Great Eastern Railway, has evidenced his attachment to the anglers, by giving them facilities to get to Yarmouth, Lowestoft, and Wroxham, in close proximity to the fish farms of Norfolk and Suffolk; and Mr. Henry Oakley, the general man-

ager of the Great Northern Railway, who is himself an angler, has given full proof of his desire to support the interests of the anglers, by opening out facilities for getting to the Ouse and other rivers, and of acquiring the best possible information of suitable places to visit. The recent National Fisheries Exhibition at Norwich has given some considerable proof of the great interest taken in angling as a national sport, and in this the anglers are greatly indebted to Mr. Edward Birkbeck, M.P., for making it to occupy so noble a position under the patronage of their Royal Highnesses the Prince and Princess of Wales. In the neighbourhood of the Thames, the Windsor Association is under the patronage of His Royal Highness Prince Christian, and the Richmond Piscatorial Society, that of His Serene Highness the Duke of Teck. It may naturally be expected to find the Royal patronage extended to other societies and associations. At the present time, in preparation for the coming sixteenth of June, the anglers are busily engaged in looking over their fishing material and equipments, and the fishing tackle shops are in great request, supplying what is necessary to make a glorious start when the war begins. On reading over the notices of angling requirements exhibited at Norwich, there is a great variety of valuable improvements, commencing with the spring plummet, which has been favourably considered by Messrs. Alfred Jardine and H. L. Rolfe, two of our leading anglers, to others of a higher degree of development in other useful departments. The anglers, as a body of men, are far superior to the general craft of anglers from ten to twenty years ago. They are better trained—possessing greater skill—and having a more merciful view of the sport of angling. The clubs, from their affiliation with the Central Associations, have now one adopted scale of the sizes of fish, and there is no recognition of the weighing-in of unsizable fish. The war against the fish is, as a rule, made perfectly honourable, and the Thames Angling Preservation Society, with its junior associations at Windsor, Maidenhead, Reading, Great Marlow, and other places, are ready to defend and protect the fish from any unsportsmanlike and illegal attacks. There is a movement now afloat in the legislative assembly of this country, to declare war against the fish all the year round, and we shall, no doubt, have some opinions expressed upon it in the columns of THE FISHING GAZETTE. It will not affect this season's angling, as it is quite improbable any alteration in the Freshwater Fishery Act of 1878 will be made in the present session, and it will then give plenty of time for ventilation. What I have more to do with now, is the operations of the army of anglers in the coming season. The time is fast approaching, and the clubs are making arrangements for opening the campaign with competitions for the first available day of the season. As far as I can ascertain, the club competitions this season will be of a more comprehensive character. Some of the clubs have more than doubled the number of their competitions, and there is evidently a great going forward of anglers. It would not surprise me at all if there are competitions for special prizes in the Norfolk Broads, and in the river Ouse, amongst the members of London angling clubs, as the facilities are now so great for getting to each destination. To meet the movements of the large army of anglers now surrounding the metropolis, there must of necessity be other rivers than the Thames, the Lea, the Colne, and the Arun; and the action of the Central Associations, in obtaining railway concessions has been a grand step in other directions out of London, which are not so largely attacked as the rivers I have mentioned. The war will soon begin in our metropolitan rivers, and the columns of THE FISHING GAZETTE will, as usual, weekly chronicle the list of killed, as given by its numerous correspondents. I heartily wish great success to the anglers, and may they catch plenty of good fish!

B.

ANGLING IN NORTH LINCOLNSHIRE.

I BELIEVE it is little known what excellent fishing is to be obtained in the north of, or rather north-east of, Lincolnshire. I had surprised some of my friends, aye, Lincolnshire ones, too, by telling them that the Prince of Wales, when down here, expressed a wish to taste the Bain trout, a stream in north-east Lincolnshire. But my experience leads me to treat of the sport to be secured in the stream which takes its rise in the neighbourhood of Horncastle, flowing into the sea below Tetney-in-the-Marsh, of which marsh Camden wrote in his day, "Good Heavens, what store of fowl and fish are there here!" This stream, after wending its circuitous way through the parishes of Thoresway, Orford, Binbrooke, passes through my uncle's grounds, by my father's residence, on through Thorganby, Croxby, Hatcliffe, Barnoldby, Brigsley, Waithe, till it empties its beautiful waters into the sea. On the banks of this enchanting rivulet, which I believe is nameless, now gliding smoothly, now foaming through most beautiful English scenery, have both my father and myself, and other brother anglers, spent many a refreshing day. The trout, on an average, run to the size of half a pound and above if anything; personally I have landed several over a pound. Some years ago my father creeled one weighing three pounds and a few ounces. It was within a few yards of the place where my father had to exert his skill in securing his big fish, that I met Mr. Ford on the Saturday before last Easter Sunday. I was compelled, through circumstances, to fish with a light trolling rod, the result being that I only managed to take a brace from their watery element, in order to restore them as soon as possible. But I could not agree with Mr. Ford, when he remarked that one ought to go to Yorkshire for trout fishing; and I think, by his note in the last number of the FISHING GAZETTE, that he is changing his mind, as I have no doubt that the stream Mr. Ford mentions is the one I am writing about. My diary for last year shows a produce of twenty-four brace in five weeks, and I must have put ten brace back again, and it was last year, not two hundred yards from where I met Mr. Ford, that I captured my biggest fish of the season, namely, a pound and a half, well fed and proportioned. As I admired him on the young green grass, the lines of Walton, or Cotton, is it? came forcibly to mind:—

"The jealous trout, that low did lie,
Rose at a well-dissembled fly."

Our stream is a late one, and the contemplative man need not think of his recreative sport before the beginning of April, and he will find the following flies suffice for the season—the March brown, green drake, stonefly, alder, professor, and last, but not least efficient, the bracken clock. But it is not with the fly that the largest fish are to be caught here, but with the minnow and stickleback, of which my father can give accounts of most successful creels. In the village of Croxby, through which the stream passes is some of the finest carp, fishing to be had. But let no man go who has not the very best of tempers. My father endeavoured to catch one in the following manner, after wasting his patience in other ways. He fastened a weight to the end of his line and from the weight upwards attached several treble hooks to the line, casting it over the carp, which can be seen in numbers and size astounding. Having managed to hook one, away went the cold-blooded creature like a dart to the middle of the pond, with the result that the line came whizzing back into my father's face. Here also can perch be creeled, and formerly the physician of fishes. Where they have disappeared to I cannot say. I must not forget to mention that magnificent silver eels are to be easily enticed from the bed of the above-mentioned trout stream. In my uncle's pond I have caught with the green drake any amount of roach, one weighing a pound and a half, the teeth of which I now have. We have also in the blow wells of Tetney and

North Thoresby, some very fine pike. It is said nobody has been able to find the bottom of these blow-wells, their formation being the result of the water from the wolds forcing its way through the earth, and I say beware how you approach these haunts of the mighty *Esox lucius*. I was at Tetney last January, when a gentleman from Grimsby had got the wind of me. I learned afterwards he had managed two fish, weighing fourteen pounds.

R. ALINGTON.

[If Mr. A.'s respected parent fishes in such a poaching manner for carp, he ought to expect to get the hooks in his face.—ED.]

THE "BELL'S LIFE" SPINNER.

IN our notice of Mr. Bambridge's variation of this very killing spinner for trout, &c., we spoke of it as the "Bell's Life" spinner. As the rotary motion is given by the "split" tail, known very many years since as the "Archimedean" which gives quite a distinct style of spin to that of Alfred's "Bell's Life" spinner, we would suggest that Mr. Bambridge should give another name to his bait, so as to prevent confusion. We ought to have mentioned that the "Archimedean" tail, though giving a very perfect spin, is no improvement on the bent tail of Mr. Alfred's "Bell's Life" spinner, which we noticed so favourably when it appeared.

THE HOME OF THE TROUT.

Huge boles and mighty arms and jagged roots
That claw-like clutch the hollow bank whence shoots
The agile trout; a marvel of deep shade,
From leaves more thick than Vallombrosa's glade—
Lush undergrowth—the blue forget-me-not,
The hyacinth and foxglove, in this grot
Of dreamy woodland.

Through it, like a beam
Of molten silver in the fitful gleam
Of fretted sunlight, runs the rivulet,
With prattle as a child—from care and fret
Entirely free. Its gurgling, plashing, clear,
Impetuous water wantons far and near
With every stone and plant, and forward goes
To placid pools and peacefuller repose.

Tread softly, parting the thick branches—see!
Yon spotted beauty speeding fluently
With easeful motion. How with brilliant eye—
A water jewel—he, afar or nigh,
The gauze-winged insect floating softly down
Perceives at once and marks it for his own!
How with swift sweep of body does he turn,
And admiration of his glories earn!
The silver-belly and blood-spotted sides
Reveal their glories as he, turning, glides.

Oh! happy trout, thus deeply bowered 'mid
Thy shade-loved waters; far from turmoil; hid
Where never earthly turmoil comes to mar
The peaceful stream, and naught but pleasures are,
Repairing to the calm of vale or grot,
Fain would we change with thee thy quiet lot.

CREON.

MESSRS. SAMUEL ALLCOCK AND Co., the well-known fishing-tackle, &c., manufacturers, of Redditch, have just been awarded the first degree of merit at the Melbourne Exhibition for general exhibits of fishing materials. A special extra diploma and gold medal has also been awarded to the same firm at the Norwich Fisheries Exhibition for their collection of sea and river fish-hooks, and for inventions and improvements effected in the same article.

GEORGE JAMES EATON, of Starkholmes Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[ADVT.]

RIVER REPORTS.

Thames (Windsor).

Water has been low and bright this last week, with hot sun. Mid-day fishing is not up to much—morning and evening being the best, though several good fish have been seen feeding mid-day, notably at Datchet (the Image Swim) and the reaches in the Windsor waters. Two small fish have been had—one by James Gray, 1 lb. 11 oz., and a 2 lb. fish, by Mr. Marsh, in the Windsor Weir stream. Barbel have been showing up strong, and shall expect a good season with them, also chub, roach and jack.—B. R. BAMBRIDGE.

Colne (Thorney Broad).

Water in first-class order for angling. Every prospect of good sport during the coming week with the trout, dace, perch and tench. Only a few anglers have been out this week, most of them taking dace. One or two trout have been hooked and lost. Our roach have done spawning, and the chub are beginning to come up.—E. GODFREY.

Coquet (Northumberland).

On the 27th, Mr. Bewing, New Hampton, killed 9 lb. of trout, Mr. Dixon, Newcastle, 8 lb.; Mr. Brown and a friend, Lemington-on-Tyne, killed 5 dozen and two, 1 trout, 1½ lb., all with partridge hackle, and orange body; on the Friday and Saturday little was done, the river small, and bright sun, and the trout not yet into the shades. On 30th, Mr. J. Short, South Shields, killed 6 lb. 1 trout 1½ lb. With worm, fishing up stream, there have been a few good trout killed in the shade with minnow. When I was packing Mr. Bowling's trout, for New Hampton, Mr. Baumaker, the water bailiff came in and saw them, he said it was the best creel that he had seen this year; he counted the trout, and there were 29, weight 9 lb.—A. GLASS.

Dove (Derbyshire).

This has been another splendid angling week, weather, wind, and water being all that could be desired. Trout have been rising madly at the myriads of flies now out on the water. The May fly will be in fully next week. I hear of a grand take of pike some distance below Rochester with the artificial spinning bait. The fish caught scaled no less than 38½ lb. Some capital dishes of fish have been killed with the alder and cinnamon flies. Four and a half brace were secured in the tributary, Henmore, and the baskets at Rochester, Uttoxeter, Mayfield, Ashbourne, and Ilam have averaged quite three brace each. The worm-fishers have been killing plenty of good fish, and dibbing under the bushes has been found very remunerative, the blue-bottle fly being the attraction. I think we shall have great sport during Whit-week.—THE SPODGER.

Exe (Tiverton).

The river is extremely low and bright. Nothing is being done in the day. Toward evening and at dusk fish sport very well for a short time. Flies killing best—small blue upright, black gnat, yellow, May dun, and ostrich Palmer.—WILLIAM MUDFORD.

Ilfracombe (N. Devon).

The streams in the neighbourhood of Ilfracombe are still very low. No one cares about angling. Any one in want of a mess of trout gets to a chosen spot in the early morning and helps himself to a dozen or two by groping. We have had some good catches of bass since my last report. One man caught 250 lb. in four hours—viz., 150 lb. in two hours in the evening tide, and 100 lb. in two hours in the morning tide. These fish are generally caught when the tide is running strong, either ebb or flood. When there is no wind to sail one man has to paddle the boat against the tide, and the other works with two lines over the stern of the boat. In this way the 250 lb. was caught in the time mentioned above. I do not like to mention the fishermen's names as there are several looking for a job, but if any one would like to try their hand at bass fishing, and will write to me I will put them in the hands of a good fisherman.—HENRY COMER.

Kennet and Lamborne.

The committee of the Newbury Angling Association are doing their best to provide sport in this as in past seasons. There are plenty of nice trout in the Lamborne stream, and one gentleman—Mr. Morgan, of Maidenhead—has already hooked more than fifty brace. The prospects of general fishing in the Kennet, also under the control of the association, are spoken of as being most satisfactory.—GEO. COSBURN.

Lea (Cook's Ferry).

During the fence season, the waters in this district have been watched by A. M. Stephens, the bailiff of the river, together with the members of the Edmonton and Tottenham fishing club, during the time has displayed great activity in guarding the waters. Mr. Collyer, Mr. Monro, Mr. Money, Mr. Sellwood, and Mr. Hasler, and others taking their turn going in from Cook's Ferry to Lea Bridge, and from Cook's Ferry to Hernford both night and day. Notwithstanding this, not a single case have they seen during the whole time, therefore anglers are deeply indebted to these gentlemen for services rendered and they all say that the waters are full of fish, and as the season opens on the 16th day of June, lovers of the sport will do well to see to their tackle.

Anglers who visit us will get a hearty welcome, and find that down here we make a deep study of the three C's—cleanliness, civility, and comfort.—S. SEWELL.

Loch Awe.

Visitors are having rather better sport since a few days ago. To-day a gentleman, staying at the above hotel, succeeded in landing a fine trout, which weighed 3½ lb. Better sport is anticipated.—W. P. CAMERON.

Swale.

The poisoning of fish in the River Swale by the refuse from the paper mills reported by my friend Mr. Walbran is no new thing, fortunately it does not affect the best part of the fishing which is above Richmond. Tourists should take note of the fact that the fishing below Reeth, and above Gunnerside remains similar to what it was before the bursting of Moss Dam. Between these places it is impoverished. The stonefly (mayfly) is now out in fair force, and little will be done with the small flies until the glut is over. This fly is better fished naturally with two hooks, Nos. 4 or 5 long shank, and 2 or 3 ordinary hook. The larger hook is passed through the body and out of the tail, while the shorter is merely run through the head. A long collar of 3 or 4 yards should be used, and the fly is allowed to float naturally down the stream. If the angler keeps out of sight, and there are fish, it won't travel far before it is gulped up by Master Trout. When this is over the datterel flies will be abundant.—THOMAS FORD.

Wandle (Hackbridge).

On the 1st of May, the opening day of the season, 30 brace of trout fell victims to the artful dodgers that visit the open water at the bridge and plenty of good-conditioned fish, varying from 2½ to 2 lb. each, have been taken since. The black gnat and hare's ear did the most mischief. On Sunday morning last heavy rain fell during the early morning, discolouring the water for a short time. The fish would not look at a fly, but with an artificial quill minnow I secured a brace and a half of splendid fish, 2, 1½, and 1¼ lb. each, much to the astonishment of some of the locals. If any of your readers require a cheap, well-balanced and highly-finished rod of any description, they cannot do better than try Mr. S. Biggs's establishment, at 33, Russell Street, Covent Garden. I purchased a fly-rod from him a few days ago, which, for workmanship and balance cannot be surpassed. His flies and other tackle are of a very superior description, and cannot fail to give satisfaction.—RENURT.

Wye and Derwent (Derbyshire).

As I anticipated in my last week's report that if rain only fell good sport was certain to follow. We had a nice fresh come down in both rivers on Friday evening which stirred the fish up and set them well on the feed at both top and bottom, and I can only say that I don't remember more fish being killed in my life than were taken last Saturday and Monday bottom fishing, and a very great number being killed with the fly; in fact, they were a couple of red letter days to those anglers who were fortunate enough to be out fishing. Baskets from 12 to 14½ and 20 brace per angler were made on various parts of the Derwent, and some very handsome young trout were amongst them. The greatest quantity of fish were killed off of the Darley Dale Club waters, which I am pleased to say is very full of fish just now, in fact I have never seen anything like the quantity of fish in this part of the river for the past twenty years. My opinion is that the great quantity of fish that are now in the Darley water have come from the Bradford through the bursting of the bank of that stream, and have come down the Lath Hill into the Darley water. The Bradford is always well stocked with large quantities of good-sized trout. Fly fishing of an evening is now first-class. The "yellows" are generally on the water from seven to nine p.m., and the fish rising very freely at them. The green drake is now out on most of our rivers, and a few fish have already been killed with them. Dabbling with the natural flies has been followed with first-class results in the middle of the day, with the following flies:—Blue bottle down looked, soldier and sailor flies. Several ground fish have been killed chiefly off of the Darley and Chatsworth Club waters. Angling prospects are looking first-class for the Whitsuntide holiday piscators. Sport on both the brooks and ponds has been very good during the week. The tight-line party about Matlock have taken some large trout and eels on their lines during the past week.—GEORGE JAMES EATON.

Yore (Yorkshire).

Not a drop of rain has fallen since my last report, and the rivers are consequently getting very low. There is very little to be done during the day-time, but a few fair fish have been taken in the evening and early morning by the local hands, the best lure proving to be the stone fly (fished natural) and the minnow; the latter spun up stream on the finest tackle obtainable. A good downpour is greatly wanted before first-rate sport can be expected.—FRANCIS M. WALBRAN.

ANGLERS should always be provided with something to take away the swelling and poisonous effect of the bites of insects. They should also have with them something to apply to a cut or sprain. Pond's Extract reduces the swelling and inflammation, stops bleeding and pain, and hastens the healing process in case of any wound or sprain; and it has no equal for application to the bites and stings of insects. Therefore never go on a fishing excursion unprovided with a bottle of Pond's Extract. It is for sale at all chemists, at 2s. 3d., 4s. 6d., and 8s. 6d. per bottle.—[ADVERTISEMENT.]

GREGORY'S SPINNING BAITS.—"The Gregory," the "Flexible Cleopatra," the "Oxford" and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Alcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived. Address, James Gregory, Vyse-street, Birmingham.—[ADVT.]

TO ANGLERS.—W. J. Cummins, Fishing Tackle Maker, Bishop Auckland, is now prepared to forward to anglers his Illustrated Catalogue, which is not only a Trade List but is interspersed with practical hints, useful directions, and valuable information gathered by the river-side from twenty years' experience. The stock consists of his unrivalled Salmon, Trout, Grayling, and Pike Rods, Lines, Reels, Baskets, Artificial Baits, Fly-books, Landing Nets, Gaffs, and last, but not least, his celebrated Trout Flies, which for killing powers stand unequalled. Every article kept in stock is of the very best description.—[ADVT.]

" "	Yarrell; Brh. Fishes. Vol. i., p. 51.
" "	Gunther; Cat. Brh. Musm. Vol. ii., p. 208.

THE Piper, according to Couch, is but little known in the north of England, and is not numbered among the fishes in the north of Scotland. It occurs in Ireland; but, according to Mr. Thomson, of Belfast, with some uncertainty, except in the south and west parts. The Earl of Enniskillen informs us, he has never seen it in the north. It is far from rare, however, on the coasts of the west counties of England, except in winter time, when it appears to seek shelter in the deeper waters, or perhaps migrating further to the south. It seems to be more plentiful in the Mediterranean than in Britain. It resembles the tub-fish, but is in rather greater estimation for the table. The colour of the head, back, and sides brilliant pink, or scarlet, faint, and nearly white on the belly. Pectoral fins, the dorsals, and tail, more or less red, ventrals and anal tinged with red.

Mr. Frank Buckland, in his History of British Fishes, page 14, states that in November, 1871, Mr. Frank Gosden, of Exeter, presented me with a very handsome specimen of the piper, which is now in my museum, &c., &c.; and that it is said to obtain its name from being somewhat the shape of an ancient musical instrument, or from the peculiar noise it makes when taken out of the water. Upon receiving the above fish, Mr. Buckland writes to say the *Trigla lyra* safely to hand, for which he is exceedingly obliged, and that he intends taking the same to the opening soirée of the aquariums at the Crystal Palace, the following day, to lecture upon.

This piper I received, with numerous other kinds of fish then in season, from Brixham, which had been brought in from Torbay. And although Mr. Parfitt tells us that they are common, and in season in January February, August and December, I never saw so handsome a specimen, either before or since; and from the position it now occupies in the Piscicultural Museum, South Kensington, London, perhaps it was one that retained its brilliant colours very much longer than these fish generally do, although as a rule, the piper retains its brilliancy some time after leaving its native element, the sea.

FRANK GOSDEN.

(To be continued.)

WHY CHUB GIVE UP STRUGGLING SO SOON.

Has it ever struck my brother anglers why this is the case; why, after a few tremendous rushes, the chub throws up the sponge as it were, and is capable of being incautiously bagged, without let or hindrance? I dare say it has been determined before, but this is the solution, as it seems to me. The chub is invariably hooked in the top lip or in the roof of the mouth. Few will deny this—why it should be so I cannot say offhand. This being so, here, in the words of Sir Humphrey Davy in "Salmenia," is the explanation: "When a fish is hooked in the upper part of the mouth, by the

strength of the rod applied as a lever to the line, it is scarcely possible for him to open the gills as long as this force is exerted, particularly when he is moving in a rapid stream. Hence the chub is suffocated, or, in other words, is in danger of dying from want of breath." I recollect hooking a 3 lb. chub in the side of the mouth (last season), and he gave me as much trouble as a 10 lb. trout on my fine Nottingham line.—J. HARRINGTON KEENE.

DO TROUT TRY TO DROWN A FLY BEFORE TAKING IT?

I think they do, for this reason: if they rose at a very lively fly (of the *ephemeridae* especially), with open mouth, besides capturing the fly, a mouthful of air would pass over the gills, certainly producing a feeling akin to pain, or at least inconvenience, judging from the behaviour of fishes recently caught when on terra firma. The sudden splash with the tail on taking a fly has been observed by the American trout anglers, and a long correspondence was printed in "Fact and Stream" (U.S.) on the subject, some arguing that the tail struck at the fly for the purpose of knocking it into its mouth. I believe that a consensus of opinion established the theory that the fish purposely struck at the more volatile flies for the purpose of preventing their flight. Perhaps some of our fly-fishers can throw light on this matter.—J. HARRINGTON KEENE.

SNARING PIKE.

There can be no question as to the grossly unsportsmanlike character of snaring any fish with the old wire appliance, but as to its legality in Norwich I am unable to decide. This is how an old poet (vide Llewellyn's "Men Miracles," 1646), characterises such a proceeding—

He that searches pools and dikes,
Halters jack and strangles pikes,
Let him know though he think he wise is,
'Tis not sport, but an assizes.
Fish to hook, were the case disputed,
Are not took, but executed.

I should advise "A True Disciple of Izaak Walton," to communicate what he saw to a local Angling Society.—J. HARRINGTON KEENE.

NORTHERN NOTES.

By F. J. H.

FROM all accounts it appears that trout are to be had for the fetching up towards Top-lock, Duffield way. We saw a brace of beauties that had been caught by a boy only a few miles up the river Hull.

And a friend of ours gives a glowing account of the sport he had a few days since in the neighbourhood of Arran Beck.

From Market Weighton Canal comes news of occasional big takes. We heard of an official pulling a party up in this quarter, saying "Where did you get those fish you have in that bag?" "Bought 'em," says the party; "Bosh," says the official. "Very well," says the party, "good-day, I'm off." "Not so fast," says the man of law, "I must see what you have got and make a report of the matter." "Very well," says the party, "look!" The official party looked. They were six smoked bloaters.

ANGLING.

A REVERIE.

IT is early in July; the wind in the south-west. The morning opens bright and cheering, but shortly clouds gather and cast a gloom over the earth; the rain descends—a dashing summer shower. The angler starts for a day by the riverside; some with a foreboding of bad weather; not so he who has studied the

varying movements of the barometer. He knows that the storm will be of short duration. His anticipations, prompted by knowledge, are soon verified, for scarcely is the railway station reached when old Sol again shines forth, gladdening the hearts of all around. The journey by the train is a short one, and on the way to the river the attention of the angler is attracted by the beauty of the landscape, the variety of tints of the fields under cultivation, the fulness and beauty of the foliage, every tree having its own individual character; the song and passion of the birds; the sound of sheep and cattle; the buzz of insects, all proclaim the breathing, living universe. When lo! the river comes in sight; then what feelings move the breast of the angler! Pleasure, emulation, and hope. Arrived at the riverbank, he soon chooses his position. The tackle is adjusted, his hook baited, and he casts it forth, and seats himself on the grass to wait the attack. In the meantime, his attention is attracted by the beautiful reflections in the river, which find an echo in his own imagination. That beautiful river running on and on until it reaches the boundless ocean may be compared to man being carried down the stream of time, until he finds a haven in the realm of angels.

But to return to our angler, whose hopes are realised, by making a good basket. And now the shades of evening remind him that he must catch the train by which he determined to return home, and so he leaves the riverside a wiser and happier man, with hope for the future.

H. GRAY.

February, 1881.

TO SECRETARIES OF ANGLING CLUBS.

NOW that the angling season is so near, we beg to remind secretaries of angling clubs that we shall always be happy to insert their reports, and that we supply printed forms for the purpose gratis. Any secretary who has not got a supply can obtain them by sending an application, with name and address, to the editor of this paper, at 12, Fetter Lane, London. The reports should be written on one side of the paper only, and should reach the office on Thursday morning; for although we always endeavour to get all reports in that have arrived before going to press on Friday, it is not always possible. Angling clubs are increasing so fast, that we hope, before long, to increase the size of THE FISHING GAZETTE, or else publish them in a special supplement. From the many pleasant letters we constantly receive from the secretaries of clubs in London and the provinces, we are glad to see the GAZETTE is appreciated. We shall always endeavour to make it merit this support, and are now arranging for some special Club Notes, which will, we think, prove of great interest to our club friends. We look to the secretaries to support us heartily, and we trust they will always consider the GAZETTE as their own special paper, always ready to do all in its power for them, and the improvement of fair angling.

THAMES ANGLING PRESERVATION SOCIETY.

MR. EDWARD BIRKBECK, M.P., Chairman and promoter of the National Fisheries Exhibition at Norwich has consented to preside at the 43rd Annual Festival of this society, at the Star and Garter hotel, Richmond Hill, on Wednesday, the sixth of July.

SCOTCH FISHERIES' IMPROVEMENT ASSOCIATION.

WE have received the First Annual Report of the council of this most important association. It contains so many matters of general interest, that we must reserve it for a longer notice next week.

A BREACH OF THE SALMON FISHERIES ACT AT CHRISTCHURCH, HAMPSHIRE.

At the Petty Sessions held at Christchurch, on Monday (before Messrs. Farr, Dean, Entwistle, and Douglas, magistrates present), Samuel Butler, fisherman, and James Starks, and Edward Porter, two of his crew, were summoned for having, between 12 noon on the 21st of May, and 12 noon on the 23rd of May, namely, at 4.30 a.m. on the latter day, caught by a net, a salmon, contrary to the bye-laws of the Avon and Stour Fishery Conservators.—Mr. Trevanion, of Poole prosecuted and Mr. Bell, of Southampton defended. The evidence of P.C. John Harmsworth (water-bailiff), for the prosecution, went to show that he watched the defendants fishing with a 4-inch mesh net, and in drawing in the net, he saw Butler take out a salmon and kill it. He then went and demanded the fish, when defendants denied taking it, but despite the denial he (Harmsworth) went and took it out of a sack, into which he had seen Butler put it. Mr. Bell set up a defence to the effect that defendants were fishing for flounders, and contended that the license under which Butler claimed to fish did not state that salmon were not to be taken within the hours stated in the summons, but that it was an utterly unconditional license.—The Chairman (Mr. Farr) said that if the license did not state it, the Act of Parliament did, and every body ought to know the law of the country. The Bench had consulted, and were unanimous that defendants were guilty of an illegal act—of catching salmon in prohibited hours. They had decided to convict defendants, and they were each fined £2 10s., and 5s. costs each.

HULL PISCATORIAL SOCIETY.

THE fifth annual dinner in connection with the above society was held on Wednesday evening, 25th, at the Seven Stars Hotel, Fish Street. There was a very fair attendance of members, and a number of visitors representing other clubs. A capital dinner was put upon the table, with a fish course added to the menu. Mr. W. T. Robinson, the president, was in the chair, and Mr. Proctor occupied the vice-chair. The chairman was supported by Mr. Councillor Wilkinson and Mr. Councillor Tate. On the removal of the cloth the chairman rose and gave the usual loyal and patriotic toasts, which were responded to in the most hearty manner. The chairman gave the "Army, Navy, and Reserve Forces," coupling with that the name of Mr. F. J. Hamlyn. After a well-rendered song by Captain J. Holbrook, Mr. F. J. Hamlyn responded to the toast of the "Army, Navy, and Reserve Forces," remarking that he felt proud to have the honour of responding to the united services, which was well represented in the company assembled.

The Vice-Chairman proposed "The Mayor and Corporation of Hull," which was neatly responded to by Mr. Councillor Wilkinson. Mr. Wm. Hague, the secretary, then read the fifth Annual Report of the Committee. The committee in their report congratulate the members on the great success of the society, its increasing popularity, and its financial position. Twenty-four new members had been made during the week. After a general review of the club's work in the past, and some allusions to the close season as it affected the northern counties, the report went on to notice the very valuable prize given by the worthy president in the shape of a valuable solid silver cup, to become the property of the member who made the most points to end of season 1882. The report was received with very great enthusiasm, was signed by F. J. Hamlyn, chairman of the committee, and ordered to be printed.

The members were then informed of the intended benefit competition and excursion on the Ancholme, on the 15th August next, in aid of a very deserving institution known as the Hospital for Poor and Sick Children. This project was receiving much aid and support from all sources. Messrs. C. Sylkes, Esq., M.P.; W. H. Broadley, Esq., M.P.; C. James H. Wilson, Esq., M.P.; the Mayor (Alderman Leak), Colonel Smith, J.P.; Alderman Summers; Councillors Williamson, Greasley, Tate; Mr. Strattan, and a great many other influential gentleman having notified their willingness to become its patrons.

During the evening many other toasts were proposed and responded to. Mr. Vinson proposed "Success to the Hull Piscatorial Society," which was responded to by the chairman, whose remarks frequently drew great applause.

"Kindred Societies" was given by Mr. Cheeseman, and replied to by Mr. W. H. Barker, and supported by Mr. J. Jackson, of the Wilkinson Society. Mr. Wilkinson proposed "Town and Trade of Hull," which was well handled in a speech by Mr. Councillor Tate. Mr. Robert Jackson proposed the health of the visitors, which was responded to by Mr. Brown. After Mr. Hamlyn had proposed the health of the club's worthy host and treasurer, which was replied to in suitable terms by Mr. Willett, the chairman announced that the rest of the evening could be devoted to conviviality. Mr. Barker rendered a song entitled "The Land we Live in," Mr. Hamlyn "There is a Flower that Bloometh" and "All that Glitters is not Gold." The chairman drew applause by his rendering of "True till Death" and "Happy Moments." Songs were also sung by Messrs. Hague, Vinson, Durden, and several other gentlemen.

Altogether, the society may be congratulated on having made its fifth annual gathering a most pleasing and effective affair.—FRED. J. HAMLYN.

6, Engine Street, Hull.

[Many thanks for the notes. Will always be acceptable.—ED. F. G.]

"My Garden Wild" is the title of a new book, shortly to be published by Messrs. Chatto and Windus, from the pen of Mr. Francis George Heath. Its object is to show what a delightful pastime may be provided by "growing the commonest" wild flowers and ferns.

CORRESPONDENCE.

[We do not hold ourselves responsible for opinions expressed by our Correspondents.]

ANSWERS TO CORRESPONDENTS.

INQUISITIVE.—The book is out of print.

CRYSTAL HOOK.—Mealworms will live for months in meal. They are a capital bait for roach, dace, chub, &c.

J. E. T.—We advise you to use fine-drawn gut in preference to hair; it is much stronger and finer.

H. Y.—Spinning is decidedly the most sportsmanlike way.

PROPOSED AMENDMENT OF THE FRESHWATER FISHERIES ACT.

SIR,—Since the passing of the above Act, a number of letters have been written you, in which the writers have expressed themselves more or less strongly against the clause which makes it illegal to angle during the three fence months. You, sir, in last week's issue express your delight at being able to state that Mr. Stuart Wortley and Mr. Dodds have undertaken to bring a Bill into the House of Commons to amend the Act, with a view to legalise rod-fishing at all times.

It is well understood by most people that when ninety-nine are satisfied with an improvement, they will allow the one to give vent to his dissatisfaction to his heart's content, so long as little or no mischief is the result.

Unfortunately in this case mischief has resulted, which would have been prevented had the ninety-nine expressed their satisfaction as persistently as the one has his dissatisfaction.

Your correspondents, with one exception, have not claimed to express any other than their own opinions. The exception is a gentleman signing himself "H. E. G.," who claims to have spoken the opinions of a society. I do not desire to disguise the importance of his statements. He is a member of a society about nine miles west of London, on the banks of the Thames, and he deliberately states that he and his brother members are of opinion that the fence months are a mistake. Now, if it is true that a society, and such a one as is here directly pointed out, has discussed and arrived at the conclusion stated, why, then, sir, there will be some foundation for the charge which appeared in the *Echo*: "Anglers are never satisfied. They prevailed on Mr. Mundella to bring in a bill to institute a close time, and now the Act is in force they want to get rid of it. Piscators don't seem to know their own minds."

Nine miles west of London, on the Thames, is Richmond, and here we have the Richmond Piscatorialists, many of them, including their president, my personal friends. I will not go so far as to ask "H. E. G." to supply the names of all those who think as he does. I ask him, and challenge him, to produce one. When I learnt that "H. E. G." was none other than our friend the proprietor of the fishing-tackle shop on Richmond Bridge, I thought it proved over again the old saying that business cannot be entirely separated from pleasure. Our friend has a right to his opinion, but he has no right to state that his brother members think as he does until he has ascertained that such a statement would be true.

We have in London 130 angling societies. Are they a means or not by which we can arrive at the true opinions of London anglers? Is there amongst this large number a single society that will say that they disapprove of a three months' absolute close time?

I wonder very much that any one who presumes to speak with authority on this matter can have overlooked the fact that anglers, as a body, have thought out this question, and are fully determined that the foundation of the close time shall be a three months' quiet for all fish, with as much more as may be necessary for pike and perch.

Let me ask those who desire to fish all the year round what particular fish is in season or fit to take during April and May. Pike and perch have spawned, but surely you will let them get over it. Chub and roach are now on the spawning beds. You cannot desire to touch them. The bream have been into the backwaters to survey, and are expected to return in a day or two and complete their work. The barbel are full and will be sure to spawn early in June. The dace is the only fish, and if you fish for him with a fly the result will be chub, and if you try with a worm you will get roach. There is no fish but that will be the better for the quiet, and no true fisherman can possibly be the worse for this restraint on his desire to be amongst them.

You say, sir, that you would like to see the Norfolk and Suffolk Act extended to all England. Permit me to give you one or two facts as to the working of it in Norwich; and I hope the Norwich Piscatorialists will read and inwardly digest what I am about to say, as they not only do wrong, but they offer premiums for so doing, and they have the bad taste to send the results where all the world are invited to see that which should be pleasing and instructive and not that which is repulsive and beastly.

In company with four others I paid a visit to the Norwich Fisheries Exhibition on April 28th, and after admiring the many splendid exhibits, my attention was called to a large slab of fish. There were large roach bursting with spawn, and little roach, not longer than my finger, there were numbers of bream equally small, and a number of small rudd. These fish, we were informed were the result of prize competitions by the Norwich Piscatorialists on the previous day. Do the anglers of London and Sheffield desire to go a single step backwards to such practices as these; will they not rather say, as my companions did when they saw these fish, "Disgusting; shame, shame"?

We had conversations with several local piscators; one offered me a rod to go with him fishing. I am told that a similar compliment was paid J. P. W. when there as one of the judges, his answer was, "What, I go fishing in the fence months? No, no."

We have heard many reasons against the close time, but yours, sir, that it tends, and will have the effect of diminishing the size of fish is quite a novelty. I must confess, I cannot see how; unless it be caused by their loss of ground bait.

It reminds me of the arguments used by a few who were very partial to the retention of undersized fish. They said little fish breed little fish, and therefore it is the big 'uns that ought to go back. I need not say that full permission was given them to return the big 'uns.

I shall be very much disappointed if the anglers are not prepared to make a stout fight for the threatened clause. Should they lose it, the Act itself is worthless, as any one may then fish and have fish in his possession, and poachers cannot be prevented from taking advantage of circumstances so favourable to their vocation.

Those who must fish all the year round should go to Norwich, but let us

hope they will not again send the fish to any exhibition while unsound or full of spawn.

I am in receipt of letters by almost every post since the last FISHING GAZETTE appeared, not only from London anglers, but from the country, each and all inquiring, as did the respected president of the Stanley Angling Society, "Do anglers intend to allow the undoing of their one Act, which has cost so much, and which is doing so much good?" My answer has been, and will continue to be, decidedly not.—I am, &c., P. GEEN.

P.S.—Since posting you my opinions upon this subject I have received a number of other important letters, including one from the Right Hon. A. J. Mundella, M.P., and one from our old friend, M. T. W. Guest. Most of your readers will remember that this gentleman was chosen to represent his brother anglers of Sheffield, at the meeting at the Society of Arts Room, and to give evidence before the Committee of the House of Commons. Will you kindly allow this and Mr. Guest's letter to appear this week, as it will set at rest any fear or suspicion of Sheffield anglers wanting to fish all the year round. I am now in a position to state that we can and will prevent this attempt of a few to override the many.—P. GEEN.

[We fancy Mr. Geen somewhat over-estimates the esteem in which the Mundella Act as it stands is held by anglers. However, if it becomes clear that the general body of anglers are satisfied, we shall be glad to bow to their decision. No harm can come of ventilation of the question.—ED.]

DEAR MR. GEEN,—I am very much pleased at receiving a letter from you, as I was about writing you on the same subject. Our association know nothing about the matter. What I can make out is that during the last election Mr. Wortley was asked at a meeting if he would alter the Fishing Bill to let anglers fish all the year. He promised he would do so if returned, and I suppose is carrying out his promise. We hold our quarterly meeting to-morrow, and the question will be brought up. I am writing Mr. Wortley for particulars of his Bill, and will let you know further on the subject. I hope the London men are dead against any alteration, unless to make it stricter. My kind respects to Mrs. Geen, yourself, and friends.—Yours truly, THOS. W. GUEST.

11, Court, Broomhall Street, Sheffield, May 31st.

SIR,—You are quite right, rods ought never to have been interfered with, it was a mistake; anglers are not poachers. Have not the London Associations always had a close season? and for England generally, as you observe, the Local Boards could fence each kind of fish, according to their wants. We do not wish to angle for fish out of season; many have felt great annoyance by the suggestion. Now, take fly-fishing for dace in May, when dace are in fine condition, how absurd not to be allowed to do so; this is only one example. But the great mistake of the Mundella Act, was attempting to fence all rivers throughout the kingdom, and all kinds of coarse fish, in three months. What is wanted, is an Act to make netting illegal; but, failing this, the close seasons should be extended to six months against netting and sale of spawning fish.—I am, &c., F. M.

40, Ludgate Hill, May 31, 1881.

SIR,—The under-mentioned society view with the greatest alarm and regret the report in your last issue of an intention on the part of Messrs. Dodds and Stuart Wortley, M.P.'s, to introduce an amendment legalising rod fishing during the fence months established by the Mundella Act, and hereby enter their formal protest against such amendment, which, in the opinion of this society, would entirely and eventually ruin legitimate sport in all rivers.—I am, &c., Piscatorial Society, Covent Garden, May, 31. JAS. LANDER, hon. sec.

SIR,—What have you gained by the Mundella Act? asks one of your correspondents. Before answering that I will tell him, and those who make indiscriminate attacks on the Act in question, that the said Act gives pretty general satisfaction to the anglers of London. It will doubtless be amended in due time. There is room for improvement, but improvement requires care and caution. By the way, fishing tackle dealers and their friends are among the principal grumblers at the Act. What have we gained? Well, the knowledge that we have two right good trusty friends in the Right Hon. Mr. Mundella and Sir Henry Peek. The former gentleman said at the time of the presentation, If the Act in its present form does not suit you, take means for ascertaining what the general wishes of the anglers are, and I will do my best to serve you. The willingness of Sir Henry Peek to do the same is beyond question, so also is his ability.

Another thing ought to have been gained by the anglers, the knowledge of their power. United, with an intelligent purpose, there is nothing in reason beyond their compass, but petty jealousies, absurd squabbles, &c., must be put aside, and if the rank and file among us see that our own leaders are working for any purpose but the general good, others ought to be chosen.

I will conclude with a word as to the netting mentioned by your correspondent. It is, unfortunately, only too true; but if your correspondent were to make the West Central Society acquainted with any facts that he could substantiate, they would most likely take action in any case where the law empowered them to do so. They are, of course, powerless to interfere with the rights of property.—I am, &c., M. A.

SIR,—I am greatly rejoiced to hear of the proposed amendment of the Mundella Act. I will only offer two observations respecting it:—

(1) The close season for pike should be extended to September 1.

(2) That any person detected in the act of taking any ill-conditioned fish—alive or dead—from the water shall be liable to a fine of £5.

I quite agree with you that fishing for fish that are in season should be allowed, but at the same time a sharp eye will have to be kept upon those who appear likely to abuse the privilege.

And, while I am upon the subject, allow me to enter my protest against anglers (P) fishing jack during the first few weeks of the coming season.—I am, &c., OWEN KING.

Ethelburga House, Battersea, S.W., May 30.

THE SEA CRAWFISH.

SIR,—There is a species of crawfish, resembling much the shape of a lobster, but far larger as a rule. It is, when boiled, of a lighter red colour than our "salad friend," with whitish spots sometimes here and there. This is the fish that "F. B." is inquiring about. Any good fishmonger will give your correspondent a look at one of these "brain increasers."—I am, &c., RED JACKET.

CRAYFISH AND CRAWFISH.

SIR,—Will you kindly allow me to answer your correspondent "F. B." and assist him, as clearly as I can, in diagnosing the names of the two above-named crustacea. These fish, as far as the two names are concerned, viz., cray and craw, one is as frequently used as the other for either fish, by those unaccustomed to the fish or the localities from whence they come. The crayfish (*Palinurus vulgaris*) is the sea crustacea, and the crayfish (*Astacus fluviatilis*) is the river crustacea. The crawfish is locally called crayfish in many parts, where they are taken, also crawfish; but crawfish may be considered the proper name for the sea species (*Palinurus vulgaris*), especially when we read in "Crab and Lobster Lore," by W. R. Lord, R.A., that "Apicius feasted right royally on crawfish." Pliny speaks of crawfish of huge dimensions, and the tables of ancient Rome were often seen laden with crawfish, &c.—I am, &c., Exeter. FRANK GOSDEN,

TROUTING IN SOUTH WALES.

SIR,—Allow me through the channel of your well read columns to call the attention of anglers to a new field for trouting, and one but little known except to the local Waltonians.

By good luck I had my attention called to Kidwelly, Carmarthen, in South Wales, and here I rusticated fourteen days, and had fair sport. Others did much better. One man took forty-five fish in a day, trout averaging 5 to 6 oz. each; some few $\frac{3}{4}$ lb. each, fat, brown, and in good condition, and excellent on the table. The Pelicans is a capital inn and moderate, and they take in boarders, and here you get plenty of good fare; but it is a very primitive town, boasting a superb ruined castle, famous for its fine cockles, but certainly not for its trade or population. Anglers can obtain three miles of good fishing here, and with plenty of rain, fish are very plentiful, also salmon and seewin later on (July). Tickets, 2s. 6d. each. Flies to be used are the cockabundy and bright blue and green bodies. Minnows (real) also are very killing bait when there is a flush of water on; worms also do good work. I trust some of your readers on this may follow suit, and get good sport at the Pelican. There is always a fine tap of ale on which to comfort one's creature wants after work or bad luck in sport.—I am, &c., F. P. May, 1881.

WHERE ONE CAN FISH ON THE TRENT.

SIR,—In answer to your correspondent a fortnight ago, I beg to inform him that I am well acquainted with all the places on the upper part of the Trent, and that I believe there is no free fishing, but if he will go to Willington, seven miles from Derby, and call at the Green Man public house, he may get some good fishing for a small sum; or if he think well to go to Burton-on-Trent, and enquire for Mr. Charles Smith, at Westmore, he will get on very well. Mr. Smith is the proprietor of the water, and also keeper, and a first-class angler in the Nottingham style. Only mention my name to him, and there is not a doubt that he will show you all the best swims.—W. BAILEY. 170, Kirk White Street, Nottingham.

TRAFALGAR ANGLING SOCIETY.

SIR,—The seventh annual supper of the above society will take place on Wednesday the 15th June.

Members are requested to attend on Wednesday night next, the 8th of June, when the tickets for the supper will be issued.—I am, &c., R. GAZE. June 1, 1881.

THE THAMES TROUT.

SIR,—The letter in your issue, May the 28th, and signed R. D. E., is, in my opinion, well worth attention. Undoubtedly, if we are to have an increase of Thames trout, it will be necessary to breed from those fish alone. I have ever argued that to turn into the Thames small stream trout is useless; they are certain to seek smaller water, suitable to their size.

I well remember, under Mr. Ponder's management, a grand success from the Sunbury pond, when I personally turned into the water at Sunbury many more than the entire number lately taken from the same pond. All were healthy fish, quite up to the size of takeable gudgeon, and some larger. They were a mixture, salmon being a part, yet generally trout bred from small stream trout. Where have they all gone? as well as the rest—for many more were turned into the Thames at other stations. Certainly they are not at Sunbury, nor have they been caught. What is wanting is a piece of water, that is Thames water, of a good size and depth. This should be walled up above the possibility of flood, and the fish allowed to grow to one pound before put into the Thames. There is a piece of water already made; it only wants the wall; it has good depths and possesses a "tumbling bay."

I allude to the water that leaves the Thames just opposite Tagg's Island Hotel, and runs through the grounds of the late Mr. Clay, of Hampton Court. If this could be utilised, I will, as a start, give two guineas towards expenses.—I am, &c., E. L.

3, New Broad Street, E.C., May 31, 1881.

[We will also subscribe towards the expenses, if E. L.'s capital idea is carried out.—ED.]

FISHES OF DEVON.

SIR,—In last week's issue of the FISHING GAZETTE your correspondent "E. Gosling," gives us an account of two beautiful fish recently taken in the bay, off Budleigh Salterton, the former of which was a female lump fish (*Cyclopterus lumpus*) which is also called the lumpsucker, and in many places the "sea owl," and "cock paddle." I have had numbers of them during the season for years past, and they are taken on various parts of the south coast, consequently are not considered uncommon; but the latter fish of the two, the "painted ray" (*Raja microcellata*), also called the "small-eyed ray," I should much liked to have seen, not having been enabled to add that name to my list of rare fish secured by myself since in Devon, and a lengthy list of which appeared in the F. G. 26th of February last, and of which you have given several descriptions. This handsome fish, so our lamented friend Frank Buckland informs us, is with the "starry ray" and "shagreen ray," all rare; but Mr. E. Parfitt, in his "Fauna of Devon," says it is a very local species, and it appears to be confined entirely to the coasts of Devon and Cornwall. As I have above stated, I should liked much to have seen it, not having seen one taken from off this coast, and therefore consider it is more rare than observed by Mr. Parfitt. I have the preserved skulls of various kinds of rays in my collection, and should liked to have added this one. E. G. does not state whether it was the grey painted ray or the brilliant yellow one with yellow spots like beads. If the

latter, it is very rare. Couch, vol. i., plate xxv., page 107, states that they have not hitherto been taken anywhere but on the coast of Devon and Cornwall, &c.—I am, &c. FRANK GOSDEN, Exeter.

HINES' SPRING PLUMMET.

SIR,—We beg to inform you we are the sole agents in London, wholesale and retail, for Hines' New Spring Plummet. We shall be glad if you will notice the same in your paper.—Yours truly, F. T. WILLIAMS and Co. 10, Great Queen Street, London, W.C.

[We suggested to Mr. Hines a form of his plummet which will better protect the spring, and he has carried out our idea exactly, and we think the new form will sell better.—ED.]

THE STANLEY ANGLERS.

SIR,—I have much pleasure in informing you that we have had some nice shows of Thames and Colne trout this last week, the largest being 3 lb. 12 oz., caught from the Colne by Mr. R. J. Pollentine, with the artificial fly. Our president, Mr. C. P. Wheatstone, had a very handsome trout of 3 lb. 6 oz., taken spinning from the Thames, likewise one of 2 lb. 10 $\frac{1}{2}$ oz. I may here mention that in spinning for the same he captured several jack, five chub, the heaviest over 5 lb., one barbel over 6 lb., and a perch weighing over 2 lb., these fish were, with the exception of the trout, returned to their native element. Mr. C. P. Wheatstone says that they were in miserable condition. A singular thing happened with the perch. He was taken, marked and returned, but in about an hour afterwards was again taken, and when again landed had a bleak in his mouth, half gorged. I think this incident would prove that though Mr. Mundella's Bill in itself is not a complete success, yet it is a step in the right direction.—I am, &c. C. LAIDLAW, hon. sec. Lord Stanley Hotel, Camden Park Road, May 28.

FISHING IN FRANCE.

SIR,—Will you kindly ask in your valued GAZETTE the following question for me? I am about to visit the village of Corney, in Lorraine, and my friends tell me the river Moselle runs through their farm.

Can any of the readers of the FISHING GAZETTE tell me what fish I may expect to catch there, and what is the best tackle, bait, and way to fish, or any information as to the fishing in the locality?

I should esteem any answer a favour.—I am, &c., H. W.

7, Castle Street East, Oxford Street, W., May 28.

[There is good general fishing in the Moselle. Jack, perch, barbel, chub, roach, &c.—ED.]

INFORMATION WANTED.

SIR,—Can you or any of your readers give me instructions as to the best and cheapest bait for a galvanised eel basket, and the best part of a river to put it? Say whether in deep or fleet water. Also, as to baiting eel lines? Also, as to where I can purchase the Act of Parliament relative to the close time of fish?

Perhaps some of your readers can tell me some other plan of catching eels. I have the right of fishing on both sides of the river part of the way, and on the one side for the remainder.

Your kind attention will oblige.—I am, &c., C. T.

Whittlesford, near Cambridge, May 29.

BAIT FOR BREEM.

SIR,—Will some reader kindly inform me how to make or where to obtain a tempting bait for bream in running waters? By so doing they will greatly oblige.—I am, &c. H. A. WEST.

SPRING-TIME.

The winter's past. Now smiling spring,
With bounteous hand, doth garlands bring
To deck the sunny braes;
And breezes, blowing wide and free
O'er verdant pastures, bear to me
The tale of other days.
At early morn, with tuneful throat,
The lark from cloudland pours the note
Of liquid melody.
And from the depths of sheltering woods
Ascend, responsive, joyous floods,
To swell the jubilee.

The peaceful cattle, grazing, stray
O'er sunlit slopes, while, far away,
The flickering kestrel hangs.
And like cloud-shadows o'er the grass,
In mimic race, the lambkins pass—
Glade-loving, gladsome, gangs.
The patient angler by the brim
Of babbling beck—whose song to him
All strife and sorrow stills—
Again his simple pleasure takes,
Where cry of lonesome wild bird breaks
The silence of the hills.

Springtime! thy beauty has been sung
Ages adown since time was young,
And still awakes a strain
Whose lighter measure breathes a balm,
As when we view, apart, the calm
Downfall of vernal rain.
The fairest scene, the brightest hour,
Seem, aye endued with greater power
In Memory's softened light;
And Spring-time, sweet in youthful days,
Illumes with more enduring rays
Life's autumn's subdued sight.

E. E. H.

CLUB REPORTS.

ANCHOR AND HOPE ANGLING SOCIETY.

The Second Annual Dinner will take place on June 15th.—W. SHAKEL, secretary.

May 31.

EDMONTON AND TOTTENHAM ANGLING SOCIETY.

In my river report I mention the activity and labour that the members of the Edmonton and Tottenham Fishing Club have displayed during the close season, it will, without doubt, give great pleasure to the readers of this letter to hear that their labours have not been lost sight of, for on Wednesday evening, the 25th day of May, they met at the club to be welcomed on every hand, and various prizes were given to the most successful members—namely, Mr. J. Stephens, 1st prize, consisting of two first-rate rods in cases and a telescope; Mr. Munro, the 1st jack prize; Mr. Collyer, a prize for perch; Mr. Money, Mr. Whale, Mr. Wray, Mr. Lewin, and Mr. Robinson all received a special prize, and, notwithstanding the great expense, there is a large balance in hand, and prizes are already promised for the coming season. Should this meet the eye of those who wish to join a club they cannot do better than join this one, and they will at once receive all the privileges. In both giving and receiving, there was but one wish, that for years they would all be spared to share each other's friendship, and that the club would ever be successful.—S. SEWELL.

May 30.

GOLDEN BARBEL.

The annual dinner of the above will take place at the York Minster, Foley Stree, Portland Place, on the 14th, on which occasion Mr. G. Dixie will give the result of Mr. H. West's travel through the Fish Book, which to my opinion deserves more than ordinary praise.—PIXIE.

June 2, 1881.

THE LIVERPOOL ANGLING ASSOCIATION.

The weekly meeting was held in the club-room at the Strawberry Hotel, West Derby Road, on Thursday, the 26th inst. There were present Mr. Woolfall (vice-president), Mr. Pratchett (chairman) Mr. Jones (treasurer) and a good muster of members. After the usual routine of business, the debate of the evening was the date and locality of the first angling excursion of the season. The chairman, after describing the angling qualities of the four places, viz., Combermere, Marbury Mere, the Vale Royal and the Vyrnwy, in which he was followed by Mr. Woolfall, a veteran angler on the Vyrnwy, who spoke very highly of the river, called for some member to make a proposition. An animated but friendly discussion was engaged in, and it was proposed by Mr. Schmitt, seconded by Mr. Healey that the river Vyrnwy be the scene of the anticipated pleasant outing. An amendment was proposed by Mr. Fearwitt and seconded by Mr. Serjeanson, that Combermere was the most suitable place. The amendment was put to the vote and carried. The next business was to fix the date. It was proposed by Mr. Lawrence, seconded by Mr. Evans, that Whit Monday be the day. An amendment was proposed by Mr. Serjeanson, who spoke very ably on the duty of anglers observing the close time for all coarse fish, as embodied in the Freshwater Fisheries Act, and he suggested the 20th of June as being a more suitable day. This was seconded by Mr. Fearwitt in a capital speech to the same point. The amendment being put to the vote, was carried. This being all the official business, the meeting was closed. The rest of the evening was spent in pleasant conversation so acceptable to Waltonians, viz., discussing the angling qualities of the various waters visited by members during the earlier part of the present season.—LIVERPOOL BLUE DUN.

PRINCESS OF WALES ANGLING SOCIETY.

This society (which is enrolled in the West Central Association of London and Provincial Angling Societies) was founded on the 19th May last, and has already between twenty and thirty members. The entrance fee (for a few weeks only) is 1s., after which it will be raised to 2s. 6d. There are numerous advantages offered to anglers, especially to tradesmen, which cannot be obtained in other societies; and as the society is limited to 100 fishing members, gentlemen desirous of joining are requested to attend any Thursday evening between 8.30 and 10.45 at the Prince of Wales, Great Barlow Street, High Street, Marylebone, W., or to communicate with the secretary, Mr. F. Robson, 19, Great Barlow Street, High Street, Marylebone, W., who will be pleased to forward all information.

"IMPORTANT NOTICE TO ANGLING SOCIETIES."

In your last issue I noticed a report from the Prince of Wales Angling Society, in which it stated, as a notice to angling societies, that Mr. F. Robson was not secretary to the "P.W.A.S." I wish most emphatically to deny that statement, as Mr. F. Robson is the secretary to the "Princess of Wales Angling Society," which is duly enrolled on the books of the W.C.A.L.P.A.S. At the same time, I feel much obliged to Mr. Lee for publishing what all anglers knew eighteen months ago, that Mr. F. Robson is not secretary of the "Prince," but that he is of the "Princess," Angling Society. I am, &c.,—F. ROBSON.

RICHMOND PISCATORIAL SOCIETY.

The opening day of the season will be held at Shepperton, when the members will compete for a sweepstake dinner at the Ship Hotel, Halliford, at 6 p.m. Major Bull, chairman; M. F. C. Clench, vice-chairman. Members tickets free, visitors 5s. each. A special concession has just been obtained from the South-Western Railway by this society allowing all anglers, upon production of their privilege tickets, to travel down from Richmond at reduced rates to any fishing station below.—J. H. GAUNT, Sec.

ROYAL PISCATORIALS.

Trout for the first time this season made its appearance in this society on the 28th of May, introduced by Mr. Canton, who became acquainted with it near Broxbourne. It was received by all members present with much pleasure. Grand preparation for the 16th. Roach and Co. will appear.—PIXIE.

June 2nd.

NOTICES OF BOOKS, &c.

THE ANGLER'S POCKET DICTIONARY OF TROUT FLIES AND THEIR SYNONYMS. By William Sang. Published by W. Ward, Market Place, Barnard Castle.

The price of this little work is only fourpence, and we can most strongly advise every trout fisher to secure a copy. It is just what we have frequently wanted, and frequently been asked for—a carefully compiled list of the various names by which the flies used in angling are known in various parts of the country. How frequently we have been at a loss to understand what fly was meant when some local name has been mentioned. Mr. Sang's little work, though not professing to be complete, will go far to obviate this difficulty. He also gives the times of the year and kinds of weather best suited to the flies named, and other useful information. Mr. Sang hopes this little first attempt may lead to something more important, and we feel sure it will.

TONBRIDGE ANGLING CLUB, TONBRIDGE.

LAST Thursday the members of the above club had a very enjoyable day's outing at Southborough. Sir David L. Salomons, Bart., having very kindly placed two large ponds at their disposal to net, to procure stock fish for improvement of the fishery of the Medway. A right merry party assembled at the club house, the Bull Hotel, Tonbridge, from whence they drove to Southborough in conveyances. On their arrival in the beautifully wooded park it was found that Messrs. Grownds and Son had got their net in the water, and were quite ready to commence operations. Amongst those present were Messrs. E. Greenwood, R. A. Dallas Beeching, Martin Spiller, W. Kirby, C. Payne, T. Pawley, W. Roser, W. Noot, W. Epsom, G. Butcher, H. W. Harris, E. G. Pine, Q. Austin, W. A. Kirby, W. Wyles, H. Hoare, C. Strudwich, H. Crundwell, J. Waite, L. Browne, W. Harmer, &c. The order was given about 12 o'clock to commence to drag, and Mr. W. Flood, who waters as well as any amphibious animal dashed in, and taking the rope of one side of the net greatly helped with the work. The pond was expected to be full of trout and carp, but the result of several draws brought to land about 1000 fine roach, splendid silver fish, some of them weighing a pound and upwards, two or three brace of very large carp, and a couple of brace of trout. The latter were returned to the water. By this time luncheon, which was supplied from the club house, had been spread in a mossy slope under a fruit tree, and every one went in for the good things provided, as if they thoroughly enjoyed them. After the appetites of all had been satisfied, the order was given to draw the second pond when about 4000 splendid carp were brought to grass, and were placed in the tubs and, with the roach, at once dispatched to the society's waters. The day was fine, and most of those enjoyed a stroll over the well-kept grounds. Through Mr. H. Crundwell, jun., John Deacon, Esq., of Mabledon, one of the Lords of the Manor, and Mrs. Pott of Broomhill, allowed the society to net the large pond on Southborough Common, and from this some three thousand carp and roach were taken, and safely removed to Tonbridge. The whole consignment was placed in the Medway, adjacent to the Powder Mill lock, under the direction of Mr. E. Greenwood, who, as usual, kindly lent the tanks and conveyance to carry the fish. The day was delightfully fine, and the outing was greatly appreciated. At a meeting of the committee on Monday night votes, of thanks were passed to Sir David L. Salomons, Bart., John Deacon, Esq., and Mrs. Pott of Broomhill for their kindness in allowing the society to net their waters.

HINES' SPRING PLUMMET.

AFTER noticing this last week, it occurred to us that though Mr. Hines' principle was quite right, the form of the lead might be improved. The spring is exposed in Mr. Hines' original pattern, and if by accident the plummet got trodden on it would probably be spoiled. We suggested to Mr. Hines that he would greatly improve the look of the thing, and prevent any possibility of the spring being damaged—if he made the lead bell, shaped. He now writes, "I have very great pleasure in sending you my new pattern, and thank you very much for the suggestion, which I am certain is an improvement." We think most anglers who compare the two patterns will agree that the bell shape is an improvement—it has a flat bottom to stand on, and won't roll off the seats of a punt, or down a bank into the water, like the old shape, besides protecting the spring.

A STICKLEBACK IN MILK.—The late Mr. Frank Buckland in his "Natural History of British Fishes," relates that a milk woman served out at a door a pennyworth of milk, and in the milk-jug the servant found a live stickleback swimming about. When the fish, all alive oh! in the cow's milk, was shown to the old woman, she turned round to her boy and boxed his ears. "Jimmy, oh! Jimmy, you lazy rascal," she said, "you never strained the water!"

CONVICTION FOR POACHING AT OXFORD.—At the City Court, Oxford, on Tuesday, Frederick Heritage, Cardigan Street, Wm. and James Carter, Cranham Street, were summoned for illegally fishing with a snare, in the river, near Binsey, on the 8th of May. The Town Clerk prosecuted on behalf of the Town Council, and said the object was to stop the waste of fish and the use of improper means in taking them. Mr. William Venables, water-bailiff, said he went to Binsey and saw the three defendants. They were walking by the side of Swift's ditch, which runs into the river. He watched them about three quarters of an hour. William Carter had a stick and a wire, and he saw him snatch at fish several times. Some men came up in a punt and they ran away. They got into a hedge row; he sent a man to stop them going out of a gate, and they then turned back and walked into his arms. He took their names. Cross-examined: He was about 80 yards off whilst he was watching the defendants. They were acting in concert. Jonathan Day stated that he was in company with Mr. Venables, and he saw the defendants snaring. William Carter was holding the stick. After the defendants ran away he found the stick in the gap of the hedge where they got through, and he judged that wire had been attached to it because of the mark upon the end of it. Frederick White, a youth of Binsey, said on Sunday, the 8th of May, he saw the defendants near the river. James Carter picked up a stick and Heritage fixed something upon the end of it. They were all together while this was being done. He thought it was a wire. He was about 100 yards off. Defendants denied that they attempted to take fish. William Carter, who had been previously convicted, was fined 10s. and 9s. costs, or fourteen days; and the other defendants 5s. and 9s. costs, or seven days.

The annual meeting of the Scotch Fisheries Association was held on Wednesday in Edinburgh under the presidency of Mr. Milne Home. A report by the council was adopted, on the motion of Professor MacLagan, after an interesting discussion, in which the causes of the decrease of salmon in Scotch rivers, and the remedies to be applied in order to bring about improvement in the fisheries, were touched on by several speakers. It was afterwards resolved, on the motion of Sir J. R. Gibson-Maitland, to approve the action taken by the council with a view to the holding of a national fisheries exhibition in Edinburgh in the spring of 1882.—*Scotsman*.

TICKLING THE "BEAUTIES."—The poachers in the Hampshire and other streams are adepts at tickling trout, and thus capturing the silly fish from under banks, and roots of old pollards. 'Tis not every yokel, however, who can tickle a beauty; it is a most delicate operation, and the "game" have to be approached with no heavy hand, or uncouth introduction. The poacher lays flat upon the ground, and very cautiously feels his prey; but it is a "killing" dodge for the expert, and many a brace of nice fish are flung over into the grass, and pocketed by the poacher.—*SPOTS*.

SUCCESSFUL EEL PLANTING.—Some four years ago the Sportsmen's Club, of Battle Creek, Mich., deposited about 5000 young silver eels in St. Mary's lake, which were at that time about three inches in length. Recently eels have been caught in this lake weighing fully six and seven pounds each.

FISH AND OYSTER CULTURE.—We learn from the *Norfolk Chronicle and Norwich Gazette* that, "Arising out of the National Fisheries Exhibition, recently held at Norwich, a series of microscopical experiments upon the oyster were made by Mr. Byram Littlewood, of Huddersfield. By invitation, a large number of persons interested in pisciculture met at the Royal Hotel, and manifested great interest in Mr. Littlewood's demonstration of the fact that the oyster tribe is divided into two sexes, a fact more interesting because it shows the possibility of developing the production of this delicious shellfish. The oyster will now in all probability become as easy of propagation as any other species of fish, and in a short time we ought to hear no more of the scarcity and dearth of oysters, since the inroads made by natural enemies upon the oyster beds will be compensated for by the establishment not only of artificial beds, but by the employment of artificial methods of propagation. We ought to state that Mr. Littlewood was one of the silver medallists at the exhibition, and in addition to this he received from many gentlemen well versed in fish culture valuable testimony to and many marks of recognition of the many practical advantages of his apparatus."

The other day a park ranger came across a man fishing in one of the ponds with a cotton string, to which was attached a hook made of the wire off a soda-water bottle, and baited with an apple core. "Do you expect to catch fish with such a line as that?" asked the ranger. "No, sir," was the prompt reply. "Are you fishing for bites?" "No, sir." "Fishing for fun?" "No, sir." The nettled ranger was about to tell the calm-minded stranger to fish away and be hanged to him, when he carefully lifted his hook out of the water, looked at the apple-core, and said, "I've been in this city two days and over, sleeping in carts and living on air, and I was just experimenting to see if there was a blowed reptile in the neighbourhood as hungry as I am!"

TIRED HANDS AND ARMS.—Edson's Electric Armlets and Wrist Bands. Invaluable for anglers and gun sportsmen and highly recommended for all persons having tiresome writing, sewing, or music practice. They give wonderful energy and strength, enabling the wearer to accomplish tedious work with steadiness and comfort. Price 2s. 6d. per pair, silk web and fine steel clasps. Sent to any address on receipt of P.O.O., payable to J. Edson, the Electric Fabric Co. Patentees, No. 1, Charlotte Street, Bedford Square, London, W.C. —[ADVT.]

Mrs. F. Y. Brocas, Artificial Fly Dresser, 4, Mill-street, Conduit-street, Hanover-square, London, W. A stock of best flies always on hand. Flies made to pattern. Lessons in fly making given.—[ADVT.]

THE IGNOBLE ORDER OF THE BRASS COLLAR.—Wherever there are jack in the ditches in watermeadows near a river, there will surely be found fellows with a snare (wire) attached to a withy or other stick for catching jack in the spawning time. This remark, of course, refers to unpreserved waters. These fish poachers are actuated by much the same spirit as the ignorant and lawless Rebeccaites in Wales, when spearing the salmon in the breeding spot. It is a disgraceful, nay, cowardly act in both cases; it requires little dexterity to catch jack, and there are but few places now left where the unsportsmanlike wiper can pursue his robbery with impunity; the fish, too, are unwholesome and out of condition.—*RUS*.

SEA BIRDS INLAND.—Gulls sometimes get blown inland in stormy weather. On one occasion a number of terns (about a score) appeared on the Kennet, at West Berks, and soon each bird was seen hovering over the river—not unlike a kestrel in a field—presently diving into the water and bringing up a dace, or gudgeon, or minnow in its beak. These birds were rather tame; some were knocked down with stones and sticks when they settled upon posts and rails near the towpath. I shot a couple—one a very fine male bird, which I had stuffed; the remnant of the flock moved off for Hampstead Marshall and Hungerford.—*SPOTS*.

THE ORIGIN OF BOTTLED BEER.—It is not generally known that the best of drinks since nectar went out of fashion was invented by an angler, but, according to the *Globe*, this was so. In Queen Mary's days a certain London merchant, named Bowyer, was amusing himself by fishing in the Thames, when tidings came that a warrant was out for his apprehension. He immediately took to flight, leaving behind him some beer he had brought with him in a bottle, and placed in a hollow of the bank. Returning to his home some months later, at the accession of Elizabeth, he had the curiosity to look for his beer, "but found there no bottle, but a gun, so great was the sound at the opening thereof."

THE NEW ACME LINES,

(PATENT),

Form the **FINEST, STRONGEST** and most **SCIENTIFICALLY CONSTRUCTED** Fly and Spinning Lines ever introduced to the angling public.

These Lines are strongly recommended in the *Field*, August 14th, 1880; *FISHING GAZETTE*, August 28th, 1880; *Land and Water*, August 28th, 1880; *Bell's Life*, September 18th, 1880; *Advertiser*, October 9th, 1880; *Yorkshire Post*, August 21st, 1880; *Standard*, 9th, 1880, &c., as also by the *Sporting Times* of Austria, March, 1881, &c., &c.

According to precedent in protected articles the price of these lines will now be reduced to 2d. per yard (Trout) 3d. per doz. (Salmon). Samples post free two stamps.

From the Manufacturers,

Messrs. D. and W. H. FOSTER,
ASHBOURNE.

1st AWARD MELBOURNE EXHIBITION, 1881.

DAY, SON AND HEWITT'S STOCKBREEDERS' MEDICINE CHEST.

FOR ALL DISORDERS IN HORSES, CATTLE, CALVES, SHEEP AND LAMBS.

In this chest are the following matchless and world-renowned remedies, all that a Farmer can require to cure disease amongst his Stock and keep them in fine, healthy, and buoyant condition:—

"CHEMICAL EXTRACT," for Wounds, Swollen Udders, and Ewes Lambing.
"GASEOUS FLUID," for Colic, Scour, and Debility.
"RED DRENCH," for Cleansing Cows and Ewes, &c.
"RED PASTE BALLS," for Conditioning Horses.
"BRONCHOLINE," for Husk, Hoarse, or Cough.
"GASEODYNE," for Heaving or Paining.
"ALCOHOLIC ETHER," for Colds and Chills.
"CARMINATIVE CHALK," for Diarrhoea in Lambs and Calves.
Price of Chest, with "Key to Farriery," £2 10s. 6d., carriage paid. Each article can be had separately.
Patronised by Royalty, and used for over 40 years by the Leading Agriculturists of the British Empire.

CAUTION.—See that the Name of DAY, SON and HEWITT is on all Bottles and Packets.

DAY, SON AND HEWITT,

22, DORSET ST., BAKER ST., LONDON, W.,
AND WANTAGE, BERKS.

Just published. Price one Shilling.

TROUT-FISHING,

With FLY, MINNOW, WORM, &c.

BY

THOMAS FORD,

130 different Flies, with ways of manufacture and seasons for use. Post free from Author, Caistor, Lincolnshire. Agents wanted. Best Trout Flies, 2s. per doz. Fly List, one stamp.

THIRD EDITION of a delightful book.

MY LIFE AS AN ANGLER. By William HENDERSON; portrait and 12 plates. Cr. 8vo. Price 7s. 6d., postage 6d.

"No modern book about angling with greater chances of charming."—*Athenaeum*.

"The sweet feeling which pervades these pages will be their highest praise."—*Daily News*.

"More entertaining than a novel."—*Durham Chronicle*.

"Will amply reward the general reader."—*Spectator*.

The Fishing Gazette.

SATURDAY, JUNE 11, 1881.

THOUGHTS ON THE COMING SEASON.

ON Thursday next, the sixteenth day of June, the season for general fishing will commence, and, above all other days, it is prominent this year as the Ascot Cup Day, when a great struggle is expected between two great horses. But that will

very little deteriorate the value of the day as an opening day to anglers, whose great struggle will be in the competition for prizes amongst the finny family. There are those who always make it a rule to wet their lines at that time, and it is possible, having done this, they may go to the races afterwards. The Richmond Piscatorial Society may be illustrated as an example of club arrangements for the 16th. The members open with a match or competition for three prizes in the Thames, and terminate the day with a good feed at the Ship Hotel, Lower Halliford, a house that has become noted for its excellent dinners. Other clubs are on the move in a similar manner as regards competitions, and I expect in most cases they will be "gross weight competitions." I am hoping, as each season advances, the clubs will give less encouragement to these competitions, especially amongst some kinds of fish, such as jack, barbel, perch, chub and bream.* I have no desire to force my opinions upon any one, but I contend there are greater advantages and far greater pleasure to be derived from competitions for the largest fish than in the encouragement to destroy a large number of small though sizeable fish for the purpose of making up a gross weight quantity. I am satisfied, as time rolls on, my ideas will grow into favour. I have always been prepared for some opposition, and in ventilating the question I have not done it from any personal motive, but for the benefit of the anglers, and keeping up a stock of good fish in our rivers. I should like the clubs calmly to consider the question, not because I have introduced it, but on far higher and better grounds. What has done more to get a supply of good fish in our tidal water than the stoppage of the slaughter of unsizeable fish, which years ago was carried on to a fearful extent? There is no serious discouragement to "gross weight competitions," it is simply limiting the quantity, whatever it may be, to good sized fish. I have thought it desirable, on the commencement of another season, to bring the question again under consideration. Mr. Alfred Jardine, at the inaugural dinner of the Gresham Angling Society, spoke very forcibly against the present rule of "gross weight competition," and others of equal position in the angling world share with him in his opinions. Probably, that society may become a model one in that respect, as Mr. Jardine remarked it was favourable to competitions for large fish. At all events, I will leave the question again for the present, and refer to other subjects connected with the forthcoming season. We are, as anglers, greatly advanced in the support of true sportsman-like practices, and the convictions of the two last seasons will certainly check many of the abuses, not only amongst anglers, but professional fishermen. In several of the cases where the latter have been implicated, each bench of magistrates has expressed a determination to punish them the more, as being more to blame than the anglers. The professional fishermen should be the natural allies of a fish preservation society, for the work of the latter is not to benefit the anglers only, but the fishermen as well. There should be one common bond of union between them, and that fisherman is the best friend to his clients who assists in the suppression of illegal practices. There never has been a preservation society established to injure the professional fisherman, but on the contrary, to preserve the fish for their customers. To my notion, each fisherman who gets his living—or, it may be, a partial living—in going out with anglers, should be a kind of river keeper for his own benefit in the district where he lives. He should help the preservation society in vindicating the common law, by the encouragement and support of legitimate practices. He too often thinks such a society is an oppression to him. It is a wrong idea. If a boat is examined to see the kind of fish there are in the well, and the keepers find the great bulk of the fish are greatly under size,

* The Stanley Anglers are the first to do away with these competitions.

can he blame them either for the removal of the fish or for taking out a summons? He knew they were unsizeable fish and perhaps justifies himself in saying his customers will not allow him to put them back again. He is wrong, and he knows it; and I am sure ninety-nine anglers out of one hundred would support him if he told them it was against the law to retain them. One of the worst cases I ever had was in a large take of roach, nearly all of them were only four inches in length. The angler assured me he was perfectly ignorant as to size, and if the fisherman had told him he was doing wrong in keeping them, they should all have been willingly returned. He and the fisherman were convicted, He pleaded guilty, and paid both fines, the latter being the heaviest, and presented the society with a donation for doing its duty. The evil practices that want putting down are these—The taking of small fish, all attempts at snaring or snatching fish, the use of night lines—which have been so greatly misused on the Thames—the catching of all unseasonable fish, the working and possession of all illegal nets, and such like things. It would be a grand day for the Thames if the fishermen could be convinced that the desire of a Preservation Society is to help them, if they in return would assist the society. There is nothing between them but what could be removed. All these are questions which the commencement of another season naturally suggest. All the society seeks from the fishermen is their help in maintaining the law, which, as good subjects, they should feel it their duty to do; and from the anglers the exercise of honest and fair sport.

B.

ANGLING IN NORTH LINCOLNSHIRE.

I WAS much pleased to see Mr. Alington's article in last week's issue, but am rather surprised that he should make so many mistakes in connection with what I believe is his natal stream. He says the stream is nameless; on the contrary, its names are legion. It receives a separate name in almost every parish through which it passes, *i.e.*, Swinhope Beck, Thorganby Beck, Hatcliffe Beck, Barnoldby Beck, Waith Beck, Tetney Beck, &c., &c. I have seen it marked the "Tetney" on two or three maps, henceforth let it so be called. Mr. Alington observes that the Tetney rises in the neighbourhood of Horncastle. Its source is fully twelve miles from this place. The Bain and the Tetney, according to the Ordnance Map, rise near Washpool in the parish of Ludford. The former runs to the south, the latter to the north. Again, Mr Alington states that the Tetney runs through Thoresway, whereas the Thoresway Beck, if we may dignify it with such a name, is merely a tributary of the Tetney, which runs through Croxby Pond. Furthermore, Mr. Alington puts the Bain in North-east Lincolnshire. It really lies nearer the centre of the county, and flows in a southerly direction until it joins the Witham at Dogdyke. This is the premier trout-stream of Lincolnshire, and contains a good store of beautiful fish. Like Mr. Alington I can testify to the loveliness of the sylvan scenery through which the Tetney flows, and also to the fine size, game-some disposition, and splendid flavour of the trout which it contains. On these points the stream will hold its own with any that I have fished; but if we substitute an arithmetical comparison, why the Tetney is nowhere beside the Yorkshire and West of England rivers. Mr. Alington speaks of catching twenty-four brace in five weeks. On looking over my diary, I find that I have often caught more than this number in five hours. On the day that I met Mr. Alington I had twelve fish that weighed close on 10 lb., so he rather understates the size. One of these was $1\frac{3}{4}$ lb., and two others of $1\frac{1}{2}$ lb. each, all caught with fly or fine drawn gut. I did not show my catch to Mr. Alington, as at that time he was a stranger to me; furthermore, finding that he had none, I thought

it would savour of affectation to display my beauties unasked. If Mr. Alington will promise me to leave that "light trolling rod" at home, and take a decent fly-rod with him, I will send him, in return for a day, which his uncle has promised me, a few flies (leaving out all that he names), which, with decent manipulation, will enable him to take twenty-four brace in a close approximation to five days. I have only fished the Tetney once this year. My last catch of thirty was on the Laceby Beck, but they did not average above $\frac{1}{2}$ lb. each, and were in rather poor condition. I am one of those anglers who never abuse the leave to fish. I have permission on certain parts of the Tetney, but thus far I have never been more than twice or so in the season. I regard the fishing as somewhat limited, and act accordingly.

Mr. Alington is wrong again respecting the tench in Croxby Pond. A year ago I caught two which weighed a little over 2 lb. each, but I got them in wading in the bulrushes, and spotting my quarry before presenting the bait. The editor would hardly have been so severe upon Mr. Alington, senior, had he known the difficulty of fishing Croxby Pond. The water is as clear as Old Tom, and on the sides not more than four or six inches deep, whilst in the middle of the lake (which is perhaps half a mile in length) the depth is not more than a foot. The monstrous carp (15 to 20 lb.) are tumbling about on all sides, but though I have made inquiries for years, I have never heard of one being taken by the rod and line. I have, in days gone by, captured 30 lb. weight of carp before, but these Croxby fish have thus far been too much for me. A long hand-line tightly weighted, and armed with two hooks and small float, is the only way in which the pond can be effectively fished, and then the lines in common use sink so abominably that three-fourths of the time is spent in untying knots. I purpose trying my David Foster (Acme line) the next time I go. With suitable small weights made in a thimble, I have been able to throw forty yards. There are plenty of perch and eels, but they, as a rule, feed only at dusk. I and a friend once caught eighty after seven o'clock p.m., and they were all about uniform in size, $\frac{1}{2}$ lb. each. It is a pity such a fine pond is not stocked with lake-trout or *fontinalis*, as the waters are very favourable for pisciculture.

Caistor.

THOMAS FORD.

RANDOM CASTS;

OR,

EXTRACTS FROM THE NOTE-BOOK OF "AN OLD ROD."

(No. II.)

MY BIGGEST DAY.

THERE is probably no sport, at all events, no angling sport attended with so much uncertainty as that of salmon-fishing, and perhaps this very uncertainty gives an additional charm and zest to this "the king of sports." In other fishing as for trout, grayling, pike, perch, "*et id genus omne*," given a favourable condition of weather and water, the skilful angler may almost make sure of success at all events to some extent. When I say "skilful angler," it must be understood that I do not mean merely one who can cast and manipulate his fly, minnow, worm, or other line, deftly and well, but one who also thoroughly understands the habits of his would-be prey, knows the places in which it is most likely to be found feeding, the various conditions of water, &c., the bait which will probably prove most alluring to it, the best method of concealing himself from the observation of his quick-sighted quarry, &c.; for, of course, the angler who possesses those qualifications will frequently succeed when one not possessing them would fail. In salmon-fishing, however, the case is often very different. There are days (as every salmon-

fisher knows) when, no matter how favourable the condition of the water, how, to all appearance, promising that of the weather the best and most skilful salmon-angler has little, if any, advantage over the veriest tyro, the reason being simply that the fish will not, like trout, grayling, pike, &c., take a fly, worm, or other bait, because it either is, or resembles, something upon which they are in the habit of feeding; but can any one say why a salmon takes a salmon-fly? So far as we know it resembles nothing the fish has ever seen before! It is not "the likeness of anything in the heavens above, or in the earth beneath, or in the waters under the earth," and therefore I, for one, can hardly suppose that it is taken by the fish for the sake of food. What it is taken for I leave to wiser heads than mine to determine, for though I have studied the habits of the salmon for more than a quarter of a century, on this point (and on many others, too), I confess I am still in the dark. Again, there are days when, to all appearance, everything is against any chance of sport, and when the attempt to capture almost any other kind of fish would be quite hopeless, yet when salmon will "feed," or, I should rather say, "take the fly, &c.," greedily, and the novice, provided he can fish fairly, stands almost as good a chance as the experienced salmon-angler. Let me give a somewhat curious instance of this. A good many years ago, when I was the lessee of a very good salmon fishery in the West of Ireland, an English friend, who, though he was an enthusiastic trout, etc., angler, had never seen a salmon except on a fishmonger's slab or a dinner table, came to spend a week with me for salmon-fishing. Need I say that weather, water, everything, from an angler's point of view were so bad that during the whole week, though he fished with the greatest perseverance, he only killed one or two small fish. On his return to England he had to join the railway at a town close to which is one of the best salmon rivers in Ireland, the fishing in which belongs to a friend of mine. Being very anxious that he should have a good day before his return to England, I arranged to go with him and have a day or two's fishing in the river I have mentioned, as I knew that if a salmon could be killed anywhere in Ireland it could be killed in this same river. The necessary permission for both of us was readily obtained from my friend, the owner of the fishery, who, however, informed us that not a single fish had been killed in the river for more than a week, in fact all attempts at angling had been given up as hopeless. A pleasant look out for us! Well we decided to begin our fishing at six o'clock on the morning after our arrival. We were called at five o'clock, and after taking a crust of bread and a glass of milk each, we set off for the river. Even at that early hour (it was the last week in July, as far as I remember, for I have not the exact date entered in my note book), the sky was without a cloud, there was not the faintest breeze in the air, the water was very low and "as clear as gin," and the heat was excessive—to use an Irish expression, "the sun was splitting the trees." Nothing daunted, however, but with hope, which "springs eternal in the human breast," we put up our rods and arranged our tackle. There was one particular place, an eddy on the far side of a rough stream, which I knew, from old experience, was sure to hold a rising fish if there was one in the river! To show my friend the exact spot, I took his rod (I had not yet begun to fish myself, but was watching and endeavouring to instruct my friend) and cast into the place. As soon as the bait—we were fishing with the "shrimp," as it is called in Ireland, it is really a "prawn"—touched the water there was a "boil," a splash, and I was "fast" in a fish! I handed the rod to my friend and, after some 12 or 15 minutes' hard fight, gaffed for him a very good fish of 11 lb. weight. He then tried a few casts, but, as he failed to reach *the* place, I again took his rod and cast. Again, as soon as the "shrimp" was in the water, there was another "boil,"

another "splash," and another fish fast! This fish my friend killed, as he also did a *third* I hooked for him. Finding that the fish were really "on the rise," I left him to his own devices, and began to fish in a pool a little higher up the river. I rose and hooked fish at nearly every cast! Never in my five-and-twenty years' experience have I seen salmon in such a "good humour," with one exception, which I may mention in some future article. When we went into breakfast at 9 o'clock, my friend had four fish (he had hooked and lost three others) and I had six fish (having also hooked and lost one other). You may be sure we did not spend much time over our meal; but having arranged to have some lunch sent out to us, were soon back at the river. The fun was still "fast and furious" when lunch time arrived; I had seven more fish, making up to then thirteen, and my friend had five more, making his total nine good fish. He was then so tired that he gave up for the day. Whilst eating my lunch and smoking a quiet pipe after it, I lent my rod to another friend who had joined us a short time previously to watch the sport, and he, during that time, killed five fish. I then resumed my rod, and at half past 3 o'clock I had 20 salmon dead on the bank (in addition to the five killed by my friend with my rod); they were all good fish, though not large, the heaviest being only 16 lb., and I had hooked and lost two others. Thinking I had done quite enough and being, moreover, considerably tired, I gave up fishing for that day; but I have not the slightest doubt that had I continued to fish till evening I could have killed 35 to 40 salmon. This on a day which was, to all appearance, utterly hopeless for fishing of any kind! Next morning was dull and cloudy, with a nice breeze, and I quite expected to have another good day, as everything seemed to afford a much better chance of sport than was the case on the previous day. I turned out for a couple of hours before breakfast; my friend was lazy and would not go. I killed three fish with the fly. After breakfast we both went out, but, although we fished steadily for some hours, we neither of us even rose a fish. We tried again in the evening, but with no better result.

AN OLD ROD.

THE GLENCOE WHISKY.

OF all the drinks that Providence has provided for the refreshment of humanity, surely none can equal good whisky. In the words of old Walton, it is a "drink too good for any but anglers and honest men." We imagine if the great army of anglers were asked what beverage they would prefer to stick to in the long run, the great majority would decide for whisky. There is nothing like it for the flask or to accompany the pipe; that is, of course, if it is good. If your sport is good, you feel you deserve a pull at the whisky, if it is bad good whisky will console you, if you get hot it will cool you, and if you get wet or cold it will warm you; a little of it goes a long way, and a flask of whisky eked out with water from the river, will last an angler all the day. It is the best introduction you can have to the anglers you may meet or the keepers who may meet you. It will find out for you the best swim or the killing fly as nothing else will. You can offer it where money would be an insult. In case of an accident it will revive you better than brandy. If you want to keep a few baits for spinning, a little whisky will keep them better than anything, especially if you add a little camphor. A trout will dash three times at a bait which has been preserved in whisky, when he will only go twice at an ordinary bait. It's the greatest mistake in the world to suppose because fish live in water they are all teetotallers; trout don't care for beer or common drinks, as chub and roach do, and the people on the Eden in Cumberland know this right well. They throw some of the ingredients of beer on their waters when they want to "fuddle" the "scalies," as they call

coarse fish, and they in this way capture them by the bushel when drunk; but the trout turn up their noses at the "stuff." This is a fact.

We believe it is a disputed point as to which is the best way to drink whisky at night, whether hot or cold? Dr. Brunton, who is a fine judge, and one whose opinion on this matter or any other we attach the greatest value to, is of opinion that the best way to take whisky is with a *little* pure cold water (he lays stress on the *little*, mind). His opinion is that hot water and sugar and lemon may do *occasionally*, but the heat evaporates the delicate flavour of the spirit.

But the grand thing, after all, is to get a good pure whisky, and if our friends will try the *Glencoe*, we are sure they will agree with us that it is a good whisky. We have known the proprietors for the last twelve years, and the mere fact of their putting their names to an article which they supply is an ample guarantee that it will be of the best quality. We ask our readers to give the *Glencoe* one trial, it will "speak for itself."

PISCICULTURE BY STEAM.

THE MALTHUSIAN THEORY REFUTED.

FROM an exhaustive article on Fish Culture, written by Mr. B. B. Redding, we clip the following:—

"Scientific investigation may never show the origin of life. In this direction it only knows that all forms of life with which man is acquainted have proceeded from previous life. Beyond this point it eludes search, and its beginning seems to be as unthinkable as the commencement of time, or the boundary of space. It, however, does know that on this planet there is no life not connected with water. In every form in which life is found, whether in the vegetable or animal kingdoms, water, in some form, is the first requisite for its existence and perpetuation. The recent investigations of life, in the ocean and on the ocean's bottom, conducted by order of the American, English, French, and other Governments, show that the varieties and numbers of different forms of life at the bottom of the ocean are largely in excess of those on the land. As the area of the earth's surface covered by water is about three times that of the land, it gives an abundance and variety in forms of life at the bottom of the ocean of which it is difficult to imagine. But this abundance and variety exists not alone at the bottom of the ocean; every cubic foot of the water of the ocean is filled with countless and multitudinous forms of life, varying with temperature and strata of depth.

"When the varieties and numbers of life at the bottom of the ocean are multiplied by the mass and magnitude of the ocean itself, it gives an abundance of life that is inconceivable and inexhaustible. Man has no food that does not come from the surface of the land, or from the ocean. If the ocean itself could be cultivated for food, it should yield a supply, not as the area of the bottom is to the area of the land above its surface, but as all its areas of density and temperature are to the surface of the land above water. Could the abundance and varieties of those lower forms of life in the ocean, that appear to propagate and increase in a geometrical ratio in the lowness of their organisms, be made to serve as food for higher forms of life, and these again for others still higher, until they resulted in food useful for man, the time could not come, during the present geological epoch, when man could exhaust the supply of food. The fecundity of the higher orders of aquatic life, made use of by man as food, is almost marvellous. Leeuwenhock found 9,344,000 eggs in one codfish. C. F. Land reported to the Swedish Royal Association

of Science that he obtained 272,160 eggs from a pike. Valenciennes reported to the French Academy of Science that he found 9,000,000 eggs in a turbot, and 13,000,000 in a mullet. Pettitt obtained from a carp 342,140 eggs. A sole has yielded 100,360, a flounder the enormous sum of 1,357,400, and a mackerel 546,680.

"Mr. W. K. Brooks, professor of biology in the John Hopkins University, while studying the life history of the Atlantic Oyster, found that each female averaged more than nine million eggs, and, what is of as great importance, that all of these eggs could be artificially fecundated, and, if cared for, would grow into perfect oysters. The soft shell-clam now found so abundantly in the mud in the bay of San Francisco, is said to be equally prolific. Mr. R. E. C. Stearns, of the University of California, who has made a study of the crustacea of this state, says that this clam (*myra arenaria*), is not a native of the Pacific coast, but that the spat was brought here in the mud attached to the shells of Atlantic oysters. None of the shells of this clam are found in the kitchen-middens, or shell mounds of the aboriginal inhabitants.

"It has been estimated that, in a state of nature, not more than an average of two eggs in a thousand ever become fish; the others either fail to receive the fertilizing sperm, or are eaten by the parents or other fish, are smothered by sediment, sand or mud, or killed by fungoid growths, or destroyed by waves or changes in temperature. It is only when man brings the milt and sperm in contact, and protects the eggs from enemies, that the full measure of this fecundity can be made to result in living fish.

"The possibilities of the ocean, as an inexhaustible reservoir of food, were not known or dreamed of when Malthus proposed restrictions to the increase of the human race. The work has commenced of turning these lower forms of life into increased supplies of food—first, for our own people, and after them, the world. The credit for this enlarged philanthropy is due to the United States Government; the honour of its inception and the exercise of the executive ability to make it practical, are due to Professor Spencer F. Baird, United States Fish Commissioner and secretary of the Smithsonian Institute. Under his supervision, for the past two years, millions of codfish and mackerel have been hatched and turned into the waters of the Bay of Fundy and Long Island Sound. Aided by an appropriation from Congress, during the past year, a steamship of 484 tons (the "Fish Hawk") was constructed expressly for the taking of fish on their spawning beds, in the ocean and rivers. She is equipped with all the means and appliances for the hatching of millions of the eggs of fish. This work is now done by steam. When the shad enter one of the Southern rivers and are ripe, the "Fish Hawk" follows; the fish are taken, the milt and spawn are artificially brought in contact; the fertilised eggs are placed in proper receptacles, and furnished with a continuous supply of fresh water by aid of a steam-engine. In three or four days the young fish, by the million, are hatched and turned into the river. The "Fish Hawk" then continues the work in some river further north, into which the fish appear later. When all this work is completed, she steams for some station, where the codfish or mackerel are ripe. The hatching apparatus is changed to suit the eggs of the particular variety of fish, and the work continues. The eggs of some fish float, as the codfish; others sink; some are glutinous, and become attached to grass or weeds; some will hatch in still water; others require running water or the motion of the waves of the ocean; some kinds, as the shad, hatch in two days; others, as the salmon, require forty or more days. The United States Fishing Commission was the first to use the power of steam in the artificial hatching of fish eggs. The amount of the work performed by steam relatively to

that performed heretofore by hand, bears the relation that the work of the largest Lowell or Manchester cotton mill does to that of the loom of our ancestors.

"Man's power to multiply fish through the aid of steam, is only limited by his want of knowledge of the various forms of life in the ocean, by his ignorance in relation to the food of fish, by the mysteries of their migrations and different modes of propagation. As scientific investigations disclose the facts as to each variety, they can be propagated and turned into the waters of our coasts until in numbers they equal their supply of food. Other civilised nations will follow our example, and in time, the waters of the shores will be stocked with all the varieties useful to man. Man's civilisation was developed in his efforts to increase his supplies of food. When in numbers he shall have increased beyond the productive power of the land, he will have so far advanced in intellectual development, that that he will be enabled to find inexhaustible supplies in "the waters that bring forth abundantly the moving creatures that have life."

NOTICES OF BOOKS, &c.

SCOTCH FISHERIES IMPROVEMENT ASSOCIATION. First Annual Report of the Council to the Members of the Association. May, 1881. Edinburgh: Neill and Co., 1881.

CONSIDERING the short time that has elapsed since the first formation of the Scotch Fisheries Improvement Association early in the present year, the Council unfold a very promising tale of present and prospective success in this the first of their annual reports. One hundred and forty life and annual subscribers, including the best-known names in modern annals of angling and fish-culture, have already found place on the member-roll; but, as the rules provide for the admission of corporate bodies, such as district boards and angling clubs, on the same terms as individuals, this number only faintly indicates the amount of support at the disposal of the Council. So far, fifteen only of these corporate bodies have joined the association, but inasmuch as it is the council's desire "to make the association a common centre to which fishery associations and angling clubs may communicate, and from which they may receive useful information with regard to the protection of the waters under their control," there is but little doubt but that the whole of the twenty-one district boards and fifty-five fishery associations and angling clubs, named in an appendix to this report, will shortly join hands with the Scotch Fisheries Improvement Association and find their advantage in so doing. The objects of the association are fivefold—to bring about required amendments in the legislation relating to salmon, trout, and other freshwater fish; to promote district boards in fishery districts where none at present exist; to procure extension of the powers given to Government Scotch Salmon Fishery Commissioners; to encourage fish-culture, and to prevent or cure the pollution of rivers, streams and lakes. In regard to the third of these objects, the council draw attention to an extraordinary anomaly in the existing legislation relative to Scotch salmon fisheries. It appears that the Scotch Commissioners are neither entitled nor enjoined to give advice or assistance to river conservators, and still less are they required to gather materials for annual reports to be laid before Government and Parliament. Under these circumstances, bearing in mind the generally acknowledged and proved utility of the reports by English and Irish Fishery Inspectors, it is no wonder that the Council should in the first place imperatively call for immediate enlargement of the powers given to Scotch Fishery Commissioners, so that these also may hold annual inspections and draw up reports, which, if not likely to excel, may at least be expected to rival the English

and Irish reports in providing valuable suggestions for the development and improvement of our national fisheries. To the Council is also due the honour of initiating the projected National Fisheries Exhibition for Scotland, to be held at Edinburgh in the course of April, 1882, and their memorial on the subject to the Lord Provost, Magistrates and Town Council will be found in an appendix. The Scotch Fisheries Improvement Association have indeed a wide but glorious field of useful labour open before them, and it is to be hoped that every one recognising the national importance of the objects they have set themselves to accomplish, will not lag behind in tendering assistance of a practical kind, as well as encouraging expressions of sympathetic good will.

Along with several valuable appendices to this report the Council have printed Sir James R. G. Maitland's Essay on the Salmon Disease, which gained the £10 prize presented by the editor of the FISHING GAZETTE, at Norwich; but as consideration of this matter will find a place in these pages elsewhere, all further reference to it here is superfluous.

BAITS FOR EELS—BREAM, &c.—THAMES TROUT, &c.

BAIT, &c., FOR EELS.—In answer to "C. T.," he may use fresh offal or small fish for his eel basket, and it should be placed in water of moderate depth, near reeds, submerged trunks, &c., or under the overspreading branches of such side growth as the river may possess, with the head of the basket pointing down stream, as eels are heading up rather than down at this season of the year. Eel lines may be baited with frogs (a capital bait for large eels), small fish, lob-worms, fresh offal, or the tiny lamprey or sand-pride. Eel-lines laid with many hooks on constitute the most killing way of all. Of course he can "bob" or "sniggle" for them. Any fishing-book will tell him how, or I will do so, if he does not know.

BAIT FOR BREAM.—Let Mr. H. A. next try the ordinary maiden lob-worm, carefully scoured in moss for several days previous to using, ground baiting with same, or greaves, also ground-baiting with same. The latter must be chopped up and boiled till quite soft. Do not overdo the ground-baiting. About a quart late at night or very early in the morning for three days before fishing will do. Write again if not successful, giving locality and characteristics of water, &c., and I will try to help further.

THAMES TROUT.—I know the water referred to by "E. L.," and I am quite sure that his suggestion is a happy one for the increase of this splendid fish. By all means let those turned in be of the true Thames breed, for I most distinctly utter my protest against the introduction of an inferior kind, such as those from the Wick even. It is, of course, very nice to be able to say one has taken a trout from the Thames, even if it has been placed there only ten minutes before, and is of size and game qualities vastly inferior; but give me the genuine article, running up sometimes to 16 lb. (as witness the cast of such a fish in the office of *Land and Water* this week), and with a capacity for fight not surpassed by *Salmo Salar*, Esq., himself.

Now, I am convinced that if trout of 1 lb. weight were introduced, say, to the number of a dozen at each station on the Thames every year, and if a fish pen were erected at each weir, in seven years the Thames would swarm with sizeable fish of the true breed, and in fourteen—providing, of course, that the supply be persistently kept up—there would be no finer trout river in the world. There is no earthly fear of jack that need be for one instant entertained, nor of the other coarse fish, because bait-catching and general angling would keep them within bounds. Pollution and poaching would be the only enemies, and the latter is not now, happily, a considerable one on this river. Of pollution, however, I greatly fear me yet. How is it, for example, that Richmond and Kingston still discharge sewage into the river?

Floods are of necessity evils with which the angler cannot cope. These do immense damage to all spawning grounds if prevalent during the breeding season. Trout are generally the greater sufferers, and hence the enhanced necessity of artificial spawning of these gallant fish. Mr. Forbes has done right well in the artificial business at his own cost; but even "B." sanguine as he is over this gentleman's operations, will admit with me that for various reasons Chertsey is not the most desirable place for trout breeding. I have not, it is true, very great knowledge of the improvements effected by Mr. F. during the last few years, but I have acute recollections of his early failures through the total inadequacy of the natural resources of the locality—and natural insufficiencies in any breeding operations whatever can never be entirely supplied.

I have several times deplored the decadence of Thames trouting, which I insist, from intimate acquaintance of the river during the past twenty years, is still increasing, and I have pointed out before the enlarging desirability (seeing the growing fraternity of anglers) of some active measures being adopted, not simply by gentlemen—theorists, as, at the best, gentlemen whose trout are found for them and observed, can only be—but by the aid and practical help of those men whose business it is to find fish for their patrons—namely, Thames fishermen. At any rate, if the fish of the Thames are to be benefited to any appreciable extent, let such men have a voice in the method. I think our fishery inspectors might do good service in holding an inquiry into the subject of Thames trout culture, seeing that the dream of the late Mr. Buckland as to the return of salmon can never be realised.

I sincerely trust that the Thames trout question will not drop out of your columns yet awhile now it has been broached; and that, as my much writing on this subject may weary my readers, that "B.," whose knowledge of the Thames cannot be surpassed, will again return to the charge with some practical suggestions.

HINE'S SPRING PLUMMET.—I admire the ingenuity of this plummet—but is it not a fault that the hook point is not protected? Suppose one is using a large hook, and fishing near or over weeds, is not the point liable to catch? and if by an accident it came in contact with stones would it not be probably unconsciously blunted? The old-fashioned plummet is not so elegant, but I certainly prefer it on this score.—I am, &c.,

J. HARRINGTON KEENE.

RIVER REPORTS.

Thames (Goring).

Good water on now—a little discoloured from heavy rains. Prospects look well for a good season. Chub and barbel have done spawning; roach have not done yet. JOHN RUSH.

Thames (Richmond).

With a fine week the river will be in splendid order for fishing; the heavy rain has done a lot of good to our waters; it has washed all the filth down that might have hung about till the end of July. I think we shall have an early season, the fish is priming more than usual for the time of year. There is a lot of barbel this season. It would be a good thing for us if our water was preserved to Kew Bridge or Barnes, as the fish seem to drop down year after year. If there was a good sale for freshwater fish now, the net men would have a good time of it, as I think there are more fish below Richmond Bridge than 20 miles above it. I hope to have a good report to send you next week of the result of our opening day.—J. BUSHNELL.

Thames (Windsor).

Another proof of the eccentricity of our climate. Last week was broiling hot, this week it is more like March; as to getting up these mornings and going on the river it requires an iron constitution. Nothing has been done here, and being an unusually busy week for the boating fraternity, anglers are few on such occasions. At Windsor Weir some good chub have been coming up to the spinning bait, but no barbel have been had as in seasons past, which is an unusual thing, as during May and June there were always some fine specimens had, though of course they were returned. I rather fancy they are not up yet, if so they are very late. I hear that a fine chub was had on Bank holiday by a Londoner, and no river-keepers being about it eventually found its way to the smoke. May a bone stick in his throat, if the pot was his object, is the sincere wish of—B. R. BAMBRIDGE.

Coquet (Northumberland).

On to the Whitsuntide holiday the old sportsmen came in on the 3rd to secure a good start for the 6th. The water very small and bright, not much done. On the 4th, from 3 to 11 fish was the best basket. On the 6th a beautiful morning, everything required by the sport, from 2 to 3; started about 9.30, the day all overcast with thunder clouds, and about 10 hail began to fall, which lasted till 3, when it brightened up again, and then another start was made, but nothing worth speaking of was done. The best basket was Mr. J. Robson's, Newcastle, 4 lb., one trout 17 oz. Worm and minnow is the only thing that is taking during the day-time and fly in the evening. There are few who care for worm-fishing, but all the best fish are got by worms now.—A. GLASS, the Angler's Inn.

Dove (Derbyshire).

For all we have had so many anglers out on our river this week, I cannot hear of any great quantity of trout being taken. The best basket—one of five brace—came from near Birdsgrove. Plenty of piscators have got their two and three brace a-day, but I really thought there would have been something better to report. I attribute the slackness of sport to the fact that nasty cold winds have been blowing, which sent the fish right off the feed. They sent the fly off the river as well. I thought the Mayfly would have been fully out by the middle of the week, but it is no more forward now than when I last wrote. The river is in nice order for either fly or worm, and I think the weather is now settling down into thorough summer order.—THE SPLODGER.

Lea (Cook's Ferry).

Not so many anglers as expected took advantage of the above waters being open on the 1st, but those who did had good sport and good baskets, several of them having fish of good size. Amongst them chub, 2½ lb. roach, 1 lb. 12 oz.; carp, 4 lb.; and barbel, 5 lb. The bream have been sunning themselves, and such a show has not been seen for years. Several trout have been taken, and as the anglers are returning them this will benefit this stream, which in its own nature is about the finest trout stream on the Lea.—H. GAME.

Loch Awe.

The following have been the takes at Pottsonachan Hotel:—June 4—Mr. Keoch, 12 trout; Mr. Clerks, 13 trout. June 7—Mr. Simpson, 14 trout and 2 salmo-ferox, weighing respectively 3½ lb. and 4½ lb.

Severn and Teme (Worcestershire).

The Severn is now quite stained, but not risen. It is at summer level, and, no doubt, upon the fords, there are plenty of trout. Some good takes have been the result of a few evenings' fishing up stream. It is of no good to angle in the daytime—that is, after nine in the morning—and, say, not before six in the evening, unless it should be a dull day. The caddow is upon the move now; we are within a few days of the great rise, as it is termed. A few remarks may be useful to some of our less-favoured brethren of the angle—I mean those who do not live so near a trout stream as myself. I can get to three streams in less than an hour, and each contain trout. In fact, I rose between forty and fifty fish last Friday evening, and landed twenty-one. They rose shy, or, as is often termed, short. The stream was so clear that I could see the spotted fellows balancing themselves as though fixed upon the extreme end of a stick, waiting the approach of a caddow, or owl-fly. The red spinner and yellow dun also seemed to be well amongst the victims. I found the red spinner and dun take the best. One of the most doubtful flies to use is the caddow, unless the water be rough. I have made, and also my father something to look like the caddow, but when the caddow is on it is useless to try an artificial one in a steady, deep pool, and that is the spot for a one or two

pounder. I have seen some of the best imitations that can be, and none will take like the natural one. The best way to take trout with the caddow is to place the natural fly upon a hook, tied on with yellow silk, taking care to form the head as if making the fly; thread the insect upon it so that your hook—a No. 7 bright sneck bent—shall make its appearance amongst the legs. Let your tackle be good, but fine, and a trout will not let it pass him without a dash at it; but give me whipping the stream with the small flies, made well and exact to colour. Do not forget the black gnat when going fly-fishing.—J. A. GRIFFIN.

Suir and its Tributaries, Clonmel (Ireland).

There has been so little fishing lately that I have nothing to write about. The water continues still very low, even though we have had some few odd showers of both hail and rain. The cots do not fish at all now, and cannot well until we get a little fresh in the river. On Monday there was a nice fish landed by James Donohue, weighing 10 lb., and one at Newcastle on Dr. Cook's preserves of the same weight, killed by Paddy Keefe. The trout fishing on the Suir is pretty fair, but all the streams are so low that no fish can be caught at present. A party of gentlemen went to the Lakes for a few days, and caught about 15 doz. good trout. The rails are the best flies for evening fishing at present, and small spiders during the day. Weather got suddenly cold and wine northerly, and all anglers hope for rain.—DORA.

Wye and Derwent (Derbyshire).

The Bank Holiday and Whitsuntide piscators have had a bitterly cold northerly wind prevailing ever since last Sunday, which has caused the trout to go off the feed a little, owing to the scarcity of flies on the water. A few professionals and some of the old hands who know the feeding places and the proper flies to use have done very fairly since Monday, and baskets from five to fourteen brace per angler, have been killed off both streams with the artificial flies. The green drake has been out very strong on the Wye, Lathkill, and also on the Derwent during the latter end of last week, and some fine baskets were killed last Saturday, both with the natural and small Derbyshire green drakes. Eight brace of fine trout were taken in the Derwent, near Matlock Bridge, last Saturday afternoon with the natural drake, weighing over 7 lb. The yellows have done fairly well, both on the Wye and Derwent, for about an hour of an afternoon, while the flies have come on from 1 to 5.30. The fish rose very little late in the evening, owing to the weather being so bitterly cold. Eight brace of large trout were killed on Wednesday on the Darley Dale Club water with the Downlooker fly by dibbling under the bushes and trees with the natural fly. Fifteen brace were taken on the Derwent with the maggot yesterday—some very large grayling among them. There have also been some good catches made on most parts of the Derwent with both worm and eggs and gentles. Sport on the ponds has been first-class during the week with both the natural and the Derbyshire green drakes. One gentleman writes me that he killed thirty brace of good trout on the Amber last Saturday with artificial green drake and spider flies. Fly-fishing prospects would be first-class if the wind were a little warmer and accompanied with a little gentle rain. There are a good many anglers now in Derbyshire.—JAMES EATON, Starkholmes, Matlock Bath.

Wye (Ross).

This river is now in good condition for angling, but trout are very scarce. Several good ones were taken last week at Bachney, by Mr. Akerman, and some good sport may be obtained in the streams with the chad. The brooks are in first-class order, yet the May flies are as thick as leaves in Vallambrosa. Last week good baskets were taken in the Garron, the fish being in splendid condition. On Sunday some scoundrels poisoned a small trout brook at Cohey, and numbers of fish were taken out dead. If looked after with care the brooks in the neighbourhood would soon swarm with trout, but at present farmers and others ignorantly net the water and spoil all chance of sport. The Wye preservation, too, is a sham and a mockery, and until something really effective is started in the way of an angling association, the stock of fish will continue to decrease. The salmon will never be more plentiful so long as the Messrs. Millers, of Chepstow, rent the lower waters. Their system of fishing is too deadly to allow anything like a fair percentage to fish to ascend the upper waters, yet the proprietors above Monmouth have consequently to suffer.

Yore (Yorkshire).

Our English climate is, indeed, a strange one, as last week everyone was groaning under the oppressive heat, and yesterday, when fly-fishing, my fingers were so benumbed with the cold that I could hardly take the fish from the hook. Then, we were treated to a thunderstorm on Monday; so that, on the whole, my readers will not be surprised to hear that trout-fishing this Whitsuntide has been a failure. I, in company with two gentlemen from Stockton-on-Tees, fished the Yore at Tantfield, but did not meet with much success, owing, I think, to the atmospheric phenomena alluded to above. I tried the minnow, worm, stonefly and every artificial fly that I thought likely, but all to no purpose, as I could only induce a few dace to show up. The yellow dace was on the water very thickly at times, and, doubtless, when the weather changes this fly will kill well. I prefer it made hacklewise, dotterel feather on a ribbed yellow silk body. The black spider, fern fly, June dun, and little yellow May fly should also kill well on warm cloudy days or in the evening, but on bright, sunny days dibbling carefully behind bushes with a bluebottle fly, will be found to answer best. The Yore rose a few inches yesterday, but was not much discoloured. It rained very heavily last night, so that a further rise may probably ensue.—FRANCIS M. WALBRAN.

NORTHERN NOTES.

By F. J. H.

THE fag-end of the close season is a time of considerable interest to the angler, a large number longing for the time when they can go out and make a good all-round catch, and certainly the grand weather we have had during the last fortnight has only tended to make that feeling the keener. It's too good to last. Some who have had a good look over the country declare that already rain is greatly needed.

A friend of mine, Mr. Willett, with a party of three or four gentlemen, had a day last Monday up at Cope's landing, towards Driffild, when several fine trout were caught. Mr. W. landed a brace in addition to a quantity of eels, one roach and a dace, these latter were returned to their native element, but are spoken of as being in fine condition. Water in good condition.

High up and low down the river Hull trout are to be caught, and no doubt adepts at fly fishing will be repaid by attention to certain parts in this stream.

The more unassuming angler will find something to do if he must have fishing before the 16th, for here he can have any number of good-conditioned eels; he may even fancy he's about to get something big, and when brought to the top it will probably turn out to be a $\frac{3}{4}$ lb. flat fish. Taken altogether, I think things seem to have a very promising aspect. The water was weedy in some parts; this stream is, of course, subject to a slight rise and fall.

Most anglers who may be in the habit of making a periodical visit to any particular river or stream will sooner or later become acquainted with what I may term the self-conceited wisecrack of the locality. A man who, by his own account, has caught more fish than you have ever seen; a man hard to shake off; a man who will cage your tobacco and liquor, a man who will sit down alongside of you without invitation and tell lies till further orders; and after all he may only be connected with the ferry, or be a hind at some neighbouring farm. It matters not; there he is. You cannot get him to take an Irish hint, you can scarcely insult him; he is probably a man who never fished with a rod and line in his life, yet knows all about it; he boasts how he has taken everything that can be taken, and uses a miserable set line at night. This is how the conceit was taken out of a man of this kidney: he was carefully watched, and seen to make for some bushes that overhung the stream, and put down his miserable line and depart. His watchers went and drew up his line, knocked off the baits, and hooked on a mackerel fresh from the town that day, and dropped line and mackerel in. Next morning, just after breakfast, in rushed Mr. Clever to a little public where a few fishermen met. "Caught another," says he. "First this season; got about fifty last." "Why, it's a mackerel," said the company in chorus, ready to burst with laughter. "Is it?" said the knowing party, with something like a doubt in his tone of inquiry. His bewildered looks set the company in roars. He feels he has been bested in some way, but cannot make it out; but if you want to hear him quote Scripture, just sing out, "Caught any more mackerel lately?" Use the word mackerel and he leaves in double quick time.

LARKHALL ANGLERS.

The annual general meeting—which had been adjourned on several occasions owing to the large amount of business to be got through—was brought to a conclusion on Wednesday, May 25th. The following gentlemen have been elected as officers of the society for the ensuing season:—President, Mr. G. F. Spencer re-elected. Vice-President, Mr. G. Nicholson, in place of Mr. F. Boyce, resigned. Treasurer, Mr. C. J. Morris. Committee, Messrs. F. Croutel, E. M. Mallett, B. Boyce, W. Creak, A. Burgess, F. Boyce, W. W. Westley, C. Davison and J. W. Green. Auditors, Messrs. E. Nixon and J. English. Hon. Sec., W. Tucker. Much time and attention has been bestowed upon the revision of the rules, the whole of which have undergone most careful consideration and reconstruction, and I have no doubt that when, shortly, they are placed in the hands of members, it will be readily conceded that the Special Committee appointed for the purpose has succeeded in placing before them as neat and as lucid a book of rules as emanates from any angling society in London. Prizes to the amount of nineteen guineas have already been arranged, and as the season progresses, doubtless this amount will be considerably augmented. A great feature during the coming season, and which will doubtless be the means of producing some good shows of fish, is the monthly competition (not pegged down matches), which have been arranged as follows:—Barbel competition, August; roach do., September; bream do., October; perch do., November; chub do., December; and pike for January and February. The contests are pretty certain to be close and exciting, as all the "cracks" have signified their intention of competing for the valuable stakes. We can also reckon upon seeing a severe race for the ten guinea challenge cup, won the first year by Mr. Geo. Penn. Several matches are already on the tapis, those old opponents, Messrs. J. W. Green and J. English having already arranged for a renewal of hostilities, and should the weather be at all favourable there is every prospect of the coming season being the most successful since the formation of the society. The number of members has steadily increased since the limit was taken off, and as this is a most favourable time to join an angling society, gentlemen wishing to become members are invited to apply (by letter) to the Hon Sec. or any member of the Committee at the Club House.—RUNNYMEDE.

June 4th.

MORE TROUT FOR THE THAMES.—On Wednesday 100 splendid trout of the Wycombe breed—supplied by Mr. Edwin Davis, of High Wycombe—were turned down by the Reading and District Angling Association, forming another valuable contribution to the future sport of the angling community by this active society. It has been found that ordinary brook trout are of little use in the Thames, as they are sure to work up the tributaries; but the Wycombe fish are believed to have a little tendency to rove as the true Thames breed, which they most nearly approach.

THE FRANK BUCKLAND MEMORIAL.—The sum of £5 5s. has been voted to this fund by the Reading and District Angling Association, and has been forwarded to the hon. sec., through Mr. Higford Burr.

A REMARKABLE EEL.—Mr. Best, of Caversham, has taken in his eel-bucks a very curious specimen of the eel, which has excited a good deal of comment among those interested in such matters. The peculiarity of the eel in question—which weighs about half-a-pound—is in the head, which is remarkably short and broad, and furnished with a pair of enormous eyes, which are as nearly as possible half-an-inch in diameter. The expression is almost diabolic; and—most remarkable of all—the look of the "weird beastie" is borne out by its temper, as it snaps viciously at any and everything within reach.

ANGLERS should always be provided with something to take away the swelling and poisonous effect of the bites of insects. They should also have with them something to apply to a cut or sprain. Pond's Extract reduces the swelling and inflammation, stops bleeding and pain, and hastens the healing process in case of any wound or sprain; and it has no equal for application to the bites and stings of insects. Therefore never go on a fishing excursion unprovided with a bottle of Pond's Extract. It is for sale at all chemists, at 2s. 3d., 4s. 6d., and 8s. 6d. per bottle.—[ADVERTISEMENT.]

GEORGE JAMES EATON, of Starkholmes Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[ADVT.]

STANLEY ANGLERS.

The annual dinner of this popular club took place on Wednesday evening last, at the Lord Stanley Hotel, Camden Park Road. Mr. C. P. Wheatstone, the respected president, occupied the position of chairman, with Mr. R. Pollentine in the vice-chair. Amongst those present were Messrs. F. C. Hatfield, G. Walker, C. Scull, J. Pooley, W. H. Brougham, L. Gow, Charles Laidlaw, E. J. Pain, H. W. Baldry, H. Lupton, Hewitt, Godsall, Rose, W. R. Hornby, &c. The billiard room (with the table removed out of it) was most tastefully laid out, the walls being decorated with the fish trophies of the president and some first-rate fish paintings from the pencil of Mr. R. Richards, and the tables looked exceedingly nice. An exceptionally good dinner was provided by Mr. W. Jarvis, who had evidently determined to make it a special one for the occasion—there was a profusion of everything, and it was served up in capital style, the wines also being of the choicest vintages. At the conclusion of the repast the Chairman gave the loyal toast of "The Queen, the Prince and Princess of Wales, and the rest of the Royal Family," and the National Anthem having been sung, Mr. Wheatstone proposed "Success to the Stanley Anglers." In doing so he noticed the prosperity of the club in the most cheering terms, and said that the committee had, after a number of meetings on the subject, made some great and important alterations in the rules, one being that of doing away with "gross weight competitions," which he considered was a move in the right direction, and encouraging the retention only of good-sized fish. The rules would come before a special meeting on Tuesday evening next, and he had no doubt the proposed alterations would meet with the approval of the members, those present having already most favourably recognised the removal of "gross-weight competitions." The toast was drunk with great enthusiasm. The honorary secretary (Mr. C. Laidlaw) then gave an interesting account of the work of the society during the last year. In the gross weight table for the season of 1880-81 it would be seen that Mr. Wheatstone, as usual, was at the head with a total of 334 lb. 10 oz. The next heaviest weight was Mr. C. Scull with 192 lb. 1½ oz.; and then followed Mr. I. Duncan, with 77 lb. ¾ oz.; Dr. Harris, with 71 lb. 10 oz.; and Mr. C. Laidlaw and Mr. A. Wrightson making a tie with 59 lb. 3½ oz. each. The gross weight on the list was 1031 lb. 9¼ oz. The club had now 90 good members, and the fishing members were on the increase. The funds were in a healthy condition, the balance after the collection of a small sum being £24 11s. 2d. The sum of £42 18s. 6d. had been contributed in prizes, and, after reading over a lengthened prize list, Mr. Laidlaw hoped, if he remained their honorary secretary another year, to come before them with even a more satisfactory report. Mr. C. Laidlaw afterwards gave "The Thames Angling Preservation Society," referring in the most glowing terms to the character of its work on behalf of the angler, and with the large increase of piscators it had extended its operations in every way to increase the sport in the river. He included in the toast the name of their old friend, Mr. W. H. Brougham, for there was no man worked harder for the anglers than he did, and none appreciated his labours more worthily than the Stanley Anglers. Mr. W. H. Brougham, in responding, thanked his friend Mr. Laidlaw for the generous manner in which he had given the toast, and was assured by his remarks that the work of his society was speaking for itself. He looked forward to a very prosperous season as regards angling, inasmuch as the different kinds of fish had gone up to their spawning grounds in greater masses than usual, and the river abounded with young fry. The Chairman proposed "The West Central, the East Central and the Central Association of London Angling Clubs," coupling with the toast Mr. F. C. Hatfield, of the Central Association. Mr. Hatfield, after referring to the concessions the Association had obtained for the anglers, called the attention of those present to the Bill now before Parliament to encourage rod-fishing all the year round. He hoped that all the London anglers would unite in a spirited and determined opposition to it, as he thought it was a most disgraceful measure, and would completely annihilate the work of river preservation. A representative from the West Central Association acknowledged the toast, and said his association was alive to the importance of opposing most strenuously the Bill of Mr. Stuart Wortley. A letter was read from Mr. P. Geen, calling attention to the advertisements in the papers in reference to a meeting to oppose the Bill. Mr. W. H. Brougham said he believed it was the intention of the West Central Association to call a mass meeting, and he sincerely hoped that any differences of opinion on other matters would be laid on one side, and all would work cordially together to prevent such an idea as rod fishing all the year round being carried out. Mr. Hewitt gave the "The Press," and with it he united the name of Mr. W. H. Brougham, who briefly replied. A number of other toasts followed, the last proposed by the Chairman being "Our Host and Hostess," in which he highly complimented Mr. and Mrs. Jarvis on giving them so excellent a dinner. There was some excellent harmony by Messrs. Scull, Hatfield, Gow, and others, and the evening was pleasantly spent.

TIRED HANDS AND ARMS.—Edson's Electric Armlets and Wrist Bands invaluable for anglers and gun sportsmen and highly recommended for all persons having tiresome writing, sewing, or music practice. They give wonderful energy and strength, enabling the wearer to accomplish tedious work with steadiness and comfort. Price 2s. 6d. per pair, silk web and fine steel clasps. Sent to any address on receipt of P.O.O., payable to J. Edson, the Electric Fabric Co. Patentees, No. 1, Charlotte Street, Bedford Square, London, W.C.—[ADVT.]

MRS. F. Y. BROCAS, Artificial Fly Dresser, 4, Mill-street, Conduit-street, Harover-square, London, W. A stock of best flies always on hand. Flies made to pattern. Lessons in fly making given.—[ADVT.]

CORRESPONDENCE.

[We do not hold ourselves responsible for opinions expressed by our Correspondents.]

THE PROPOSED ALTERATION OF THE MUNDELLA ACT.

SIR,—In spite of Mr. Geen's long letter, in your to-day's paper, I trust that you will persevere in advocating considerable alteration in this most objectionable "Mundella Act."

As honorary secretary of an angling club, consisting of nearly 200 members, I have no hesitation in asserting that an immense majority are utterly disgusted with the working of this Act. I differ entirely with Mr. Geen, if he considers that roach, bream, and chub ought not to be fished for after the middle of March. As to the roach exhibited at the Norwich Exhibition, which I saw on the 29th of April, the day after Mr. Geen's visit, I must say candidly that I saw nothing either "repulsive or beastly" about them. They were in far finer condition than they are at all likely to be for at least a month after the termination of these precious fence-months. Had the exhibition been held some six weeks later, say, in the middle of June, what would the roach have been like *then*, I should like to know?

Mr. Geen's theory that fish are in a repulsive condition as they approach their spawning-time, is quite new to me, and, I think, to most other anglers, and I do not hesitate to say that roach, bream, chub, carp, and tench are, in the opinion of myself and many others, in splendid condition, throughout the whole of April. But the fence-months for all these fish commence on the 15th of March, in order to protect the jack and perch! It is notorious that dace are in good condition long before the 16th of June; but, then, one might accidentally catch a chub or a roach. These qualms of conscience do not seem to trouble the Thames trout spinners much, for everyone knows that they hook hundreds of pike, perch, chub, and barbel, before they get one single specimen of what they fish for? Will Mr. Geen tell us whether he advocates putting a stop to this practice?

Jack-fishing should not be allowed, I consider, between February and September, but that is no reason why all fishing should be stopped. The Mundella Act has attempted an impossibility. No three consecutive months can be selected as fence-months for our fish, with their different spawning times and habits. The natural consequence is that, at present, fishing is forbidden for many fish at a season when they are in excellent order, and allowed for others when they are not fit to take. Believing, as I do, that our rivers will never be damaged as long as fair angling only is allowed (considering the enormous productiveness of fish, and also the numerous days throughout the year when, from some cause or other, even the best angler goes home disappointed). I say—Put a stop to *netting*. Talk no more rubbish about increasing the food of the people—which coarse fish never can become to any extent—and leave the fair angler alone.—I am, &c.,

E. BICKNELL.

Bedford, June 4, 1881.

SIR,—The proposal of Mr. Stuart Wortley and Mr. Dodds to "amend" the Freshwater Fisheries Act, "with a view to legalise rod-fishing at all times," has caused much alarm among the anglers in this neighbourhood, who cannot see why the most valuable clause in that excellent measure should be destroyed. The matter was, on Saturday last, discussed at the weekly meeting of this association, when there was a crowded attendance, and I was unanimously requested to write you on the subject, and to enter our earnest protest against any tampering with the clause except in the direction, if thought desirable, of extending the close time for some fish. At the meeting the admirable letters of Mr. Geen and Mr. Lander in Saturday's GAZETTE met with unqualified approval, and all agreed with every one of the points they so ably enforce. We must have at least "three months' quiet for all fish," or "legitimate sport in all rivers will eventually be ruined."

It is easy to talk of putting down netting and all kinds of poaching, but let us aim at the possible. Every one will, I am sure, agree that it is a great point gained to have netting made illegal everywhere three months in the year.

The argument that fair angling all the year round would do no harm is still more plausible; and no doubt if all who seek to catch fish were as honest and sportsmanlike as the gentlemen who have written you on the subject, no harm would be done by legalising it. But if the argument—the only one—that because a certain number of persons have true instincts, therefore a law to check those who are evilly disposed should be abrogated, is a good one, let us follow it out to its logical conclusion, and do away with our criminal law, because you and I, as individuals, do not contemplate murder or indulge in "burgling."

Those who have the practical working of preservation societies know that if angling were permitted all the year round a bailiff would be required at the elbow of nine out of ten of the anglers, at any rate in the neighbourhood of large towns; and even if such a thing were desirable, where are the funds to come from?

No doubt the Mundella Act is capable of amendment, and we should be glad to see a real conference on the matter, which should be attended by delegates only from associations and clubs all over the kingdom, elected say at the rate of one or two for every hundred members. Then it would be impossible for a noisy local clique to swamp the sober opinion of the great community of fair anglers.

Following the good example of the Piscatorial Society, this Association hereby protests most energetically against the proposed "amendment" of the Act, and we intend to petition Parliament and otherwise act in opposition to it. May all clubs and associations do likewise.—I am, &c.,

ARTHUR C. BUTLER,

Hon. Sec. Reading and District Angling Association.

Great Western Hotel, Reading, June 6.

SIR,—Will you kindly allow me to express my opinion on the above subject, through the columns of your valuable paper? At one time I was greatly impressed with the importance of the "Freshwater Fish Act," but after carefully watching the operation of the Act in this district I am forced to confess that it requires altering in some of its details. Years ago, barbel and chub were netted from the weed beds during scouring time—sometimes to the tune of tons in a single season—on the various reaches of the Lower Trent; ay, and certain "anglers," who called themselves "sportsmen," would take chub with a rough Palmer or the locust on the surface, or with the cadbait from the bottom, when the ova has dripped from the fish. But, as a general rule, anglers are honest, and there are not very many of the class just described. I am perfectly aware that there are black sheep in every flock, and that the flock of anglers is not an

exception to this rule; but that is no reason that a hundred anglers should be deprived of their sport because there happens to be a "blackleg angler" among them. Mr. P. Geen, in a lengthy article on this subject, which appeared in the GAZETTE for June 4, seems to me to be of the opinion that the great body of anglers are dishonest—at least that is my opinion after reading the very high-handed letter just referred to. Mr. Geen—you surely cannot mean it—what are your reasons for supposing that the great body of anglers would take fish out of season? We are all aware of the fact that trout fishers frequently hook chub, barbel and dace; but they are mostly, if not always, returned; and I have no hesitation in saying that any angler fishing for dace during May, if he hooked a roach or chub would return it to the water. Trout fishing we know is in the height of its glory during the close time for coarse fish, and perhaps Mr. Geen and his friends have got their purses well lined, and can afford to go trout fishing, and don't care for such "ignoble" sport as bottom fishing during those months. But let him ask the great army of working-men anglers up and down the country, who cannot afford to go to a distance trout fishing, while a good coarse-fish river is within easy hail. I say, let him ask these men if they agree with the "Mundella Act," and I am sure the answer would be—No, no! At least, it would be the answer of ninety out of every hundred. Let him come here to Newark, and walk through the Trent Ironworks, and ask the anglers in those works if they are satisfied with the "Act of 1875"; I know what the answer would be. I am a workman in these works, and I can speak from experience, for I have heard the opinions of lots of our working-men anglers. I have not the slightest hesitation in saying that I could forward a petition from this little town of Newark, signed by at least a hundred of our local anglers, that are in favour of rod-fishing all the year round, and if this is so in our small place, what must it be in other large places up and down the kingdom? Mr. Geen is very much mistaken when he says that only fishing-tackle makers are in favour of an alteration. It is all very well for him to go to gentlemen trout fishers, who are in favour of the present condition of things, and say that their opinion is the opinion of the majority. I am not a fishing-tackle maker, but simply a working blacksmith, and my opinions are shared by scores of my fellow working-men anglers. I cannot allow Mr. Geen to ride roughshod over us in this fashion without protesting against it. Mr. Geen may suppose that as I am only a working man my opinion is not worth much; but I have studied the question of fish and fishing, and I know the nature and habits of our coarse fish, and so I am perhaps entitled to an opinion.

Rod-fishing will never hurt a river in the least degree; it is netting that wants putting a stop to; the improvement to the "Mundella Act" would be a grand improvement if it would entirely stop netting, snatching, snaring, trimmering, liggering, and all other unfair methods of fishing, from the 1st of March till the 1st of August, and also stop the sale of fish (freshwater fish), except trout, &c., during the same period; by far the great majority of anglers in this district are of this opinion. I say, don't accuse anglers of unfair doings, but give them the benefit of the character they have long borne of being honest. The netting and the sale of coarse fish is all that requires putting a stop to, and the anglers with their rods will never hurt the fishing. I cannot learn that any better sport has been obtained since the passing of the Act, and I am sure that anglers who have hooked a fish in a gravid state would return it to the water. Dace are in condition in May, and may very well be taken then; and as for eels and flounders they ought not to be interfered with by any Act of Parliament, but allowed to be taken by anglers at any time. This is my honest opinion as a sportsman, and this opinion is shared, as I before remarked, by scores of our anglers. We do not wish to do an unfair thing, but we would be satisfied if we could legally fish for dace after the 1st of May, and take eels and flounders any time when we could get them. I will just give one instance to prove that netting ought not to be allowed until some considerable time after the 16th June. It was, if I remember aright, about a week after the opening of the season last year that a lot of barbel and chub were scouring themselves in the weed beds a short distance from Newark; a party of poachers went with their nets and captured a large quantity of them, and then they were hawked through the streets, and sold to the poor people at about a penny per lb. as wholesome food, when they were anything but wholesome. I say, stop the netting and also the sale of coarse fish from March 1st to August 1st, but let the rods be free and trust to the honesty of the anglers to return fish taken in a gravid state or in bad condition.

I am afraid I have trespassed on a deal of valuable space, but with your kind permission I will again refer to the subject when I get the opinions of other anglers in this district.—I am, &c.,

THE TRENT OTTER.

Newark, June 6.

[Mr. Geen is not backed up by "gentlemen trout fishers," but by London and Sheffield working men—it is only fair to state that fact.—ED.]

SIR,—In the GAZETTE of May 28 you say you would be glad to have the opinions of those who have watched the operation of the Mundella Fishery Act.

I will, therefore, endeavour to state, as briefly as possible, how matters stand in this particular neighbourhood.

The river Ivel is only a small stream; the water very pure, as there are no manufactures to pour offensive matter into it; and I am certain that in a short time it would be swarming with coarse fish; but just here there is a long length of common land alongside the river, and although, during the fence months, netting is not carried on in the daylight as much as it used to be, yet, as soon as the close time ends, netting will begin and be carried on both night and day as long as fish can be caught. The roach are never done spawning here by the middle of June, and on the shallows at night they capture them wholesale.

Snaring jack (if only six inches long) is carried on openly during close time, and the laying of night lines also. I have seen where they have been taken out, and on the bank scales as large as a sixpence; they would not belong to an eel, you know.

Now the Mundella Act is very well in some things, but as it stands it is very little use to us here. I agree with a close time of some sort, but we want a power created to see it carried out. We don't seem to have any here. I have asked the police whose business it is: they cannot tell me. 'Tis not theirs, they say. And then, a close time is no use unless netting is stopped entirely. We want the Act amending, power being given by special means to stop netting and night lines *entirely*, for if a man is a true angler I hold that he ought to catch his baits with rod and line if he wants them; I do myself. If we cannot get netting stopped we had better go back to the old state of things. I could then take my chance with the netters all the year round. Now I lose three of the best months of the year, for what? When the 16th comes, however early I may be out, I shall probably encounter half-a-dozen nets, and the men who own them do not mind throwing them just where you are fishing. I have had them within a foot of my float before now.

I am afraid that instead of telling you how the Act operates, I have told you more of how it does not operate; but perhaps you will understand the state of things existing here, though not told in best style. If you do I shall be glad, and I earnestly hope it may be soon altered. Hoping I have not tried your patience, I am, &c.,

J. F. COOPER.

Shortmead Street, Biggleswade, June 7.

SIR,—Kindly allow me space to notice briefly a question asked by Mr. Geen, in his letter published in your last week's issue. "What particular fish is in season or fit to take in April and May?" Your correspondent answers this question in favour of dace only. Why has he omitted carp and tench, which fish, according to Blakey (no mean authority on the subject), are at their best during the above-named months? Mr. Geen also says he would prohibit the capture of dace in May, because, possibly, chub or roach might take the offered bait. Does not this objection equally apply to anglers who fish for trout in the Thames during April and May? Is it really a misfortune for these gentlemen to have to put back a 6 or 8 lb. pike or barbel, after an exciting struggle of five or ten minutes' duration? I think the majority of anglers whose pockets might permit them to partake of such a luxury would answer in the negative. Into the general question which forms the main subject of your correspondent's letter space forbids me to enter; but as the law now stands the more humble angler is certainly placed at a disadvantage. The 16th June will indeed release him from an enforced three months' abstinence, but it will also release the netters and their tribe, who will then be free to carry on their wholesale destruction of fish, large and small, indiscriminately, to the great detriment of the angler. The Thames and Lea are, to a certain extent, protected rivers, and, of course, I do not in these remarks allude to them. There are, however, other streams and miles of canal water in the neighbourhood of London, which may truly be said to be open water. In such places an angler might fairly expect to catch a few fish on the first day of the season; but whatever benefit three months' fencing may have accomplished for these waters, the angler gets none of it. A week or two's persistent netting suffices to neutralise the advantages of a close time. This I believe to be a more important question than the one which Mr. Geen is so decided against. We owe him and the Association generally a goodly debt of gratitude for what they have done, and that debt would be largely increased if, by their means, the abolition, or at least partial suppression, of netting should be accomplished. If money were wanted I am satisfied the clubs would liberally respond.—I am, &c.,

M. R. P. S.
128, The Grove, Camberwell, June 7, 1881.

SIR,—In reading your paper of the 4th inst., I was much amused, firstly, by some one signing himself "P. Geen" holding a sort of "indignation meeting" upon Norfolk and Norwich anglers. I think it would have been as Christian-like of "P. Geen" had he held a similar meeting respecting Cockney fishermen holding their club meetings and matches on Sundays, and then sending an account of them in the most brazen manner to the FISHING GAZETTE to be read throughout Christian England. Secondly, I read another short article signed "B.," saying most likely some of the London clubs would fish on the Norfolk broads and waters this summer. I do think it is rather cheeky that they should first dictate, like "P. Geen" does, as to when we may fish, and then invite themselves to our broads and rivers to fish. I hope they will come down handsomely to the Bure and Yare Protection Societies for the liberty they are about to take. I daresay when those London clubs do come they will find different fishing from what they are in the habit of having. We in Norfolk do not want to buy a few fish and turn them into some artificial pond or other, and then fish for them, as they do in and around London, for then I can understand "P. Geen" and a few others haggling all Sunday evening over a few paltry fish. I understand one firm in Norwich is supplying certain Scotch streams with Norfolk fish to the tune of 20,000 per week, and I have no doubt that we could supply "P. Geen" with twenty times that amount, then he could angle and pay attention to his particular water, instead of dictating as to what Norfolk anglers may do with their fish. Thirdly, I see some one, who signs himself "J. H. Keene," recommending "A True Disciple of Isaac Walton" to communicate with some local angling club to remedy the grievance about "pike snaring." "J. H. Keene," like "P. Geen," has no idea of Norfolk fishing. Clubs in Norfolk have not control over legal matters connected with fishing. We do not pay for fishing here, only through the Yare and Bure Protection Societies, to stop netting. All are free to fish. We do not want to buy a few fish from one place and turn them into our streams and fish for them again. We have millions of fish, and now that they have stopped the netters (who used to take as many as 10 tons of fish from the river as manure in the year) we shall have millions more, and can fish all the year round and not miss them. We in Norfolk do not want to do the Pharisee business over a few fish about close time. I do not believe in persons vamping themselves up in matters they know nothing of. They either do it in ignorance or to gain notoriety amongst the ignorant. We in Norfolk have gone on very well for many years without the advice gratis of "P. Geen," and our prospects appear to be more flourishing than ever. If I was Mr. Geen, and wanted something to do, I should advise him to turn his attention to the cod fish, as I consider they ought not to be caught and sold just when they are so full of spawn, as I consider them a national food; but perhaps what applies to them applies to the fish in Norfolk—viz., inexhaustible. Apologising for trespassing on your space,—I am, &c.,

A NORFOLK ANGLER.

St. Stephen's Street, Norwich.

SIR,—The anglers of the Eastern Counties, having been the subject of criticism—and that, too, of a somewhat strong character—respecting the working of the Norfolk and Suffolk Fisheries Act, kindly allow me a space in your columns to offer a little information with respect to "all the year round" fishing in Norfolk and Suffolk.

In the first place, allow me most respectfully to suggest to Mr. G. and Mr. B. the desirability of becoming practically acquainted with the character of our Norfolk Broad before they again rush into print on this subject, it being too apparent from the nature of their communications that their want of knowledge respecting them is in a great measure due to the misrepresentations contained in their letters. Those gentlemen are evidently labouring under the delusion that we have no more facilities for breeding fish than are to be found in the metropolitan and many other waters.

I might possibly be asked, "What has this to do with taking fish out of season?" My answer is, that if we did not continually keep our fish down with rod and line, we should very soon be overstocked; and the wise and pertinent remark in your leading article of this week, viz.,—"That if you pit the

fecundity of fish against the skill of the angler only—not the net—the fish will win in the long run"—would, before long, be practically demonstrated.

If further proof were needed, I might mention a fact that on Sunday last Surlingham Broad (a few miles from here) was one black surging mass of live fish. Here it was that, a few years, as much as one hundred tons of fish were taken by wherry-men and others in one week by means of netting. Since this has been put a stop to, it has been known that one single angler, in one day, has caught upwards of five stone weight of fish, near this very spot. I merely mention this in order to show how very good our facilities for natural breeding are.

I cannot but think, from the severe animadversions contained in Mr. G.'s letter, a great injustice has been done the anglers of the Eastern Counties, who, if not numerically, certainly in point of quality, are as good as the anglers of the metropolis or elsewhere, or even from the locality from which Mr. Geen himself hails.

Sir, we, as a body, are as jealous of the interests and belongings of pisciculture as any society in the land, and would scorn to be guilty of a single act derogatory to the sport we love so well, and which we are banded together to uphold and promote.

Mr. Geen is probably not aware that, before the passing of the Norfolk and Suffolk Fisheries Act, the late Mr. Frank Buckland and Mr. Spencer Walpole, as representing Her Majesty's Government, made a personal inspection of nearly all the broads around here, and it was doubtless mainly owing to the representations of those eminent gentlemen that Parliament conceded the privilege of continual rod-fishing in this district. Would this have been perpetuated had there been the slightest ground for the allegations now made? The absurdity of such a suggestion is its own refutation. The fact is, sir, the Broad of the Eastern Counties are too rich and fertile ever to be injured by constant rod and line fishing, from the fact that the spawn is rarely if ever disturbed, and, as I have before shown, good rather than harm is the outcome of the practice.

One word as to the exhibit of this society in the National Fisheries Exhibition. Here Mr. G. again shows a lamentable ignorance of the actual facts of the case. The roach were not so small as he asserts, and certainly not one bream weighing less than 4 lb. was exhibited.

With regard to the general question which forms the subject of Mr. Geen's letter, I will not venture to offer any further expression of opinion, but I have deemed it right, in the face of the misstatements contained therein, to ask you to publish the above facts in vindication of the integrity and, from a sportsman's point of view, the honour, of East Anglian Pisciculturists.—I am, &c.,

ALFRED PALMER,

Hon. Sec. East Anglian Piscatorial Society.

St. Stephen's Street, Norwich, June 7.

SIR,—I am glad to find that Mr. Geen is prepared to uphold the principle of the Freshwater Fisheries Act as opposed to those who would legalise fishing all the year round. Better, say I, entirely close that season which includes the spawning times of the greatest number of fishes than ever entail no end of confusion on the part of well-disposed but, to a certain extent, ignorant anglers, and no end of evasions of the law, which would inevitably ensue were different seasons enacted for different fishes, if, indeed, this were possible. I feel confident that he expresses the opinions of the majority of anglers (who are not tackle and bait sellers) when he emphatically asserts that London anglers will decidedly not agree to rod-fishing during the fence months.

With all due respect, however, I would record my disagreement with you, sir, when you say that "angling for roach, chub, bream, carp, &c., should be permitted until they spawn." Granted that it is much later than March 15, why "till they spawn"? This indicates precisely the condition of the fish Mr. Geen (and I also) saw at Norwich. The fish were full of ova, and I argue that at such time the fish is by no means in condition, even if it had not completed the issue of its ova. From my observation, I declare that all fishes are in best condition when the ova is about a third developed, and not one fish with which I am acquainted shows an exception to this rule. The fat of the animal is then most plentiful, its flesh most firm, and its fighting power greatest. Experience, moreover, tells me that this period, roughly speaking, is with all the coarse fish during the early winter.

The duration of this period of condition varies with each family. With the carps, properly so called, it is longer than with the *leuciscini*. Jack possess it a shorter time than perch, but in each case the forward development of the ovaries and their contents indicate deterioration in quality, and even in desire for food. It may be said that these are platitudes, but I submit that they are facts going far to disrobe the idea that fish are fit to be caught "till they spawn" of its fascination.

Yet I will admit that in certain parts of the country it seems a hardship to preclude fishing when the fish have not as yet even advanced toward spawning, owing to a preceding average lower temperature, which, by the bye, is the cause of such retardation. Then, I would recommend the formation of a board for such districts, or a responsible committee of local anglers, and let it decide what extension should be allowed of the particular season in question. Suppose, for example, owing to a cold summer and winter, and a chill early spring, it be found that the fish of the Thames do not indicate loss of condition by the 1st of March, what difficulty would there be in a committee of London anglers, representative of their fellows, suggesting the necessary alteration. In other words, why could not a board of anglers adjudge the interests of London anglers with reference to the Act?

The radical alteration of the Act would be a virtual self-stultification of what was deliberately determined by anglers themselves. Of course, the Act was only intended, so far as its details were concerned—for example, dates—to be tentative. Alter the dates slightly if you will, but do not destroy its strong prohibitory character.—I am, &c.,

J. HARRINGTON KEENE.

[By the expression "till they spawn," we meant the period when they commence "heading up" (for the purpose of spawning), which is very much later than March 15. In fact we maintain that roach, chub, barbel, carp, &c., are in their best condition for a month and often two months after they are fenced, and that the so much talked about "period of rest" is wanted just when the fence months now end. We predict that the London and Sheffield anglers will some day admit that vast improvement in their pet Act is possible, and that their fear of "rod poachers" is a bogey they will one day laugh at. Stop the nets.—Ed.]

SIR,—I am a Thames angler of over fifty years' experience, and I beg to say that, as regards the Mundella Act, I should be very sorry indeed to see the fence months done away with. I should like the fence months to commence

1st March and end the 3rd May—that is to say, for all coarse fish except jack—and I would make it illegal to catch and retain the fish before the 1st September.—I am, &c.,
Guildford Lodge, Teddington.

THAMES.

SIR,—In paragraph eight of Mr. Geen's letter to your paper last week he says, with regard to dace-fishing, if you fish with a worm you will take roach, if with a fly, chub. Well, if that was a fact (doubtful), is that any worse than Mr. Geen and his friends hooking and mauling chub, barbel, perch, and jack while troutling (see the Stanley Club report this week)? Is that giving the fish the quiet Mr. Geen says fish so much require in their spawning time? Come, come, Mr. Geen, it is a very bad rule that won't work both ways. Give your poorer brethren of the rod credit for as much honesty as yourself and friends that can afford a punt. If you will take this piece of advice, try and make the Act perfect in protecting fish in June, and, if possible, less hard against the class of anglers that get so few fishable days in the now short fishing season.—I am, &c.,
CENSURE.

(Mr. Geen sends us the following telegram.)

SIR,—The result of the prompt opposition of London anglers to Mr. Wootley's Bill is that it cannot possibly pass second reading this session.—I am, &c.,
P. GEEN.

House of Commons.

[Oh, Mr. Geen! are you forgetting the "wrongs of ould Ireland"? The Government have other "fish to fry."—ED.]

THE ORIGIN OF BOTTLED BEER AND THE MUNDELLA ACT.

SIR,—In last week's FISHING GAZETTE there is related an anecdote on this subject, taken from the *Globe* newspaper. The writer has evidently fallen into a mistake when he describes the discovery or invention of "that best of drinks since nectar went out of fashion," viz., bottled beer, to a certain London merchant, fond of angling in the Thames, named Bowyer. If you and your readers will consult "Walton's Complete Angler," one with notes by Sir John Hawkins. For my present purpose I take Ephemeris' edition. At page 29, Walton there speaking of "two memorable men . . . who have been ornaments to the art of angling," mentions, first, Doctor Nowel, some time Dean of St. Paul's, London. After a graphic account of his many virtues, how he spent a tenth part of his time in angling (only after his duties were done), gave a tenth of his revenue and "usually all his fish amongst the poor that inhabited near to those rivers in which it was caught," and then praised God he had spent that day free from worldly trouble, and so on. How he died at the ripe age of ninety-five years, with all his faculties unimpaired, further remarks:—"Tis said that angling and temperance were great causes of these blessings, and I wish the like to all that imitate him, and love the memory of so good a man" (p. 30). To this latter passage, as quoted, Sir John Hawkins adds a foot note: "It would appear that, though reputed temperate, he was by no means reputed a teetotaller. For Fuller, in his 'Worthies' Lancashire, p. 113, has thought it worth recording of this pious and learned divine, and that in language so very quaint as to be but just intelligible, that he was accustomed to fish in the Thames, and having one day left his bottle of ale in the grass on the bank of the river, he found it some days after, no bottle but a gun, such the sound at the opening thereof. And hence with what degree of sagacity let the reader determine he seems to derive the origin of bottled ale in England."

This note is somewhat differently ended in Sir J. Hawkin's fifth edition of Walton.

Such I take to be the correct version of the story.

In these days of agitation for and against Mundella's Act, it will perhaps interest some of your readers if I quote from p. 37 of same edition. Says Walton to Venator, "For I know that the want of otter killing, and the not keeping the fence months for the preservation of fish, will in time prove the destruction of all rivers; and those very few that are left, that make conscience of the laws of the nation, and of keeping days of abstinence, will be forced to eat flesh, or suffer more inconveniences than are yet foreseen." Speaking of the Acts then in force—Edward I. and Richard II., and the regulation of their defects, and, I take it, their non-enforcement, Walton says, "that which is everybody's business is nobody's business, if it were otherwise there could not be so many nets and fish that are under the statute size, sold daily amongst us; . . . above all the taking of fish in spawning time may be said to be against nature; it is like taking the dam on the nest when she hatches her young; a sin so against nature that Almighty God hath in the Levitical law made a law against it" (Deut. xxii. 6, 7). Curiously enough, in answer to Venator, Walton gives the fence months as March, April, and May, but assigns quite a wrong reason, vide, p. 37.

I quite agree with you and most others that some modification of the present Act should be made. I will not go so far as to advocate rod fishing all the year round, but I am sure I shall be supported by all in insisting that the most important part of any modification of the present Act should be the abolition of all netting in public water (except for special purposes) throughout the year; and that such public water should mean, not, for example, the main stream of the Thames, but include all its tributaries to their sources.

June 8, 1881.

FISHING ON THE WANDLE.

SIR,—My attention has been directed to a paragraph in your last week's issue respecting the Wandle (Hackbridge) from "Renurt," which, like a great many fishermen's reports, is misleading. On the 1st of May about fifteen brace of trout were killed; of these, certainly not one half were regulation size, that is, over 8 oz. I stood on the bridge for some time in the morning and saw "artful dodgers" killing 2 oz. fish. There are no good fish in the wash of a morning, for they are so disturbed by the carts going through the water that they only show up late to feed, and certainly this season no one has caught a brace of trout there to average 2½ to 2 lb. each. Such a thing would certainly astonish the locals who are good fly fishermen, as would "Renurt," fishing with an artificial minnow, who caught an improbable brace and half of trout (qy. Where were they weighed?) Is "Renurt" aware that such things as minnows and baits are strictly prohibited on all parts of the Wandle, and a suggestion to a good fisherman of such a thing would be considered the height of poaching. I am always pleased to read accounts of anglers; but somehow, when these accounts

are to be printed, they get magnified exceedingly, for I have seen reports of my own sport by other people, and have been ashamed of their system of multiplication and exaggeration in writing.—I am, &c.,
CARSHALTON.

BAITS FOR BREAM.

SIR,—One of your readers asks "for a good bait for bream in deep swift waters, pretty clear." Try cod's roe, worked to fine paste, in oatmeal grits, and strong clove oil; that is, if the water is clear, and of not too strong current. Otherwise "wasp's grubs" take well in sun, but best red worms in clove oil are my killers mixed in rosemary oil and not essence.
P. P.

Cork, June 6.

["Stinking Gladwin" has been tried by some anglers, and it appears to be as useless as nasty. We have not tried it, and don't wish to. The name is enough!—ED.]

SIR,—I advise Mr. H. A. West to send to Mr. W. Bailey, fisherman, Annesley Terrace, Nottingham, for his book, "The Angler's Instructor," price, I think, 2s. 9d. He will get every information about bream fishing from this excellent little work, and if he strictly attends to the instructions will soon be rewarded with some heavy takes.—I am, &c.,
E. GOSLING.
Budleigh Salterton, June 5, 1881.

BAITS FOR EELS AND BREAM.

SIR,—In reply to C. T. in your last publication as to bait, &c., for galvanised eel trap, my experience is gut of a fresh killed sheep, bunch it up, and tie it tightly around the middle thereof, and make it fast to the inside top of trap; lay the trap where you may expect to find eels (say a quiet, muddy part). I believe they travel in rivers a distance by night in search of food, therefore one thing is, and I believe the great secret, to be up at break of day and haul in the traps, otherwise the prisoners get uneasy in confinement and want to return to their respective haunts. And unless they are so dealt with I do know small ones will get out of galvanised traps.

And in reply to H. A. West, as to bait for bream, of which I have at times taken a very fair quantity, I have always found a moderate-sized marsh worm (cleaned in coarse moss after wetting and wringing the moss, and keeping them in a flower pot a night or two), the most effective bait.—I am, &c.,
J. P.
Covent Garden Market, W.C., 6th June, 1881.

BAITS FOR EEL TRAPS, &c.

SIR,—In answer to your correspondent, C. T., in your issue of the 4th inst., I have by experience found that the best bait for an eel basket is the entrails of fowls or poultry of any sort. And to his second question, I should suggest the deepest water, near old camp-shedding if possible. To his third question, he can purchase a handy book of the fishery laws, Oke's Fishery Laws, containing Act of Parliament relative to Freshwater Fishery Act, &c., &c., 1878, by J. W. Willis-Bund, M.A., published by Butterworths, 7, Fleet Street, London.

Another mode of capturing eels that may be new to your readers:—Procure a small skag, increase the size of the bung-hole with a chisel, insert an old stocking with a small portion of the foot cut off, fasten the edge of the stocking to the rim of the bung-hole, placing a small quantity of entrails and other offal in the barrel beforehand, sink the whole in the water with a strong rope attached, the result, after remaining a few days, will meet your fondest anticipations, if there are any eels about.—I am, &c.,
WM. TRANTER.
Portsmouth, June 6.

ANGLING IN NORTH LINCOLNSHIRE.

SIR,—Since writing my letter marked No. 1, I have read your issue of the 4th, and was well pleased with Mr. Alington's communication on "Angling in North Lincolnshire." Its a part I know, though, perhaps, but little known by those out of the locality. I will shortly, with your permission, give you a little copy concerning another place in Lincolnshire. I mean Ferryby Sluice and about.

I remember a London gentleman asking me last summer if there was any fishing within twenty miles of Hull. I happened to recommend him to this part. He made a good day of it, and gave it, as his opinion, plenty would be glad to come from London and have a day or two. There is a nominal charge of 6d. to fish, and if a man can do with putting up at a small, but comfortable, house, he may have some good fishing at very little expense. Its noted for heavy bream and roach, and few fail to make a good all-round catch.

I make these remarks because such communications as Mr. Alington's are a sort of guide to those from other parts, and its just as well if the quickest, cheapest, and best route is given from various points. For instance, you cannot get by railway much nearer than Great Grimsby, and here's where most travellers should make for. The rest is a pleasant look round.—I am, &c.,
F. J. HAMLYN.
6, Engine Street, Hull.

MR. BAMBRIDGE'S SPINNERS.

SIR,—In your last notice of the "Bell's Life" spinners, it is suggested I should alter the name of the bait called by Messrs. Alfred the "Bell's Life" spinner. If the bent tail or the bait itself was the original idea of Messrs. Alfred I should not hesitate so to do, but as like myself they have to get them from a wholesale house, which I explained to you, I see no reason for doing so, especially as the bent tail is like the "Archimedean," very old.

Respecting the improvement, whilst trying one a few evenings back in the Boveney Weir I found that the bent tail of the 4s. 6d. size (according to Messrs. Alfred's price), when revolving, described a circle of 1½ inches, and would be liable to form a gag when taken unless a very large triangle was used at the tail. Whilst with the split tail (on the same principle as the Windsor bee specimen), which you describe as Archimedean, it gives a circle of under ¾ of an inch.

When Mr. Alfred again visits the river side it will be perhaps apparent to him that the split tail, "though known very many years since," is less liable to lose a fish.

I leave your readers to judge whether this is an improvement as regards this bait. I certainly when using it shall give preference to the split tail; and if that old trout at Clewer point, or any other, will come at it, we shall see what they think of it.

Hoping you will allow insertion in your next issue.—I am, &c.,
June 1881.

B. R. BAMBRIDGE.

BLACK BASS.

SIR,—I thank you for the reply appended to my inquiry in your issue of the 28th of May, but I had applied to Mr. Silk, and his reply, dated the 4th of May, is as follows:—

"The black bass that we have are in a lake where they will spawn naturally. The first lot that were brought over will be about spawning at the present time. I will not have any for sale. It would be very difficult to catch any of the young fish in the lake that they are in at present."—I am, &c.,

The King's Lynn Angling Association, H. BRADFIELD, Hon. Sec.
June 8.

FISHING IN NORTHUMBERLAND.

SIR,—I would feel obliged to any Northumbrian angler who can give me directions how to fish any of the following Northumberland rivers, starting from Central Street, Newcastle:—The Coquet, Wansbeck, Blyth, Tyne (North and South), and the best stations on each river.

It is calculated that there go in the season over 700 anglers from Newcastle, and to a great many of these the above information would be of great value, as the average angler has to fish outlying districts, and stand the risk of it being preserved or private water, which generally means a day's sport lost, which, as all anglers will agree with me, is far from being pleasant.—I am, &c.,

Sycamore Street, Newcastle, June 7. NEWCASTLE.

SNARING PIKE.

SIR,—Allow me, through the medium of the FISHING GAZETTE, to thank Mr. J. Harrington Keene for his notice of the above subject in your "Notes and Queries" of this week's number, likewise for the very quaint, but unmistakably true, lines which are also inserted.

When I wrote about it, J. H. K. will, perhaps, remember that I did not accuse any gentleman or a member of any angling club, but simply the natives who lived on the spot.

These cases really ought to be looked after by the river watcher, who is employed by the Y. P. S., but from the fact of his having such a long stretch of water under his charge these yokels take advantage of his absence to commit these depredations.—I am, &c.,

A TRUE DISCIPLE OF ISAAK WALTON.

AN ERRATIC BARBEL.

SIR,—A rather unusual occurrence happened last Friday night, which may possibly interest your readers. As I was rowing up the River Thames, near Windsor, a barbel of about half a pound jumped into the boat and flopped about vigorously. I returned it to its native element as soon as possible, none the worse, I hope, for its little excursion into the upper air.—I am, &c.,

June 6th. BLUE DUN.

TROUT IN CLOSE TIME.

SIR,—I shall feel obliged if you will kindly inform me through the medium of your Answers to Correspondents, whether it is illegal for an owner of a private stream to take trout during close time, i.e., for his own use only.—I am, &c.,

Manchester, 3rd June, 1881. W. R. R.

[We fancy it is strictly illegal—he may not shoot game in his private grounds out of season.—ED.]

THE THAMES TROUT.

SIR,—You were kind enough to insert in your issue of May 28th a few remarks which I made about fish culture and the scarcity of trout in the river Thames, and as the subject is evidently engaging the attention of some of your correspondents, I wish, with your permission, to make some addition to my former statements.

The fishery of the Thames from Richmond to Staines has for many years been under the protection of the Thames Angling Preservation Society. This society has done much good in maintaining a stock of fish in the river; and through its exertions the Thames has partially sustained its reputation for sport, although the great number of anglers, who now frequent the river, has much increased the drain on its resources. Probably, for one angler that fished the river ten years ago, there are now thirty. The Thames is teeming with small fish, which are visible to anyone who walks along the banks on a bright summer day, but the continuous drain mentioned must necessarily increase greatly every year with the continuously-increasing number of anglers. To keep up an efficient supply of fish, a proper method of artificial breeding must be resorted to, in order to replenish the river, the more especially with large fish; such as trout, pike, perch, and I might also include barbel and chub.

It is all these fish that require more preservation and protection than those which are of less weight, such as roach, dace, gudgeon, bleak, &c., as these appear to multiply more rapidly than those of the former kind. In the supply of many of the larger kind of fish, the Thames has of late years shown a falling off, and, though there is an abundance of food for them, they every year appear to become scarcer, more especially the famous Thames trout; and this scarcity is no doubt to be largely attributed to the great increase in the number of anglers. Angling becomes more popular every year; as the numerous angling clubs which have recently been established in London and other large cities and towns fully testify; and there appears to be a great and increasing wish on the part of many of the inhabitants, especially as respects the working class, to participate in those healthful sports and recreations which a day in the country will enable them to enjoy. Angling is a sport that is accessible to all, and can be pursued more economically than many others; therefore, it is every year gaining favour as a healthful recreation.

The Thames above the stream of tide might surely be most profitably cultivated for the benefit of anglers. It is the cultivation of the larger kind of fish that is now most needed. No doubt, in some of the Continental rivers there are many large fish that might be successfully and profitably acclimatised in this country, and might be introduced in the Thames, therefore it would probably be in this respect that fish culture would greatly benefit the river. The numerous shoals of dace and other fish which may be seen heading up the stream at the different weirs during the spawning season, darkening the surface of the water, is a proof that there is great abundance of small fish, and more than sufficient to support an extensive increase of the superior species without being injurious to the sport of angling for the various smaller fish now existing there. I am sure that the greater number of anglers would welcome the accession of a great increase of the larger kinds of fish in the river, and that a

liberal cultivation of them would add considerably to the sport of all anglers, and tend to the improvement rather than the impoverishment of the inferior species. It is by artificial breeding that many of our salmon rivers have so much increased in value; and so might in other respects the Thames be equally improved by the like means, and by the introduction of other species of fish hitherto unknown in this river. It is said that an acre of water properly cultivated is more profitable than an acre of land; but really good fishing in England is now most scarce and costly to obtain, in consequence of the great difficulty caused by the increase of population and by the destruction of fish through the pollution of many of our streams and rivers. The Thames surely offers such an inducement for improvement that every effort ought to be exerted to make this river one of the best and most attractive in the kingdom for the enjoyment of angling, combined as it is with the recreation of boating; these being the most popular pursuits during the summer and autumn months of a large number of the greatest and wealthiest city in the world; whose inhabitants can well afford, and would, no doubt, liberally support, a well-managed institution established for the benefit of their favourite pursuits.

The river above the tide-way has hitherto been kept sufficiently free from pollution to support a large stock of almost every variety of freshwater fish, and this result offers an additional inducement for hopeful success, by a liberal system of fish culture.

Among the Thames Angling Preservation Society, there is an influential and intelligent number of enthusiastic anglers, who would, no doubt, render every assistance towards the promotion of Thames fish culture; and it is not unreasonable to hope that the angling public would liberally support an institution of this kind, the want of which is now so much needed. I may add, in conclusion, that like your correspondent, "E. L.," and your own liberal offer, I would willingly subscribe towards this project, and others, including fishermen and boat-builders, to whom I have spoken on the subject, have also promised to subscribe; and I believe that the same spirit of sympathy and assistance would be found to exist amongst all anglers and fishermen throughout the whole course of the river, from London to Oxford, towards the establishment of an efficient and well-managed system of fish culture, on which we must, no doubt, eventually rely for the permanent maintenance of the Thames fishery.—I am, &c.,

R. D. E.

[We have always advocated and should be delighted to see fish culture carried on in a spirited manner in this country. We fear it will be a long time before Government will take the subject in hand, and so we must look to private enterprise. Mr. W. Oldham Chambers, the originator of that grand success, the Norwich Exhibition, has undertaken the culture of all kinds of fish at his fish farms at Lowestoft. We wish him every success, and when he has a stock of perch fry ready for use, we are sure the Thames associations will buy largely, for perch are wanted in the Thames, and there is no more handsome kind than that produced by the Norfolk rivers.—ED.]

ANSWERS TO CORRESPONDENTS.

CAPTAIN.—Write to Messrs. Alcock and Co., Standard Works, Redditch; they will tell you who supply their luminous floats. We are not sure that they are on sale at all yet.

CLUB REPORTS.

AMICABLE BROTHERS ANGLING SOCIETY.

The members of the above society will hold their annual dinner at Mr. Mansel Bayley, the Swan Hotel, Pulborough, on the first Sunday in July, and they will wind up the fence months by having a supper in the club room on June 15. Members not aware of this, please copy. Unlimited as to numbers, but limited to 2s. 6d. per head. Members are requested to send in names prompt for Anglers' Benevolent Society. Railway privilege tickets expire on the 15th of June. The new ones come into operation on the 16th.—J. WORLEDGE, Sec.

June 7.

BIRMINGHAM AND MIDLAND PISCATORIAL ASSOCIATION.

The third annual meeting of this flourishing society will be held at the Grand Hotel, Colmore Row, on Monday evening, June 13, at six o'clock. Mr. Councillor Pemberton, the president of the association will occupy the chair.

June 8.

GOOD INTENT ANGLING SOCIETY.

The members of this club have decided to open the season by going for a series of prizes on the first Sunday after the fence months—19th June—at Ware Room of Water, from Ware Bridge to Hertford Lock, the prizes ranging from £5 5s. to 10s. 6d. I expect a strong force to compete on the occasion. After their long rest they are eager for the fray. I trust we shall have a better season than the last and also every other club the same. One of our members, Mr. H. Brookwell, has added another trophy to his handsome collection by the capture of a handsome trout of 12 lb. 4 oz., from Dobbs' Weir, on the Lea, and I think it will make all anglers proud of their dear old river. Perseverance is not always rewarded, but it was so in this case, for he was trying for him eleven days before the capture. There is great credit due to him. Bravo! Brookwell.—R. MURPHY.

[We congratulate Mr. Brookwell on getting such a stunning trout.—ED.]

ISAAK WALTON ANGLING SOCIETY.

The members will compete for two special prizes on Sunday, the 19th inst., at Pulborough and Amberley; all fish weigh in accordance with the rules of the society. The annual Sunday dinner will take place at the Rye House on July 3rd, 1881. Members who intend to be present are requested to inform the secretary not later than the 24th inst. The annual Wednesday dinner will take place at the Pied Bull, Stanstead, St. Margarets, on July 13th, 1881. Members who intend being present, will also inform the secretary not later than July 6th, 1881.

LIVERPOOL ANGLING ASSOCIATION.

The first fishing excursion of the season will take place on Monday, the 20th inst. The water selected is the river Vyrniew, at Llanymynech. Members will leave the landing stage by the 8 a.m. Woodside steamer, taking, at Birkenhead,

anglers' tickets to Oswestry. The fare is 5s. 5d., 1s. 5d. of which will be paid out of the funds of the association. Members should kindly inform me, at least three days before, if they intend to go.—**RICHD. WOOLFALL**, hon. sec.
Strawberry Hill, West Derby Road, Liverpool,
June 8.

MARYLEBONE ANGLING SOCIETY.

The annual supper of this society was held on May 31, at the Prince Albert, Sherborne Street, Omega Place, Marylebone. The chair was filled by Mr. Prosser, faced in the vice by Mr. R. Humphrey. The supper was served in excellent style by Host Garrett, to which ample justice was done by those present. Letters were read from Messrs. Bonvoison, Hoole and other friends, expressing regret at being unable to attend. Mr. R. Humphrey, in responding to the health of Mrs. and Mr. Humphrey (who are both large prize givers), said he hoped the time was not far distant when we should have the company of our wives and sweethearts both in our outings, and on such like occasions as this. In bicycle, cricket and other clubs, no supper was complete without the presence of the ladies, and our societies were about the only ones where ladies were not recognised, although many of them were true anglers. Some capital songs were sung by Messrs. R. Humphrey, Toesland, Mellish, Crate, Wood, A. Humphrey, Pearce and Prosser; our worthy host giving a recitation. The harmony was greatly shortened on account of the great number of prizes given to be fished for during the ensuing season. The company dispersed at 12.30, deeply regretting the evening was so soon brought to a close.—**W. PEARCE**, sec.

June 8.

NORWICH PISCATORIAL SOCIETY.

The monthly meeting of the above society took place on Tuesday last, June 7th, at Walnut Tree Shades. The president, Charles Daniels, Esq., occupied the chair, vacated for the time by the chairman *en posse*, the Rev. W. H. Matthews, B.D., and there were present—F. F. Brady (in the vice chair), R. Brady, A. Brown, W. Butler, G. Corbyn, E. H. Corbyn, W. G. Capon, A. Cox, Hinsbey, F. S. Harvey, Holmes, F. S. Howitt, Knight, P. Otty, Ollivant, W. Provart, Pyc. Spellman, Sim, Wright, Townshend, Thompson, Waters, Dr. S. Matthews, Loveday, Cubitt, &c., &c. The proceedings consisted chiefly of making arrangements for the first fishing match of the season, to be held at Horning, on July 14th next, for which match a liberal sum, voted from the funds of the society, for prizes, is handsomely augmented by special prizes offered by several of the members, so many that as regards this feature nothing will be left wanting to make the match a success as great as those which have hitherto taken place. Three new members were ballotted in, and the maximum number of 50 thus made up. In addressing the meeting, the President commented on the great impetus which angling in the eastern counties had received during the past few years, and the great assistance which was given to the gentle art by the preservation of our Norfolk and Suffolk rivers, while he pointed out that the facilities for angling would in a few years be much enhanced by anglers returning to the waters all under-sized fish, instead of, as is too often the case now, allowing fish to die which could be of no use whatever, when they might be returned to the water, and in after years afford sport to the angler, besides being a valuable addition to the food supply. A resolution was then passed that all fish under six inches in length should be returned to the water.—**W. G. CAPON**, hon. sec.

June 9th.

PORTSMOUTH WALTONIAN ANGLING SOCIETY.

The members of this society have an advantage that many of their brethren of the London Angling Societies do not possess, but, could they avail themselves of it, it would tend greatly to prevent the now increasing murmurs relative to the Freshwater Fishery Act (I mean sea-fishing) when the 15th of March arrives, and with it the three months' probation. Our members turn their thoughts, with evident satisfaction, seawards; and, although it is in this locality, to a certain extent, an innovation to take fish with a rod, and was viewed with no small degree of contempt by the professional fishermen of this place, the use of the rod and reasonable fine tackle is gradually increasing. One proof of its efficiency is to see the boatmen, with their primitive rods, use live shrimps for bass and pollack fishing in the harbour, instead of the coarse hand line. One of our members, Mr. Redward, has been weighing in some good fish, from Brackelsham Bay, consisting of sea bream, conger, flat fish, and two sorts of dog fish, viz., nurse and the lesser hound, the latter most formidable affairs; also Mr. Smith, a fine show of whiting coal from Ryde Pier; Mr. Bracey, a lobster of 5 lb.; Mr. Hollanders, whiting, coal bass, from the

harbour. In spite of these attractions, the members are looking forward to the 16th inst. with great expectation; and I am pleased to say the London, Brighton and South-Coast Railway Company have again renewed their kind concession of cheap fares to Chichester, for which we have to thank the kindness of J. P. Knight, Esq., their able and efficient general manager. We expect a good muster on the platform of the Portsmouth town station by the 1.30 train to Chichester, to celebrate the opening day, on which occasion several handsome prizes will be competed for.—**W. TRANTER**, sec.
June 6.

RICHMOND PISCATORIAL SOCIETY.

The following resolution has been passed by the Richmond Piscatorial Society:—"That the Richmond Piscatorial Society has heard with regret that it is proposed to amend the Freshwater Fisheries Act of 1878 by legalising rod-fishing throughout the year. That such proposed legislation will seriously interfere with the proper preservation of the river Thames, especially in the tidal waters under the observation of this society, and are convinced that the Act of 1878 has been of great service in the prevention of poaching in this neighbourhood, and such proposed amendment is unnecessary and uncalled for by anglers."

UNITED LONDON ANGLERS.

The usual monthly meeting will take place on Monday next, June 13, at nine o'clock, when the half-year's balance sheet will be presented. The question of opposing the proposed amendment to the Freshwater Fishery Act about to be brought before the House of Commons by Mr. Stuart Wortley, M.P. for Shaffield, and Mr. Joseph Dodds, M.P. for Stockton, will be considered. In answer to an application to the Lea Conservancy Board to appoint a local honorary bailiff at Cheshunt, I have great pleasure in stating that I have received a warrant in favour of Mr. Lane, of Government Cottage, Aqueduct Lock, Cheshunt, who is appointed. Secretaries of clubs will oblige by sending their lists of members who require privilege tickets as soon as possible, when I will send them by post or otherwise, as requested, on the second day after application. The yearage is 1s.—**R. GURNEY**.

June 9.

WILKINSON ANGLING ASSOCIATION.

On Monday, May 30, the members of the above association held their usual fortnightly meeting at the Crown Hotel. In the absence of the president, Mr. Freeman, the vice-president occupied the chair. There was considerable discussion in respect to where the opening match was to be held, on account of a change having to be made from the original fixture for Newport, this last-named place having to be abandoned on account of some supposed dredging operations. It was finally settled that Brigham, near Driffield, should be the place for the club's opening match. It is expected that about £10, in addition to several special prizes, will be forthcoming for that occasion. The annual match for the benefit of the Hull General Infirmary has been fixed for the 15th of July, and it was proposed and carried without an objection that Ferreby Sluice be the place where the match be held. After some little business of a private nature the evening's proceedings were brought to a close with a little harmony.

GREGORY'S SPINNING BAITS.—"The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived. Address, James Gregory, Vyse-street, Birmingham.—[ADVT.]

TO ANGLERS.—W. J. Cummins, Fishing Tackle Maker, Bishop Auckland, is now prepared to forward to anglers his Illustrated Catalogue, which is not only a Trade List but is interspersed with practical hints, useful directions, and valuable information gathered by the river-side from twenty years' experience. The stock consists of his unrivalled Salmon, Trout, Grayling, and Pike Rods, Lines, Reels, Baskets, Artificial Baits, Fly-books, Landing Nets, Gaffs, and last, but not least, his celebrated TROUT FLIES, which for killing powers stand unequalled. Every article kept in stock is of the very best description.—[ADVT.]

GREAT EASTERN RAILWAY.—Seaside.—**TWO MONTHS RETURN TICKETS** are now issued by all trains to YAKMOUTH, Lowestoft, Cromer, Hunstanton, Southwold, Aldeburgh, Felixstowe, Harwich, Dovercourt, Walton-on-the-Naze, and Weeley (for Clacton-on-Sea).

Fortnightly, and Friday or Saturday to Monday; First, Second, and Third Class Return Tickets are also issued at Reduced Fares by all trains to Hunstanton, Cromer, Yarmouth, Lowestoft, Walton-on-the-Naze, Weeley (for Clacton-on-Sea), Dovercourt, Harwich, Felixstowe, Aldeburgh or Southwold.

A SPECIAL EXCURSION TRAIN to WALTON-ON-THE-NAZE, Dovercourt and Harwich, will leave the LIVERPOOL STREET STATION, every Sunday at 9 a.m., and every Monday at 8 a.m., calling at Stratford. Fares, 8s., 6s., 4s.

BROXBORNE and RYE HOUSE every Sunday at 10 a.m., and every week day at 9.30 and 10.11 a.m., 12.45, and 2.50 p.m. Fares, 3s. 6d., 2s. 6d., 1s. 6d.

EPING FOREST.—EXCURSION TICKETS will be issued daily to Woodford, Buckhurst Hill, Loughton and Chingford. Fares, 2s., 1s. 6d., 1s.

For full particulars see Handbills and Time Tables.

THIRD EDITION of a delightful book.

MY LIFE AS AN ANGLER. By William HENDERSON; portrait and 12 plates. Cr. 8vo. Price 7s. 6d., postage 6d.

"No modern book about angling with greater chances of charming."—*Athenaeum*.

"The sweet feeling which pervades these pages will be their highest praise."—*Daily News*.

"More entertaining than a novel."—*Durham Chronicle*.

"Will amply reward the general reader."—*Spectator*.

London: **W. SATCHEL & CO., 12, TAVISTOCK STREET, COVENT GARDEN, W.C.**

ANGLING.

Now ready, third Edition.

THE ANGLER'S INSTRUCTOR,

By Wm. BAILEY.

A book on the best modes of Angling in English Rivers, Lakes and Ponds, and on the habits of the fish, besides all the latest practical hints on many things that have not up to now been made public, to be had of W. Bailey, 170, Kirke White Street, Nottingham. By post, 2s. 9d.

NOTICE.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., must be addressed to the Editor of THE FISHING GAZETTE, No. 12, Fetter Lane, London, E.C. and should reach the office not later than Tuesday morning.

Contributions are solicited, but the Editor will not undertake to return rejected MSS., unless accompanied with a stamped addressed envelope.

Correspondents are requested to write on one side of the paper only and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to no notice will be taken of such communications.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls, and of the following, amongst other Fishing Tackle Dealers in London and the Provinces:—

Messrs. Alfred and Son, Moorgate street.
Messrs. Price and Co., 8, Seymour-street, Euston-square, N.W.
Messrs. Williams and Co., Great Queen-street.
Messrs. Gee and Co., St. Andrew's-street, St. Martin's-lane.
Messrs. Gee and Co., Gray's Inn-lane (near Holborn end).
Messrs. Little and Co., Fetter-lane, E.C.
Messrs. C. Kewell and Sons, 197, St. John-street-road, E.C.
Messrs. Kewell and Co., 1A, Conduit-street, Regent-street, W.
Mr. J. Richards, 97, Church-street, Paddington.
Mr. W. Leader, 30, Upper Marylebone-street, Portland-place, W.
Mr. — Clark, 35, Wells-street, Camberwell.
Mr. Geo. Read, 91, Goldsmith's-row, Hackney-road, E.
Mr. A. Bulmer, 62, Wandsworth-road.
Mr. F. Oliver, 188, Great College-street, Camden Town.
Mr. J. E. Gold, 284, Waterloo-road.
Mr. D. W. Willoughby, 21, Lombard-market, Battersea, S.W.
Mrs. F. Y. Brocas, 4, Mill-street, Conduit-street, Hanover-square, W.
Messrs. Gillett and Co., 40, Fetter-lane, London.
Mr. Alfred Young, "The Golden Perch," 174B, Oxford-street, W.
Mr. T. Barnett, 26, Church Street, Lisson Grove, N.W.
Mr. J. Smith, 7, Tottenham Court Road, London.

SATURDAY, JUNE 18, 1881.

ANGLING PROSPECTS IN THE PROVINCES.

PROSPECTS for the coming season in the angling world seem on all hands to be good. There are exceptions, perhaps ; but, according to the old adage, the exception proves the rule. There is, independent of the temporary fluctuations of good and

bad seasons, a great normal improvement going on in the prospects of sport for the followers of "Old Izaak," caused by the protecting influence of modern legislation, the growing popularity of the sport, and the increased facilities offered by the great railway companies to the more humble and far removed to indulge in the pastime. The introduction of fence months has undoubtedly done much to prevent the destruction of young and breeding fish, and consequently increase the supply, if we may believe the more recent statistics on the subject, published on the authority of Parliament in regard to salmon ; and no doubt the same results may be expected in regard to the like operation on other kinds of fish. Vast quantities now go on to maturity, and ultimately to furnish the means of sport, which otherwise would have been destroyed ; and as the breeding stock increases so does its fructification, in a like ratio, as time progresses. The increase in the number of anglers is an almost unappreciable one in comparison to the increase of fish ; but at the same time the increase of sportsmen tends to the increase of their protecting influences, for the chief aim of the true sportsman is not the extirpation of his pastime, but the perpetuation of it. Consequently, apart from any local or temporary advantage, it is fair to suppose the prospects of the angler yearly improve as the influences producing the improvement continue to exist and operate.

Apart from all these natural circumstances, there is very good reason indeed to suppose the prospects of the angling season now commencing are much better than they ordinarily are. There are many reasons for believing the fish that have spawned have had a most favourable time of it. For many years past the rivers during spawning time have been full, fresh, and even often greatly flooded. Such disturbance of the water and of the beds of the streams acts very injuriously during incubation time, and vast quantities of spawn are buried, damaged and wasted by such floods. During the past fence time there have been very few of these freshes, and what there have been, they have been of the diminutive or minimum kind ; consequently there is great confidence that the spawning season has been more favourable than for several years past. Then, again, the spawning is believed in many places to have been much earlier than has been usual for some time, and it is believed the fish are in a more forward condition. Last year there were complaints that some kinds of fish had not spawned at the close of the fence time, and were not in a fit state for sport, being mostly disinclined to bite, and even those that were caught were poor, flabby and ill-nourished. This year it is thought the contrary will be the case. The fish will have well over-gotten their sickness, will be in a better condition, and will seek more eagerly after their food. In a word it is considered in very many districts there will be plenty of fish well on the feed by next week, and that consequently sport will be extremely good for the time.

It is little use, though, generalising thus, and leaving the more definite information to be gleaned on the spot. It is far better to refer to localities, and at the same time to give a few practical hints that will aid the angler in his sport. The first locality, perhaps, in the provinces for angling at the present time is that of Lincolnshire. A correspondent of the writer the other day from Boston, states this fact :—"The whole of our waters" (the waters of the Boston Association), says the writer, "are in splendid condition, and abundantly supplied with fish ; and, seeing that we have nearly one hundred and sixty miles of water, I think we may fairly lay claim to having the best rough fishing in England." The waters of the Boston Association, as some readers will know, not only include long stretches of the Witham and other smaller rivers, but miles upon miles of those long deep drains so familiar to the traveller in the Fen country, and so enviously regarded by those who really know what Fen country angling is. Speaking of the spawning season, he says :—"The fish have had an unusually

good season for spawning, not having had the heavy floods down our rivers this spring which we had the last three or four years. From the little opportunity we have of noticing the fish during the close season, it is almost impossible to give an opinion as to their condition, but judging from the fact of roach, &c., appearing in shoals and apparently very lively, there is little doubt they have gone through the process of spawning most favourably." Close to Boston the fishing, he says, "is as good as any part of the water, and far superior to any in the Witham between Boston and Lincoln. It is satisfactory to know that "hotel accommodation in the town is abundant, good, and moderately cheap, in fact, compared to many towns, very cheap. There are also plenty of decent houses near the river, a few miles away, where accommodation may be had at very low charges. The baits most in use in these waters," he says, "are paste, plain and coloured, gentles, and of course worms, though paste is certainly the most killing bait for roach in the hands of those who know how to use it. In the drains are large quantities of tench, which yield excellent sport. The privilege of angling in the Boston water is one of the cheapest in the country. All that is necessary is that an angler should subscribe not less than 1s. a year to the funds of the Association.

In the Peterborough district they have been fishing all through the fence months, and during that time there have been some very large takes of good roach. A correspondent, giving this information, says, also, "All we fence is pike and perch. Ours is a private fishery, and the lessee grants us permission under the subsection of the Act." He adds, "The water is all alive with the following kinds of fish:—perch, pike, roach, dace, chub, bream, bleak, eels, and a few tench; but none of these will be in condition except dace. The roach, bream, and chub have not spawned, and the other fish are not in good condition." Speaking of the water, he says, it is very low just now, and no weeds are to be seen. Pike, in these waters, run to a useful size. They seldom reach 16 lb., and few under 2½ lb. The largest taken last year reached 19½ lb. The waters of the Peterborough Association extend along the bank of the river Nene, a distance of about nine miles, from Stanground Lode to Alwalton Mill. The river is not a good one in summer, owing to the vast quantity of weeds, and the swims are best reached by boat. Plenty of fishing places, however, may be thus found at any time. Anglers will find good accommodation at such places as the Boat Inn, the Saracen's Head, the Queen's Head, the Waggon and Horses, the Club House, &c., and boats may be had at the boat-yard close to the latter. The cost of the tickets is 2s. 6d. per year, 1s. per week, or 6d. per day.

From Cambridge and Ely accounts come of the healthy condition of the Association, and that the waters are well stocked with fish. Roach, bream, perch, tench, pike, and eels are plentiful, and a few dace and barbel have also been caught in these waters. The Association have over twenty miles of the Ouse in their hands, and Ely is about in the centre of it, for it extends from near Cambridge to Littleport. Perhaps the best point is at a place called the Branch, where the river Lark joins the Ouse. Perch are taken here up to 4 lb. Good accommodation may be had at the Granby at Littleport, several places at Ely, and at Cambridge. The cost of the tickets is 2s. 6d. per year, and there is the privilege of cheap railway fares on production of the fishing ticket at most of the Great Eastern stations.

At Spalding there is good angling, and it is expected sport will be even better than it has been. The Association have some capital water many miles in extent, and conveniently reached from Spalding, Pinchbeck, Surfleet, and Deeping St. Nicholas. There is plenty of accommodation, and a cheap tariff. Tickets 10s. 6d. a year; day tickets, town subscribers, 2s. 6d. each.

All along the Trent the prospects of angling are said to be good, and fish are spawning early and satisfactorily. In the upper waters the Birmingham people have extensive rights and anticipate fine sport. In the neighbourhood of Nottingham, anglers are expectant, and anxious to begin. Near Newark the prospects are spoken of as unusually promising, and down towards Laneham, Dunham, and to Gainsborough the reports are equally good. One of the longest of English rivers, the Trent is justly celebrated as an angling stream, and being little polluted by large towns, it produces almost its whole length vast quantities of fish. Upwards of thirty kinds are said to be found in its waters, and the angler can scarcely make a mistake in the selection of a locality. Long stretches of the river afford free angling, and the preserved portions may be fished at a reasonable charge almost anywhere. There is plenty of accommodation along its banks.

The Soar is now a fine angling stream. From Leicester to the Trent it is preserved by associations nearly the whole length, and its waters contain fine pike, salmon trout, roach, dace, perch, tench, bream, chub, and eels. Reports sent into the committees speak very favourably of the prospects of the coming season. Bream and roach are the principal stock. Trout and tench when taken are usually of a good size. Pike fishing is good in the season. One of the finest portions of the stream is that reached from Barrow-on-Soar station. The Barrow, Quorn, and Mountsorrel Association have five or six miles of the river here, and there is capital bream fishing within half a mile of the station, the fish running from 2 lb. to 5 lb. each. The fish have mostly spawned early, and this will make the fishing good to begin with. Roach will be first. It would be convenient here to mention that those who go there for bream would do well to inquire whether they are on, or it is possible they may be disappointed. This information may be got from the secretary and others who would be glad to aid a stranger. There are good inns in most of the villages near, and terms are reasonable. Subscriptions, 10s. 6d.; weekly tickets, 5s.; daily, 1s. 6d.

Between Lincoln and the Trent, and down the Witham for some distance, and in some of the neighbouring streams and drains, the Lincoln Association have good preserved fishing. Their waters are excellently stocked with roach, perch, pike, bream, dace, barbel, eels, chub, &c. For the Fosdyke the best places are Torksey, Dimsey Nook, Saxilby, and Lincoln; for the Upper and Lower Witham, Lincoln, Washingborough, Bardney, Stixwold, and Kirkstead or Tattershall. Subscription to these waters is 1s. a year and upwards, and all information, tickets, baits, &c., may be had of the water bailiff, Mr. George Barton, Newland (Vine Inn), Lincoln. Gentles, paste, and grain in their season are here used for roach, as also caddis and cockspur worms.

In the neighbourhood of Thorne, Keadby, Crowle, &c., where fishing is well preserved, there are great quantities of almost every kind of fish, pike, perch, roach, eels, flounders, &c. Subscription to the preserved waters is 3s. 6d. per annum. There is, however, many miles of excellent fishing entirely free, and about the best and most central point is the South Yorkshire Hotel, close to Crowle Station. Reasonable charges are the rule in this locality, and latest reports from the locality speak of the coming season as likely to be a good one. Roach have not yet spawned but they will be ready in a very short time.

All down the eastern side of the country, no doubt, is the most popular for the coarse fish angler, still it must not be supposed the waters mentioned are all that are to be had worth going to. On the contrary, on the western side there is now capital angling to be had in Lancashire and Cheshire, and it is much patronised by anglers from Manchester, Liverpool, Wigan, Preston, Blackburn, Chester, Warrington, &c. The prospects of a good season

are better than for years. In some of the favourite waters, roach and bream have been seen in shoals very lively. At Newton Mere (nearest station Newton Bridge), roach and bream exist in immense quantity, and there are also plenty of pike and trout. The lake is of good size, and has been strictly preserved. Permission to fish may be had free on enclosing a stamped envelope to J. E. Pardey, Esq., Newton-le-Willows. Boats on the lake may be hired at a low charge. The dams of the Wigan Waterworks afford plenty of fine fishing, good roach, perch, and trout. Tickets 1s. each, may be had of the lodge keeper. The river Weaver, in Cheshire, is a great attraction. The best points on this stream are Acton Bridge, Hartford, and Frodsham, at which places there are good houses and reasonable charges. The Lancaster Canal also contains plenty of fish from Oxenholme to Preston, a distance of forty miles, and permission to fish it may be had from J. Slinger, Esq., Canal Office, Lancaster. Most of the angling clubs of Lancashire pay so much per annum for this right. The Ribble affords good fishing. Dace, roach, and chub are caught in abundance, and there is plenty of good accommodation. There are also several other localities, including the Dee and Severn, that are easily reached from these parts.

In the West of England reports are equally satisfactory. From Wales, the reports speak of good angling, but many of these latter are chiefly devoted to salmon and trout. The coarse angling seems more confined to the places indicated. We have said enough to show that the angler has nothing to fear in the way of sport, if he can keep out of the way of weeds, which in many rivers bother him sadly during the summer time. In the fast running streams there is not much to fear in this respect, but in the country where there is a dead level for miles ill-weeds grow apace, and become his very plague. It is perhaps strange, though, to some; still very often these are the very best streams in the whole country for coarse fish angling. W. H. L.

ANGLING IN NORTH LINCOLNSHIRE.

ALLOW me to supplement my notes of last week by recording one of the finest day's trout fishing that I ever experienced. On Wednesday, in last week, I was out on the Tetney and filled my pannier before four o'clock. There were thirty-two fish, which weighed exactly 16 lb. They were all caught with fly, on fine-drawn gut. About one half were secured by the green drake, the others fell to the lot of the iron blue drake and Ford's favourite. The day was very cold and generally overcast, but, as the wind blew up stream, I was able to throw over the heads of the fishes, and thus keep well out of sight. The water was very clear and low, but my David Foster (Acme line) answered admirably, and contributed largely to the glorious result. I retained no fish under $\frac{1}{2}$ lb., whilst several were over 1 lb. On Friday, I again went over to the stream, which I fished lower down. As I did so well on Wednesday, I only fished about three hours, but I managed four brace, which were even larger than those of Wednesday, weighing a total of 7 lb. Four fish weighed just 5 lb.—the largest $1\frac{3}{4}$ lb. In justice to Mr. Alington, I must observe that the above results equal, if they do not surpass, anything that I ever did in Yorkshire, but I have often filled the same pannier on the Inny in Cornwall.

THOMAS FORD.

Caistor.

GREAT YARMOUTH FISHERIES EXHIBITION

IN AID OF THE

GORLESTON VOLUNTARY LIFE-BOAT ASSOCIATION.

THIS exhibition will be opened by the Mayor of Yarmouth, on Monday, July 18.—Classes: Class 1.—Models: Ships, smacks, fishing boats, steamers, yachts, &c. Class 2.—Rigging:

Ropes, canvas, blocks, &c. Class 3.—Fishing Gear: Trawl nets, drift nets, freshwater tackle, deep sea lines &c., Class 4.—Fish: Living fish, shell fish, salted, smoked, tinned, and stuffed fish. Class 5.—Life-saving Appliances: Models of life-boats, rocket life saving apparatus, foghorns, signals, lights, &c. Class 6. Aquatic Birds: Living or preserved. Class 7.—Pictures. Class 8.—Relics from the deep (including various interesting articles, picked up at sea).

Exhibitors of Inland fishing matters are invited to send exhibits. Sales can be effected in the building in the same manner as at Norwich. Some prizes for essays will be awarded. Our friends should write for particulars to the secretary.

PRACTICAL NOTES ON THE SPAWNING OF THAMES FISH.

THE ROACH.

IT is generally understood that the roach begin to spawn in the Thames about the middle of May, but much depends upon the character of the season as to their movements in that direction, and it is as well to place upon record any experience in the spawning of fish as matter of practical information. I think on the Thames the best proof afforded about the roach is when they begin to occupy the back stream at Hampton Court. As a rule I have usually found their migration upwards to commence about the middle of May, but this year they have been quite a fortnight earlier, and it will be remembered that four thousand good fish were removed at that time. What I mean by good fish is as regards size—in other respects the roach were getting very rough as they do when in a spawning condition. About a fortnight later another shift of roach was reported, but not in similar numbers, and only about fifteen hundred were found where four thousand had been taken out before. These fifteen hundred fish were very forward, and some of the grass in the water was covered with spawn. I have always thought the roach might safely be fished for throughout April, but this season has proved otherwise, as they must have been getting rough long before the end of April, and therefore might be taken. I admit it has been a somewhat exceptional season in the Thames, but we must be prepared for these exceptions in order to be perfectly safe. It is far better to give time to the fish than to take time from them—much safer to recognise the earlier spawning period as a standard than the later and perhaps more ordinary one.

THE DACE.

The Dace made their first shift very much earlier this year, about the end of February, and were all up in their spawning beds before the general angling season terminated. I noticed some about the time of the first movement that were exceedingly rough and had very little life in them as jack bait, so that the end of February is quite time enough to suspend operations in catching them, as a rule. The extension of the season to the 14th of March is not at all favourable to the dace as they are amongst the earliest to spawn. I have only defined the period as showing by actual observation when the spawning has occurred. I think most people regretted, as far as the dace were concerned, that the Freshwater Fisheries Act of 1878, left them to be fished for after the old period at the end of February, as even at that time they were in no sort of condition. It would appear from the remarks of the fishing correspondent at Richmond in last week's FISHING GAZETTE, the dace have dropped down to their old quarters in the tideway, and I sincerely hope that he and the other fishermen will have another successful season amongst them, which before this is in print will have made a commencement.

THE BREAM.

These fish went to their spawning beds about the first of June this year, and I think are somewhat earlier than usual in the Thames. It is said they have gone into the backwater at Walton in immense shoals, or, as was computed, by "tons weight." This place and the dock at Chertsey are the most favoured places for the bream at such a time, but as a rule they do not take long to discharge their domestic duties. According to "Otter's Modern Angler," and it is a valuable guide to go by, the bream generally spawn towards the latter end of May, so that the practical author is substantially correct this year in reference to the Thames. The bream then can hardly be in condition for angling before July.

THE PERCH.

The great bulk of these fish are pretty regular in spawning in March, and this season they were quite as early, not only successfully depositing their ova in immense sheets on the boughs at Walton and other places, but they were all safely guarded from the swans, and vivification was complete. The anglers, however, will testify from experience that most of the perch taken towards the middle and end of February are in no condition to be caught in consequence of their being so full of spawn, but I am only speaking of the Thames, as I know in other places they are as late as May in spawning. B.

NOTICES OF BOOKS, &c.

THE PRACTICAL FLY-FISHER, more particularly for Grayling or Umber. By the late JOHN JACKSON, of Tanfield Mill. London: John Stark, 12, Bushby Place, Camden Road, N.W.

THE dweller in Herefordshire, Yorkshire, Derbyshire, or Hampshire, who cares for fly-fishing, can, if he pleases and the weather permits, angle all the year round—for trout in the spring and summer, for grayling in the autumn and winter. There are many most excellent works on trout fishing, but very few on grayling fishing. The little work before us was written by a master in the art, and we cannot give it higher praise than to say it is, in our opinion, worthy a place in every fly-fisher's library as a companion to that grand old favourite "Ronald's Fly-Fisher's Entomology." A great feature is that it contains most beautifully-finished copper-plate engravings of sixty-four flies and beetles, used in grayling fishing, with their artificial representatives. These plates are coloured by hand, and, in most instances, are very carefully done, they will be found of great value, even to those who only fish for trout.

The author first gives directions for making flies, with clear illustrations. He then describes the various flies for the season, which are also illustrated in the plates; and the remainder of the work is devoted to remarks on the nature of the grayling, its haunts and how to take it, and a description of the grayling rivers of Yorkshire. We must mention that our author wrote in 1853, and though his remarks on the Yore, Aire, Wharfe, and Rye are still generally applicable to those rivers, in many particular cases great changes have taken place as regards landowners and angling associations. Our own experience is that it is by no means difficult to get good grayling fishing at the present time on any of the above rivers, and especially the Yore, in Wensley Dale, and on the Rye, near Helmsley.

Grayling fishing is most excellent sport, and trout and grayling fishing combined, on a good day in August, is, we think, the *acme* of sport with the fly-rod. In grand scenery, with a genial companion, when the fish are rising well, there is an indescribable charm in the variety afforded by the great difference in the rise and fight of now a trout and now a grayling; and at the end of

the day a creel of ten or fifteen pounds of these fine fish is a sight and dish for the gods. An experienced angler can almost invariably tell, from the nature of the rise, whether he has hooked a trout or a grayling, and if the fly has been taken under water the action of the fish betrays its nature in a moment.

The trout-fisher who fishes for grayling for the first time or two will find that he strikes too hard for this soft-lipped fish—the gentlest turn of the wrist is all that must be given. When grayling are rising short, as they very often do, we have found it a good plan to sink the flies a few inches below the surface. A short piece of elastic tied between the line and the collar is said to be a good dodge for lessening the effect of the strike.

In confirmation of what we said about our author's remarks being somewhat out of date, as regards some portions of the rivers he names, we may instance his statement that "in Bilsdale the trout are very numerous." We regret to say that in consequence of the poisoning of the fine stream which runs through Bilsdale not a trout or grayling is now to be had in that stream. jute mills are the cause in this instance.

Although it would undoubtedly be more valuable if revised to date, as regards the fishing stations, it still remains one of the most practical and useful little books on the grayling extant.

YANKEE BABIES.

Of all the amusing Yankee "notions" ever invented, we think the palm must be given to the olive-branches, which are supplied—either male or female—at most moderate prices by the sole agents, the Facsimileograph Company, Kemp Town, Brighton. We were recently presented with twins from this establishment, and if the amount of amusement which has been caused by their subsequent unexpected appearance in two or three family circles may be taken as a sample of their reception generally, then, indeed, they must have made thousands grow fat. "Laugh and grow fat" is an old and sound proverb, and we defy the primest and thinnest of old maids to look upon and handle these charming infants without laughing as she rarely laughed before. Their cries are so life-like that a nursemaid who heard one rushed frantically upstairs in search of her charge. The more you whack them the more they squeal—another most natural feature; they hate pins as much as does the real thing; and a great advantage is that you can see inside them if they are unwell, and so dispense with doctors' bills.

THE LUMINOUS FLOAT.

MR. ARCHER has patented a very useful application of Balmain's luminous paint. This paint shines like phosphorus in the dark, after it has been exposed to light. The top of the float is a glass tube filled with the paint, and all you have to do is to strike a wax match and hold it near (but not under or touching) the glass tube. This will make the float luminous, and you can easily detect a bite. It will be found very useful indeed, as one has often to leave off fishing, just when the big ones are coming on, because it is too dark to see the float. Fish feed all night long in the summer; in fact, that is why they feed so little in the day-time. Fishing on a warm summer's night is very good fun, and is the only time that many anglers can devote to fishing. Archer's Glow Worm float comes as a "boon and a blessing" to them.

ANGLERS should always be provided with something to take away the swelling and poisonous effect of the bites of insects. They should also have with them something to apply to a cut or sprain. Pond's Extract reduces the swelling and inflammation, stops bleeding and pain, and hastens the healing process in case of any wound or sprain; and it has no equal for application to the bites and stings of insects. Therefore never go on a fishing excursion unprovided with a bottle of Pond's Extract. It is for sale at all chemists, at 2s. 3d., 4s. 6d., and 8s. 6d. per bottle.—[ADVERTISEMENT.]

MRS. F. Y. BROCAS, Artificial Fly Dresser, 4, Mill-street, Conduit-street, Hanover-square, London, W. A stock of best flies always on hand. Flies made to pattern. Lessons in fly making given.—[ADVT.]

CONFERENCE OF ANGLERS AT THE SOCIETY OF ARTS.

WE beg to call the special attention of our readers to the particulars of the meeting to be held at 8 p.m. on June 27, in the room of the Society of Arts. Particulars will be found in our correspondence columns in a letter from Mr. Geen, and also in one from Messrs. Ghurney and Hoole. We put both in, though they are nearly identical as regards the amendments.

CLUB AND OTHER JOTTINGS.

BY L. B.

THE one great topic discussed among anglers this week—whether club men or otherwise—has been Messrs. Wortley and Dodd's proposed amendment to the Freshwater Fisheries Act of 1878, legalising rod and line fishing all the year round. Strange irony of fate that the town of steel, to whom belongs the honour of having been the original promoter of the Mundella Act, should be the first to do a growl. The growl, however, comes from a very few, indeed; for we hear that no sooner was the Bill brought into the House than a meeting of delegates from over 200 angling clubs was held in Sheffield, when it was resolved, by a very large majority indeed, to oppose the so-called amendments "As contrary to the best interests of anglers." Similar resolutions appear to have been passed in many parts of the country by all the large preservation societies—the Thames Angling Preservation Society, Reading and District, Richmond Piscatorial, and many others; while in London the West Central, the East Central and Central—representing some thousands of club men—are unanimous in their opposition to Messrs. Wortley and Dodd's ill-advised amendments.

From the neighbourhood between Send and Woking we hear that a tributary or backwater of the Wey has been drawn off, and large numbers of roach, bream, and carp, from 4 lb. to 6 lb., jack up to 7 or 8 lb., and some large eels, were taken away in sacks by the yokels.

From that savoury place, Dagenham Reach, familiarly known among its admirers as the "Lake" and the "Gulf," come fair promises of a season that is to surpass by far anything that we have seen of late years. I trust it may turn out so, but I much doubt it. This is one of those places which has steadily gone from bad to worse. Continual angling and no restocking—the latter compelling the fish to breed in and in, until fingerling roach and bream like little bits of tin have become the rule; and a decent fish now and then the exception.

From the Cam, Ouse, and Lark district, a correspondent writes:—"Angling prospects first-class; enormous shoals of bream, roach and dace flying about in all directions, showing that pike and perch are making up for lost time after discharging their family duties."

The cry is still they feed. Among the dinners on the—well, no, not on the *tapis*—say on the boards, or about to be set there, are the following—the Thames Angling Preservation Society's anniversary dinner, the Richmond Piscatorials' summer dinner, on the 16th, at the "Ship," Halliford; Major Bull in the chair, faced by our genial friend Mr. F. C. Clench; also the Great Northern Brothers and the Trafalgar on the 15th, the Golden Barbel, 14th, &c.

Touching the Anglers' Benevolent Society, the balance sheet for the half year ending April 31st will soon be issued. The annual subscription becomes payable on the 1st of May in each year, and the necessity for renewing same at once cannot be too strongly impressed, as no angler can receive relief and assistance unless such subscription (1s. 1d.) has been paid. It is impossible not to express astonishment and regret at the fact that only 547 anglers joined this admirable institution during the financial year ending April, 31st, 1881, in spite of the unwearying exertions of the committee, whose members, provided with receipt books for that purpose, have, regardless of refusals and indifference, canvassed for and enrolled members upon every available occasion.

From all parts of the river Lea the prospects for the coming season are said to be excellent. At Ware, on 3rd inst., two men convicted of illegal possession of fish (about 16 lb., mostly small roach taken from the shallows) were fined 10s. each. Mr. Murphy, secretary of the Good Intent Anglers, has been among the trout; half-a-dozen (heaviest 2½ lb.), falling to his rod. It is always a pleasure to hear of Mr. Murphy's success, for a more persevering angler or a truer sportsman never wielded rod. Is he going after some more of those big dace this season?

At the Working Committee meeting of the West Central Association on Friday, 3rd, three new angling societies were enrolled.

Mr. T. Hoole says he has two or three more new societies in his mind's eye which he hopes will shortly do ditto. How many small bodies of anglers, who proposed starting societies, and were struggling over the drawing up of rules, the obtaining of the concessions which they had heard were granted to anglers, has not Mr. T. Hoole assisted with valuable advice, until from the grub state they have burst forth fully formed, and able to fly alone. The Immortal Bard somewhere says: "I see Queen Mab has been with you. She is the fairy midwife, and comes in form no bigger than an agate stone on the forefinger of an alderman." Would it be too far-fetched to compare Mr. Hoole in this case?—yes, I am afraid it would.

£5 5s. from the Reading and District Association voted to the Frank Buckland Testimonial. The late Mr. Buckland's kindly and genial disposition endeared him to all those who were brought into con-

tact with him, however much they might differ from him in matters of opinion. Against a memorial being got up by those whose interests he furthered, there is not a word to be said; but the applying of money publicly subscribed with the one object of securing the better preservation of a stretch of our river Thames to a purpose so entirely foreign is creating a very doubtful precedent, and from all sides there are rumours of its being made the subject of severe criticism both in and out of print.

On Monday evening, 13th, the monthly meeting of the East Central Committee was held at the Bald Faced Stag, Worship Square Finsbury, Mr. S. Morgan presided. A numerous deputation from the West Central Association of London and Provincial Angling Societies was present, including Messrs. Geen, Hoole, Beckett, Welch, Bonvoison, Murphy, Vincent, Marshall, &c. The one great topic of interest here, as elsewhere, being the "Fresh Water Fisheries Act." Mr. Geen opened the subject in a speech of great power, during which he remarked that Mr. Stuart Wortley's amendment might be owing to the prompt opposition offered to it by the anglers, considered a thing of the past. The present, however, was the time for a strong pull, a long pull, and a pull altogether, for the purpose of obtaining such alterations as were needed to make the Bill a really effective measure. He read certain important suggestions which he had jotted down, and which he thought might advantageously be included in any future amendments. It was ultimately decided "that a conference composed of delegates from Angling Societies and River Protection Associations should be held in London to ascertain the views of anglers, and to put the same into shape with a view to a public meeting. Particulars as to date, &c., of both will be published in THE FISHING GAZETTE. After some remarks from Messrs. Manning, Beckett, Ghurney, Murphey, Bonvoison, and others, the ordinary business of the evening was proceeded with. The half-yearly balance sheet, which was distributed, showing the handsome balance of £107 3s. 4d. in the Post Office Savings' Bank.

MR. WORTLEY'S FRESHWATER FISHERIES ACT AMENDMENT BILL.

SUPPORT OF SHEFFIELD ANGLERS.

A MEETING of the New Angling Association, which represents a large number of fishing clubs in Sheffield and the neighbourhood, was held last night at the Garrick Hotel, Sycamore Street, to support the Bill introduced into Parliament by Mr. C. S. Wortley, M.P., for the amendment of Mr. Mundella's Freshwater Fisheries Act of 1878. Mr. Walter Timperley, the President of the Association, occupied the chair, and there were also present the hon. secretary, Mr. F. G. Bennett, and the following members of the committee:—Messrs R. Bickerdike, H. Bailey, W. W. Cook, J. Lowaler, T. Robinson, E. Rhodes, C. Sadler, C. Staniforth, and J. W. Wortley. There was a large attendance of members.

The Chairman said Mr. Mundella's Bill was passed before it was thoroughly understood, and thus it happened that working men were unfairly deprived of the power of fishing with rod and line during certain seasons of the year. He hoped the amendments proposed by Mr. Wortley would be supported by the meeting and adopted by Parliament.

Mr. John Young said the Bill lately brought in by Mr. Mundella was wrong altogether, and Mr. Wortley, by bringing in his Bill, had rendered a great service to the people of Sheffield.

Mr. Arthur Harrop observed that the Old Angling Association had condemned Mr. Wortley's Bill before they knew anything about its provisions.

On the motion of Mr. Thomas White, seconded by Mr. Arthur Harrop, the following resolution was unanimously adopted:—"That, in the opinion of this meeting, the Freshwater Fisheries Act, 1878, is partial and unjust in its action, and operates harshly towards poor and working men; that it is not general in its application; that many owners, occupiers, associations, and individuals are taking advantage of an exemption allowing rod and line fishing, and do fish continuously throughout the close season; that the advantages of the close season is sufficiently gained by stopping the sale of coarse fish, which prevents poaching, and by prohibiting netting and other means of wholesale destruction, which protects the spawning fish; that rod and line fishing can do no harm, seeing that breeding fish will not take bait (live or artificial) during the breeding time; that to allow the taking of eels in the spawning season would confer a substantial benefit on freshwater fisheries, because of their great destruction of other fish spawn during the time it lies for incubation; and therefore this meeting pledges itself to support by petition and other legal means the Bill recently introduced by Mr. Stuart Wortley, and now before Parliament, entitled the Freshwater Fisheries Act Amendment Bill."

It has decided that a petition embodying the statement of his resolution should be forwarded to the House of Commons, and if necessary to the House of Lords, signed by as many anglers as possible.

Another resolution was adopted requesting the secretary to invite the co-operation of the Right Hon. A. J. Mundella, M.P., and the members for the Southern Division of the West Riding, in the passing of Mr. Wortley's Amendment Bill, and also to ask for kind support of the prayer of the petition.—*Sheffield Daily Telegraph*.

GEORGE JAMES EATON, of Starkholmes Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[ADVT.]

RIVER REPORTS.

MID-THAMES.

"Arouse ye, me merry, merry men,
For 'tis our opening day."

To-day is our spawning day on the Thames, and as the water is in grand trim, in consequence of the wet-suntide days, first-class sport may be anticipated. My occupation, which, "Othello like," seems to have been gone for some three months, will now come back to me, and I am sure "Mid-Thames" anglers will have grand success. The water is in prime order for all round work. Roach and chub well on. I have several reports as to trout taking from Henley and Marlow, but as the weights are only within 4 lb., the record will hardly be interesting.

THURSDAY.—River in prime order for all-round angling; roachmen should do especially well, as the river has got a mignonette colour about its clothes.—MARLOW BUZZ.

Thames (Goring).

Water in good condition. Prospects; very good. Chub biting well, three chub going 9 lb., were taken by Mr. Hue, 231, Camden Road, Holloway, on Thursday.—JOHN RUSH.

Thames (Kingston).

My son has just caught 4½ dozen roach and dace, a few good roach have been caught, but principally early in the morning, as the bulk of the fishermen left off between six and seven, and the fish did not feed again till three in the afternoon. We want rain badly, the water is full of natural food. I have not been out myself; hope to send you something better next week.—JOHN JOHNSON.

[This bears out what we said, that the fence months, although nominally three, are practically six, for the fish wont feed in the day time now, and the river is full of natural food. But the nets can, of course, get all the fish they can hold now.—ED.]

Thames (Richmond).

The first day of the week was a good one, or, as anglers would term it, a fine dull day, but did not pass over without a shower of rain, but nothing to stop the man who was bent on business. I was out this morning at half-past six, and had a walk as far as the Orleans Club, and counted no less than seventeen at it as early as this—something new for our waters. When I took to fishing it used to be reckoned nothing before the middle of July; but last season upset all this, as we commenced with good takes, and went on with them. This looks to me to be a very good season. There were no less than 23 small barbel thrown out of the boats moored in the middle of the river during last week, which had leaped into them in their sporting about. The fish that have been taken to-day were in very good condition, and the dace running a good size. There was every punt out that could be had here, and I had to send people to Twickenham, as I could not accommodate them here. The men that were out to-day were G. Howard (who got 2 dozen of roach and dace), C. Brown, Job Brain (2 dozen roach and dace), H. Mansel, H. Wheeler. I think the sport ran to between 2 and 3 dozen, as it usually the case on the opening day. I have not been out myself, but I live in hopes to have a fair start on Monday, when I shall be prepared to take orders for the season. Wishing success to every angler.—JOHN BUSHNELL, fisherman.

Bure (Acle).

Anglers have had plenty of sport on the above river of late; swarms of roach, dace, bream, perch and pike have been taken. Amongst the more expert anglers a deal of fine perch fishing has been experienced, the bait used being live minnows, one gentleman from Norwich having taken upwards of 2 st. one morning, most of them being 2 and 2½ lb. fish. Much controversy has been held of late as to "all the year round fishing, but I think Norfolk anglers need see no fear that close or fence time will ever come into operation in our country. For those gentlemen at a distance who are advocating it in our waters I should advise them to read, "The Cruise of the Coya," issued in "Blackwood's Magazine" for this month, and which charming little narrative will give them some idea of the extent of Norfolk broads and rivers, and the facilities for fish culture therein.—ANGLER.

Coquet (Northumberland).

The river is still very small and clear, but the sport is very fair considering. Messrs. J. F. Dance, W. Dance and G. W. Gray last week caught from six to ten fish each with worm, all a good class of trout of from 4 to 12 oz. Messrs. J. Bruss and T. Bruss, from Morpeth, on Monday had very good sport on the Brinkburn water. Thunder is heard from a distance, and rain is beginning to fall, which is wanted to improve the fishing.—A. GLASS.

Dove (Derbyshire).

The weather continues dull and cloudy, but sport, on the whole, has been good since I last wrote. Last Friday a nice dish of 10½ brace were taken, and on Saturday another of 9 brace. I also hear of a basket of 8½ brace being secured on Friday, while the general takes on Saturday must have averaged from five to six brace each. On Monday, Tuesday, and Wednesday sport continued about the same. There have been any number of roosters out, but, so far, it cannot be said that the drake season has been a good one. No sooner do the flies come on the water, then they are drowned before having obtained

the proper use of their wings. Rain is drizzling as I write this (Thursday) night; and a good copious downfall, with plenty of clear bright sun afterwards, would be a great boon.—THE SPODGER.

Exe (Exeter).

There has been but very little doing, either with net or rod, in the Exe during the past fortnight, the long protracted drought keeping the water very low, and in some parts more than dirty. We can put up with dirty water, but when it comes down like dye refuse and of a purple colour, that will not do. Such has been the case frequently lately, but, thanks to Pluvius, his occasional refreshing showers, the surplus of which are leaving the high lands and a gentle freshet has taken it all downwards. Every one seems delighted at the change, and anglers are busy and anxious for the memorable 16th, when they will to the Exe streams swiftly hie, and cast the trembling mimic fly; find health and beauty, with joy in ample store; creels full of trout, carp, perch and dace; say, who could wish for more? A few trout have come to bank, many of them turning the scale at 1½ lb. each. And my friend, Mr. T. Kelly, informs me of one weighing 1½ lb., so that, if numbers are not our luck, we get it in weight. Eels are plentiful and fine. I have just preserved one of 2 lb. 5 oz.—it is a common sharpnose eel (*Anguilla acutirostris*) in splendid condition. Salmon seem pretty free of the fungus disease (*Saprolegia Ferax*). Bass, pollack, mullet and shad are coming along slowly, although in many parts they are very plentiful. Very few are seen in the market at present. Next week, I am in hopes of saying something about the fishing club now being formed at Host C. Blake's, the Royal Museum Hotel here. Members are anxious to enrol themselves, and with brain and had in concert find fresh vigour for the jaded mind. "An Angler's Life for Me!"—FRANK GOSDEN.

Ilfracombe.

There have been a few trout caught this week; the fish are rather small, average one dozen per rod per day. Prospects look good for sea-fishing, cod, pollack, whiting pout, bream, &c., are increasing catches, vary from 10 lb. to 40 lb. per boat per tide. We have had no heavy catches of bass this week, say about 50 lb. per boat. Should the weather continue as it is to-day, we shall have some good catches next week.—HENRY COMER.

Suir and its Tributaries, Clonmel (Ireland).

We had a very few soft showers this week, which did not raise the river in the least. However, it caused a little stir in the trout, but not much in the salmon way, as we only heard of two fish being killed by Mr. Hutchings, one weighing 16 lb. on Saturday last, and on Monday one of 12 lb. at Dudley's and the Bridge Stream. The cotmen are not fishing at all, owing to the low state of the water. We hear of immense numbers of salmon lying at Kilshulgan Bridge, in a deep pool, likely waiting for a fresh to bring them up the river. On the tidal portion of the river there are a large supply of salmon and peal, so we only require a little flood to see good sport. The trout fishing is very good in the evenings, by either wading or fishing out of boat; the weeds have grown so much that it is very hard to fish from bank or river. Strange to say, we have had a flood for the past five years during the June moon until this year; however, as the glass has fallen we may have some rain to raise the river. The best night flies for present use are orange and silver rails, and for day fishing gold and green spider wings.—DORA.

Swale.

Mr. Barker, of Grinton Lodge, had three afternoons last week. He killed fine dishes of 32, 33 and 40. With one or two exceptions they were all caught with the dotteril drake and oak fly, recently supplied by me. As reported in my last notes, the dotteril flies will now do the chief execution. They should be made very small on No. 1 or 2 hook, with yellow or orange bodies. The evening is the best time for fishing them, provided weather is warm. The iron blue drake is a good fly for cold days, but the green drake is seldom fished on this stream, there being but few natural flies.—THOMAS FORD.

Trent (Newark).

The general angling season commenced to-day, and everything looks promising as far as can be judged at present. The water is low and clear, and seems to be in fairish condition. Roach are now in very bad condition, and should not be taken yet, bream have scarcely commenced to spawn, and barbel and chub are still upon the shallows, dace are in good condition, and may be taken with the fly or a cad bait, or gentles. Try the shallow runs for them. The shallow water by the side of a nice eddy, or at the tail of a pool, will be the best places to look for dace. Eels and flounders have been biting pretty freely at worms to-day. One very small and youthful angler has just brought home half-a-dozen very nice eels, about a score of flounders, two of the eels very good ones. It is raining very nicely to-night; wind south. May all anglers have a very good season is the wish of THE TRENT OTTER.

Wye and Derwent (Derbyshire).

The drake may now be considered nearly over on these rivers; we have had a great quantity of flies, and both on the Lathkill, Wye and Derwent, and a very fair quantity of good-sized trout have been killed, both with the natural drake—where it is allowed to be used—and with the small Derbyshire green drake. The yellows and blacks have also been out very strong on these rivers during the week. What with thunder-clouds and rain hanging about nearly the whole of the week, only small quantities of fish have been killed with the artificial fly, with the exception of last Monday. There were some fine baskets of good-sized fish, both trout and grayling, killed with the yellow dun and spider flies, several of the fish being over 1 lb. each. The downlooker or oak fly is now out very strong, and some good-sized trout have been killed by dishing with the natural fly, both on the Chatsworth and Darley Dale Club waters. The abundance of flies that are now upon the water make the fish very particular, and they require very careful fishing to ensure even a small dish of fish. A man, to get anything like a dish of fish with the artificial fly, must wade, working as much up stream and across under the opposite bank as possible; early in the morning and late in the evening are the best times. The duns or yellows then come sailing down the water, and the fish generally rise well for about an hour. Sport still continues good on the ponds, both with the green drake and spider flies. The bottom fishers on the Derwent have done very little during the week owing to the river being so very clear and low. I am often asked by gentlemen what is the best fly line that can be used for fly-fishing? I can now recommend one with the greatest of confidence. It is a silk and hair line, with a piece of copper wire running through the line. It is so ingeniously worked into the silk and hair as to be barely perceptible. This line thus unites weight, strength and durability. The fact is, it is a line of the future for

the fly-fisher. It is made and sold by Messrs. J. Peach and Sons, fishing tackle manufacturers, 10, St. Peter Street, Derby, whose lines I have used and tested for the past twenty years, and I find none equal to them. Their prices are most reasonable and their lines first-class ones. Rain is much wanted both by the fisherman and the agriculturist.—GEORGE JAMES EATON.

Yore (Yorkshire).

There is still very little doing in this district, the weather during the last few days having been heavy and inclined for thunder. There are a few green drakes out on the stream, but it does not kill well on the Yore, although at times I have killed good dishes with it on some of the tributary streams. At present perhaps the little red worm is the most reliable bait; but, until a good flood comes, I do not expect that any one will make very heavy baskets.—FRANCIS M. WALBRAN.

NORTHERN NOTES.

By F. J. H.

THE enthusiastic disciples of Izaak Walton in this quarter, from all I can learn, are anxiously awaiting the great day, the 16th. On which occasion they will no doubt be eager for the fly, and it is easy to imagine that long before this, rods and tackle have been brought forth and laid ready to hand. And doubtless our friends the tackle-makers have had quite a good time of it, for the most careful angler generally finds he must get in a little fresh stock for the coming season.

Before the next issue of the FISHING GAZETTE some hundreds who have cheered themselves during the hurry and bother of business will have shaken the dust of the town from their feet, and again betaken themselves to their favourite haunt on the bank, thankful for a day's outing and their favourite amusement, for—

"Oh, the gallant fisher's life
It is the best of any.
'Tis full of pleasure, void of strife,
And 'tis beloved by many."

So sings old Izaak Walton, and doubtless a vast number are ready and willing to sing in the same strain.

Three gentlemen, Messrs. Holbrook, Jackson, and Atkinson, had a rare day on Monday last at Leven Canal, and, in addition to trout, they might have brought home big bags (but for the law) of roach and perch, which were said to be in very fair condition.

There is reason to suppose somebody has been doctoring the water in a little stream that runs near the east end of Hull, for a large number of fish were seen floating dead on the surface, and as they are a fish that usually thrive in this particular stream, it is hard to surmise what natural cause has turned them up.

In the same stream a man on Saturday shot a pike, which was reported to have weighed between six and seven pounds. It is not said what the jack was doing to the man, but Master Jack had been dining very extravagantly when he met his fate.

NOTES FROM SHEFFIELD.

Sixteenth of June how anxiously awaited by the impatient angler. How he longeth for the leafy month of June to test the tackle he has been preparing during the last three months, and how heavily the time has hung upon his hands; but if a reflecting man—as all anglers are supposed to be—he will have the consolation that the time, which no doubt has seemed long to him, has been spent by the fish in increasing and propagating their different species to afford him increased sport during the following season.

Our talk is now of waters, as Wilson says:

"From dancing rill to slow and solemn stream,
Not hurl'd precipitous from steep to steep,
Lingering no more 'mid flower enamelled lands
And blooming thickets, nor by rocky bands
Held, but in radiant progress toward the deep,
Where mightiest rivers into powerless sleep,
Sink, and forget their nature."

The anglers of Sheffield have every reason to expect a very successful season, the Trent and other waters round about us having been free from such disastrous floods as swept them last year. At the present time the Trent is exceptionally low, more so than has been known for some years. The account from the Fossdyke and Witham are also very good, and where, I hope, the Sheffield blades will meet that amount of sport that will recompense them for their patient waiting.

The caterer for our opening match is Mr. Robert Spill, who gives £50 in money, besides minor prizes, to be fished for on Monday, June 20th, at Dogdyke, near Boston. To what an amount of time and expense will the enthusiastic angler go to. A journey of 150 miles to exhibit his skill and patience for a few hours, but let us hope success will reward them for their pains.

The Sheffield Angling Association have issued their programme for their excursions during the season, and expect a very successful season, the number of clubs belonging to the association being greater than ever.

The question of Mr. Wortley's Amended Act has caused some little talk in the town, but I think there is very little chance of its becoming law.

RED SPINNER.

[Yes, we should like an account of the match.—ED.]

SALMON TROUT AT GREAT YARMOUTH.—A good many of these silvery beauties have been caught during the past month, but at present the catch has rather fallen off. Mrs. French had a nice lot in her shop window one morning last week, and she informed me one of the boats had over 6 st., two of these fish weighing nearly 7 lb. each. I hope the catch may come on again, as it is rather a dull time for our fishermen.—ESOX LUCIUS.

CONVICTION FOR POACHING IN THE KENNET.—William Basden, Alfred Basden, Frank Bond and John Mercer have been convicted of netting fish from the Kennet on June 3, and each fined 40s. and costs, or one month's hard labour in default. The capture of this noted gang of fish poachers is due to the efforts of the Reading Angling Association.

CORRESPONDENCE.

[We do not hold ourselves responsible for opinions expressed by our Correspondents.]

THE PROPOSED ALTERATION OF THE MUNDELLA ACT.

SIR,—The prompt energy displayed by all classes of anglers throughout the country, and the practical way in which they set to work to petition their representatives in the House of Commons, has ensured, beyond the shadow of doubt, the complete discomfiture of Mr. Stuart Wortley's attempt to give back rod-fishing all the year round. Had the attempt succeeded, the best interests of anglers would have been thrown to the rear for many a long year; its failure has brought those interests to the front, and it is now the imperative duty of all thinking men amongst us, to endeavour to make the most of this opportunity.

The defeat of Mr. Stuart Wortley's Bill has cleared the road of one great danger to angling interests; unfortunately, a greater one looms in the immediate future, I allude to the Salmon and Freshwater Fishery Laws Consolidation Act, 1881. However much we anglers may differ as to my proposed amendments, we shall have no differences of opinion in respect to the necessity of taking active steps to prevent the passing into law of such portions of this act, as the following:—

"SALMON AND FRESHWATER FISHERIES.

"(5) The justices of a county at any court of quarter sessions assembled, due notice having been previously given according to the practice of the said sessions, may, by writing under the hand of their chairman, apply to the Secretary of State to form into a fishery district all or any of the rivers lying wholly or partly within such county, &c.

"(10) The justices of any county lying wholly or partly within a fishery district shall, in every year after the passing of this Act, appoint such number of members of the Board of Conservators as is hereinafter provided, &c.

"BYE-LAWS.

"(20) (d) To alter the commencement and termination of the close time for freshwater fish, so that such close time shall not be less than ninety-two days.

"(e) To alter the commencement and termination of the weekly close time, so that such close time shall not exceed forty-eight hours, nor be less than forty-two hours, and that Sunday shall always form part of such weekly close time."

Are we prepared to stand by and see our angling liberties handed over to county justices? If so, good-bye to all Sunday outings for anglers.

I had the pleasure to speak to a meeting of representative anglers, on Monday evening, upon this subject, and they answered this question, as practical men must, by immediately taking in hand the subject of the true amendment of our one little Act of Parliament, which we are not prepared to lose, even to bring about the much needed consolidation of the Salmon Acts.

During the past week, I have had conversation with, or letters from, a number of M.P.'s, and I did not fail to observe that most of them alluded to the fact that there is a large number of gentlemen on either side of the House who would be sure to oppose the taking away of protection once granted, but who would be equally sure to favourably consider any true amendment of the Act. In the course of a conversation with Mr. Mundella, he said, "Ask the anglers to state definitely what amendments are requisite. My Act was only intended to be the thin end."

I fear, sir, that I am laying myself open to the charge of presumption by sending to the GAZETTE in such a rough form my ideas of the amendments which are necessary to make the Act a terror to poachers, and something more than a caution for unfair practices of every description. My excuse is, that now is the time to answer Mr. Mundella, and that possibly what I may write will be of some service to those who, more competent than myself, will have a say before this question is settled.

(1) I would empower any fish protection society to appoint by writing, under the hand of their chairman, a sufficient number of water-bailiffs, who should be authorised to search, seize, summon, &c., &c. Anglers could then, when and where necessary, form a society and appoint bailiffs.

(2) Netting must be abolished in all public waters. In private waters it must be illegal to net without the written permission of the owner, such permission to have been signed and dated within three days, inclusive of the day of netting. The possession of nets on or near any water should subject the nets to seizure, and the owners to penalties.

(3) Any one having in his possession a wire, snare, spear, gaff, or other like instrument, at any time or place under such circumstances as shall satisfy the court before whom he is tried that he intended at the time to catch or kill fish by means thereof, shall be liable, &c.

(4) The period between the first day of February and the thirty-first day of July, both inclusive, should be the close season for pike.

(5) The period between the first day of February and the thirtieth day of June, both inclusive, should be the close season for perch.

(6) The period between the first day of April and the thirtieth day of June, both inclusive, should be the close season for all freshwater fish other than pike and perch.

I leave these crude suggestions without a remark in support of them, preferring that they should be first beaten into shape by the criticisms of your readers.

It must have appeared to all who read our Norfolk friend's letters, that they have lost their temper. They profess to be very much put out with me on account of my "lamentable ignorance." "No man, at least no contemplative angler, can live long without discovering that he is lamentably ignorant;" but is it my ignorance that has put them out, or my knowledge of that disagreeable fact?

They don't like to be found out at such practices. They are ashamed, and have lost their tempers, therefore I leave them for that which is more agreeable—their rivers and broads.

Many who, like myself, have had opportunities of visiting the rivers and broads of Norfolk and Suffolk cannot help having been struck with the almost inexhaustible sport which they are capable of affording if dealt with by rods only, and in a sportsmanlike way.

Now these immense fisheries are brought before us in a very peculiar manner. Many long-headed men will read these letters and be set thinking, many true hearts will throb with earnest hope that the day may not be far distant when greater facilities shall be given for the thousands of working-men anglers of this big city to wet a line there at least a few times each year.

What an increasing and ever increasing flow of half-crowns would result; we were enabled to pay a visit to these rivers for that sum.

"The Trent Otter" has somehow muddled up my letter with others, and has proceeded to censure me for opinions which I do not hold. I am surprised that one who generally writes so well and to the purpose, should suppose that his being a working man can—in the present day—make his suggestions less acceptable. I hope he will not misunderstand, or be annoyed at, what I am about to write, as I wish to see him at our conference, armed with his brother anglers' opinions. Should the loss of time and the expenses of the journey be too much for him, the society of which I am a member will gladly pay, as they think he should be present.

Make an effort to come, friend, and assist us; we hope to see representatives from all parts of the country, and we further hope that the result will be the true amendment of the Mundella Act.—I am, &c.,

P. GEEN.

Hill View, Addlestone, Surrey.

SIR,—Would you let the enclosed letter appear? It will show that "The Trent Otter" only represents one side of the feeling in Newark.

P. GEEN.

14, Market Place, Newark, June 9, 1881.

To Mr. P. Geen.

SIR,—Since writing my last letter to you a committee meeting of our society has been held. On that occasion I introduced the subject of Mr. Wortley's Bill now before Parliament, and in addition to my own remarks placed before the meeting the letter written by yourself to the editor of the FISHING GAZETTE. The result of our deliberations, I am sure will be pleasing to you. "It was unanimously passed that a special general meeting be held on Monday next, and that the secretary and treasurer draw up a resolution to be submitted, condemnatory of the proposed repeal of the angling clause of the Freshwater Fishery Act, and asking our borough members to oppose the Bill introduced by Mr. Wortley when brought on for hearing in the House. Upon the return of our senior member, who is from home for a few days, I shall place before him your letter, and ask him to back your application to Mr. Mundella when he meets him in his place in the House of Commons after the Whitsuntide holidays. I hope you will give all publicity to your meetings in London, as I think it will create a strong feeling in the country, especially amongst anglers residing in the neighbourhood of the lower reaches of the Trent, who know of the unsportsmanlike proceedings which were carried on before the present Act came into force.—I am, &c.,

H. WEAVER.

Hon. Treasurer Newark and Muskharn Fishery Association.

SIR,—The letter of "we in Norfolk," who signs himself "A Norfolk Angler," does not answer the assertion of Mr. Geen about fish being exposed at the exhibition full of roe that ought not to have been taken away from the water at all in his opinion, but is, instead, full of abuse of a most silly kind. I don't know if Mr. Geen ever went "fishing on Sundays," but I do not think he deems those who do un-Christian, though for that matter a man has to suit himself, whether he be a Christian, and not any one's opinion.

"We in Norfolk" seems alarmed at the threatened incursion of the London cracks to his idolised waters; but if the kindly and temperately-worded letter of Mr. Palmer is conned, it will be seen that there is room for them as well as those who have hitherto used the waters—room without stint of kindly feeling between the men of Norfolk and London, and honest rivalry without acrimonious bitterness.—I am, &c.,

E. U.

83, Rotherfield Street, N., June 12.

SIR,—The letter in your last issue signed "A Norfolk Angler" scarcely merits reply were it not that its gratuitously insulting tone, if allowed to pass unnoticed, might encourage other communications of a similar character; and I need scarcely say that anonymous temper is quite out of place in the discussion of an angling question.

"A. N. A." commences by complaining of Mr. Geen's—or, as "A. N. A." puts it, "some one signing himself 'P. Geen'"—remark anent the disgraceful exhibition of gravid fish at Norwich. Surely Norwich anglers are sportsmen, and if so it is equally sure that the capture of fish so laden with developed ova cannot but meet with reprobation. As to his retort about the un-Christian-like character of Sunday fishing, it seems to me such a remark is beneath the contempt of every broad-minded man having the true welfare of the artizan, clerk, &c., in "populous city pent" during six days—wherein every hour "sweats her sixty minutes to the death"—at heart. How often is the beneficence of an intimate contact with Nature to be preached? A healthy mind occupies only a healthy body; and is it not better in such cases as I mention for the tired brain and body to seek recuperation and true refreshment in a temple not made with hands, amid the unending remembrances of the Great Omnipotent Cause, than to coop oneself anew in stifling edifices, listening, oftentimes, to questionable sincerity and sophistical pharisaism?

Of course all this is somewhat aside from the question; but that is the fault of "A. N. A." not mine. He goes on to "daresay" that London clubs would find different fishing in Norfolk than they have been accustomed to, and further on he tells Mr. Geen, and "a some one who signs himself 'J. H. Keene,'" that they know nothing of Norfolk fishing. Possibly not; but if fishing be a fine art, judging from some samples of tackle shown at Norwich, it is not known as such in Norfolk. If "A. N. A." came up to our streams—where there is perhaps one fish for every hundred in Norfolk—I think the "some ones" he so impertinently refers to could teach him a wrinkle or two not dreamt of in the philosophy of those who justify snaring pike, and boast of manuring land with the fish of their waters. Because a man has a thousand pounds income sterling per day, is that any reason why it should be squandered? Because the Norfolk broads and rivers yield millions of fish, is that a reason why they should be wasted? And they are wasted if taken as the specimens at the Norwich Exhibition were.

"Then," says A. N. A., with remarkable attention to poor murdered Lindley Murray, "If I was Mr. Geen, and wanted something to do, I should advise him to turn his attention to the codfish," *et seq.* What in the world has this to do with the Mundella Act? *Ne sutor ultra crepidam.* Let Mr. Geen, as I know he will, stick to the subject of which he knows so much. He does not desire to interfere with the Norfolk men. If they choose to snare pike and net fish, so far as the immediate subject in hand is concerned, it is nothing either to him or to me. Their resources will bear it probably, and if pot-hunting is preferable in such case to them, so be it. But the Sheffield and London anglers are not so favoured with fish, and a period of rest seems to me,

therefore, absolutely necessary where streams are, from whatsoever cause, not so productive as they should be.

The whole question lies in a nutshell. Certain streams are over-fished. Can any one deny this of the Thames, Lea, &c.? By over-fished I of course mean that the sport of to-day, owing to the increased number of rods, the disturbing influences of navigation and floods, is less per man than formerly. We don't want this deterioration to increase, no matter how large becomes the angling community—hence a period of three months' rest, which has been as nearly as possible fixed for that time when the fish are spawning. Why, it may be asked, is this period fixed for the time when fish are spawning or thereabouts? The answer simply is, because at such time the fish are less game and unfit for food, and facilities are allowed for the deposit and impregnation of eggs.

Again I, therefore, repeat what I have so often said—let the Mundella Act remain, in its essence, allowing such alterations only as are necessary to the complete protection of the spawning time of fish.—I am, &c.,

J. HARRINGTON KEENE.

SIR,—The idiosyncrasies of the human family of anglers are so new and extraordinary, especially amongst that peculiar element called "the people," for whom all sorts of fads and fancies have been promulgated both by law and the prophets for their peculiar delectation; but the Lord knows they are a troublesome people and their ways are very perverse and untowardlike.

Now, a short time ago meetings were held all over the country, and opinions taken as the best close time for our freshwater fisheries, and although the time agreed upon did not go to the extent many would have liked, yet the majority seemed well pleased with March 15 to June 15. If my valuable opinion had been taken I should have said from February 1st to July 1st, for you know Mr. Editor—that is if you are an angler—that pike should not be taken after the 1st February, because their matrimonial engagements at that time employ so much of their attention, and I call a "fellow" a coward who takes advantage of them when not thoroughly wide awake; indeed, I have always expected, and very often caught a second pike from the same spot after landing my first, when fishing in the month of January; and I believe, as a rule, they pair in that month.

I have also noticed the female fish to be the first fool, and the jack comes tumbling after, as much as to say that death shall not part us; like silly Adam, after Eve took the bait dangled to her by the "serpent."

I should think all pike fishermen have noticed this freak of nature. It must then, be a pity, and very cruel, to rob a poor fish of its mate; and, by the bye, may not this be the cause of some anglers having such poor sport, for I have heard them say they could see pike lying, and have dropped or drawn a bait right in front of their nose without any effect. Serve the fishermen right. No doubt these were disconsolate lovers who had lost their mates by previous unsportsmanlike fishermen who take advantage of them (in February and March) when not in condition, and consequently now won't look at their bait.

I am also quite certain that roach and most other white fish are not fit for food before July 1st, some of them not being thoroughly scoured by that time, and if the Bill is altered at all give the fish six months' close time.

Some people say, not many, why should I be deprived of a day's angling? but who are these people? not legitimate sportsmen. I know lots of them, and their day's angling is often an excuse for going out and getting swikey. Why fishing might go to the dogs, and fish to the cats if they (the fishermen) were obliged to go without beer and baccy. I don't say a glass or two of beer when you are thirsty or a pipe of tobacco, goes against the grain of any angler as a rule, for I know to the contrary; and this I know, that many fellows go fishing, and return with empty baskets, and a "barrel" full of beer and "woskey." The great objection to doing away with the close season is, that by so doing you open the market for the sale of fish; and who can tell, when on a fishmonger's slab, or in a poacher's basket, whether they were caught by the line or net. While fresh water fish are saleable you will never keep out the nets or do away with poaching, and all legitimate sportsman would like to see the close time extended at both ends.—I am, &c.,

LEICESTER.

THE MUNDELLA ACT AND THE SHEFFIELD CLUBS.

SIR,—The didactic letter of Mr. P. Geen has drawn upon him a very fair quantity of well-deserved abuse. The Mundella Act of 1878 has never been popular in this part of the country. The reasons are numerous. One is that it debars our anglers from enjoying their favourite pastime during the holidays of Easter and Whitsuntide; another is that it includes eels and flounders; but the greatest of all is that it is clearly an Act for the rich but not for the poor.

I enclose you an extract from the *Sheffield Daily Telegraph* of Friday last, whereby you will see that Mr. Wortley's amendment is receiving almost universal support in Sheffield.—I am, &c.,

J. E. H.

Kiveton Park, June 14, 1881.

[We print the report elsewhere.]

SIR,—In your valuable paper of the 11th inst, I read a letter from a gentleman in the vicinity of Norwich, who signs himself "A Norfolk Angler," it professes to be a sort of reply to the able letter of our friend, Mr. P. Geen, and at the same time an attempt to give the "Cockney Anglers" of Christian England a moral lesson. I do not wish to waste time in discussing with the Christian Angler the worn-out Sunday question. Having had the pleasure of fishing many times in some of the broads and rivers of Norfolk, I must say the brag as to the enormous quantity of fish might well have been omitted. This Norfolk angler seems to think it no pity to take fish in the close season. I am sure no true sportsman, Cockney, Christian or otherwise, like to see this practice. It is true that some anglers never eat their fish, but at the same time love to see a nice clean bright fish brought to grass and not a poor miserable object bursting with spawn. Mr. Geen does not appear in the least to wish to teach the people of Norwich when to fish, it is true that he expressed surprise, like hundreds of others, at fish being stuck in a Piscatorial Exhibition in such a pitiable condition. It has been my good fortune to have fished in the same boat with Norwich anglers, who, I am proud to say, I have found jolly fellows and enthusiastic sportsmen, some of whom, I am certain, do not fish in close time. Allow me to tell the Londoner that the fishing in Norfolk is not so free as our Christian brother would have us to believe. For example, take Wroxham Broad, where numbers of Norwich anglers fish. If other waters were so prolific would they go there, where every boat of anglers has to pay half a crown a day, and no Sunday fishing? Do you call this free, friends?

What do you think? I merely draw attention to this, as I know many Cockney Sunday anglers will be down that way, and I should not like to see the anglers' friend, Chamberlain, disturbed or annoyed on the Sabbath. They

can fish as much as they like in the river, and doubtless will get hold of many a "rum'un" while Mr. Geen's antagonist is in church. Let us hope he will put his threepenny bit in the plate with the same good will as they will pay their subscription to the Bure Protection Society.

I have certainly had some splendid takes of bream in Norfolk, but I must say that, taking the year round, the angler will generally do better if he goes in the direction of Littleport, Cambridgeshire; the waters there are looked after by a society of genuine anglers; they have proper fence months, and, in consequence, there is an abundance of all kinds of fish, and they never complain of excessive stock.

Our Christian friend seems to believe that Norfolk could supply the world, if necessary, with fish, and that they can afford to kill their fish all the year round. He reminds me of a brewer I once knew, who, as an excuse for getting drunk every day, said, "It costs me nothing—I never miss it." You wait, my friends, in Norfolk will be blessed with fence months yet; it is not long since they considered netting, and certainly "liggering" a fair practice. There are already, though you may doubt it, some sensible anglers in Norwich. We must excuse "A Norfolk Angler's" ignorance of London club affairs. We in London fully appreciate the great services Mr. Geen has so many times rendered the Cockney anglers, and as long as there is an angling club in London, I am sure his name, and the benefits conferred by fence months, will never be forgotten.—I am, &c.,
H. A. HAKETONIAN.

ANGLERS' CONFERENCE AT THE SOCIETY OF ARTS, JOHN STREET, ADELPHI, LONDON, W.C.

EAST AND WEST CENTRAL ASSOCIATIONS OF LONDON AND PROVINCIAL ANGLING SOCIETIES.

DEAR SIR,—We are instructed to inform you that it was decided at a joint meeting of the above associations to invite representatives from the whole of the angling and preservation societies of England for the purpose of conferring together and deciding upon the necessary amendments to the Mundella Freshwater Fisheries Act, 1878.

The Council of the Society of Arts have kindly lent us the use of their large room for Monday, June 27, for the purpose.

The following have been suggested as necessary amendments, and will come before the meeting for consideration:—

1st.—To empower any fish protection society to appoint by writing, under the hand of their chairman, a sufficient number of water bailiffs, who would be authorised to search, seize, summon, &c., &c.

2nd.—Netting must be abolished in all public waters. In private waters it must be illegal to net without the written permission of the owner, such permission to have been signed and dated within three days, inclusive of the day of netting. The possession of nets on or near any water should subject the nets to seizure, and the owners to penalties.

3rd.—Any one having in his possession a wire, spear, gaff, or other like instrument, at any time or place, under such circumstances as shall satisfy the court before whom he is tried that he intended at the time to catch or kill fish by means thereof, shall be liable, &c.

4th.—The period between the 1st day of February and the 31st day of July, both inclusive, shall be the close season for pike.

5th.—The period between the 1st day of February and the 30th day of June, both inclusive, should be the close season for perch.

6th.—The period between the 1st day of April and the 30th day of June, both inclusive, should be the close season for all freshwater fish, other than pike and perch.

We would wish it to be understood that the associations have not as yet had the opportunity of expressing any opinion upon these suggested amendments, but they will be prepared to do so through their representatives at the conference.

We have also to inform you that the representatives will be asked to express their opinion in reference to some of the clauses of a bill introduced into the House of Commons by Sir Joseph Bailey, Mr. Dillwyn, and others, which would, if passed, curtail the liberties at present enjoyed by the angling public. The chair will be taken at 8.30 p.m.—We are, dear sir, yours faithfully,

R. GHURNEY, 10, Baches Street, Charles Square, Hoxton, N.
T. HOOLE, 7, King's Road, Mortlake, W.C.

June 16, 1881.

MR. GEEN AND THE PROPOSED ALTERATION IN THE MUNDELLA ACT.

SIR,—Will you kindly allow space in your next issue to answer some of your numerous correspondents on the above subject?

All true anglers throughout England will agree that this is a most important question, and that the best people to deal with it are the old and experienced men who have mixed most with anglers, and who have made angling a life-long study. Amongst these we class Mr. P. Geen; he is one of the oldest, best, and most painstaking anglers that England can boast. When I inform your correspondents that he is the Honorary President of the West Central Association of London and Provincial Angling Societies, member of the Thames Preservation Society, treasurer of the Anglers' Benevolent Society, president of the Hammersmith United Angling Society, and honorary member of a dozen different angling societies, it should convince them that we are looking to the right man to defend our cause.

E. Bicknell shows his want of piscatorial knowledge when he asserts that fish are in fine condition when full of spawn. They are repulsive to the sportsman's eye, but "Jews' eyes" to the pot hunters, because they weigh heavier.

The "Trent Otter" evidently desires to make Mr. Geen's name obnoxious to the anglers, but let me tell him that Mr. G. is supported in his opinion by over 20,000 anglers, men who know that he has worked for years to improve the sport that we all love so well, and who has spent, and is still spending his money towards improving the prospects of his poorer brethren of the rod. I think I am correct when I state that he has never spent one penny upon trout culture. He works for the working man, and would sooner go ten miles to serve a poor bank angler than half-a-mile for the man who can afford a punt, although he is a friend to all. I, who have fished with him for many years, and know his almost every thought, know how much the "Trent Otter's" remarks will affect him; they will be like water upon a duck's back. But I cannot pass them by without telling the "Trent Otter" that although he may have studied the question of fish and fishing he has a lot to learn, and, amongst other things, that it is as well to know at whom you are throwing mud, as one may regret hitting a friend instead of a foe. The least the "Trent Otter" can do is to send an apology to the best friend the poor angler ever had, for the gross insinuation that Mr. Geen should represent the majority of anglers is dishonest.

Any one reading Mr. Geen's letter could not so misconstrue it to mean anything of the sort.

In reference to the persons signing themselves "A Norfolk Angler" and "Censure" I would merely remark that their letters are too full of misstatement and spleen to be worth any comment.

I would like to take this opportunity of thanking Mr. Alfred Palmer for his very gentlemanlike letter, although we Londoners do not consider that fish when full of spawn are at all presentable or nice to the eye; still we can and do appreciate a gentleman when he is prepared to discuss these important questions in a friendly spirit.

In conclusion I wish to state that we shall shortly hold a mass meeting to fully discuss the question of "fence months," when we hope the matter will be well ventilated, and that by and by we may get the proper fence time as near right as possible. We are all satisfied that what we have is not quite correct, but it is better than none at all.—I am, &c.,

T. HOOLE, hon sec. W.C.A.L. and P.A.S.

THE FISH AT THE NORWICH EXHIBITION.

SIR,—Your correspondent, Alfred Palmer, in your issue of the 11th inst., accuses Mr. Geen of "lamentable ignorance" of the size of the fish shown by his society at the National Fisheries Exhibition. In company with several anglers, I was present when Mr. Geen was examining the trough, and he is quite correct in stating that the roach shown were scarcely 4 inches in length. In fact, one was taken away as a sample that size. I saw no bream weighing 2 lb. in weight. If they were there, they were at the bottom of the trough with the four-pounders. The general opinion of London anglers who saw the fish was, that we were spared the exhibition of such a seething mass of foul fish in our club-rooms by the beneficial operation of the Mundella Act. I trust that your correspondent will feel convinced that there has been no misstatement on the part of Mr. Geen, and that he will have to make some stronger assertion to prove the "integrity of, from a sportsman's point of view, the honour of East Anglian Pisciculturists."—I am, &c.,
FRED. C. CLENCH.

Mortlake, June 13, 1881.

FISHING NEAR BOURNEMOUTH.

SIR,—Can any reader of your excellent paper inform me whether there is any fishing for coarse fish to be had at Bournemouth or near to? Also as to where I can obtain Warner's registered seat fishing basket in London.—I am, &c.

40, Victoria Road, Holloway, N, June 13.

E. CLEAVER.

[There is splendid roach fishing in the Avon at Christchurch, near Bournemouth. Write to Mr. Warner, and he will tell you where his capital basket can be had in London.—ED.]

STINKING GLADWIN.

SIR,—I have noticed in the correspondence columns of the GAZETTE several letters from anglers who, like myself, have purchased samples of what is advertised as "Stinking Gladwin," and, I presume, like myself, also have been deceived thereby.

The name certainly does not sound particularly odoriferous; but the composition is anything but insulting to the olfactory nerves, and appears to me to be nothing but bread paste with a few drops of oil of rhodium kneaded into it.

I purchased mine the day before an intended outing for roach-fishing, but when I looked at it before starting out, found it covered with a thick green mould, far more offending than enticing to my beloved roach.

What oil of rhodium was, and what it is, might be likened to butter and butterine, the true being a product of the genus *rhodorriza*, natives of the Canary Islands, while the fictitious is a mere mixture of aromatic oils, compounded to suit the pocket of the purchaser.

Be it what it may, I have no faith in it, nor any scented bait whatever. Only let the roach fisherman be provided with a clean sweet piece of paste, white as snow, and, granted he knows how, he will average a greater weight of fish than with any other bait.—I am, &c.,
R.E.X.

London, June 11, 1881.

[Smokers—and where is there an angler who does not?—should keep all smell of tobacco from their baits.—ED.]

THE LUMINOUS FLOAT.

SIR,—I left a specimen of my Luminous Float at your office this morning. It is very useful for the hour that is allowed after sunset. The line passes under the rubber collar, which obviates the necessity of using the ordinary caps. Messrs. Allcock and Co. are the sole makers. The most effective way is to light about an inch of magnesium wire just before the float is wanted. Nearly every member of our Society has one, and speak favourably of it. The float can be had of Miss Williams and Messrs. Gee, and other houses.

We have a meeting of the Westbourne Park Piscatorial Society on Tuesday. A presentation is to be made to the chairman. I will send you a full report same night.—I am, &c.,
GEO. ARCHER.

June 6th.

THE FISHERIES PRESERVATION ASSOCIATION.

SIR,—I come to you as a beggar, very hard up, yet very deserving indeed—on behalf of a very old and infirm individual well worthy of the support of all true men and anglers—I mean the Fisheries Preservation Association. This poor creature turned out its pockets on the 1st of May, and found its balance at the bankers, Sir Samuel Scott, Bart. and Co., 1, Cavendish Square, W., to be—What do you think? £—9s. 2d.!!!

Is this as it should be? I trow not. The anglers must support this association. There are many questions on which this Association is ready and willing to move, but move it cannot, without more support. Some time ago I asked the angling societies to help us, but with few and small results. Now I come to the FISHING GAZETTE, the great "organ" of angling societies and anglers, and I do trust that organ will do its utmost to give its support and encouragement to the Fisheries Preservation Association. I believe, in fact I know, that every pound that it receives (very few they are; last year under £95), is well accounted for and spent to best advantage.

If this society were well supported by the great body of anglers, I feel convinced that they themselves would receive a large return for any outlay. Recently we have heard much about "Annexation of the Thames,"—this society was very anxious to exert itself on the subject, but it was paralysed by want of funds.

Now there is a cry for permission to spear salmon and take samlets, which I am sure this Association is perfectly right in opposing to the death.

On the subject of pollution of rivers, again, it is also quite ready, willing, and very anxious to see a change in the laws; but to get a change of law, even if the Houses of Parliament be idle, which they are not, there is needed the sinews of war, and with nine shillings and twopence to its credit, this Association is perfectly powerless to effect any permanent good in any direction. Now what can the Angling Clubs and Societies do for us? Will they set aside for us what they would otherwise spend in one of their "peg-down" matches for gross weight of fish? If so, I am sure that they will do both themselves and the Association a benefit. If every angler in the United Kingdom would but give, through the Central Associations or otherwise, the small sum of 1d. a year, or still better, 2½d., the cost of a foreign postal stamp, we should be able, I am sure, to give a good account of every farthing received. Knowing that your space is much occupied just now, I will merely add that I heartily commend the cause of the Fisheries Preservation Association to the anglers of the United Kingdom, and all readers of the FISHING GAZETTE, in the hope that its past services (no small ones) may be remembered, and that its worthy president, treasurer and officers may receive the support that they so richly deserve. The treasurer, Dr. Peter Hood, 23, Lower Seymour Street, Portman Square, W., will gladly receive and acknowledge donations, subscriptions, &c., as also will the bankers, Sir Samuel Scott and Co., 1, Cavendish Square, W.

Hoping for some result from this appeal, I am, &c., CHARLES C. CAPEL.
Cray Fishery, Foot's Cray, Kent.

June 14th, 1881.

FISHING NEAR LINCOLN.

SIR,—It is my intention to spend a short holiday in the early part of July in Lincolnshire. Being an angler, and fond of the sport, I should be exceedingly glad if you, or any of your numerous readers, through the medium of your columns, would give me some information on the following points:—

- (1) Where are the best free-water fishing spots to be found within a radius of 20 miles of the City of Lincoln?
- (2) What kind of fish most commonly prevail in the said radius?
- (3) What kinds of bait are generally found to be the most successful?—I am, &c.,

W. MOORE.

Bolton, 15th June, 1881.

[See article on Angling Prospects in the Provinces in this week's paper.—ED.]

A SPLENDID CARP.

SIR,—We have a handsome carp taken in the Thames at Maidenhead last season (13 lb.), which can be seen at our establishment for a few days. We also wish to inform you that we keep the luminous floats, as we see a correspondent wishes to know where they are to be had. We are pleased to inform you that Hine's spring plummet, with your improvement, is now ready.—We are yours, &c.,

F. T. WILLIAMS AND CO.

10, Great Queen Street, Lincoln's Inn Fields.

FISHING AT DAWLISH.

SIR,—Will some one be so kind as to inform me, through your columns, whether there is any fishing to be got at Dawlish, near Teignmouth, South Devon, and, if so, of what kind, &c. By so doing he will greatly oblige

BLUE DUN.

June 15th, 1881.

[There is good sea-fishing, and there are some good trout streams in the neighbourhood—mostly preserved, we think—but Blue Dun will easily get some fishing.—ED.]

FLIES FOR DACE.

SIR,—I shall feel obliged if you can inform me if it would be worth going twelve miles to roach fish at Stanstead, Essex? Also, can you tell me the best fly for dace fishing?—I am, &c.,

H. S.

[Any small trout-fly will take dace. We have found a blue dun with a bit of silver tinsel added to the body a good killer. Perhaps Dr. Brunton will let us have his opinion. We don't know Stanstead.—ED.]

A CORRECTION.

SIR,—In your last issue I am made to say, I should like the fence months to commence 1st of March and end 3rd of May; it should be 31st of May.—I am, &c.,

THAMES.

Mr. Mundella having been asked to assist Mr. Wortley in passing the Freshwater Fisheries Amendment Bill, writes in reply:—"My only object in passing the Act was to increase the supply of food, and multiply the several species of freshwater fish which were fast becoming extinct, and to afford better sport to the anglers of United Kingdom. I am receiving testimony on all hands that the measure has been remarkably successful in all these respects. I know that the Act is capable of amendment. But it appears to me that the amendment required is rather in the direction of further restriction than of relaxation. The taking of fish in the close season, when they are full of spawn and easily secured, seems to me both unsportsmanlike and unnatural. Under these circumstances you can hardly expect me, in opposition to the almost universal opinion of fishermen and to my convictions, to support Mr. Wortley's measure."

TIRED HANDS AND ARMS.—Edson's Electric Armlets and Wrist Bands Invaluable for anglers and gun sportsmen and highly recommended for all persons having tiresome writing, sewing, or music practice. They give wonderful energy and strength, enabling the wearer to accomplish tedious work with steadiness and comfort. Price 2s. 6d. per pair, silk web and fine steel clasps. Sent to any address on receipt of P.O.O., payable to J. Edson, the Electric Fabric Co. Patentees, No. 1, Charlotte Street, Bedford Square, London, W.C.—[ADVT.]

GREGORY'S SPINNING BAITS.—"The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived. Address, James Gregory, Vyse-street, Birmingham.—[ADVT.]

CLUB REPORTS.

BIRMINGHAM AND MIDLAND PISCATORIAL SOCIETY.

The third annual meeting of the members of this society was held on Monday evening, at the Grand Hotel, Colmore Row, Birmingham, Mr. Oliver Pemberton, J.P., president, in the chair.—The report, which was read by Mr. J. Gregory, the honorary secretary, congratulated the society on the steady progress it had made, and on its present satisfactory financial position. After meeting all expenses, there remained a balance in hand of about £40. Among the recommendations suggested by the committee were the erection of two huts for the use of members—one on the banks of the Trent, and the other on the Tame; the purchase of another fishing-punt, the offer of prizes for the heaviest fish caught by members during the season, and the fixing in perpetuity of the annual dinner for the 9th of August, the anniversary of the birth of Isaac Walton. The report spoke of the past year as having been a very disappointing one for anglers, by reason of the frequent floods in the autumn and the severe frosts in the winter; yet, notwithstanding these drawbacks, members had made good average baskets.—The Secretary reported that there were a few vacancies, caused by the resignation or death of members, application for which should be made immediately.—The president being compelled to leave after the approval of the report, the chair was taken by Mr. Adams Parker, the vice-president, and the remainder of the business was got through.—Several minor alterations were made in the rules, the only one of importance being that requiring members to give one month's notice prior to the annual meeting of their intention to cease membership.—The suggestions contained in the report were discussed, and approved, auditors were appointed, and hon. treasurer, (Mr. John Allday) and the other honorary officers were thanked for their services, and the proceedings terminated, after a very protracted meeting.—The reports received from the society's river keeper (Charles Draper) as to the past spawning season during the close months, and the quantity of fish in the society's water, were highly satisfactory.

EAST ANGLIAN PISCATORIAL SOCIETY.

The first match of the season in connection with the above society took place at Acle on Thursday, May 26. The day was gloriously fine. The members assembled at the club-house, the Great Eastern, St. Stephen's Gate, at 6.30 a.m. sharp, and after a splendid drive of about twelve miles arrived at their destination at nine o'clock. Every arrangement having previously been made by the indefatigable and obliging secretary, Mr. Alfred Palmer, with regard to staking out places, &c., the members soon commenced operations, and were fairly into work by ten o'clock. Fishing lasted till five o'clock, when the signal was given to "make up." The sport on the whole was not so good as might have been expected, but the fineness of the weather and the charming scenery made up for the deficiency. The weighing-in which took place in the pretty orchard adjoining the house caused much interest, not only to the members, but also to the many visitors who had assembled to witness the contest. List of prize winners:—First prize: Silver teapot, presented by the President, John Boyce, Esq., won by Mr. Robert Palmer. Second: Silver jug, presented by C. Louis Buxton, Esq., won by Mr. Geo. Cubitt. Third: McKenzie's illustrated work on "Freshwater Fish," presented by Mr. Tom Saul, won by Mr. H. Roberts. Fourth: Case of Imperial ale, presented by C. Barnes, Esq., vice-president, won by Mr. Geo. Webb, of the Norwich Photographic Company. Fifth: Handsome smoking lounge, presented by Mr. Geo. Cubitt, won by Mr. Geo. Hart, of the Thorpe Old Gardens. Sixth: Pair of fishing-boots, presented by Mr. H. Roberts, won by Mr. W. Hinsbey. Seventh: Enlarged photograph, presented by the Norwich Photographic Company, won by that old veteran angler, Mr. Walter Vont. Eighth: Pair of silver dolphins, presented by "Professor" Fowler, won by Mr. Tom Saul. Ninth: Fishing rod, presented by an old friend, Mr. G. Harvey, won by Mr. W. Hicks. Tenth: Handsome case of scent, presented by Spratt's Patent, won by Mr. James Cupper. Eleventh: Nottingham rod, presented by Mr. Walter Capon, fishing tackle manufacturer, won by Mr. Ben Hook. Twelfth: A creel, presented by Mr. Roe, won by Mr. Fred. Lacey. Thirteenth: Fishing rod, presented by Mr. Howard, won by Mr. A. Woodcock. Fourteenth: One dozen bottles of mushroom ketchup, presented by Messrs. Woodcock, won by Professor Fowler. Fifteenth: Handsome pipe and case, presented by W. Miles, Esq., of the Bowdley Waltonians, won by Mr. S. Horell. Sixteenth: Two dozen bottles of Caley's Inadore, presented by Mr. Butler, won by Mr. Robert Bradley. Seventeenth: Bait kettle, presented by Mr. Wead, won by Leo Lamb. Eighteenth: Landing net, presented by Mr. McKenzie, won by Mr. Leo Wright. Special prizes.—For the heaviest bream: Prize given by Edward Birkbeck, Esq. M.P., won by Mr. Geo. Cubitt. For the three heaviest roach: Prize given by a gentleman in London, won by Mr. Tom Saul. The weighing-in finished, the members were then photographed by Mr. Geo. Webb, of the Norwich Photographic Company. This over they adjourned to the house, where Host Rose had provided for the members a bountiful and substantial dinner. A number of toasts were given after dinner, including the "Health of the President, John Boyce, Esq.," the "Vice-President, Charles Barnes, Esq.," the "Donors of Prizes," to which was coupled the names of Edward Birkbeck, Esq. M.P., and C. Louis Buxton, Esq., &c.; "The Committee," "The Secretary," "The Host and Hostess," whose catering elicited great commendation; and, lastly, "Success to the East Anglian Piscatorial Society," which brought this pleasant part of the business to an end. The start was then announced, and a ringing cheer was sent up by the visitors and members as the bus left the village. A pleasant drive home, interspersed by songs and a short halt at the Blofield Globe, finished this most successful of outings. The entire catch of the competitors (twenty-five) weighed 7 st. 5 lb., and the highest prize was won by 12 lb. 5 oz. of fish. The fish, with about five or six exceptions, were all bream. The distribution of prizes took place on Monday evening following the match, when Mr. Vice-president Barnes took the chair in the unavoidable absence of the president, the vice being ably filled by Mr. Robert Bradley, in the absence of M. C. S. Fowler. In the course of subsequent toasting the chairman gave "The Donors of Prizes," and took the opportunity of remarking that the club, although only one year old, was now the most flourishing club in the whole city, as was evidenced by the numerous valuable prizes he had just had the honour of distributing, and which were all contributed by gentlemen who had the interest of the club at heart. Mr. Barnes also alluded to the labours of the hon. sec., Mr. Alfred Palmer, to whom, in great measure, was due the success of this and previous matches. Some capital singing added to the pleasure of the evening, which was brought to an appropriate close with the toast of "The Ladies," for whom Mr. Arthur Woodcock returned thanks in his usual chivalrous manner.

HULL PISCATORIAL SOCIETY.

On Wednesday evening, June 8th, the members of this society held their usual fortnightly meeting. There was a fair attendance, and in the absence of the president, Mr. F. J. Hamlyn occupied the chair. The minutes of the previous meeting having been read by the secretary, Mr. Hague, they were put to the meeting and confirmed. Mr. Willett proposed, "That the society do not fish more than six hours at any match." Mr. Cheeseman moved as an amendment, "That the time to be occupied in fishing be arranged on the ground by the members at that time present." The proposal and amendment were then put to the meeting, when the amendment was declared carried. A long and important discussion took place in respect to the close time, and how it affected angling in the North; the members evinced considerable interest in this important matter, and it was resolved that the feelings of the whole of the anglers in this part should, if possible, be obtained, so that united action might be made in view of bringing about an alteration. The chairman having called attention to the FISHING GAZETTE as a paper in which much information on this matter could be obtained, trusted the members present would endeavour to support a paper which was strictly devoted to their interests. After some discussion on matters connected with the forthcoming match, the proceedings terminated.

LARKHALL ANGLING SOCIETY.

SIR,—In the report of the above society, as it appeared in your issue of last Saturday, the value of the prizes already arranged for competition is put (by a printer's error) at nineteen guineas, whereas it should be ninety guineas. Trusting you will kindly make this correction in your next issue, I am, &c.
June 13, 1881.

F. H. CROUTEL.

NEWARK AND MUSKHAM FISHERY ASSOCIATION.

We have noticed of late there has been great activity amongst piscatorials, at first we thought that preparations were being made for the fishing season, which commenced on Thursday, but we find that a Bill has been introduced into the House of Commons by Mr. Stuart Wortley and Mr. Dodd to repeal the angling clause of the Freshwater Fisheries Act. This Act was passed by special request of anglers for the purpose of establishing a close season, because they felt that the protection of the fish during the time of spawning was an absolute necessity. And since no person is allowed to have fish in his possession during this time, the poacher's occupation is gone. It is therefore only natural that great indignation should be expressed throughout the country at any attempt to do away with the close season. The Freshwater Fisheries Act, as Mr. Mundella says in a letter, was passed as a tentative measure and might be amended in the way of further restrictions, not relaxation, with beneficial effect. Mr. Wortley's Bill stands condemned by angling associations generally, and, with the opposition it met with in the House, has not a ghost of a chance of becoming law. The members of the Newark and Muskham Fishery Association held a special meeting on Monday evening, to consider Mr. Wortley's Bill. Mr. Glover, the president, was in the chair, and after calling upon Mr. Neal, the hon. sec., to read the circular convening the meeting, made a few pointed remarks upon the beneficial effects of the Anglers' Act. Mr. Weaver, the hon. treasurer, proposed, and Mr. Neal seconded, the first resolution:—"That the members of this Association view with much concern the introduction of a Bill into the House of Commons by Mr. Wortley and Mr. Dodd to repeal the angling clause of the Freshwater Fisheries Act, and, believing in the necessity for a close time, condemn the principle of the Bill, and pledge themselves to use every legitimate means to prevent it becoming law." Both gentlemen made some well-timed remarks, and Mr. Neal read the following letter received from a Nottingham member as embodying the opinion of anglers generally:—"Nottingham. Dear Sir,—I exceedingly regret that I shall not be able to be present with you on Monday evening, to enter my protest against the proposed amendment of the Freshwater Fisheries Act. Anything more un-English and unsportsmanlike I have never met with. I shall, however, be obliged to be at the Foreign Office on Tuesday, which will prevent my being present, or I should certainly have liked to tell my brother anglers what I imagine to be the origin of such an abominable attempt.—Yours very truly, J. T. M.—Mr. Neal." Mr. Alcock proposed, Mr. Curtis seconded, the second resolution:—"That a copy of the resolution just passed be forwarded to the borough members in the name of the association, with a letter soliciting their influence against the passing of the Bill." Both resolutions were carried unanimously. The special business of the meeting being closed, the members carried on a desultory conversation on the prospects of the coming season. The look-out is very favourable at present, and we hope anglers will have better sport than has fallen to their lot the last year or two. Any gentleman wishing to join the Newark and Muskham Association will greatly oblige by applying to Mr. J. NEAL, hon. sec.

June 16.

THE ORIGINAL CLERKENWELL PISCATORIAL SOCIETY.

The members of the above society, fish for a number of prizes next Sunday, any water. A general meeting will be held on Monday next, at nine o'clock, precisely. Owing to the secretary of the Central Association not coming to time with privilege tickets, they have been compelled to enrol themselves on the United London Anglers' Central Committee.

June 16, 1881.

THOS. WM. LUCY.

PECKHAM BROTHERS.

The members of this society will commence the season on the 19th, by a trip to Weybridge, where they will compete for a handsome prize given by Mr. Steadhall. There is a vacancy for a few more members in this society. Gentlemen living in the neighbourhood and wishing to join should apply at once to the secretary, Mr. W. Matthews, The Prince Albert, East Surrey Grove, Peckham.—PIXIE.

June 13, 1881.

ROYAL GEORGE ANGLING SOCIETY.

The annual return visit to this society will take place on Tuesday next, the 21st inst. The reason of this late date is owing to not having had a notice from another angling society.

SOUTH LONDON ANGLING CLUB.

The annual supper of the above old-established society took place on Wednesday evening, the 15th inst., at Anderton's Hotel, Fleet Street. A large

number of the members assembled to partake of the good things which were provided for them, and served up in first-rate style by the worthy proprietor, Mr. Clemow. The chair was taken by Mr. Buck, one of the oldest members, who was faced by Mr. Field. After grace was said, the members did justice to the good things provided for them. On the cloth being cleared, the first toast was the "Queen and the Royal Family," given by the chairman, followed by the vice, with "Success to the Eastern and Western Associations of London Anglers." The Chairman then gave "The South London Angling Society;" the vice "The Health of Mr. Morris, the Treasurer;" which was drank in bumpers and with musical honours. The distribution of prizes then commenced, and an equally large and valuable number put on the list for the coming season; so there will be no lack of prizes for the members. With a hearty vote of thanks to the chairman, a very pleasant evening ended. There were some capital songs by Messrs. Buck, Morris, Dickson, and Head. Over six hundred-weight of fish was weighed in by the members during the past season.—G. H. FIELD, pro T. PALMER, secretary.

June 16.

WALWORTH WALTONIANS.

A competition took place on the 16th, for a pair of £1 1s. boots, given by Mr. Boalch; conditions: go where you like. On the 19th, a 4-horse omnibus will leave Bright's Coffee House, near the "gate," in the Walworth Road, at six o'clock sharp, and convey the members to Staines, where they will compete for £2 2s., given by Mr. Sutcliffe; £1 1s., by Mrs. Coleman; 10s. 6d., by Mr. Gold; and a box of sweets, by Mr. Moore. Limit of distance: from Staines to Egham Lock.—PIXIE.

June 17.

WESTBOURNE PARK PISCATORIAL SOCIETY.

PRESENTATION TO MR. GEORGE EVANS, CHAIRMAN.

On Tuesday, 14th inst., there was a large muster of members and friends at the club house, the Pelican, All Saints Road, to assist at the presentation of a handsome watch and address to the chairman. The members have had some capital sport among the trout, one weighing 3 lb. 9 oz., was shown on Saturday evening. The opening match will be fished on Sunday, 19th inst., when several substantial money prizes will be contended for. The ordinary business being satisfactorily concluded, Mr. George Archer was elected chairman, and Mr. Fogarty vice-chairman. After a short interval the chairman rose and said—Gentlemen, having been requested by your committee to accept the honourable position of chairman this evening, I must ask you not to expect too much of me. You are well aware we have for some time past been desirous of showing our appreciation of the valuable and gratuitous services rendered to the Westbourne Park Piscatorial Society by our respected chairman Mr. George Evans, whose untiring energy and business ability has been the means of placing the society in the position it now is. It was the wish of Mr. Evans that the present should be inexpensive, and the subscription was accordingly limited to a very small amount. We have therefore purchased a handsome watch which has an inscription in the inner case to the following effect:—"Presented to Mr. Geo. Evans as a token of respect by the members of the Westbourne Park Piscatorial Society. June 14th, 1881." We also thought an address neatly framed would prove an acceptable gift. It is worded as follows:—"Mr. Geo. Evans, in asking you to accept the accompanying present, we, the members of the Westbourne Park Piscatorial Society, desire to express our thanks for the able and efficient manner in which you have fulfilled the onerous duty of chairman. We can assure you that any further services you may feel inclined to render the society will be appreciated, and may you long be spared to lend us your valuable aid. Dated this 14th day of June, 1881." Now, gentlemen, this is the only manner in which we can but poorly repay our valued friend for the time and trouble he has expended on behalf of our prosperous society. I will now ask your attention for the event of the evening. Mr. George Evans: As chairman of this meeting I have the honour to ask you to accept on behalf of the members of this society these our humble gifts as mementos of the great regard we have for you. This handsome watch, I am sure, will prove useful, and although the manufacturer is noted for the durability of his wares, I hope in this instance you will beat Father Time, and fairly wear it out. This address will, I hope afford you pleasure in after years, even when you speak of the present time as the good old times of 50 years ago. And the wish of the members of this society is that you may continue to grace our chair until that time arrives.—Mr. George Evans, in expressing his thanks, said he was deeply indebted for their spontaneous kindness which actuated them to present the testimonial, and he expressed his desire to do all he could to further the interest of the society.—Mr. Archer proposed the Press, coupled with the name of Mr. Hare, proprietor of the *Indicator*.—Mr. Hare responded in suitable terms.—The health of Mr. Geo. Evans was then drank with great enthusiasm.—The meeting terminated with a cordial vote of thanks to the chairman, Mr. Geo. Archer. During the evening a number of songs were well sung, and a very pleasant evening was spent.

ILLEGAL POSSESSION OF FRESHWATER FISH DURING FENCE MONTHS.—Joseph Riddle and Joseph Taylor were charged before the bench of magistrates at Ware on Tuesday, June 7, with being in possession of 142 roach on the banks of the River Lea at Ware. The case was taken under clause 11, section E, of the River Lea Fishery Act. G. Cerbbe, Esq., clerk to the Conservancy Board, attended to prosecute. Police Constable Walter Stoten, No. 17, stated that he met the defendants on Ware Bridge on May 28, between 12 and 1 a.m., with a bag containing 7 score and 2 roach, weighing 16 lb. The defendants acknowledged having the fish, which they stated they took from the river with their hands. The magistrate remarked that bills were posted all along the banks of the river giving notice that it was illegal to take fish from the 15th March to the 15th June. In answer to a question, the defendants stated they could not read. The chairman, after giving them a caution as to their conduct in future, fined them 1s. and 9s. costs each.

TO ANGLERS.—W. J. Cummins, Fishing Tackle Maker, Bishop Auckland, is now prepared to forward to anglers his Illustrated Catalogue, which is not only a Trade List but is interspersed with practical hints, useful directions, and valuable information gathered by the river-side from twenty years' experience. The stock consists of his unrivalled Salmon, Trout, Grayling, and Pike Rods, Lines, Reels, Baskets, Artificial Baits, Fly-books, Landing Nets, Gaffs, and last, but not least, his celebrated Trout Flies, which for killing powers stand unequalled. Every article kept in stock is of the very best description.—[ADVT.]

QUOIT PLAYING.

RULES OF THE ASSOCIATION OF AMATEUR QUOIT CLUBS FOR THE NORTH OF ENGLAND.

(As very many of our readers are quoit players we have pleasure in giving some extracts from the rules of the North of England Association, which have been sent us by the secretary, Mr. Wm. Tyerman, of 2, Prebend Row, Darlington.—ED.)

MEETINGS of the representatives of the various Quoit Clubs in the North of England were held on February 10th and April 19th, 1881, at the house of Mr. Councillor John Fraser, Castle and Anchor Hotel, Stockton-on-Tees, for the purpose of framing rules and regulations for the guidance of quoit players.

The following rules were the final results of the meetings:—

ASSOCIATION RULES.

1. The objects of the Association shall be to provide general rules of play for the guidance of those engaged in the game of Quoits, and to cultivate the game as a national pastime.
2. Each Club belonging to the Association shall be allowed two delegates where the number of members does not exceed fifty, and one for every fifty or portion of that number.
3. There shall be a general meeting of delegates annually, such meeting to be held in the towns represented in the Association as each annual meeting may determine, but no town shall be selected a second time until the meeting has been held in each town desiring it.
4. A President, Vice-President, Secretary, and Committee of five members shall be elected at the annual meeting. The President for the time being shall act as Treasurer.
5. Committee meetings may be called at the discretion of the President and Secretary.
6. In order to defray the general expenses of the Association, each Club shall pay an annual subscription of 10s. where the number of members does not exceed fifty, and 20s. for over that number.
7. All expenses out of pocket (except for refreshments) shall be allowed for Committee meeting out of the general fund, but the expenses of delegates to annual meetings shall be defrayed by the Club they represent.
8. The accounts shall be audited at the annual meeting by two delegates appointed for that purpose.

RULES.

1. Whenever a match is played, these rules shall be in force, unless both parties consent to a variation previous to play commencing.
2. The quoits shall not be more than $5\frac{1}{2}$ lb. in weight, nor more than $8\frac{1}{2}$ inches in diameter outside, and $5\frac{1}{2}$ inches in the inside, nor more than $1\frac{1}{2}$ inch in height, and made of malleable iron. Quoits faced, or partially faced, with steel, shall not in any case be allowed.
3. The pins shall be placed in tempered clay ends, confined by a wooden frame, and shall not project more than 3 inches. Pins to be not less than 3 feet long, and the exposed point $\frac{1}{2}$ inch in diameter.
4. The pins shall be placed at such distances apart as may be agreed upon, and placed in the centre of the clay. The pins to be re-adjusted and the clay made up only at the discretion of the umpires.
5. No quoit shall count that is a greater distance than 18 inches from the pin.
6. When a match is played, one umpire shall be chosen by each side, and their decision shall be final. Should, however, an umpire have occasion to appoint another in his place, the last-named in all cases shall be the umpire for the time being. No person except the umpires shall interfere, but each captain may instruct his men, if requested.
7. A player in delivering his quoit shall stand with his foot opposite the pin, but not more than 2 feet therefrom, and must deliver his quoit before the second step is completed. Should he not do so, the quoit

pitched shall be called a "no quoit," and treated the same as a "no quoit," as per Rule 11.

8. The two quoits nearest the pin shall count one each, if belonging to the same side. If not, then only the nearest quoit counts one. The quoit touching the top of the pin to count before a side-toucher.

9. When the inside of a quoit, taken perpendicularly from the pin upwards, shall surround the top of the pin, it shall be called a ringer and count two. If a player has two quoits in this position, they shall count two each, unless his opponent has one dividing them, then the last ringer only shall count.

10. No quoit shall count as a ringer when a quoit under it covers, in a perpendicular direction, any part of the top of the pin.

11. If a quoit when pitched shall hit the frame surrounding the clay in alighting, or shall alight outside the frame, it shall be called a "no quoit," and shall not count or hinder any other quoit from counting, and shall at once be removed.

12. No clay shall be removed in measuring the distance of a quoit from the pin, neither shall any quoit be removed to facilitate the measurements.

13. When two quoits belonging to opposite parties shall rest at equal distances from the pin, the leading player shall retain his lead.

14. Any player claiming a point or points after pitching one quoit, shall not be at liberty to go back and play his second quoit.

15. A player in any match must have been a member of the club he plays with for at least one calendar month previous to that time.

OFFICERS FOR 1881.

PRESIDENT—

Mr. GEORGE MARSHALL, Woodleigh, Darlington.

VICE-PRESIDENT—

Mr. THOMAS SMITH, Milton Street, Middlesbrough,

COMMITTEE—

Mr. J. DAVIDSON, Elvet Club, Durham.

Mr. GOWLAND,

Mr. L. M. HILL, Lord Raglan Club, West Hartlepool.

Mr. H. BLORE, Erimus Club, Middlesbrough.

Mr. E. D. GAULT, Tradesmen's Club, Newcastle-on-Tyne.

SECRETARY—

Mr. WILLIAM TYERMAN, Borough Club, Darlington.

The next annual meeting was then fixed to be held at Durham, on Easter Tuesday, 1882.

BILLINGS-GATE MARKET AND THE FISH SUPPLY.—A correspondent of the *City Press* states his conviction that the time has arrived for a further consideration by the Common Council of what is to be done with Billingsgate, in order to cheapen fish by making the market more easy of access. An outlay of a million and a half of the ratepayers' money would not effect the requisite improvements, since there is not sufficient room in the ward of Billingsgate for any further extension without one interest giving way. During the last three-quarters of a century several inquiries have taken place into the fish supply and the conveniences for its sale to the public in London. In the first quarter of the present century the advent of railways effected a complete revolution in the mode of transit; and commencing with about the year 1836 the supply by water diminished, and the supply by railway gradually increased, until now, as will be seen by the figures published, for the 52 weeks of last year, there were 95,548 tons of fish came by railway, and 26,587 only by water; that 95,548 tons brought by railway cost the consigner 5s. per ton for its delivery from the railway station in London to Billingsgate and the railway companies are unanimous apparently in their desire to be relieved of the obligation of delivery even at that price. There is also another serious charge for portage, which amounts to 10s. per ton, and represents an amount in the aggregate on the 122,135 tons of fish that came to Billingsgate last year to £61,768. The delivery of the fish by steamers is an additional expense of about 6s. per ton, representing £7,978 per annum. If one-half of the charge for delivery from the railway station to Billingsgate, and the "bobbing" or portage could be saved, the gain to the owners of the fish would be about £55,000 a-year. All these charges on fish, which are so excessive as compared with meat, render it necessary for a serious consideration of the question.

Just published. Price one Shilling.

THIRD EDITION of a delightful book.

MY LIFE AS AN ANGLER. By William HENDERSON; portrait and 12 plates. Cr. 8vo. Price 7s. 6d., postage 6d.

"No modern book about angling with greater chances of charming."—*Athenaeum*.

"The sweet feeling which pervades these pages will be their highest praise."—*Daily News*.

"More entertaining than a novel."—*Durham Chronicle*.

"Will amply reward the general reader."—*Spectator*.

London: W. SATCHELL & CO., 12, TAVIS-STOCK STREET, COVENT GARDEN, W.C.

ANGLING.

Now ready, third Edition.

THE ANGLER'S INSTRUCTOR,

By Wm. BAILEY.

A book on the best modes of Angling in English Rivers, Lakes and Ponds, and on the habits of the fish, besides all the latest practical hints on many things that have not up to now been made public, to be had of W. Bailey, 170, Kirke White Street, Nottingham. By post, 2s. 9d.

TAPER SALMON AND TROUT LINES.

Enamel Waterproof in 4 sizes, either single or taper at both ends; these we have made for many years without a single complaint; all speak well of them; they have more spring than the wire centred line (fine cast, no splash), being made exactly on the principle of a tandem whip; used by all noted anglers. See letters in catalogue; wewress these lines and return them in five days equal to new for 1s.

WIRE CENTRE LINES.—(Enamel Waterproof), Salmon or Trout. These we have made for upwards of 7 years, being the first inventor of them; but our Taper Lines have quite superseded them.

DEEP SEA LINES.

Double Cable Waterproof; we are the largest makers in the world of this class of line, which we spin and cable direct from the raw material. Will outlast four ordinary undress lines; all sizes from whiting to conger; sold by the single line or cwt. For samples, address, with two stamps,

COTTON TWINE SPINNING CO., MANCHESTER.

NOTICE.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., must be addressed to the Editor of THE FISHING GAZETTE, No. 12, Fetter Lane, London, E.C. and should reach the office not later than Tuesday morning.

Contributions are solicited, but the Editor will not undertake to return rejected MSS., unless accompanied with a stamped addressed envelope.

Correspondents are requested to write on one side of the paper only and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to no notice will be taken of such communications.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls, and of the following, amongst other Fishing Tackle Dealers in London and the Provinces:—

Messrs. Alfred and Son, Moorgate-street.
Messrs. Price and Co., 8, Seymour-street, Euston-square, N.W.
Messrs. Williams and Co., Great Queen-street.
Messrs. Gee and Co., St. Andrew's-street, St. Martin's-lane.
Messrs. Gee and Co., Gray's Inn-lane (near Holborn end).

ANNUAL SUBSCRIPTION.

The Annual Subscription, payable in advance, for the United Kingdom is 8s.; or post free, 10s. 6d.

To any part of Europe, the United States, and Canada, the Annual Subscription, including postage, is twelve shillings and sixpence.

ADVERTISEMENTS.

All communications respecting advertisements must be addressed to the Manager of THE FISHING GAZETTE, No. 12, Fetter Lane, London, E.C.

N.B.—All Remittances must be sent, and all Cheques and Money Orders must be made payable to ROBERT B. MARSTON.

The Fishing Gazette.

SATURDAY, JUNE 25, 1881.

THE OPENING DAYS ON THE THAMES.

LIKE many brother anglers "in populous city pent" for about nineteen out of every twenty days of the year, who can only tackle the heavy routine of daily work by looking forward to casual holidays, I was determined, long before it came, to spend

the opening day of the Thames fishing season (and, perhaps, a day or two to follow) on the dear old river at Staines. I also determined that the barbel should be the chief object of my short campaign.

The anticipation of sport is often more than half its enjoyment, and preparing for it often equals its realization, and so I amused myself from time to time in making ready. There was to be a new rod, or, at least, one newly arranged so as to be lighter and more pliant than those generally in use for legering, a new line and winch to match, and new hooks, for I find that old ones cannot be depended on for barbel fishing. New paternosters were also to be rigged up, as a sort of supplement to legering, in the hopes of picking up a vagrom perch or two, or whatnot. My Nottingham rod also was to be overhauled, a new top supplied, and the check of the Nottingham rod to be adjusted, and the thin line tested. And then there was my big tin tackle-case, with its many trays and multitudinous divisions, to be thoroughly put in order, and everything to be stowed in its right place.

The doing of all this and more, talking over matters piscatorial with tackle makers and friends, reading the FISHING GAZETTE and wishing it came out as a daily paper, making arrangements with a fisherman and the landlord of some riverside hostelry—all this I took as part of the fishing holiday enjoyed in anticipation. Rooms were engaged at that quiet, clean and snug little Inn, the Swan, hard by Staines Bridge, a favourite resort of mine, as I fully appreciate good cooking of good things, good liquids, and good accommodation generally, when combined, as they are at the Swan, with great civility and a moderate tariff. This makes a capital head-quarter for fishermen, who can command from it the river from Penton Hook up to Old Windsor. My puntsman, Sam Scott, was also duly laid on; and as he signed his letter, according to his wont, "yours trully," I took the extra "l" (I might almost say the extra liquid) as an omen that he would most surely have the all-necessary worms he so faithfully promised for baiting the swims we had agreed upon.

All was in readiness, then, by the afternoon of the 15th, and my attack of "barbel on the brain" was getting more acute. I have had many good turns with our ordinary freshwater fish in my day, but I honestly confess that legering for barbel is my special weakness, or rather strength, as I shall put it. I "fancy myself" at it, and that's something, and I entertain the humble assurance and consciousness that if anyone can "nick" a barbel I can. There is something to my mind specially enjoyable in this method of barbel fishing. You sit on your Windsor chair in the punt with your arms resting on your knees, with rod in right hand and line in left, ready to feel the slightest touch of a fish, and with your eyes at liberty to watch all that is going on round you on land and water, while with your ears you mark the calls and singing of the various birds and the other sounds of nature. It is a deliciously dreamy way of passing a summer's day, and enjoying a succession of soothing reveries, assisted as they may be from time to time by that which Dr. Barclay spoke of to the Bishop of Murray as the "happie and holy herbe." And then the thrilling sensation which like an electric shock passes up the line, through your arms, and pervades your whole self, body and soul, when the barbel "knocks!" And then, again, when your bait is fast fixed in his leather mouth, the grand fight your prey makes! I say fearlessly that no fish that swims, not even the lordly *salmo salar*, is a better fighter, more game unto death, than the barbel. I am not ashamed then to acknowledge my delight in barbel fishing especially when the fish will feed. When "the're on, the're on" I will sententiously observe, and then the fun's fast and furious; but, *per contra*, "when the'er off, they're off," as, but too often, the poor barbel-fisher knows to his cost.

But all this by way of preface; and here I find myself, like

many who handle the pen as well the rod, pretty nearly at the end of the space allotted to me, and painfully conscious that I have not yet said much actually on "The Opening Days on the Thames." Well, the day before the opening day duly arrived, as eventually it was bound to do, and we were ready to make a start for Staines on the afternoon of the 15th, and see to the baiting of the swims in the evening. Alas for the vanity of all things mundane generally, and piscatorial especially! A telegram arrives—a few brief words—to inform me that S. S. had lost all his worms through the heat, and that we had better not come down. You could have knocked me down with a crowbar. Oh, the bitter disappointment, and exhausting depression that followed! Practically I collapsed; and, possessed by a fit of combined sorrow and anger, and oblivious of all the virtues and graces which anglers possess (often in reserve), I would have none of Staines that night.

However, I went down on the 16th, in the afternoon, prepared to make the 17th the opening day, as far as I was concerned, and the best of a bad job. S. S. shook his head dolefully; but as the sky got overcast, and it began to spit with rain, we hoped that the worms would "come up." Some of the railway porters, who seemed vermically inclined, spoke hopefully, and held out prospects of bringing me some quarts before midnight; so did a gardener's man and some boys. I was prepared to pay handsomely for the wretched worms, if they could only be got, but they could not. The tantalising rain would not come down fluently enough to induce them to draw their slimy lengths above ground sufficiently for thumb and finger to give them an unexpected lift. And so the morning of the 17th came, and S. S. with it, and only a pint or two of worms, all told. Hoping against hope, we pitched some little way below the railway bridge, threw in two or three clay balls, with worms in them as few as plums in a "Dotheboys Hall" pudding, and scattered some broken pieces as far as our scanty store would allow. But all to no purpose. Not a barbel would "touch," nor, indeed, any other finny denizen of the Staines district. Where were the splendid tench which I saw the T. A. P. S. representatives—Mr. Brougham, my friend Mr. A. G. Jardine, and others—put into these waters two years ago? Cannot I get one of them? or a dace, a chub, or "anythink," this pleasant morning? No. Two or three hours of most patient legering, and an absolute blank; hardly a floating weed to catch one's line occasionally and produce a little mild excitement.

So home to breakfast in the comfortable and pretty look-outed room at the Swan, where the old familiar oil painting of a 16 lb. barbel, taken as long ago as 1734, meets one's eye, and another of a veritable Thames salmon of 21 lb., taken in 1812. Breakfast disposed of, how were we to dispose of ourselves for the rest of the day? Barbeling? No, it did not strike us as "good enough" under the circumstances, nor indeed any other fishing. Happy thought! It was the last day at Ascot, the "quiet" day. The illustrious Robert the Devil, Peter (the champion kicker), and other equine celebrities, including possibly the famous Bend Or, were to be seen, and many human celebrities both of the male and "fieldmale" persuasion, for on this "quiet" day all celebrities make a point of putting in an appearance. So we made tracks for Ascot, which was not far from our unhappy fishing grounds, and enjoyed ourselves much in most charming weather in wandering about the classic heath, and taking stock of horses and our own kind. Just on leaving the course rain began gently to fall, and once more rose up visions of abundance of worms, and shoals of barbel transported from their native depths to the punt's well.

But disappointment once more—not sufficient rain; and again wormless to bed. Fish, however, I would the next day. So down to yesterday's swim early, and, *mirabile dictu*, a 3 lb. barbel (more or less) to hand at once. Surely a new thing is about to happen,

and we are going to take barbel without baiting. Oh, dear no! not another touch! It was a pure mistake on the part of aforesaid *Barbatus*. He never intended to take the bait. He was not "on" theoretically at all; only, unfortunately, so practically. His fellow *Barbati* and *Barbatæ* were not going to answer to our miserable apology for baiting. While thus musing, and almost in a trance, I hear S. S.'s voice to this effect: "Jack, got any worms?" "Yes," was the answer from Jack, on the tow-path; "several quarts, which I've kept by me." If we had only come across this vermicular proprietor on Thursday evening, how differently matters might have stood! It was too late now, as I was bound to get home that evening. However, I could not resist buying three quarts, at 8d. per quart—the price of the best bitter beer! And so, after breakfast, we baited the swim, and fished as we baited. But all in vain; the barbel would not respond, nor any other fish. So off and away for a bit of chubbing with Nottingham tackle and cheese along the willow boughs. Almost the second run I was in a fish. A good one, too; who required a good deal of *fortiter* and *suaviter* combined to keep him from the boughs, and at the same time not to let him break my light line. Some minutes' manœuvring and of pleasurable fear and hope, and he is in the landing net, and very soon on the steel yard, which registered a full 4 lb. A goodly chevin this, in these degenerate days, in which the multitude of steam launches and pleasure boats have sadly kept down the chub, which, of all fish, will not increase and multiply without quiet. I remember when I was a boy a 6 lb. Thames chub was not considered a wonder; but now it is.

This success led me to hope that a grand day with the chub was about to be recorded. But I must tell the truth. I had not another bite, though for hours I fished all the likely bits down to and around "Penty Hook." In the evening we returned to the baited barbel swim, but only again to find that the barbel were not "on." Not a touch was vouchsafed us, and so ended the opening days on the Thames. I cannot hear that much was done with any kind of fish at any of the fishing stations. Even fishermen who had worms did no good that I know of. Nothing was "on," in fact; and this, perhaps, may partly be accounted for by the state of the water, which had assumed a dirty kind of red tinge as it often does in the summer. Perhaps some reader of the FISHING GAZETTE may explain what is the cause of this tinge. But then! this Thames fishing! How seldom does a good day come off! I believe there are plenty of fish, but each year they seem less disposed to feed, and more wary. Then, again, one day the water is too high, another too low—too bright or too thick—too much wind or too little—always too much or too little something or other; and Thames fishing practically a delusion and snare. It may be heresy to say this, and I will partly purge myself by saying "I love it," notwithstanding. With fish or without fish, to a well constituted and appreciative mind the dear old Thames is "the place to spend a happy day." Many happy days I have had on it, but fishless withal. I hope to have many more, and whether fishless or fishful I don't care much. And now I am at the end of my story—but "story I had none to tell, sir." One barbel and one chub—the grand result of two opening days on the Thames!

J. J. M.

THE "ALEXANDRA" FLY.

"WHAT'S in a name? That which we call a Rose, by any other name would smell as sweet," so says Shakespeare. How the "Alexandra" fly got so named, we cannot say, unless it was actually, as jokingly hinted by one correspondent, because the fly is so "taking."

We last year described a day's fishing with the "Alexandra,"

which description was translated and published on the Continent, and has caused considerable demand for this fly there, and we were informed the other day by a large London fly-maker that the demand was "wonderful"; in fact, he had at that moment orders for more than five gross (700) of these flies, and they retail at 4d. apiece. Why does not some enterprising firm advertise the fly?

We should very much like to have the opinion of some of our readers as to what they imagine the "Alexandra" is taken for by the trout.

We are firmly of opinion, as we said last year, that this fly is supposed by the trout to be a minnow or small fish of some kind. Its body is bright silver, it has half a dozen inch-long steel blue and brown fibres of peacock feather tied at its head, a few shorter ones underneath, also tied at the head to form the legs, and half a dozen shorter ones still tied as a tail, the body being simply plain gold or silver wire or braid; a strand or two of red fibre mixed with the leg fibres is recommended by some.

Now, having got your "Alexandra," how do you fish with it? You put it firmly on to the end of a salmon trace, and then throw it across and down stream, and draw it back over the surface with a series of gentle jerks, stopping for an instant between each jerk. If there is any store of trout in the water you are fishing, you will, if you throw a long line and *keep out of sight*, see a rush and find you are fast in a fish before you know it. He is fast on a line that will hold a dead weight of any number of pounds, and you must be a "regular duffer" if you let him break you; he may get off through being but slightly hooked—that is his fortune, but not your fault.

When trout are feeding on the natural fly, they swim about just under the surface—keeping to one spot pretty well—and gently rise and suck in the flies, and the largest fish often make the least fuss, and in like manner do they take the ordinary small artificial fly. But how do they take the "Alexandra"? Why, with a bang, smash, splash, a regular rush, just as they do a minnow, and a big wave goes over the place announcing the size of your prey. Little trout of even only five inches and less will make their little rush at a big "Alexandra" perhaps a quarter their own size; we have even caught samlets with it in Devonshire.

Any way, the "Alexandra" is a wonderfully deadly lure, though the fish get used to it, and we should much like to hear what any of our readers can tell us of their experience with it. We always use it on a drawn gut line, and that vastly enhances the sport. But even then it cannot hold a candle to scientific fly-fishing proper, as far as real sport goes; in fact, it is fly-fishing with the minnow.

REMINDERS ON COARSE-FISH ANGLING.

By J. HARRINGTON KEENE.

PERCH.—*Tackle.* Fine gut paternoster with lead dulled by means of sulphate of copper solution, or by water-green-hued paint; hooks, No. 6. *Baits.*—Scoured cockspur worms (or gilt tail, found in rotten manure heaps and scoured by mixing with clean moss, slightly damped, over which a little fresh milk has been poured), freshwater shrimp, found under stones and in gravel in most streams, fresh shrimps, the white flesh of the tail of a prawn, tail of lobworm, piece of high coloured fresh beef, horse leeches, minnows alive, and all other fry, small gudgeons preferable before any other if procurable.

N.B.—Perch may be found at this season of the year, in the hottest day, under the shade of the osiers and elders fringing a stream. Use a live gudgeon on No. 6 hook, attached to a fine gut line, light Nottingham twist reel line, small piece of cork to aid sight about six feet from bait. Float the latter as near the actual

bank as possible, and on striking urge the fish out stream. Chiefly large perch are thus taken, occasionally a chub also.

JACK are unfit to be taken yet.

BARBEL.—If the water be clear, float a boat over the supposed barbel "pitch," and with face downward reconnoitre the number inhabiting it. Mark the precise *locale* by some object on the bank; observe depth and character of bottom as nearly as possible, generally the fish lie in a hole having a declivity up stream. If the hole has been much fished proceed as follows: Commence baiting with lobworms (fresh picked if possible), about four nights previous to the day of fishing—or, better still, early morning, because the eels are not about. Pitch the worms in so that they, on the first night, fall directly on the hole, next night in the hole, and part out up the declivity, next, some yards from the declivity, next, further up still, and let this last instalment be the most plentiful. You thus lure them from their regular haunt, and immediately one is hooked on strange ground its fellows flee back to their covert, and do not participate in the alarm of the hooked one. *Tackle.*—"Nottingham" throughout—I have seen some capital cheap and good outfits by Slater, of Newark-on-Trent. Sliding float. *BAITS.*—Lobworms preferably, the miniature, or so called *maiden* worm, having no ring near the head. (They both belong to the species *Lumbrica Terrestris*). I know of no better bait.

CHUB.—Chub are chiefly under the "boughs" during hot weather, and no matter how shallow the water may be, provided it is shaded, these fish may be found. Extreme quiet is necessary, the *extremest* quiet I might say. *Tackle.*—Finest "Nottingham" ring line, winch and quill float, sinkers or shots well away from the hook, hook, No. 4. *Baits.*—Tail of crayfish (boiled and shelled) cheese, cheddar or *gruyère*, cut into wedge-shaped pieces, or made into paste with new bread, leeches, prawns, red worms. These for so called bottom-fishing. A black slug is very deadly used without a float, and simply thrown with a light splash under the boughs as the boat passes slowly. Cut the slug open, remove the inside, lay the former in the sun for an hour, and thread on the gut with a baiting needle, using a large hook according to size of slug. Let point of hook be well exposed. A good imitation of the slug is made from the finger of a black or white kid glove, stuffed with wadding and loaded with a shot or two. Let a morsel of the wadding protrude if employing black kid. It simulates the extrusion of the slug's viscera. Keep the fish well out when hooked and do not seek to draw it into the boat during the first few minutes.

(To be continued.)

THE MEETING OF ANGLERS AT THE SOCIETY OF ARTS.

THE Conference of Anglers who intend to discuss various amendmends in the Freshwater Fisheries Acts promises to be well attended. We trust all who can possibly attend will make a point of doing so.

The place is the room of the Society of Arts, Adelphi, Strand. The day is Monday, June 27, and the time 8 o'clock for 8.30.

AN IMPUDENT TROUT.

I NEVER saw such an impudent fish in all my life. Imagine, if you can, an Eton boy spending his whole afternoon in running in and out of the Christopher when he knows that a master is watching him from the opposite side of the street, and you will have a faint idea of the consummate cheek of this particular trout. For the whole day has he been rising at the natural fly, not above 8 yards from me, down stream; not once would he touch my fly or do more than look at it and follow it a

few feet, yet not once did he seem frightened or leave off rising, though he must have seen me plainly all the time. Vainly did I try at intervals of about half an hour every conceivable variety of fly calculated to suit the most delicate taste; sunshine, cloud or shower it was just the same, the old fellow kept on winking and poking fun at me for nine mortal hours. Vainly did I recite an old charm taught me by a German Professor:

“O liebliche Forelle, nimm die Fliege,
Dass dich das schönste Mädchen essen darf.
Mit corallenen Lippen sei begrüßt,
Mit Perlen sei zerdrückt; unter dem Glanz
Der diamanten Augen sei begraben:
Wäre nicht ein solcher Tod ein glücklich Schicksal?”

which may be thus Englished:—

“Come, juicy trout, seize thou my tempting fly,
And for a maiden fair provide a feast:
By lovely coral lips thou shalt be kissed,
Crushed amid pearls, and 'neath the joyous glance
Of diamond eyes and damask cheeks be buried:
Could'st thou desire a more delicious fate?”

Not even that would tempt him. If I could have got below him and thrown up stream, doubtless he would not have been alive now to wag his tail at me, but an envious wall made this impossible. Seeing a friend, one of the best fly-fishers in the neighbourhood, fishing in the next estate, I asked him to try his hand in punishing such audacity. He tried for some time—and failed. Here was the chairman of one association and the secretary of another being openly cheeked by a rascally fish of under 2 pounds! It was as bad as a Ritualist indulging in his vagaries, and paying not the slightest attention to his bishop or Lord Penzance. His cousins up stream had the grace to move up higher or leave off rising for a time, if they did not take my fly; thus, some of them escaped, while others enjoyed the delightful fate described above. But no, this fellow, conscious, I suppose, of the greater difficulty of hooking a fish well, and playing him successfully with a down stream cast, kept on swallowing fly after fly, and utterly rejected my daintiest imitations. I took out my watch and found that he rose about nine times every minute. That gives—but he has driven me wild enough already, and I am not going to give myself a headache by calculating the victims of his nine hours' (and probably much longer) meal. His stomach would furnish a museum. I hope he will have indigestion.

A week later I paid the same spot a second visit. Why there is the very same fish in the very same spot rising as fast as ever! Has he been at it ever since? Perhaps he fed like the Scotchman's pike “even on the Sabbath.” He must be overeating himself. He takes no more notice of me than before, though his brother, who is feeding about three yards higher up, and exactly opposite to me, is evidently made rather shy by my presence. Does the Ritualist mean to take no notice of me at all? Has he no respect or fear for the “nobler creature,” man, that is making war upon him? I am getting desperate. I will treat him as did the hunters of the snark, and tempt his life with a—may fly. He has never seen one before, for they do not appear, I understand, upon this river. There, my friend—that is something big, but looks remarkably juicy—won't you just try a bite? now do. Not a bit of it. He is evidently interested; he puts up his eye-glass as it were, and follows her about, but as for proposing, that is far from him.

I have but twenty minutes unless I would lose the last train home. I vow, mentally, to give, I don't know what, on Hospital Sunday if I can induce him to come back with me! Hurrah! he has got it; now how shall I play him among these weeds? Bah, he is off! I hope he may be as sick as I feel at this moment. At any rate he has got the toothache.

“Improba trutta, salis, musicæque illudere gaudes?
At, per Petrum, anser mox tibi coctus erit.”

J. T. E.

CLUB AND OTHER JOTTINGS.

By L. B.

THE West Central Association District Visit was paid the Phoenix Angling Society on Wednesday evening, the 15th. It was very insufficiently attended, the list, as it at present stands, by no means gives satisfaction. The attempt to cram a visit into each week so as to give each club two visits in the twelve months, not only allows no time for the issuing of regulation articles as to date, &c., but the rapidity with which these visits follow one another makes of what would otherwise be a pleasant act of brotherly courtesy, a positive task. The committee of the association must look to this when next the list is revised if they are desirous of their visits continuing as popular as they have hitherto been.

Mr. F. Hill, the secretary of the North-Western Angling Club writes that nearly 2,000 lb. of fish have been weighed-in at the N.W. during the past season, including some handsome specimen fish, several of which have been set up.

What has become of the Thames Rights' Defence Association?

The summer dinner of the Richmond Piscatorial, on the 16th, at the Ship Hotel, Halliford, was a great success. The same may be said of the annual feed of Ye Golden Barbel, the West Central Angling Club, Great Northern Brothers, and Trafalgar Angling Society.

The *Daily Telegraph*, one day last week, had one of those comparatively short leading articles, written in that, what shall I call it?—well, flowery style peculiar to this one paper—setting forth that a whole army of mudlarks should be despatched to search for a certain Whitehead's torpedo, which, to quote your contemporary, might be described as lost, stolen, or strayed, and supposed to be lying hidden in the bed of the river; going on to comment upon the insufficiency of the reward (£5) offered for the recovery of so terrible an engine of destruction, “which might go off upon the slightest provocation or none at all.” Well, I hear you say, what has all this to do with angling? Well, only this—that among other possible frightful things which the imaginative scribe in your lively contemporary's columns, goes on to anticipate is the possibility of some “Gentle disciple of Walton” hooking this terrible monster—too much for your nerves? Well, it nearly proved to much for mine—only that, speaking to a friend about the matter the same day, he read to me a short paragraph concerning the same torpedo in the *Standard* of that date, concluding with the significant words, “It was not loaded.”

Very little was done in the river Lea on the opening day, though many rodsters were out—bright water and a forest of weeds are scarcely conducive to sport.

On the Stort there were no rods at work, yet this is a summer's water. Is it that the continual netting has brought this pretty little river, the principal feeder of the sedgy Lea, so low that it is considered waste of time to fish it? Has any serious and well-directed effort been made to rescue it?

The following will give the readers of the FISHING GAZETTE a very fair idea of what the fishing is like thus early in the season in the Upper Thames. A particular friend of mine, Mr. Julius Harding, and another gentleman, went to Pangbourne on the evening of the 18th, and were out and hard at it a little after daybreak on the 19th, fishing carefully for several hours right away without a single bite. They afterwards walked on to Goring and spoke to some dozens of anglers, always receiving in reply to their inquiries the same ominous shake of the head. Nor had the occupants of the several punts whom they hailed, fared any better. Another proof, if any were needed, of the utter worthlessness of June fishing, as a rule.

Mr. J. Blamey, on the 19th, fishing with Trodd at Dumsey, took, among other fish, some fair-sized bream, which were in such wretched condition—slimy and full of parasites—that, after removing these unwelcome additions, friend B. returned them to the water, literally to grow better. Bravo, Blamey!

From Teddington I hear that Mr. Hewitson, fishing off the weir, succeeded in capturing a handsome barbel (8 lb.), some chub and a few roach—total weight, 13 lb.

From Littleport a correspondent, on whose reports the greatest reliance can be placed, writes:—“There are lots of fish, but they will not feed, nor do I expect they will for at least another week or two.”

From the Wey, in the neighbourhood of Send, I hear of the capture of some good bream, a few roach, and several carp.

From the Welsh Harp some good lots of bream and carp were captured during the week up to 19th, one angler getting 40 lb. and another 20 lb.; but on the 19th, whether owing to the fresh water, the rough wind, or the cold during the early morning, they were right off. We are informed that over 200 day tickets were sold on this day only, quite irrespective of annual subscribers. I went all round the water, and among the numerous blanks gleaned the following items of comfort:—Mr. Randell, some large bream, heaviest said to be between 4 and 5 lb.; Mr. T. Neville, a handsome carp, about 6 lb.; another gentleman, one about 7 lb.; Mr. Underwood, a pretty little carp, about 2 lb.; Mr. Grindley, N.W.A.C., a handsome perfectly clean jack, 6½ lb., and some good well-mended bream.

The West Central Association's monthly meeting was held at the Portman Arms, Great Quebec Street, on Friday evening, the 17th., Mr. Bonvoisin in the chair, faced by Mr. Murphy in the vice, Mr. Beckett being away on private business. A great deal of important business was transacted, the report of which appears elsewhere in the columns of the GAZETTE. Mr. T. Hoole, the hard-worked secretary, says, thus early, he has issued or has application for 1600 privilege cards, and has hard work to keep pace with the applications each post brings.

To arrange the business to be transacted at the Anglers' Conference

to be held on Monday next, at the Society of Arts, a special meeting of committees from the East and West Central Associations was held at the Portman Arms, on Monday evening last, Mr. Geen presiding, Mr. Metcalfe occupying the vice. There were some 25 gentlemen present. It would be manifestly unfair and unwise to publish the details of a committee meeting, but I do not think I shall be blamed in any quarter for stating that the resolutions which will be moved on Monday next will substantially be the same as those printed in the GAZETTE last week, the only difference being a doubt expressed by a minority whether the close time for jack—six months as proposed, and even five, as ultimately carried—was not too long, the same applying to perch, which it is proposed to fence for five months.

To the conference on Monday each club is invited to send six delegates. Cards to that number will be issued. Many societies in the provinces have promised to send representatives who will require no cards, and invitations have also been issued to the committees of the various river preservation societies on the Thames, Lea, &c. London societies not enrolled either on the East and West Central Associations, and of whose existence Messrs. Hoole and Ghurney have no official knowledge, can have tickets by applying to either of the above gentlemen.

The W.C.A. No. 1 district visit was paid the Prince of Wales Angling Society, on Tuesday evening, the 21st, a general visit to the Royal George taking place the same evening.

NETS SUPERSEDING HOOKS FOR DEEP-SEA COD FISHING.

A pamphlet of great practical value has been published by the United States Fish Commission, compiled by Capt. J. W. Collins, explaining the methods of catching cod with gill-nets. Heretofore, with few exceptions, cod have been caught off the coast of North America with lines. Either single hand lines are used or trawls, the latter being a long line buoyed on the water, from which depend innumerable other long lines, with baited hooks. This trawling takes a large portion of the fish, and, like all line fishing, is laborious and expensive at times, from the character of the bait. Prof. Baird, who has in every way had the practical interests of our fishermen at heart, had long ago thought that netting cod, as in use by the Norwegians, might yield the best results in the United States. In 1880, at the Berlin Fishery Exhibition, Capt. Collins, attached to the commission, had the fullest opportunity to study these Norwegian methods of netting cod. Now it happened that last year bait for line or trawl fishing was almost impossible to procure, so a schooner, the Northern Eagle, from Gloucester, determined to make a trial with cod gill-nets, Capt. Collins having explained to the enterprising skipper the exact methods in use on the Lofoden Islands. During the last winter, 1880-81, the nets had a trial in Ipswich Bay, which lies north of Cape Ann, dividing the waters of Massachusetts Bay on the south. The depth was 25 to 30 fathoms, but the nets were tried in fifteen fathoms, and they were worked with dories, the usual boat of our fishermen. The results attained were most successful. On a trip ending Jan. 11 "35,000 pounds of cod were taken by a smack, 1,000 pounds of which were caught in a single morning." Two other vessels, absent just about the same length of time, but using trawls, only got 4,000 and 5,000 pounds. The same vessel using the nets made another trip, taking in four days 35,000 pounds of fish again, having caught in one single day 11,000 pounds. Now, on this same day another vessel set, quite close to the nets, 10 trawls of 1,000 hooks each, and only caught 2,000 pounds of fish. The total results of Capt. Martin's enterprise, who was the first to use the nets, may be stated as follows: In not quite two months, from November to January, he took 111,000 pounds of cod, while no trawler, with the same luck, had landed one-third of the quantity. Not only does Capt. Collins tell us that more fish can be had by netting, but they are of better quality—larger fish—the average of weight during six weeks' fishing running as high as twenty-three pounds. With such apparent advantages, where the sea bottom will allow it, there is no doubt that nets-for-cod-fishing, thanks to intelligent study given to such matters by the United States Fish Commission, will come into common use.

RICHMOND PISCATORIAL SOCIETY.

As had been previously arranged by the executive of this popular suburban angling club, a goodly number of the members made the sixteenth of June one of the festival days of the year, and so gave to the "opening day" all the importance which is necessarily attached to it, as the commencement of another season's sport. The lower Thames was this year selected for the first campaign, and as the society, under the able generalship of Mr. F. C. Clench, has increased almost fourfold during the last twelve months, it was regarded with no ordinary importance, and a number of competitors entered themselves in the contest for three good prizes, but, as a matter of course, no large quantity of fish were taken, as the fish were scarcely ready for them. Mr. F. C. Clench, with his admirable colleague, Mr. P. Geen, who were not competing, had about the best of it, under the piloting of James Haslett at Chertsey, as they made a good show of fourjack, the largest 7 lb., and a fair sprinkling of roach, bream, chub, and barbel. The day's proceedings were announced to terminate with a good feed at the Ship Hotel, Lower Halliford, and it was ably carried out by Mr. and Mrs. Stone (the worthy host only just recovering from a dangerous illness) and thus the dinner became a conspicuous success. Major Bull, who has from the commencement taken a great interest in the society, occupied the chair, the vice-chair being well-filled by Mr. F. C. Clench. There were present a large number of members and friends, including Messrs. G. Nattress, P. Geen, T. Abbott, H. G. Penney, W. Abbott, Owen Davis, R. A. Rowe, H. S. Giles, H. E. Gaynor, H. Dickinson, W. Goodale, J. P. Houghton, G. Laurence, jun., T. Hoole, M. H. Blamey, A. J. Little, F. A. Crewe, J. Plant, J. H. Gaunt, J. Abbot, J. Bayley, Dyer, J. H. Ford, &c. After the removal of the cloth and the disposal of the usual loyal toasts, the Chairman gave "Success to the Richmond Piscatorial Society," and, in doing so, expressed his gratification at its recent protest against the proposed amendment to the Fresh Water Fishery Act of 1878. He was glad to learn that the Bill was given up and nothing more was likely to be heard of it, but he was quite certain that any measure that was proposed against the principle of true sport would always be opposed by the Society. In the course of some well-deserved complimentary remarks on the labours of Mr. F. C. Clench, he said they all knew how much the vice-chairman had done to bring the Society to its present successful position; and he was

perfectly satisfied, under his auspices, with the assistance of the members, it would continue to flourish. He had, therefore, great pleasure in coupling with the toast the name of its excellent leader, Mr. F. C. Clench. After the toast had been enthusiastically drunk, Mr. Clench, on rising to respond, was received with an undoubted ovation, and, on it subsiding, remarked that it was only a young society, but had flourished to an extent that could scarcely have been expected in Richmond. When they considered that Richmond was the metropolis of the Lower Thames, they would feel certain the members of the Society would take a great interest in the preservation of the fishery, and especially that portion so closely adjacent to their capital club-house. After referring to the great work that lay before them, and the evils that wanted removal, in respect to riparian rights, and the excessive rate of speed of steam launches, he said they desired to hand down the river Thames to their children as they received it, and to repress any attempt that might be made to take away the liberties of either anglers or fisherman. In reference to his visit to the Norwich Exhibition, he might say the fish they saw there caught on the previous day in the river Yare did not reflect much credit on the anglers, as some of the fish were only four inches in length, and full of spawn. Mr. Clench resumed his seat amidst great applause.—The chairman, then, announced the result of the competition. The first prize was won by Mr. Nattress, with a take of 5 lb. 13 oz.; the second by Mr. Dickinson, with 2 lb. 2 oz.; and the third by Mr. Goodale, with 1 lb. 10 oz. In these weights all jack are excluded.—Mr. Owen Davis proposed "The Thames Angling Preservation Society," as an institution which claimed the hearty support of all anglers and deeply regretted the unavoidable absence of Messrs. Spreckley and Brougham.—Mr. M. H. Blamey, whose name was coupled with the toast as a member of the committee, spoke of the work of the society in the netting of rivers, lakes, and other private waters, placing the proceeds in the Thames. They had now several very efficient river keepers, who did all in their power to preserve the fishery, and to see that the regulations were observed.—Mr. William Abbott proposed "The West Central Association of London Angling Societies," coupling with the toast the name of Mr. Geen, its indefatigable president.—Mr. P. Geen, who is very popular amongst the anglers, was loudly applauded, and in an eloquent speech of some length, referred to several matters of great interest in the angling world, notably the Bill of Mr. Dillwyn, which is to be discussed at a conference at the Society of Arts, on Monday, the 27th of June, and to which he hoped, they would raise a determined and universal opposition.—The Chairman then, gave "The Treasurer and Secretary," which was responded to by Mr. T. Abbott and Mr. J. H. Gaunt, the latter stating that the Society which was started in September, 1879, with six members, had now eighty on its books.—Mr. Gaunt afterwards proposed "The Visitors," coupled with the name of Mr. T. Hoole, the hard-working secretary of the West Central Association, who on rising so respond to the toast met with a hearty reception, and replied in appropriate terms.—The vice-chairman, in highly complimentary language, gave "The Chairman," who, in responding, said he had always taken great interest in piscatorial matters, and angling was his favorite pursuit. "The Press" having been given, and replied to, the proceedings were brought to a most satisfactory close, and so ended a most pleasant day, which will be long remembered by the members of the Richmond Piscatorial Society.

DUSK FISHING.—"Verimago," writing to the editor of *Field Sports*, says,— "Knowing Devonshire rivers well, and with some experience in trout-fishing at dusk, especially in the Dart and Teign, and in the lake district, I venture to recommend "Glaucus," whose articles are eminently sound and practical, to try the effect of using black gut, or horsehair. I have found the result of the change from a white or lightly-stained cast to a very dark brown or black, most eminently satisfactory, both at dusk and in the full glare of a summer's sun, when the water was at its lowest and clearest; and where the stained gut has not answered the horsehair has, even when I have used it in double strands. The black or brown hair can be got of much greater strength than the white or grey; and though not as absolutely strong as even thin gut, it is as elastic, especially when used as a long foot-line, and with a good horsehair reel-line, after it has been well wetted, that one can kill a very heavy fish with it with moderate ease. As a rule, the trout in Devonshire rivers do not run large, a pounder being a very good fish, but they are very game and handsome, both to look at and eat. No one ought to break a good horsehair over a pound fish; very large fish have been caught with single hair. Mr. Stoddart, in the earliest, and in my opinion the best, of his books, "The Scottish Angler," published in 1835, records the feat of a Mr. Paterson, of Edinburgh, who actually killed a twelve-pound salmon in the Tweed with a single horsehair! Droppers I dress on hare's whiskers; they are very strong, taper, and stand out stiff."

A STICKLEBACK IN MILK.—The late Mr. Frank Buckland in his "Natural History of British Fishes," relates that a milk woman served out at a door a pennyworth of milk, and in the milk-jug the servant found a live stickleback swimming about. When the fish, all alive oh! in the cow's milk, was shown to the old woman, she turned round to her boy and boxed his ears. "Jimmy, oh! Jimmy, you lazy rascal," she said, "you never strained the water!"

ANGLERS should always be provided with something to take away the swelling and poisonous effect of the bites of insects. They should also have with them something to apply to a cut or sprain. Pond's Extract reduces the swelling and inflammation, stops bleeding and pain, and hastens the healing process in case of any wound or sprain; and it has no equal for application to the bites and stings of insects. Therefore never go on a fishing excursion unprovided with a bottle of Pond's Extract. It is for sale at all chemists, at 2s. 3d., 4s. 6d., and 8s. 6d. per bottle.—[ADVERTISEMENT.]

GREGORY'S SPINNING BAITS.—"The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived. Address, James Gregory, Vyse-street, Birmingham.—[ADVT.]

TO ANGLERS.—W. J. Cummins, Fishing Tackle Maker, Bishop Auckland, is now prepared to forward to anglers his Illustrated Catalogue, which is not only a Trade List but is interspersed with practical hints, useful directions, and valuable information gathered by the river-side from twenty years' experience. The stock consists of his unrivalled Salmon, Trout, Grayling, and Pike Rods, Lines, Reels, Tackles, Artificial Baits, Fly-bobs, Landing Nets, Gaffs, and last, but not least, his celebrated Trout Fluke which for killing powers stand unequalled. Every article kept in stock is of the very best description.—[ADVT.]

RIVER REPORTS.

MID-THAMES.

The opening day arrived and passed without any grand demonstration in the fishing line. The fact is, the river is suffering from the effects of sheep washing, and why this intolerable poisonous nuisance should be allowed by the Conservancy, and the various angling preservation societies passes my piscatorial capacity. Sewage is not in the same street as far as infecting the river as the poisonous matter eliminated from the thousands of sheep, and which are washed just now, previous to shearing. Sheep suffer from many cutaneous complaints, become irritated, and can't "keep their wool on," and their possessors dress them with some fearfully and wonderfully made poisonous compound, which eventually finds its way into poor old Father Thames, to the detriment of fish-fishing, and common health. Very few fish have been taken since the first day, the best catch of roach being 15 lb., near Cookham, by two gentlemen fishing by themselves. Godden, of Cookham, has been daily out, also J. White, of Bourne End, but small items have been the daily record. Marlow has done a few small trout, and Hurley (to-day) a pretty fish of five pounds, Rockwell, sen., being the promoter of the punt. At Magpie Island, a trout of 5½ lb. has been had, and from Henley I glean "it is a caution" to see the barbel in various swims. Thursday Evening.

River a fair height, but not a nice colour for roach, chub, or dace. Wind, S.W.—MARLOW BUZZ.

Thames (Goring).

Water in very good order for chub and roach, but roach are not biting much. Fishing with Mr. Hue, of 231, Camden Road, Holloway, London, six days, 50 lb. of chub, 9 jack and some perch.—JOHN RUSH.

Thames (Kingston).

I have not much news to send you. I have been out once, caught a small trout, which was returned, and a few chub, small, not weighing a pound. The chub was milky, and plenty of louse on them; the roach have not fed well all this week, and what you get are as slimy as eels. Plenty of small barble jumping out in the streams, but few fish taken from the banks.—JOHN JOHNSON.

Thames (Richmond).

I commenced my season on Monday with Mr. Kilroy, who caught ninety-three splendid dace and one barbel. On Tuesday, with Mr. Bachuss, in a few hours, three dozen dace, one barbel, 2½ lb. On Wednesday, with Mr. Morse, five and a half dozen dace. This day (Thursday), with Mr. Richardson, five dozen of dace. C. Brown, in two days, four dozen dace; H. Howard, one day, three dozen dace; G. Howard, two days, five dozen dace; E. Brown, one day, three dace; H. Wheeler, one day, twenty dace; Job Brain, in five days, sixteen dozen of dace and three barbel; H. Mansel, in three days, twelve dozen dace. The dace are running a very good size, and it looks to me to be one of the best seasons I can remember. I heard of some gentlemen coming to Richmond the other day, and got a wrong man. Now this is entirely their own fault, or perhaps they don't read the GAZETTE. If they would only drop me a line I would find them a good man: and then if they do not get a good day's sport it would be the fishers' fault and not the man.—J. BUSHNELL, fisherman.

Thames (Sunbury).

Water clear; wants rain; prospects, fair. T. Stroud, four days; best day, 1 jack and 6 chub. A. Stroud, two days; best day, 2 barbel, and 4 chub. J. Stroud, four days; best day, 2 jack, and 3 perch. Abram Stroud, three days; best day, 8 chub, and 1 dozen roach.—ALFRED. STROUD.

Thames (Windsor).

Some good showers have fallen and water has been greatly benefited. Worm fishing ought to answer well, especially if an old trout is known to be lying in or near a barbel swim. Already a brace has been had ledgering for barbel, but small. Hockley, Esq., of 84, Old Kent Road, was the captor of this pretty brace, and Dick Gray, his fisherman, in addition had about 17 lb. of barbel. James Gray has been getting some good barbel, and gentlemen wanting a day at them should drop him a line; he has now some good swims baited and with the late showers there is a good chance of getting amongst them. His address is 1, Baker's Buildings, Eton. A good many jack have been had, though it is much too early. The only decent fish I know of is one of 11 lb. 3 oz., taken at Bell Weir. Roach are rather shy and but few have been had; the best I have seen weighed 1 lb. 9 oz., and was not in first rate order. There has been a deal of wind, but water is not in bad order, though it is full early for anything, as there is such an abundance of young weed for them to feed on that they care not for the angler's lure.—B. R. BAMBRIDGE.

Bure (South Walsham).

Messrs. Palmer and Varvel, of the East Anglian and Champion Clubs, and Mr. Sheldon, of the Court Minstrels, visited the above spot on Monday in the present week, and were rewarded by a magnificent catch of about 6½ stone. The fish were principally bream and rudd, and were in splendid condition. These gentlemen speak of the river being literally alive with fish, and no doubt as the season draws on numbers of such takes will be reported. Those who have not yet paid this spot a visit will do well to avail themselves of the opportunity at once, not merely for the purpose of angling only, but in order to inspect the remains of what was once a magnificent abbey, viz., that of S. Benedict.—ANGLER.

Bure (Norfolk).

The sport amongst rodsters has been extremely brisk during the last week, reports of good takes coming in from all quarters. Amongst those which have

come under our special notice was a fine show of bream, rudd, roach, &c., which were taken at South Walsham, near the historical St. Benedict's Abbey, by Messrs. Alfred and Robert Palmer and W. A. Campling, members of the East Anglian Piscatorial Society; also about two score of fine roach taken by Mr. Tom Saul, of the same club; Mr. G. Webb and friend likewise showed a very decent basket of bream flats, taken near Coltishall on the same stream. An immense quantity of fish are reported to have been seen at all the fishing stations on the river, but we cannot say that bream are fairly on the feed yet. Undoubtedly, after these magnificent rains, and with the wind in the right quarter, some fine fish will be the result. Several matches are announced amongst the various clubs during the next month. The first being that of the Champion Angling Club, which will take place at South Walsham. A number of costly and valuable cups and other prizes are already on show at the clubhouse, where they may be inspected through the invitation of the courteous secretary, Mr. W. Chettleburgh. The next following is that of the Norwich Piscatorial at Horning. This club has had presented to it a magnificent challenge cup, value twelve guineas, to become the bona fide property of a member winning it twice. Other valuable prizes are also offered. The club contest of the East Anglian Piscatorial Society takes place the last week in July, but the spot to be selected is not yet decided upon. As I write I have just heard of a salmon trout being taken in the heart of the city (in the Wensum) by a member of the Beehive Angling Club, its weight being about 2½ lb.—ANGLER.

Coquet (Northumberland).

AN OTTER HUNT.—The river is very small, although we have had showery weather, but nothing to discolour it. On the 17th Mr. J. F. T. Dance killed 6 lb., on the 18th Mr. Treweek killed nine trout, 4 lb., all with worm, on the same date T. L. Wilkinson, Esq., Neason Abbey, arrived with his otter hounds, and stayed over Sunday, and on the Monday at 5 a.m. commenced hunting. We had a very small gathering until we arrived at Brinkburn, and then the Rathbury and Flamington people added a good number. Just half a mile above the Priory the dogs called, and were on the scent until we reached the Black Burn, and there we were cast up for a few minutes. Then on they went till they reached Rothbury and had another cast up. The dogs refusing to go any further they returned to the Blackburn, and then were off in full cry again until they reached Paperhaugh, and another cast up occurred, when the terrier was required, and soon did Pincher give mouth and a good battle was fought with the otter, but they lost him. Mr. Wilkinson drew the dogs for half an hour, and then put in again, and up the river the dogs went full cry, till again they reached the Blackburn, and another stop took place, when Pincher was required again. As soon as he went in the otter seized him by the head: then one of the hounds got hold of the otter by the hind part and drew them both out clasped together. Mr. Wilkinson tailed him, but he came back into the water, and then all the hounds went to work and soon killed him, which ended a good day's sport. Miss McCabel got the otter.—A. GLASS, Anglers' Inn, Weldon Bridge.

Dove (Derbyshire).

The river is now slightly coloured by the rains of the past few days, which have now washed every vestige of May fly away. Last week and the beginning of this week saw some good dishes of trout taken with the grey, or what is sometimes designated the black drake. Several of which numbered over nine brace. Notably one take on Monday, which numbered nine brace of fine lusty fish, all being trout. This was the closing day of the May fly season, the flies being very scarce indeed. In fact it was generally found more difficult to catch the "live burrs" than to catch the fish. The opening day in the grayling season proved anything but favourable for fly fishing. Towards evening, however, there were a few good fish landed, one of which scaled over 1½ lb. This formed part of a dish taken from the Dove Dale length by Mr. D. Foster, jun. Some good baskets of trout, ranging from four to six brace, were also taken with the May fly, which were then on the water in myriads. Minnow fishers have been having a good run since the heavy rains of the past day or two, more especially upon the tributaries of this beautiful river.

Exe (Exeter).

Horace, the lyric poet of Rome, spoke of the winding stream that hastens through the pleasant fields; and Burns says, charmingly, "The muse, no poet ever found her, Till, by himself, he learnt to wander, Adown some trotting burn's meander, And nae think lang." Rogers, with equal beauty, makes the stream to linger. This is poetry, which transfers to external nature the accidents of human action and emotion. Moving water, in particular, having already a semblance of life. It whispers, it prattles, it smiles, it chides, it chafes, it is angry. (So says that beautiful little book of class poetry issued by the National Society's Depository, Westminster.) Wordsworth also subtly says, "The river wanders at its own sweet will," and Coleridge speaks of "A hidden brook in June, That to the woods all night singeth quite a tune." What angler has not, more or less, felt (even if at a loss to note them down on the loose memoranda sheet that should always accompany his fly book) the beauties of the above lines? And a few pieces of poetry, such as we occasionally get in the FISHING GAZETTE, for instance, the "Angler's Wish," by H. N.; "Welcome Anglers," by T. Crumplen; "Fly-fishing in July," by F. B. Doveton, &c., &c., I am sure would be welcomed by all. The time has now arrived when the seasons give us the greater varieties to select our muse from; and, although our sport may not be of the most successful, there are very few true anglers who return to a sullen mood but are ever ready to recount the enjoyment derived from the beautiful surroundings, and that boon so many crave for, the stimulating and invigorating mouthful of fresh air. The Exe, although it has been very low for some weeks past, owing to the long drought, is not only getting, but is in first-class fishing order, and since the opening day, has been well patronized by the craft. Salmon are on the increase, and several have passed upwards during the fresh, a slight falling off in trout. Perch very plentiful, the most successful up to Saturday being Messrs. Horspool, Sercombe, A. Hete and Connert, the former taking a splendid fellow of 2½ lb., which is the largest taken for some time; the next largest was taken a season or two back by myself, weighing 2½ lb.; the latter gentlemen taking baskets of two and three dozen each, and of fair killing size. Mr. C. Blake, R.M.A.C., with Messrs. Holman and Kenshole, showed a fine catch of bass and flounders from the estuary, and last, but not least, Mr. J. A. Kelly, with a nice show of eels and a beautiful tench nearly 1½ lb. weight, from the ponds at Exminster. A preliminary meeting of the Royal Museum Angling Club was held on Thursday last, when it was decided to give it every publicity possible; and should any of your Devonshire readers, who have not been apprised of the same, and feel desirous of becoming members, we shall be most happy to give them a true angler's reception, as only anglers can do. The rules, which were heartily approved, were compiled partly from rules laid down

in the FISHING GAZETTE of December 11, 1880.—FRANK GOSDEN, hon. sec., *pro tem.*

P.S.—A splendid dish of nine trout, weighing over 8 lb., were shown by Mr. C. Blake, taken this morning (Monday) before nine o'clock from the Exe, the handsomest of which I have to preserve for the club-room. Mr. Dobles has also just brought in a basket of seventeen trout, the largest weighing 2½ lb., from the Exe.

Lea (Cook's Ferry).

Since the opening of the waters we have been favoured with large numbers of anglers from all parts in and near London. The late rains have greatly improved the condition of the waters, they have been full of fish, which fact was proved on Sunday, for most of the anglers had large bags of fish. The weather fine, the country full of natural beauty, with the railways and trams in request at low fares which gave great pleasure to those who started to enjoy the sport on the first Sunday in opening season. A person had a policeman on duty all day for the purpose of keeping people off the grass, which should not apply to anglers, for they go out not to do wrong to any one, but to improve their health and to indulge in fishing. On Sunday last they were not allowed to use the banks of the river, but were driven away, some of them would not go after the policeman told them to go, so they had to give their name and address, and were told that they will be summoned for not obeying the order. Now I am informed that fourteen feet of the sides of the river, anglers can use without any fear of doing wrong, and the space between the posts and the edge of the river is the widow's mite, and not the landlord's, so that is one more reason; but should any doubt be in the minds of anglers, why not have the point settled once and for ever.—S. SEWELL.

Swale.

The river had run very low, but the late refreshing rains have proved a godsend both to the farmer and the fisherman. This is a river which has a very rapid course, hence it soon runs down after rain. One day it is in a state of flood, and the next is often in good ply for fly-fishing, but two days are generally sufficient to bring it down to the coffee-tint so much admired by anglers. Mr. Barker has two flies made from the night-hawk, with which he kills wells. One is made from the top of wing with orange body, the other from underneath the wing and yellow body. The latter he calls Barker's fancy. Having looked into the matter, I give it as my opinion that the former represents the freckled dun, the latter the early brown, or, in other words, outside and inside woodcock. The only difference that I can note is that the two flies are of darker shades. There are now about eighty or one hundred well-known flies on the water, but some of the best are the dotterel drake, yellow drake, light drake, starling drake, black drake, freckled dun, dotterel dun, sanded dun, oak fly, and the ant flies.—THOMAS FORD.

Suir and its Tributaries, Clonmel (Ireland).

We are glad to say the rain came at last, but it did not raise the river much until Saturday last; it is now like peaseoup; but a few fine days will clear it sufficiently, when we are quite sure there will be splendid fishing. The peal are running now, the cotmen killing from four to six each every day this week. Saturday and Sunday being the weekly close season, and being the beginning of the flood, a good number of fish got up the river. The trout fishing is excellent on all the mountain streams, and several good baskets were got. The killing flies at present are spider wrens and yellow black hackles for day fishing and for evening and night rails.—DORA.

Trent (Alrewas).

At last we have commenced the legitimate season, but I am sorry to say the weather has not been of that agreeable character one would anticipate for the time of the year; rain has fallen more or less every day, while the wind, one, if not the worst, of enemies to the followers of Walton, has proved a regular caution, at times putting one in mind of March instead of Midsummer. Considering all these unpleasant matters, the few who have braved the elements have had little cause to grumble of bad sport, the takes have not only been good in point of condition, but the samples of the different kinds of fish were first class. Dace and grayling are in good order, likewise perch, roach are in much better condition than I expected to find them, in fact, I never recollect finding them so bright so early after spawning, which I attribute to the low state of the water on the scours. Big barbel and chub are knocking about on the shallows, but I do not anticipate their feeding for another month. I took a small one, 2 lb., on the opening day with a cod bait—which, by the way, is a capital bait for barbel this time of the year. The following are a few among the many takes during the week:—Mr. W. Reynolds, 100 roach and dace; Mr. S. Basnet, some good roach and a brace of perch, 1½ lb.; Mr. J. Parker, 7 lb. of roach; Mr. W. Seal, a few chub of 1 lb. each, and a nice sample of dace; Mr. H. Jephcott, 14 lb. roach, the largest fish 1 lb. 5 oz.; and your humble servant on Thursday, thirty nice roach, the largest 18 oz., a grayling of 1 lb., and few nice dace. The weather to-day has a more settled appearance, the wind is also in the proper quarter. Roach and dace are feeding well on both cod bait and gentles, and with our rivers well stocked with fish everything points to one of the most successful seasons for many years.—JAS. GREGORY

Witham and Fen Drains (Boston).

At no period in the memory of the oldest angler in June have such quantities of roach been taken as on the 16th inst. and up to date. The various waters literally abound with well-fed fish of excellent size, although many have not spawned, and others very rough. Some of the takes are marvellous, it being quite an ordinary one of 20 lb. to 30 lb., whilst one Bostonian secured upwards of 50 lb. in five hours; many of the fish scaled from ½ lb. to ¾ lb., and pounders were by no means scarce. The pike season opens on Saturday, the 25th, spinning will be out of all question in the present state of the weeds, but many a victim will succumb to the deadly live bait. Whilst strolling on the banks of one of our favourite drains last Saturday, taking notes, &c., I was accosted by a veteran native of the adjoining village, who had done a lot of netting in his day, thus—"Guvner, yor wrong of the drein (drain); yor see that bed of flags about thirty yards long at the end of the neck (breach), well, I see a few days since seven or eight pike lay there in the sun, and they wor 'skelpers,' " whatever that may mean. Some tench, going from 1 lb. to 3 lb. are daily secured. To those unaccustomed to the habits of this fish, it is a sight worth observing now they are spawning, rolling about by scores, like porpoises amongst the weeds.—J. R. BARNES.

CORRECTION.—In our review last week of the "Practical Fly-Fisher," the publisher's name should have been *Slack*, and the address *Busby Place*.

CORRESPONDENCE.

[We do not hold ourselves responsible for opinions expressed by our Correspondents.]

THE PROPOSED AMENDMENT OF THE MUNDELLA ACT.

MR. EDITOR,—I must congratulate you on the sound sense and practical truth of the last paragraph of your editorial article of June 4th. Few anglers who write in public on the subject of fish protection have any knowledge of the great principles on which such protection should be based. There are certain individuals, having a kind of piscatory patriotism, who may be called Protectionist, that blindly rush to any standard bearing the name; albeit the principles involved in the teaching of these dogmatic and unpractical schools is utterly at variance with the truths revealed to the ardent naturalist and true fisherman.

These would-be savants desire to land fish into such a degree of utter wretchedness and multitudinous poverty, with dearth of food, that the half-starving, attenuated and diminutive objects of their pseudo sympathies will be infallibly impelled, by the pangs of irresistible hunger, to gulp down, heedless of bygone warnings, any clumsy, undeftly-wielded baits that these ostentatious instructors of others may themselves place before the fish. When this day comes may I quit the banks of the river! My wanderings at the waterside have taught me too distinctly that fish are self protective from the rod and line. The number of small individuals caught in rivers vastly exceeds that of the large, but it is absurd to think this proportion absolutely indicates the relative number of fish of different ages in the water. Small fish in time become wary, but the older members of the race have such a perfect knowledge of the angler and his ways, that they have learnt to ignore his crudities, his artifices. Let Mr. Mundella essay the angler's task with some aged trout or carp; he will soon have practically proved whether fish are, or are not, self-protective against the abilities of the rod. I could show Messrs. Geen, Bonvoisin, and Keene, rivers abundantly stocked with, for instance, trout one pound and upwards in weight; and I am assured, were I to accompany these gentlemen, and watch their efforts with the fly-rod in one of the best natural fly-streams I know, for a period of three months, there would be few fish of these dimensions found to have entered their creels, owing to the complete wisdom of the fish, and not to any want of skill of the anglers; moreover, every first-rate brother of the craft whom I have met and with whom I have interchanged ideas on the subject has stoutly affirmed that no rod-fishing can injure streams, that it is the nets and other poaching implements which are the destructive agents. It is true, bunglers in the art may suffer by the increased wariness of the fish, but then the bungler should become an expert; if not, he deserves to suffer.

Having been a conservator myself, and having also had a considerable experience of poachers themselves, their proclivities and their ideas, I find all reliable evidence leads to the same conclusion; and I therefore endorse your statement, Mr. Editor, when you tell us (like your Norfolk correspondents) that you know streams or waters so prolific in fish, that neither rods nor poachers, sewage nor natural enemies, can avail much in reducing the supremacy of the fish.

I am aware, too fully, of the frequent cry which is often raised of dearth of fish and a frightful percentage of poachers in some rivers; but I also know that this false cry of "Wolf, wolf," is too often the result of a bad day's fishing of some inexperienced angler, who therefore blames the poacher when he should mentally exorcise himself for not having faithfully followed the teachings and principles of Walton and Cotton, whilst presuming to consider himself no mean pupil of the old teachers. It is, no doubt, aggravating to have bad sport; and this I have at times severely felt; but then, I have at last learnt to know that an abundance of fish is actually present by the behaviour of the fish themselves; having sufficient skill at least for this, and having only once angled in a river where there were no fish whatever; a fact, however, I very soon discovered. Thus I know that if my creel be scantily loaded, its want of weight is owing either to my neglect of some important maxim of fishing with want of skill; or, otherwise, to some temporary inertness of spirit which makes me so idle as to substitute an inferior self for the one which at other times will surmount all difficulties and inconveniences with the one object of attaining all that is attainable.

Again, in relation to your other editorial note of June 11th, I fear this time, Mr. Editor, you are a little too sanguine; for though there is no doubt "that the fear of rod poachers is a bogey" to most hallucinated minds, yet I am afraid it is a little venturesome to predict that London and Sheffield anglers will some day admit their errors: this is not a common attribute of the human mind. The present system of fishing protection throughout the country is conducted mainly on wholly erroneous principles, and requires reorganising from its very foundation.

A close time in relation to coarse fish is no good; is simply a mere farce; several of these fish being altogether unpalatable, and the rest of such a mean and insipid flavour as to be entirely useless as a staple article of food in competition with superior fish. In relation to fish of a higher order, I may merely add the words of the "Trent Otter"—who, though a blacksmith, may be a gentleman for all that—are strictly true, absolutely incontrovertible, "rod fishing will never hurt a river in the least degree." These facts I expressed on October 23, 1880, in a letter in the FISHING GAZETTE, in the Samlet and Parr controversy, but then much more emphatically. I could show the three previously-named gentlemen *burns* in which considerable poaching occurs, even of an utterly vile description, where good fishing is to be had; and therefore I say it may be an easy thing to stupefy the discriminative powers of committees of the House of Parliament with plausible sophistries, such as the upholders of the recent Act so profusely fabricate. But let our hypothetical representatives be so deluded; we are ready "to bide a wee"; yet, at the same time, we will not allow ignorance to override truth by not upholding the latter, for we know that it will come to pass that "Time will, in his own crude way," declare who are the better naturalists, and who the better anglers. Let it do so; of such an exposure of the truth I stand fearless. In the meantime we register our opinions, our convictions, in the FISHING GAZETTE (? for some, the fashionable notion of the hour sometimes leaves its stamp).

There is one point, however, to which I have still to allude, namely "close time," as there seems to be some hard thrusting and parrying going on in this direction. A fish preserved at one time of the year is as valuable a *life* preserved as at any other; but, if not, the value of its life is approximately greatest just previous to or at the time of the first active sign of increase in the reproductive organs; and I challenge any one to disprove the statement. Why not, then, protect at that time, and ensure the greatest number of healthy individuals? This is plausible! In the next place, after spawning, fish are mostly

of little value; probability of life is at a minimum. Why not, then, catch and eat, if eatable, when, possibly, the fish may succumb to exhaustion, and so be lost? This, too, has plausibility. Mr. Keene tells us that all fish are in best condition when the ovaria "are about one-third developed." Even if this were true, it would not alter the fact, that the flavour of fish is better during the whole period of active ovarian development than at any other; for trout retain exquisite flavour until fully in the act of spawning, and sometimes even all through and after, despite a slight emaciation, although this is more rare, and is dependent on relative abundance of food, as opposed to want. But if a "close time" is a thing that must be, it should certainly exist after the act of spawning, as then fish are comparatively valueless, and, though more liable to death, may still to a certain extent be preserved. It is now the general practice to preserve the small fish, and catch the largest specimens which will allow themselves to be caught; despite the fact that it is these very self-same large fish which are the breeders! despite the fact that these fish are seldom in good condition more than three months! despite the fact that small fish are not the breeders, and are always in good condition; that their abundance reduces the size and number of the uncatchable breeding fish, or of similar fish which can only just be caught by great skill! Notwithstanding that it is true that large fish, if once caught, can be returned to the water, comparatively uninjured! whilst the smaller brood is the subject of painful and often fatal injury, and in utter contempt of the immemorial maxim of old anglers, that rivers producing large fish have naturally comparatively few inhabitants; whilst those teeming with occupants are notable for the smallness of the fish! Size of fish must have a direct or inverse relation to number of individuals and food supply taken together, if one of these elements be constant—regardless of the fact that the number of fish uncatchable by the rod always suffices, with fair play, for breeding purposes. One correspondent, attacking rod fishers, practically admits the impossibility of preventing poaching; if this admission be correct, legislation is impracticable. I, however, deny the premise, and say that it is poaching and pollution that must be rendered impracticable.

And now, finally, Mr. Editor, if ever it should be your lot to have to speak authoritatively to Piscatory Commissioners, &c., I would strongly urge that you should advocate the complete expunging of clauses 1 and 4 of the late Act with the uttermost strengthening of the 2nd, 3rd, 5th, and 6th, with material additions relating to sewage, beds of rivers, planting of trees, &c.; and you might suggest that judicious administration of "Thong" would not be unsuitable for malefactors. I find the *nom de guerre* of an old opponent useful in this place.

THE RAVEN.

SIR,—I have heard it remarked by counsel in courts of law on more than one occasion, "If you do not possess a good cause, vilely abuse the other side," and "E. N.," Mr. J. H. Keene, T. Hoole, and H. A. Haketonian undoubtedly are fine samples of advocates of their individual opinions, possessing extremely weak cases. I will not justify my assertion, but leave it to the readers of your issue of the 16th inst. "Murderers of Lindley Murray," and they are not rare, have opinions of their own, which it is well they should express; it may result in benefit to mankind in general, and the legislator may glean from the thoughts of the ignorant substance tending ultimately to affect the destinies of a nation. Ignorance of London piscatorial club affairs may not entail ignorance of country clubs, or of East Anglian fishing, and Mr. Geen may, as Mr. T. Hoole has it, be honorary president of one club, treasurer of that, and honorary member of a dozen other clubs or societies, which honour is easily obtainable by contributing certain yearly subscriptions, entitling one to the same high distinction as he possesses; yet, as far as Norfolk fishing be concerned, he may be as ignorant of the subject as it is alleged a Norfolk angler is of London Waltonianism. Mr. Geen is an acknowledged authority on Londoners' fishing. With the deepest and most profound respect for him, I say let him be so, and credit him with the knowledge of his own particular district; but, at the same, it should not be forgotten that his knowledge of our waters may be limited, and he should not be suffered to interfere with the regulation of those rivers of which he knows little indeed. London anglers, I leave him to battle your cause, and sincerely wish you success; but I turn to other metal.

One cannot but regret, from the ability shown by Mr. Keene in his letter, that he should have advocated the cause of Sunday fishing, and with frothy words attempt to show that fishing on Sundays is more remunerative to body and soul than devotion to that Supreme Being from whence we derive our existence. However, like him, I leave Sunday fishermen to their deserts. The evident object which a "Norfolk Angler" had in his letter was to oppose the proposed alteration in the Mundella Act, applying it to the Norfolk river, and a "Norfolk Angler" was not without good, true and lawful reason. Notwithstanding friend Haketonian found Wroxham Broad a profitless investment of his 2s. 6d., which payments are applied to the funds of the Norfolk and Norwich Hospital, it still is the fact that there are abundance of fish to be found in our rivers than may be in Wroxham Waters. The reason for the excessive quantity of fish in these parts is easily arrived at. The county of Norfolk, as a rule, is exceedingly flat, without a single hill of the least magnitude, consequently its waters are extremely sluggish, and there is not the tithe part of the swiftness nor the constant navigation to be found in the Thames and other rivers. The quiet stream, whose bosom undisturbed, slowly wends its way, and stops only with the tide, and then flows gently back. See what opportunities it gives the fish in the spawning season; no rushing of waters to scatter the spawn away in every direction, but like a vast preserved fishing pond, the seed once deposited in Norfolk waters, there is ample opportunity for the male fish to complete the work of genitine. The late Frank Buckland saw, was well aware of, and said as much. Therefore the damage done by the rod and line during the spawning season, and whether the fish caught are full or not, cannot materially prevent any of your London correspondents availing themselves of the loving sport (without breaking the Sabbath), and getting a good catch of fish, if they only know where to go, which, sir, you regularly communicate in your columns.

Sir, we in Norfolk do not require fence months. We have only to look to the clearing of our streams of the filthy refuse coming from the town sewerage, and the poisonous matter emptied into the river from various manufactories in Norwich, which destroy the fish by thousands, and if not, renders them totally unfit for human food. Why, sir, fifty years ago our Norwich river was so clear that you could see the bottom and the big fish swimming about it. 'Tis not many years ago since I bagged fish in the heart of the city weighing from 2 to 3 lb. But, alas, since that period the river has been vilely polluted, the whole of the town sewerage being emptied into its placid bosom, till the river looked more like a wretched stagnant pool than a healthy flowing stream. However, the river is now a trifle better, the sewerage has been to some extent

diverted, and one looks forward to the old times of pleasant days' sport in fishing. As an encouragement, I am told that on Friday last a fine salmon trout was caught quite in the heart of the city.

Sir, I trust you will excuse the length of my letter, but in conclusion allow me to make a suggestion to my fishing friends and to the Waltonian clubs generally. Let each of our clubs call a meeting of its members, for the purpose of discussing the merits and demerits of establishing in their own waters a close season, and to pass such resolutions thereon as the majority of its members think beneficial to the districts in which they reside, those resolutions being forwarded to the proper quarters so well known for that purpose, and every disciple of the gentle art putting his shoulder to the wheel to preserve the privileges and benefits of his own district, will enable our fishing advocates to suggest legislation satisfactory to fishermen in general, and beneficial to the public generally.—I am, &c.,

PIXIE.

SIR,—In answer to various letters contained in your valuable paper of the 18th inst. in reply to my former communication, I will take the first, signed by Mr. P. Geen. He speaks of "angling liberties" being handed over to county justices, and Sunday outing being exterminated.

I consider by what he is advocating that he is not the working men's angling friend. He would take from them their nearly only one sporting liberty left—that is, catching a few fish in the beautiful evenings during the spring, when the labourer has done his work and has an hour or two to spare. Why is Mr. Geen advocating a close time in Norfolk nearly all through the year—viz., from January to July? I would ask him in fairness whether he would prefer a "Yarmouth bloater" with a nice "roe" in it, or, as we in Norfolk call them, "shotten"? I myself not being in the habit of living upon anything inferior would prefer fish in good condition—that is, freshwater fish—to the end of April, as I consider, and so do a great number of other persons, that empty fish are not fit for food; and I am sure I must agree with several of your correspondents that where close time is law, various close times ought to be regulated for different kinds of fish.

As to Mr. Geen's knowledge of Norfolk fishing, I should say it is extremely limited, and all his presumed knowledge is founded on theory only.

The unmerited stigmas contained in the remarks of some of your correspondents are enough to make all Norfolk anglers lose their tempers; and when they read such unadulterated inconsistency, as put forth by persons who ought to know better it is not at all likely they will scruple to use such language as adequately meets the unjustifiable vituperation to which they have been subjected.

I doubt whether Mr. Geen's ideas are endorsed by the twenty thousand London anglers which are so boastfully talked of. He speaks of fishing in the London close time as unsportmanlike. Where such is law I entirely agree with him. Mr. Geen's wishes seem to me to be a morbid selfish desire to use his "pets" for amusement only. In Norfolk many working men anglers go really at times on purpose for a fry of fish. Would they go when the fish are thin and flabby—that is, after they have spawned? Certainly not; they are not knaves, they know when fish are good, that is in the cool months of spring, when Mr. Geen and others would have us stop fishing. I leave it to any man of ordinary sense to say if fish are not at their best up to the time they spawn. But enough of sham philanthropy, I hate it, and will always pertinaciously and uncompromisingly unmask the exponents of it.

I was talking with a very old angler the other evening (a gentleman who has had the pleasure of fishing with "Greville F.," of the *Field*) about a close time for Norfolk; he laughed, and scorned the idea, and also asserted that instead of a close time a little netting of small fish (roach, bream and dace) ought to be done on purpose to reduce the great number of small fish, so that the rest might have more scope to come to better perfection. He likewise considered that a close time for pike and perch was necessary, as there is not enough of those fish to regulate our rivers.

With regard to Mr. J. H. Keene, I am surprised at that gentleman backing up Sabbath breaking. He seems to be "straining at a gnat and swallowing a camel, for he would lead us to believe that it is a more heinous crime to catch a few fish in certain months of the year, than it is to be an habitual Sabbath breaker. As regards the wrinkle or two he could show me if I were in London, I very much doubt it. If "elegant tackle," coupled with the want of knowing how to fish, make a crack angler, even in the much-boasted-of metropolitan waters, I opine that the old proverb, "fine feathers made fine birds," would unmistakably be reversed.

I have lately had curious demonstration of witnessing the exploits of some of the London and Midland county crack anglers. One of those gentlemen was fishing at Acle a few weeks ago with three friends of mine, and actually, while our local angler with his Norfolk tackle, which Mr. Keene ridicules, in the same boat kept landing large bream, the London expert with his costly tackle could only land a few eels and ruffs of about 1½ oz. each. I am of opinion that we could show Mr. Keene very many wrinkles. Also I fail to see by what right the London gentlemen arrogate to themselves the claim to interfere or intermeddle with Norfolk anglers. There is nothing like blowing one's own trumpet, and if I were to take for granted one-half what several of your London correspondents say I should put them down as extraordinary anglers and truly wonderful men. Apologising for troubling you once more—I am, &c.,

A NORFOLK ANGLER.

SIR,—In last week's GAZETTE a few letters appeared that seem to me to merit a reply. Mr. Hoole says "that the 'Trent Otter' evidently desires to make Mr. Geen's name obnoxious to the anglers." The "Trent Otter" desires to do nothing of the kind, he is only too glad that there are such men as Mr. Geen, if it is correct what Mr. Hoole says of him. If I did not understand Mr. Geen aright, and attributed opinions to him that he never possessed, I am very sorry. I have no wish to insult either Mr. Geen or Mr. Hoole, but discuss a question in a fair and impartial manner. Mr. Geen's opinion is as valuable to him as mine is to me, and if we differ we will agree to differ, and shake hands over our differences if we ever meet. If I misunderstood his letter, and it is the general opinion of your readers that I have insulted Mr. Geen, why, I am very sorry, and will send him an apology; but still, the question is an important one, and wants discussing freely and openly. Should any angler feel hurt at anything I say, I hope he will speak out freely. Since sending my last letter to the GAZETTE, I have carefully read the text of Mr. Wortley's Bill, and I can say that it does not exactly suit me; it is right a little and wrong a good deal, but no good can come now from discussing it, so I will leave it to its fate, and turn to the true amendment of the Mundella Act. I have read the suggestions of Mr. Geen in this week's, or rather last week's GAZETTE, and I can say that I agree with some of the clauses.

Nos. 1, 2 and 3 have my hearty support, and as for the others, why, I am open to conviction. And now, before proceeding further, I must turn to the letter sent by Mr. Weaver to Mr. Geen, and also the report of the Newark and Muskham Fishery Association, of which Mr. Weaver is the hon. treasurer. The meeting of which the report speaks was nothing like so important an affair as Mr. Weaver would make Mr. Geen believe it was. I am not a member of that association, but members who were there told me that the special meeting referred to was only *very* thinly attended, and they also wished that I had been a member, so that I could have gone to the meeting and proposed an amendment. They said they would have taken care that I had plenty of support, for they would have gone to the members who feel rather sore about the action of Mr. Weaver, which I will explain presently, and requested them to attend; but as it was, they had no one to speak up for them, and as the great majority of the members kept away and allowed Messrs. Glover, Weaver, Curtis, Neal and Co. to have their own way, and the result was a very thinly-attended meeting and the adoption of the report in last week's GAZETTE. And now, so as to let your readers grasp the whole of the difference between working-men anglers here and Mr. Weaver, it is necessary to go back a little before the passing of the Mundella Act. A public meeting was held, and Mr. Weaver was one of the speakers, and there are several of us who have a lively recollection of what Mr. Weaver said. In the course of his remarks he said—"Gentlemen, you will not be entirely deprived of your sport during the proposed close season, for there will be certain fish that you can take, such as eels and flounders." After giving this promise he met with no opposition to his motion, and the result of that meeting was the adoption of a resolution in favour of the proposed Mundella Act; but as soon as ever the Bill became law Mr. Weaver was one of the very first to cry out and say that eels and flounders were included in the close time. This action naturally made the working-men anglers here feel very sore. Mr. Weaver is a member of the Newark Town Council, and some time after this he offered himself for re-election at the November elections. If there had been any opposition, he would most certainly have been defeated, for lots of working-men anglers, who like myself are voters for the North Ward, would certainly not have voted for him then, for they remembered his promise at the meeting and his subsequent action. Mr. Geen says, in reference to Mr. Weaver's letter to him, "That the 'Trent Otter' only represents one side of the feeling in Newark," but I venture to say that I represent by far the greatest majority of working-men anglers here. An old member of the Newark and Muskham Fishery Association, in a conversation we held about the meeting, told me he was perfectly disgusted with the action of certain prominent members of that association. "The very idea," says he, "of half a dozen members of that body to over-ride the opinions of about two hundred working-men anglers." "I consider," he continued, "that the promise obtained from our borough members to oppose Mr. Wortley's Bill was obtained in a questionable manner. Why not," added he, "have had a public meeting of all the anglers in the town, and let the whole case be stated, and I am sure Mr. Wortley's Bill would have had a majority of supporters; and," continued he, "I was surprised that no one got up at the meeting and got on to Mr. Weaver about the eels and flounders, and taken steps to have them excluded from Mr. Mundella's Bill." This then is the opinion of an old angler who was there; but I will not commit myself by saying anything about it. Of course that meeting was perfectly legal and the members present were justified in what they did. They had a perfect right to ask our members to oppose Mr. Wortley's Bill in Parliament, but as my words have been challenged by Mr. Geen, I have taken the liberty to state the whole case as far as the working-men anglers of Newark are concerned. The sore spot with our anglers is the eels and flounders; they think that they ought to be allowed to take them with rod and line at any time, for I know that fish have been taken every year during the close season, by both night lines and nets, and yet anglers were not allowed to take a few eels and flounders, which fish are in capital condition during May and June. Anglers naturally feel the injustice of this, and I can say that our working-men anglers would be content if the eels and flounders were excluded from the Act, and a heavy penalty put on any one taking a scale fish during the close season, or netting, and also stop the sale of fish for another month at least. I must now conclude and finish this letter another time.—I am, &c.,

THE TRENT OTTER.

SIR,—As far as the benefits supposed to be derived from the "Mundella Act," in this part of England, are concerned, they are not worth much, the angling clubs only adhering to its strict letter by not angling during the restricted time; but as there are no keepers or watchers over the rivers, &c., poaching and snatching is carried on to a great extent, and even when the 16th of June arrives (which date is at least a month too early hereabouts for roach to be in good condition), the very ordinary class of fishermen will take them when full of spawn, at the time they are making for the becks, thus destroying thousands of fish, which it evidently was the intention of the Act to preserve.

I may add, that the proposed amendment of Messrs. Dodds and Stuart-Wortley would be appreciated, I believe, by the majority of Hull anglers, if carried.—I am, &c.,

HENRY BOOTH.

Prospect House, the Arcade, Hull.

SIR,—I am now more than ever convinced it was a mistake to interfere with rods by Act of Parliament. I have always looked upon the Mundella Act as simply a tack on to the Salmon Act, for it certainly fails most completely at both ends against the poachers. As far as club members are concerned, the proposed alterations are good, and few would grumble, especially if extended to include the Easter holidays, in exceptional seasons. Hot weather in April will bring up a few early spawners, but I have frequently noticed a cold night or two and back they go again, and do not complete spawning until the white flower is upon the weed, end of May and frequently well into June; therefore, with jack and perch having a special time, we could angle, at least, a month later without harm; several good reasons could be adduced for June being entirely closed.—I am, &c.,

F. M.

P. S.—I see Mr. Geen has omitted any mention of eels.

SIR,—There has been a great deal said about the Mundella Act. I am convinced that many who object to the Act do so through ignorance. There never was an Act that pleased everyone, and I should feel surprised if I should find myself able to please all those who read these remarks; but I will, with your permission, give my opinion upon the working of it, and the good it is doing in the Worcester district; and I am quite convinced that if it is carried out as it now stands, it will lead to the object aimed at by Mr. Mundella, that is, to stock the rivers with coarse fish, and also there will be more salmon and trout

in our streams. The natural history of all our coarse fish points to their spawning in one of the three months named in the Act, that is, from the 15th of March until the 15th of June. If you want to preserve fish, you must find and pay your keeper; and what club will unless they are the owners of, or have got the right of, the fishery? As far as my experience goes, it tells me none will. I recommend all clubs to discourage the act of showing fish when out of season, that is, during the dates given. I quite agree with Mr. Geen, that it is unpleasant to see small fish killed, or fish full of spawn, as was the case at Norwich. Why cannot all anglers do as the Worcester anglers do; if they see a man offer for sale any freshwater fish during the fence month, they make him answer for it; the law says you shall not sell, or offer for sale, any of the fish known as coarse fish during the fence months. In my opinion, that is one of the best clauses in the Act. As an angler, I should not think any anglers would mind losing a few days' sport if it will protect their favorites only three months in the year, and this it must do if carried out as the law now stands; for what man will be fool enough to destroy by the net fish he cannot sell? Men who toil with the net do not do it for sport. The effect of the Act is, beyond all doubt, good upon the Severn, &c. There are more anglers than ever I remember, and they all get a few fish now—in fact, I have seen more of the trout, dace, chub, and roach kind this season than I have ever seen before in our waters, and I have fished this district for upwards of 35 years, and I hope to see the law remain and enforced.—I am, &c.,

T. A. GRIFFIN.

Worcester, June 21, 1881.

SIR,—The many misapprehensions which appear to prevail in the minds of many of your correspondents on this subject must be my apology for again writing you on the matter.

In the first place, I most respectfully desire to accept the challenge of your correspondent, Mr. F. C. Clench, to prove the condition of the fish exhibited by my society at the Norwich Fisheries' Exhibition.

I still adhere to my former statement, that there was no fish so small as those described by himself and Mr. Geen; and I would, with great deference, refer those gentlemen to the letter of Mr. E. Bicknell, of Bedford, contained in your issue of the 11th inst., who, whilst fully bearing me out, further says, "he saw nothing repulsive or beastly about them, in fact, they were in a far finer condition than they would have been a month later."

I am, of course, sensible of the fact that Mr. Bicknell is not a London angler, but I submit that his opinion is not the less to be relied upon.

I cannot pass over the last letter of Mr. Geen without remarking on the "free and easy" way in which he deals with the assertions made by me, a line of conduct which is only equalled by his characteristic coolness in accusing ME of losing my temper. The flattering and almost too indulgent remarks of several other of your correspondents concerning me conclusively demonstrates that Mr. Geen's opinion with regard to my personal temperament is quite as erroneous as the many others he appears to hold, and which I have before dilated upon.

I, however, thank him for his candour in corroborating me as to the excellent nature of the quality and quantity of sport to be had on the Norfolk and Suffolk Broads—which he admits is almost inexhaustible—and, thereby, indisputably proving the non-necessity for fence months in this district, or anything like the stringent provisions of the Mundella Act. Mr. Geen will, no doubt, agree with me, however great my shortcomings may be, that I have, as a brother angler, done really good service to our cause by giving to our friends throughout England a gratuitous advertisement of the fine and, practically, endless sport we are able to afford them; and I, with him, shall rejoice at the dawn of the halcyon day when the boon we now enjoy can be extended to the thousands of London working men he speaks of.

I very much fear that Mr. Harrington Keene is far too cunning a master in the art of "newspaper debate" for me to cross swords with; but, however dire the consequences, the innuendoes contained in his letter demand some slight recognition at my hands. I most emphatically protest against his insinuation that the "Norfolk Anglers" justify the snaring of pike.

Sir, if Mr. Keene tax his memory, he will find that a friend of mine, under the *nom de plume* of a "True Disciple of Isaac Walton," having seen some uncultivated countryman indulging in the practice, inquired through the medium of your paper as to its legality, and Mr. Keene, in your issue of the 4th inst., recommended him to communicate what he saw to the properly constituted authorities, which, doubtless, he did.

This being the case, it seems somewhat hard now that materials for arguments are wanted to use the circumstance against those who are really legitimate anglers. *O tempora! O mores!*

I do not now propose to enter further into this controversy, but will content myself by reiterating my former opinions as to the harmless result of continual rod-and-line fishing in this district; and referring to the arguments I before adduced, I would also remind your correspondents that the most salient points I put forward yet remain unchallenged and unanswered. At the same time, I cannot help expressing the unfeigned pleasure I shall feel if by these interchanges of opinion the Act now objected to can be altered or modified so as to give satisfaction to anglers as a body, and be the means of increasing the sport we all have so much at heart.—I am, &c., ALFRED PALMER, Hon. Sec., E.A.P.S. St. Stephen's Street, Norwich.

SIR,—At a meeting of the Crewe Angling Societies, held on Tuesday evening last, the following resolution was unanimously passed:—moved by Mr. Houghton, Crewe Waltonians, seconded by Mr. Heckins, Crewe No. 1 Angling Society, and resolved unanimously—"That this meeting of the United Anglers' Societies in Crewe highly approves of the Bill to Amend The Fisheries Act, 1878, introduced in the House of Commons by Messrs. Wortley and Dodds.

"That a copy of this resolution be forwarded to each of those gentlemen.

"That a copy of this resolution be forwarded to the members of this division of the County, in the hope they will support Messrs. Wortley and Dodds.

Mr. Wallace Lumb, President Crewe No. 1 Angling Society has carried out the wishes of the meeting.—I am, &c., WALLACE LUMB, 23 and 25, High Street, Crewe.

SNATCHING AT SURBITON.

SIR,—It seems a pity that nothing should be done to stop the most abominable practice of snatching fish, which is carried on in our neighbourhood.

Bills have been posted up by the Thames Angling Preservation Society, and the keepers and watchmen are on the look out, yet snatching is going on here in broad daylight, and nobody seems to interfere with those who make use of this very unsportsmanlike way of nailing fish.

Last night I walked up the Surbiton Promenade, and in the course of half-an-hour saw eight fish caught, one only of which was fairly hooked. This was a perch; the other seven were bream, all hooked by the back fin or belly.

To-day at 3 p.m., that is again in broad daylight, I saw two bream caught in the same way.

In years gone by, a man used to put four or five hooks, and perhaps a couple of triangles, on his line, and, without baiting any of his hooks, set to work without fear of being stopped.

But when the T. A. P. S. stuck up their bills and notices these several hooks were done away with, and snatching had to be done with one hook only.

For instance, a man arrives at the sewer with a line such as many would use for roach fishing, well shotted and with porcupine or quill float, and begins his fishing, hook baited with worm or gentle. This looks very fair, but if you notice him for a short time you find that every few seconds he strikes as if he had a bite, and wished to knock head and shoulders off his fish. The result is that in such places as the outlets of sewers, where the fish of all sorts and sizes congregate in vast numbers, it must occur that some time or other the hook is drawn sharply against a fish, which is, therefore, hooked by the belly or fins, or gets a terrible gash in the side. If well hooked the fish is landed, if not the poor victim gets off with some wound which, in most cases, proves fatal. This can easily be proved by the number of fish, generally bream, which are seen floating down the river dead, and nearly all wounded in the side.

I was astonished to count the large number of rods (fifty-one) on the Promenade this afternoon.

Any one can see at least two dozen at work any evening of the week, and just at the point where the greater number of these so-called anglers congregate there is a board stuck up, by order of the Town Council, on which is notified in good plain English that "It is strictly prohibited to fish or angle from this promenade; that offenders will be," &c., &c.

I should say, therefore, that the greater part of the snatching in this neighbourhood could be done away with if some of the members of the committee of the T. A. P. S. (and I believe that one or two belonging to our neighbourhood are influential men) would ask the Town Council to be kind enough to enforce this bye-law.

The promenade which is, or rather was before the fishing season commenced, one of our pleasant walks, would be restored again to the quiet public.

At present it is unbearable, on account of the indecent language and rough behaviour of the greater part of those whose practice it is to spend the best part of the day there fishing. It is quite out of the question taking ladies to the top of the promenade now.

Should, therefore, angling from this spot be stopped we should be able once more to enjoy our evening walks, and also see the greater part of the abominable practice of snatching done away with.

I must apologise, sir, for troubling you with such a long letter, but seeing that no serious steps seem to be taken to stop this foul angling, I believe it time to ask that the matter should be put before the public, interested in the real sport of angling, through the medium of your valuable paper.—I am, &c., Kingston-on-Thames, Surrey, June 18.

FAIR ANGLER.

P.S.—Since I wrote my letter last Saturday, snatching has been going on here without ceasing. Some few fish have been caught fairly. I have seen among others two tench, 2½ and 3 lb., a third and smaller fish caught foul by the fin. Also to-day, caught with gentle in one case and worm in the other, two carp, 3 lb. and 3½ lb., and a small lot of remarkably fine dace.—I am, &c., Kingston-on-Thames, June 23.

FAIR ANGLER.

THE MIDGE THE ANGLER'S CURSE.

SIR,—Everybody knows that anglers are proverbial for patience—at any rate they get credit for having a large share of that virtue. Whether it be so or not I am not going to argue. Most men are patient in pursuing their hobby; but I am an angler, and, I believe, a patient one, but if my patience is tested when I am riding my hobby it is when throwing the flies over a pond alive with trout rising at the black midge. That insect has not been called "the angler's pest" for nothing. I have consulted most of the authorities upon the mode of dressing this fly, and I have tried it in various ways, but I have never succeeded in making a taking fly. The trout pay no more attention to my invitations than they would do to a dead sparrow. I use hair and fish as fine as I possibly can. The whole pond is moving, but a spotted fellow never makes a mistake and seizes mine. Well, now, I'm sure that's perplexing and trying; but the cup is not full yet. My patience has often had to stand as much; but throw in another set of midges—smaller than those just referred to, quite as numerous, and not confining themselves to the surface of the water—the minute pests that settle themselves upon your ears, neck, eyes, face, hands, arms, every inch of exposed skin, are overrun, and you are stung or bitten until you can't hold your rod for a moment, but your hand is wanted to use your handkerchief and clear a myriad off your face. Next morning when you attend to your toilet you see a multitude of small elevations, reminiscences of the previous night's sport! Various are the remedies I've tried to be midge-proof—Eau de Cologne, whisky (externally), benzole, &c.; but there again I've failed. (It's hard for one to write that word, but I'm forced to it.) Now, sir, will any brother angler help me out of either or both of these difficulties? Surely the whole fraternity isn't "licked;" and if any good fellow who has surmounted them can give me a lift I will indeed be very thankful, and I'll promise to pass it on to my son when he is old enough, so that there may be no fear of such important information being lost to posterity.—I am, &c.,

VICTIM.

"Victim" will find Porter's veiled spectacles a perfect protection if tobacco smoke is not enough. He should try the pond with a big fly, say a lake trout fly or the fatal "Alexandra." Hardy Brothers, of Alnwick, make a good "midge," but it is very rarely trout will take the artificial midge. It should be fished "dry"—i.e., made to float on the surface. We hope some of our fishing friends will take up this "midge" question.—ED.]

FISHING NEAR LINCOLN.

SIR,—Mr. W. Moore will find some fair all round fishing in the Ancholme, tickets, 6d. per day. Brandy Wharfe or Brigg may do for head-quarters. Bream run up to 3 or 4 lb., and of the pike it is said—

"Ancholme pike

None the like."—I am, &c.,

Caistor.

THOMAS FORD.

CRYSTAL ROACH HOOKS.

SIR,—Will any of your readers inform me where I can obtain the Crystal bend of hook.—I am, &c.,

CONSTANT READER.

[Crystal roach hooks (the best in the market) are made by Messrs. Williams and Co., Gt. Queen Street, Lincoln's Inn.]

LINES WITH COPPER WIRE IN THEM.

SIR,—Seeing Mr. George James Eaton's letter in your issue of last week, we think one or two remarks would not be amiss in tending to keep those anglers, who wish to have a really serviceable line, in the proper track, and with this view we ask the angling community these two questions—(1) Is copper a substance that will corrode when in contact with the action of air and water? and if so, what will be the effect of this corrosion on such substances as silk and hair? We think acetate of copper very injurious.—We are, &c.,

Alnwick.

HARDY BROTHERS.

[In theory Messrs. Hardy are right, but in practice we can only say again, we have used one of Foster's "Acme" trout lines for more than twelve months, and killed one trout of 2 lb. and one of 2½ lb. with it a few days ago. It is not rotten yet. If you put it in a damp cellar it might soon be so; but if the line is properly treated, dried, and rubbed with Russian tallow now and then, it will last as long as any other similarly fine line will last, and it will cast much further than any line of the same size not wired.—ED.]

FLIES FOR DACE.

SIR,—I have at one time or other fished a good deal for dace with the fly, and have found those flies to kill the best which are made from the starling, dotterel and port (i.e., young grouse). The blue tinge seems peculiarly attractive to these shining ones. Foremost among the list I can, like the Editor, recommend the blue dun; but other noted killers are the blue brown, yellow brown, yellow drake, dotterel drake, light drake, starling drake, dotterel dun, grey goose dun, and oak fly. These can all be obtained at almost any respectable dealers, but if H. S. has any difficulty in getting them I shall be glad to supply him.—I am, &c.,

THOMAS FORD.

Caistor.

THE SMALL GREY DRAKE.

SIR,—We have had no rain since I left London two months ago, so you may judge what state the water is in. I have caught nearly all my fish with a small grey drake that Hardy sent me—yellow body and white mottled wing, the generality of May flies that you buy are more like salmon flies than trout flies, they put them on such large hooks. Thursday, I had a very good afternoon; in the morning we had thunder, so I did not fish till nearly four, commenced with fly, Hardy drake and red drake; after I tried minnow (Devon), caught twelve good fish, six fly and six minnow. I always commence with fly, but, when tired, I use the minnow. Yesterday was very close and wet. I could do nothing only with fly, last night it rained a good deal; but I understand it has made no difference to the water. You might write an article on the proper size and thickness of hooks for trout flies. After what I have seen this last month, I am certain that all flies ought to be a size or two smaller than the original (particularly May fly), and on much finer hooks than generally made. If I had not stuck to what you taught me, used small flies and fine gut, I should not have done anything in this fine water.—I am, &c.,

FERN WEBB.

SEA FISHING AT REDCAR.

SIR,—To what extent do fish feel pain? Fishing off Coatham Pier last week, I felt a fish, struck, and lost him. Almost immediately, I felt another (?), which I landed. It was a billet, or coalfish, minus one eye. I was baiting with mussel, which he had swallowed, along with the eye of the fish I had previously struck, and which presumably was the same fish. By the way, they have a very unfair way of collecting the charge for fishing from this pier. You are charged threepence per day. There is only a short length of pier available for the purpose, and some of the native pot-hunters here come at low water, fix some eight or ten lines at this particular place, ready for the return tide. A visitor with his one line has to pig in where and how he can, yet the man with the eight or ten lines only has his threepence to pay. It would seem more reasonable to charge so much per line but the authorities here do not seem to see it.

W. S. L.

FISHING NEAR BOURNEMOUTH.

SIR,—For the information of E. Clever, your correspondent of last week wishing for fishing at Bournemouth, you rightly state the Avon, but it is preserved from the run to Ringwood, and belongs to John Mills, Esq., J.P., of Bistern, near Ringwood, where you can get free fishing from the first bridge from the station (London and South Western Railway), only here there is a deep hole where three years ago I saw a dozen beautiful roach taken in the course of the morning, and on a very bad day.

This year I was staying near Christchurch, and fished a stream known as Cassey by the inhabitants of Winton Common and Burton, near Christchurch (private, J. Mills, Bistern), and I caught in a week about 1 cwt. of roach, a dozen or more over 2 lb. weight, three perch and half dozen dace, in all 105 fish. This stream runs out of the Avon and Winton, and into it again at Christchurch. The place where I fished is known as Bugden's Hole, where there are also a few jack, tench, and eels.

There is also at Christchurch the Stour, where you may fish from the Quay by obtaining permission, the boatmen there could inform you where to go to obtain it.

I saw some very fine salmon taken while there, and I think that the fee is one guinea per day salmon-fishing within the Stour or the Avon. Although there is excellent fishing in both these rivers, they are private waters.

Trusting that this information will be of service.—I am, &c.,

W. PRICE.

[Many thanks.—ED.]

FISHING AT DAWLISH.

SIR,—Your correspondent, "Blue Dun," will find good sea fishing at Dawlish, but the trout and salmon fishing is some distance in the Teign. Tickets, 1s. per day, salmon-licenses, 7s. 6d. I should not recommend "Blue Dun" to depend too much upon it.

As for the sea, it is good, but very exposed. Bass, pollack, whiting, and cod are to be met with, and any of the local fishermen who let out boats will put him upon the spots.

In the rivers he will find the alder fly, the blue with rat's fur body and red tail, the red spinner; the cooh-y-bondhu, black with silver twist, and also his namesake, good for this season of the year.

If he is not bound to Dawlish, he will get some good peel and salmon fishing at Plymouth now, some good baskets being taken this week, and with the

advantage of being able to fish in the sea in any weather, the harbour being so protected.

Boats can be hired here at 6d. per hour, or 1s. per hour with man.

If "Blue Dun" will communicate with me I shall be pleased to put him in the right way for sport.—I am, &c.,
WILLIAM HEARDER.
Plymouth.

ANGLERS' QUARTERS.

SIR,—As many hundreds of your readers in London, &c., will no doubt be very shortly going away for their week or two's country trip, and would be glad to know where accommodation in the shape of lodging, &c., could be found near the streams they may be intending to visit for angling purposes, I would suggest that some of your country agents, if requested, might get many innkeepers (and even cottagers) in their localities to advertise the same in your paper. This would be advantageous, I think, to the circulation of your paper, to the advertiser, and also to anglers.

Your last year's holiday number was a good plan, but I unfortunately found it not quite perfect, and apprised you at the time of two letters of mine to people mentioned therein being unanswered, though stamped directed envelope enclosed in each.—I am, &c.,
EDWARD BEAVAN.

15, Camden Grove, S.E., June 21.

ANGLERS' PRIVILEGE TICKETS.

SIR,—On page 290 of last week's FISHING GAZETTE will be found the sentence, "The cost of the tickets is 2s. 6d. per year, and there is the privilege of cheap railway fares, on production of the fishing ticket, at most of the Great Eastern stations." Will the writer kindly inform me to which stations near the Ouse do the Great Eastern Company grant the privilege from London?—I am, &c.,
NAUTILUS.

23, Clifford Road, N., June 22.

FISHING AT ELSTREE RESERVOIR.

SIR,—Kindly inform me through the columns of the FISHING GAZETTE, if in your knowledge, whether Sunday fishing is to be had at Elstree, on the Midland Railway.—I am, &c.,
CIGARETTE.

[We cannot say for certain, but doubtless some reader will know and send us word.—ED.]

June 22.

FLY-FISHING.

Mr. E. Frost wishes us to state that "some gentleman has written to him," asking a question respecting fly-fishing, and forgotten to enclose his address; and if he will kindly supply the omission by again writing to him, addressed to the Gresham Angling Society, Throgmorton Street, he will send a reply."

CLUB REPORTS.

AMICABLE BROTHERS ANGLING SOCIETY.

On Wednesday, June 15, twenty-six of the members sat down to a very excellent supper provided by the host, Mr. Gray. Mr. Medcalf occupied the chair, with his usual good humour and affability. After the supper, harmony took place, which was ably supported by friends and members, accompanied by a pianist and violinist. After a very pleasant evening, some of the members started fishing. Sunday, June 19, a great number went out, but the result was not what it ought to have been after giving the fish so much rest. Mr. Pedley, perch, bream and roach, 4 lb. 6½ oz.; Mr. Harding, perch, roach and dace, 3 lb. 2½ oz.; Mr. Shory, dace, roach and gudgeon, 4 lb. 3 oz.; Mr. Moir, one bream, from Dagenham; Mr. Wood, roach and dace, 2 lb. 12 oz.; Mr. Larkman, some very nice eels, from the Lea.—J. WORLEDGE.

ANGLERS' PRIDE.

On Sunday last the members of the above society contested for three valuable prizes at Pullborough—viz., a very handsome timepiece presented by our worthy host and treasurer, Mr. Fiddes; Mr. Norris kindly presented us with jack rod, and Mr. A. Fiddes, jun., gave a money prize. Being the first Sunday of the season you may be sure the members were eager to select their swims and get to work as soon as possible, and after a hard fought contest (especially for the timepiece), the result was as follows:—Mr. J. Deeley, jun., 1st, with a nice show of bream, weight 6 lb.; Mr. Haines, 2nd, with 3 lb. 8½ oz. of bream; Mr. H. Mallett, 3rd, with 3 lb. bream. The following members also weighed-in: Mr. T. Fiddes, 2 lb. 14½ oz.; Mr. Wall, 2 lb. 10½ oz., Messrs. Dawe, Jones, and E. Mallett, &c. Total weight 24 lb. 6½ oz., being a considerable deal; I am pleased to state, above the average weight that prizes were won last season, and the result gave great satisfaction to the members and friends.—H. MALETT, Reporter.

BOSTONIAN ANGLING SOCIETY.

On Sunday last we had our second annual outing by road, to King's Langley. At night the following members weighed in fish: Messrs. Vincent, Clark, Seymour, Slade, Bastain, Cubitt, Hart, and Leslie. Messrs. Seymour, Slade, and Hart managed to secure a prize each.—H. TAYLOR, hon. sec.

BRIGHTON ANGLERS' ASSOCIATION.

On June 16, the opening day, very few members turned out. Mr. Anscombe weighed in a small take of roach, the largest fish weighing 1 lb. 10 oz. On June 19 the above association held their first competition in the river Adur, between Henfield and Steyning, being well represented; but the takes were small, the 1st prize being taken by Mr. G. Saunders; 2nd, Mr. Ollive; 3rd, Mr. Hassel; 4th, Mr. Anscombe, all with roach and dace.—JOHN ANSCOMBE, hon. sec.

CITY OF LONDON ANGLING SOCIETY.

Four of our members weighed-in on the 19th, Mr. Mortimer, bream and roach from Amberley, 4 lb. 12 oz.; Mr. J. Chambers, bream from same place; Mr. Perry, roach from the Thames; and Mr. Castell, rudd.—CAS.

CLAPHAM JUNCTION ANGLING SOCIETY.

Several of our members were out on Sunday last, but only to turn up to weigh in, namely, Mr. Willoughby, with 5 lb. 4 oz. of roach and bream; Mr. A. Turner, 4 lb. 3 oz. of carp and roach; Mr. E. Withers took a nice Thames trout on May 15th, weighing 5 lb. 4½ oz. Members are requested to attend on Thursday next for important business. Hoping all members will attend.

June 21.

E. WILSON, Sec.

GOOD INTENT ANGLING SOCIETY.

Mr. Roberts and Ernest Holms opened the season with a splendid show of bream, and the members of this club fished on Sunday last for some valuable prizes at Ware Roam of Water, Mr. J. Osborne taking 1st prize (£5 5s.), Mr. J. Gadbury 2nd, Mr. Hellens 3rd, D. Sims 4th, J. Bell 5th, Mr. Ormes 6th, J. Robinson 7th, J. Hadkiss 8th, W. Agambase 9th, 30 members taking fish. It looks well for the opening of the season, some of the fish weighing over 1 lb. each, and in excellent condition.—R. MURPHY.

IZAAK WALTON ANGLING SOCIETY.

The members competed for two special prizes on Sunday last, the 19th inst., at Pulborough. There was a good muster competed, but the takes were small. Mr. G. Wood won the first prize, given by Mr. A. Rogers; Mr. E. W. Turner won the second, which was given by Mr. H. Butt. The following members also weighed-in for the first time this season:—Mr. C. Green, roach; Mr. J. Baraes, roach; Mr. W. Wilkinson, roach; Mr. H. Butt, roach; Mr. G. P. Rolt, perch. Members who intend being present at either the Sunday or Wednesday dinners, are requested to give in their names at once.

THE LITTLE INDEPENDENT ANGLING SOCIETY.

On Sunday we commenced the season passably well. We had three prizes competed for and won by the following members: Mr. Letch, 1st prize, bream, 5 lb. 10 oz., one fish scaling 3 lb. 10 oz.; Mr. Humphreys, 2nd, jack, 5 lb. 6 oz.; Mr. Goods, 3rd, jack, 4 oz. 9½ lb.; Mr. Hopton, bream, 4 lb. 8 oz.; Mr. Hurwood, roach, 1 lb. 11 oz.; Mr. Mead, 1 perch, 13½ lb.; and Messrs. Somers, Moore and Grey, had takes of roach, perch and dace. We had likewise a few pounds of eels brought in. On Tuesday, July 5th, we hold our general meeting on the central list. We hope to have a goodly muster of our brother anglers.—W. BROWN.

ORIGINAL CLERKENWELL PISCATORIAL SOCIETY.

The members of the above society weighed in some excellent fish on Sunday last. Messrs. Lucy, sen., Lucy, jun., Drew, Gorsuch, jun., also Messrs. Orman and Marles, a brace of the speckled beauties from Pulborough, the latter being rather uncommon from the Arun. The following members also weighed-in:—Messrs. Laundry, Neagus, and our host (Mr. Warren), with two trays of barbel, chub, roach, and dace from the Thames. The first prize fell to Mr. Lucy, jun., and the second to L. Gorsuch, jun.—THOS. WM. LUCY, secretary.

PECKHAM BROTHERS.

On the 19th the members of this society commenced the slaughter of the "finny uns" in right good style; one of them "shanking it" through the stills night along the banks of the Wey, whilst others took (or rather were taken by) the first "iron horse" on Sunday morning to Weybridge. At the close of the competition Mr. Page was declared the winner of Mr. Steadall's prize with bream; Messrs. Williams, Duke, Gendle and Matthews had bream, perch and gudgeon; Mr. Bignell also made a show.—PIXIE.

THE PISCATORIAL SOCIETY.

A fine collection of Great Lake and other trout from Ireland, caught by Messrs. Sachs, Huggett, Edgar, and Walter Wilkinson were shown and distributed to the members on Monday evening, the 20th inst. Among the fish was a splendid Lough Melvin Gillaroo trout and a charr, caught by Mr. Huggett, the same gentleman being also fortunate in catching the largest salmon, 13½ lb., and the largest lake trout, 6½ lb. Mr. Sachs had hold of a monster lake trout, who run him out 40 yards of line when hooked, but owing to a sudden confusion in the boat, his fellow angler having two lines out, and the boatmen turning the boat round in the rough water, he broke away. Mr. Walter Wilkinson caught his first salmon, a fair share of the lake and other trout falling to him and Mr. Edgar Wilkinson. A consignment of salmon and trout from Lough Conn, near Ballina, were sent the week previous to the Piscatorial by the above named gentlemen, who must have worked hard the whole of each day to secure them, and their bronzed faces and hands testify how well the wild winds and wet agreed with and strengthened their constitutions.—T. R. SACHS.

ROYAL PISCATORIALS.

Mr. W. Randall has just returned from his favourite Bettws with as fine a show of bream, perch, jack, and roach, as anybody would wish to have at this time of the season. The gross weight was a few ounces under 30 lb. and consisted of six bream, two jack, six perch, and two roach. He had no bream under 1½ lb., and some going nearly 5 lb., jack, roach, and perch in splendid condition, considering the time of the year and the water. Mr. W. Randall has to bid farewell to this part of the country for some time, owing to professional engagements in the provinces.—PIXIE.

June 23.

SIR HUGH MYDDELTON ANGLING SOCIETY.

The majority of the members of the above society fished for a series of prizes at Shiplake, on the 19th inst. The water was very low and not too bright. This being an opening day, we had made extra provision in bait and tackle, feeling sanguine that we should have heavy creels by the time of leaving off. Yet our expectations were not realised. The fish were right off feed, consequently our takes were very small. The weather was beautiful; after being laid by for three months, we enjoyed our first day's outing immensely. First prize,

ROYAL PISCATORIALS.

The friends of the members of this society, were much delighted and surprised on the 16th, by the display of fish exhibited by Messrs. Hughes, Canton, and Hockley, which consisted of trout, barbel, and chub, from the Thames. Mr. W. Randall also exhibited fifteen pounds of splendid perch not from Bettws Garmon, but from a spot the name of which is well known to all "North-Westerners." The greatest applause on this occasion fell to the share of Mr. Hockley, first; Randal, second; and Canton, third. On the 19th, Messrs. Smithers and Canton visited the Thames and were fortunate enough to get among the barbel and trout. Mr. Dale had some dace. Mr. Randal from his "Bettws Garmon" succeeded in getting some large bream and perch, one bream turning the scale over six pounds and a half. The prizes on this occasion were won by Mr. Randal, first; Mr. Smithers, second; and Mr. Canton, third. In one of my reports of this society last back end, I stated that Mr. T. Hughes had succeeded in capturing four pike, weighing from seventeen to twenty-four pounds. These four fish will shortly be added to the already large collection that decorated the walls of the Society's headquarters.—PIXIE.

June 23.

telescope stick and net, E. Smith, chub 1 lb. 12 oz.; second, 10s. 6d., J. Rogers, roach, 1 lb. 7 oz.; third, 10s. 6d., G. Caborn, perch, 1 lb. 5 oz.; fourth, half a ton of coals, W. Fowler, roach, 12 oz.; fifth, 7s. 6d., A. J. Allard, roach, 8 oz.; sixth, cart-load of chump-wood, J. Sanders, roach, 4 oz. The prizes that were not won will be fished for on a future occasion.—G. CABORN.
June 20, 1881.

THE STANLEY ANGLERS.

As under, allow me to have the pleasure of handing you the report of fish caught by the members of the above society. In the first place, I may mention that our president, Mr. C. R. Wheatstone, has commenced the season in a very satisfactory manner, having captured from the Thames two splendid trout, taken spinning—viz., one weighing 8 lb. 2 oz., and another 5 lb. 3½ oz. I may mention the first was a very long fish, not exactly in condition, but the other was in the pink of condition. He had also 17 lb. 7 oz. pike, one weighing 7 lb. 3 oz.; 5 lb. 15 oz. perch, one weighing 1 lb. ½ oz.; 16 lb. 3 oz. chub, one weighing 3 lb. 1 oz.; and 8 lb. 13½ oz. barbel, one weighing 5 lb. 11 oz. Mr. D. M. Humby, trout; Mr. Tucker, trout; Mr. A. Wrightson, bream; largest 2 lb. 11½ oz.; and also your humble servant with a show of perch and rudd. Total, 69 lb. 9½ oz.—C. LAIDLAW, Hon. Sec.
June 20.

THE STOKE NEWINGTON ANGLING SOCIETY.

The Crown Tavern, Mayfield Road, Dalston, is now the headquarters of the above society. Having a commodious meeting-room and a genial host, it should tend to give renewed vigour to the club. The following gentlemen have also been enrolled:—Messrs. J. King, E. Morrow, S. Wilkinson, J. Wackett, W. Tye, jun., W. Coulthard, J. Hammond, A. L. Watkins, and J. W. Dawson. The first show of fish this season took place on the 19th inst., when the new set of trays (presented by Mr. Thos. Harris) were fairly adorned, the following being the contributors:—Mr. T. Gretton, 4 lb. 2½ oz. bream and a tench 15 oz.; Mr. E. Morrow, 1 lb. 5½ oz. perch and roach; Mr. E. North, 14½ oz. roach. The annual dinner will take place at the club-house on Tuesday, July 5th. Tickets 3s. each; may be obtained of the treasurer, Mr. J. King, or THOS. GRETTON, Secretary.

THE ST. JOHN'S WOOD PISCATORIALS.

Thursday last being the first day of the angling season, two members of the above young but flourishing club had a very enjoyable day amongst the roach and perch, and had a very nice show at the club in the evening, amongst them a very fine specimen of roach, weighing 1 lb. 3½ oz., caught by Mr. F. Salmon, son of our worthy host, which he has sent to be preserved.—W. F. FIELD, hon. sec.

THAMES ANGLING PRESERVATION ASSOCIATION.

The anniversary festival of this society, on the 6th of July, promises to be a great success. There are over sixty stewards in addition to five members of Parliament and a number of invited guests, including Mr. W. Oldham Chambers, the honorary secretary and originator of the National Fisheries Exhibition, at Norwich. Mr. W. L. A. Burdett-Coutts Bartlett, "knowing how much the amusement of many thousands of the working population of London is enhanced by the society," has contributed a donation of ten guineas.

TRAFALGAR ANGLING SOCIETY.

The seventh annual supper of the above society took place at their clubhouse on Wednesday night last, chair taken by Mr. Humphries, faced by Mr. Lord. About forty sat down, including visitors. Among the visitors were Messrs. Bonvoisin and Beckett of the W. C. A. After a sumptuous repast, supplied by our worthy host Mr. Hadkins, some capital songs were sung by the following gentlemen:—Messrs. Rawlinson, Gaze, Smith, Bray, Wilson, Richardson, Cove, Bradley, Raimont of the Mohawk Minstrels, and Gough. A recitation by Mr. Bonvoisin, after a few remarks from Mr. Humphries, brought a very enjoyable evening to a close.—R. GAZE, Secretary.

WILKINSON ANGLING ASSOCIATION.

OPENING MATCH.

The members of the above club mustered in strong numbers on the morning of the 16th. Some half an hour before the time of starting between forty and fifty had assembled at Host Holbrook's, and by a little after 6 a.m. the party were en route to Brigham, a place some few miles from Driffild—the journey had to be taken in a bus and wagonette. The country to this place is flat and unattractive, though Nature had put on her green mantle and was looking her best, and the morning promised a fine and glorious day for angling. Brigham

was made in capital time, and the ground was soon pegged out, and anglers took their positions, bent on doing execution amongst the finny tribe. It was soon seen, however, that the fish were not very vigorously on bite, though the water was in fair condition and free from weeds; but worse was to follow, for by dinner time a sad change had come o'er the scene, dark and heavy clouds had made their appearance, and soon a terrific shower of rain descended, and those who had left their waterproofs at the hotel had reason to regret their want of forethought. This led to some of the company returning with wet jackets. A succession of heavy showers prevailed until closing time, and under these depressing circumstances only a very poor catch can be recorded. Mr. Thompson came in No. 1 with something like 4 lb., Mr. Freeman as No. 2 was closely followed, so far as weight was concerned, by Messrs. Drury, Haldenby, Hall, Crossland, Venson, Ward, Fairfield and Noble. Some really fine-conditioned roach were taken, and trout were plentiful, dace were small and hardly up to the mark. The ladies, a number of whom had accompanied the party, were very fortunate in another part of the stream, and I am happy to record that they succeeded in taking several trout in addition to a variety of other fish, and are to be congratulated on their success under very unfavourable circumstances.—F. J. H.

WALTONIAN ANGLING SOCIETY.

The following gentlemen weighed in on the 19th:—Messrs. Roland, Starr, Waltham, Good, jun., Burton, Greenfield, E. Watkins, and a grand show by Mr. T. Watkins, consisting of 12 lb. 4 oz. of roach and 7 lb. 2½ oz. of dace.

WALWORTH WALTONIANS.

On the 16th, Mr. Howard, sen., succeeded in getting 4 lb. of nice roach, from Boxmoor, which entitled him to Mr. Boalch's prize of £1 1s.; Mr. Howard, jun., landed Mr. Spencer's 10s. 6d. with 2 lb. of roach, from the same place; Messrs. Boalch, Evans and Weatherhead also exhibited fish. On the 19th, the first general outing took place, in a trip to Staines; on this occasion, Mr. Weatherhead managed to get entitled to Mr. Sutcliffe's £2 2s. prize; Mr. J. Bedford, to Mrs. Coleman's £1 1s.; Mr. Pearson, to Mr. Gold's 10s. 6d.; and Mr. Boalch, to Mr. Moore's box of sweets—each of the above named gentlemen having some fair samples of roach, perch, dace and gudgeon. Several other gentlemen also had fish.—PIXIE.

June 20.

GEORGE JAMES EATON, of Starkholmes Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[ADVT.]

1st AWARD MELBOURNE EXHIBITION, 1881.

DAY, SON AND HEWITT'S STOCKBREEDERS' MEDICINE CHEST. FOR ALL DISORDERS IN HORSES, CATTLE, CALVES, SHEEP AND LAMBS.

In this chest are the following matchless and world-renowned remedies, all that a Farmer can require to cure disease amongst his Stock and keep them in fine, healthy, and buoyant condition:—

"CHEMICAL EXTRACT," for Wounds, Swollen Udders, and Ewes Lambing.

"GASEOUS FLUID," for Colic, Scour, and Debility.

"RED DRENCH," for Cleansing Cows and Ewes, &c.

"RED PASTE BALLS," for Conditioning Horses.

"BRONCHOLINE," for Husk, Hoarse, or Cough.

"GASEODYNE," for Heaving or Paining.

"ALCOHOLIC ETHER," for Colds and Chills.

"CARMINATIVE CHALK," for Diarrhoea in Lambs and Calves.

Price of Chest, with "Key to Farriery," £2 16s. 6d., carriage paid. Each article can be had separately.

Patronised by Royalty, and used for over 40 years by the Leading Agriculturists of the British Empire.

CAUTION.—See that the Name of DAY, SON and HEWITT is

on all Bottles and Packets.

DAY, SON AND HEWITT,

22, DORSET ST., BAKER ST., LONDON, W.,
AND WANTAGE, BERKS.

Just published. Price one Shilling.

TROUT-FISHING,

With FLY, MINNOW, WORM, &c.

BY

THIRD EDITION of a delightful book.

MY LIFE AS AN ANGLER. By William HENDERSON; portrait and 12 plates. Cr. 8vo. Price 7s. 6d., postage 6d.

"No modern book about angling with greater chances of charming."—*Athenaeum*.

"The sweet feeling which pervades these pages will be their highest praise."—*Daily News*.

"More entertaining than a novel."—*Durham Chronicle*.

"Will amply reward the general reader."—*Spectator*.

London: W. SATCHELL & CO., 12, TAVISTOCK STREET, COVENT GARDEN, W.C.

ANGLING.

Now ready, third Edition.

THE ANGLER'S INSTRUCTOR.

By Wm. BAILEY.

A book on the best modes of Angling in English Rivers, Lakes and Ponds, and on the habits of the fish, besides all the latest practical hints on many things that have not up to now been made public, to be had of W. Bailey, 170, Kirke White Street, Nottingham. By post, 2s. 9d.

Now ready. Third edition. Price, 7s. 6d.

THE PRACTICAL FLY-FISHER;

More particularly for
GRAYLING OR UMBER.

With 10 Plates, coloured by hand, representing 120
Flies, natural and artificial.

BY THE LATE

JOHN JACKSON,

Of Tanfield Mill.

London: JOHN SLARK, 12, Busby Place,
Camden Road, N.W. 1880.

HOLBROW AND CO.,

111, JERMYN STREET, ST. JAMES'S, S.W.

Every kind of Fishing Rods and Tackle of the best quality, and flies specially dressed for all parts of the world. Speciality in glued-up cane rods. Separate department for Polo.

NOTICE.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., must be addressed to the Editor of THE FISHING GAZETTE, No. 12, Fetter Lane, London, E.C. and should reach the office not later than Tuesday morning.

Contributions are solicited, but the Editor will not undertake to return rejected MSS., unless accompanied with a stamped addressed envelope.

Correspondents are requested to write on one side of the paper only and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to no notice will be taken of such communications.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls, and of the following, amongst other Fishing Tackle Dealers in London and the Provinces:—

Messrs. Alfred and Son, Moorgate-street.
Messrs. Price and Co., 8, Seymour-street, Euston-square, N.W.
Messrs. Williams and Co., Great Queen-street.
Messrs. Gee and Co., St. Andrew's-street, St. Martin's-lane.

The Fishing Gazette.

SATURDAY, JULY 2, 1881.

THE CONFERENCE OF ANGLERS AT THE SOCIETY OF ARTS.

A CONFERENCE of anglers to discuss various amendments in the Freshwater Fisheries Acts was held at the Society of Arts, Adelphi, Strand, on Monday last. The room was crowded to excess in every part.

Mr. Geen having been voted to the chair, opened the proceedings with a statement of the object of the conference. He presumed there were very few who failed to see the great necessity which at present existed for the more efficient protection of our freshwater fish. That necessity was growing from day to day as the anglers increased. Three years ago the anglers of Sheffield saw the necessity for making application to Parliament for the protection of fish in their rivers, and the result was the Freshwater Fisheries Act, 1878. Unfortunately there were some gentlemen who did not see the necessity for increased protection. He had a letter from the Piscatorial Society stating that the members of that society did not feel that the present time was a good time to propose amendments. But he (the chairman) thought that the fact of Mr. Stuart Wortley's Bill having been introduced and defeated, the angling interest was brought to the front and gave them a good opportunity for carrying those amendments which they thought necessary for the protection of our freshwater fish. He had received the following letter from Mr. Mundella:—"Dear Sir, I am in receipt of your letter of yesterday's date, and thank you for the kind terms in which you are good enough to refer to my past services. You are quite right in watching carefully any Consolidating Act. I am inclined to think you will do well to keep your Freshwater Fisheries Act free from all others, and introduce such amendments from time to time as experience may prove to be necessary. I am glad to tell you that Sir W. Harcourt is determined to maintain intact any advantages secured to the anglers by my Act. I am sure he will not oppose any reasonable amendments, and although I cannot take charge of your amending measure, I shall be happy to advise and assist any Member of Parliament who may undertake it. I am, &c., A. J. Mundella." That letter was a distinct invitation to proceed with the resolutions, and they should therefore be prepared to meet him at the House of Commons to-morrow with their resolutions. Anglers were a law-abiding class; they paid taxes, and he did not think it too much to expect that they should have had one little Act to protect the sport of the thousands instead of the few. They had received letters from all parts of the kingdom, approving of the resolutions, and he did think that the amendments they proposed to introduce would efficiently protect every freshwater fish that swam.

Mr. String of Sheffield, then briefly proposed the first resolution that—"In the opinion of this meeting it is desirable to empower any Fish Protection Society to appoint by writing, under the hand of their chairman, a sufficient number of water bailiffs who would be authorised to search, seize, summon, &c., &c."

This was seconded by Mr. Guest, who held that it was necessary that the water bailiff should have sufficient power to take any one whom he found doing wrong.

Mr. R. B. Marston said, with reference to the first of the proposed amendments: I think that the duties of the Bailiffs which Fish Protection Societies are to be empowered to appoint should be confined to stopping poachers with nets, wires, &c., but that they should not be permitted to interfere with anglers using rod and line. I ask you, gentlemen—all of you anglers, I presume—what is to become of the charm of angling if it is to be conducted under the noses of a new race of water police—little men made big by being dressed in a little brief authority, who will be only too ready to "search, seize, and summon" any poor devil of an angler who cannot afford to tip them. Gentlemen, whether poor or rich, do not like being treated like rogues and being under police supervision. Fancy our friend Mr. Francis Francis being asked by some novice to show his basket, what would occur? Why, with appropriate language the fellow would be sent to the devil; and that's where he ought to go, in my opinion. Englishmen detest any interference with their liberties.

Mr. Crumphen suggested that the Fish Protection Society should be registered.

Mr. Bonvoisin objected that they should at that meeting go so far into detail. At present it was sufficient if they confined themselves to the spirit of the thing.

The resolution having been put, and carried almost unanimously, Mr. Bonvoisin proposed the second resolution that, "In the opinion of this meeting it is desirable that netting should be abolished in all public waters; and that in private waters it should be illegal to net without the written permission of the owner, such permission to have been signed and dated within three days inclusive of the day of netting. The possession of nets on or near any water should subject the nets to seizure, and the owners to penalties." There were, he said, very few really open waters; the majority of the waters that they fished in were what he might be allowed to describe as neutral waters. They were allowed to fish, but there were, no doubt, certain gentlemen who really had the right to the waters. The consequence was that those waters were depleted by vagabonds. If the resolution proposed by him was adopted it would be impossible for anyone to net in a public

water. Every country gentleman would be pleased if such a law were passed, as it would keep away what every country gentleman detested, and that was the poacher; and not only the waters which were free, but also the waters above and below the waters which were now depleted, would benefit by it. (Cheers.)

Mr. Clench, seconding it, said there was a vast amount of netting going on in the Thames, and if they could once get netting abolished they would all be the better for it.

Mr. Spreckley deplored that netting should take place in any water at all, because it was allowed not to be fair fishing; it was not sportsmanlike. They should keep this Bill to themselves. They should keep the Freshwater Fisheries Act entirely separate from the Salmon Laws. (Cheers.) They had a splendid Bill in Mundella's, and with some additions and with the education which was coming to the owners of waters, they might depend if they could keep the two things separate their great point would be gained, and it would give them time to get their amendments to Mr. Mundella's Bill. (Cheers.)

The resolution was carried, and

Mr. Beckett proposed the third resolution that, "In the opinion of this meeting it is desirable that any one having in his possession a wire, spear, gaff, or other like instrument at any time, or place, under such circumstances as shall satisfy the court before whom he is tried, that he intended at the time to catch or kill fish unfairly by means thereof, shall be liable, &c." To this he apprehended there would be little or no opposition as it left room for no difference of opinion. Yet it was most important, for it would materially facilitate the detection and conviction of poachers.

Mr. Butler, secretary of the Reading Preservation Society seconded this. Under Mundella's Act they had been able to convict more than one poacher, and this would further assist them. And if it were made to apply all the year round they could then leather them all the year round. (Laughter.)

The resolution was carried unanimously, and

Mr. Alfred Jardine proposed the fourth resolution that, "In the opinion of this meeting, the period between the first day of March and the thirty-first day of July, both inclusive, should be the close of the season for pike." He knew a little about pike. Pike spawned from the middle of April towards the end. Therefore to give them more than five months was not necessary. In five months the pike would spawn and recover. In July they were hungry and would dash at any bait. But through July weeds grew apace, and he would defy any one to take pike then—they would take a great many more weeds than pike. (Laughter.) Therefore they were well protected in that month from any one who would catch them.

Mr. Wheeldon seconding said nothing would give him greater pleasure than to see all the amendments carried into effect. The question of the pike was especially one, he thought, of which they should take cognisance, because pike were not increasing in the Thames, for they were killed full of ova and also when they were lean. He had seen brought in and shown upon the lawn at the Crown Hotel, at Reading, little 1½ lb. fish; they were simply more like attenuated eels than anything else. The amendment, if carried, would put an end to killing pike in the weeds. He would include both pike and perch under the one resolution. They were getting very nearly extinct in the Thames and they would become extinct if they did not take more care of them. Their Fisheries Act should have nothing to do with the salmon laws. If they left their Fisheries Act to the country justices depend upon it they would get their Sunday fishing stopped, and if it were stopped it would be a sad thing for the poor angler who had to toil hard in the workshop all the week. Sunday was the only day he could spend by the river side. (Cheers.)

Mr. R. B. Marston said—With reference to the fourth Amendment, which will give pike a five months' fence season, I think we should take into consideration the fact that we are protecting a fish of prey, a most voracious fish, a rapid grower and a great multiplier of his species. I should not like to say that in the Thames and Trent there are too many pike at present, as I don't know; but I am certain that there are hundreds of other rivers throughout England and Wales which have quite enough freshwater sharks already. If it can get them, a pike will eat twice its own weight of fish in a single week, so that a fish of ten pounds will consume twenty pounds' weight of trout, roach, dace, &c., in a week. In Germany the only fish not protected by law is the pike—he is considered an outlaw and a common enemy; a great destroyer of fish life.

Mr. Hugget thought it rather remarkable that the anglers of London wanted to fish all the year round (cries of no, no). In his opinion, if they altered the Mundella Act they would do a very unwise thing. Who were the persons who were not content with the present time? Was it angling societies generally? He had been to several but he had not heard a word of a murmur. He

did not know why the five months close time should be for pike. Three months was a reasonable time. The close time was now more than sufficient for them. By keeping the close time the same for all they avoided confusion. Before they passed this resolution he begged them to consider it from that point of view. The Mundella Act, he contended, had not yet had a fair trial.

Mr. Wheeldon, replying to the last speaker, urged that Mr. Mundella's Act, having the same close time for all fish, was the very evil of which they complained. They wished to protect the fish and not the anglers (hear, hear), and it seemed to him that five months was not an atom too long. Pike, when taken in the autumn, were in an utterly unfit condition for food or sport.

Mr. Guest said his Sheffield friends were of opinion that if the close time ended on the 30th June, and opened the same time as other coarse fishing, it would be quite sufficient. He proposed as an amendment, therefore, that the close time for pike should be from 1st March to the 30th June.

Mr. G. Newsome seconded this, contending that if pike were over-preserved it would lead to the destruction of trout-fishing.

The amendment was carried by a large majority.

Mr. Manning next proposed the fifth resolution that "In the opinion of this meeting, the period between the first day of March and the thirtieth day of June, both inclusive, should be the close season for perch." Perch, he said, were nearly extinct in the Thames, and in the river Lea it would soon be a scramble among the London clubs as to who should get the last one. (Laughter.) Taking fish at the time when they should be unmolested was accountable for the fact that they could not now get ounces where they used to get pounds. The perch was despised by some who said it was insipid; but, as an article of food, he considered it second to none of the coarse fish. By protecting perch they would bring it back to their rivers.

Mr. Field seconded the resolution, which was carried, making the close time the same for both pike and perch.

The two resolutions were then amalgamated.

Mr. Martin, "The Trent Otter," proposed the sixth resolution that, "In the opinion of this meeting the period between the first day of April and the thirtieth day of June, both inclusive, should be the close season for all freshwater fish other than pike and perch." He complained that the Mundella Act as it was before did not protect several of their fish on the Trent. For instance roach and bream had no business to be protected on the 15th March. They were then in excellent condition and might very well be taken for another month at least. Bream went far into July. This season in the Trent was more forward than others, and bream had been taken close to Newark—a bucket full of them was taken last Saturday full of spawn, and there were two roach among them that had not cast their spawn. The resolution would just about suit the Trent. Let them fish another fortnight for the roach and bream and preserve them a little longer at the other end. They were not fit to be taken at that time. The close season of the whole of the coarse fish should be consolidated.

Mr. Sachs, seconding, held that the roach were not fit to take till the end of June.

Mr. Guest supporting the resolution, claimed the credit of having moved the same thing two or three years ago.

After a few remarks from Mr. Newson, who was anxious that there should not be "one law for the rich and another for the poor,"

Mr. R. B. Marston said, with reference to clause six of the proposed amendments, in common with thousands of other anglers: I am of opinion that the fence time for coarse fish other than jack and perch is much too long. I think we ought to get April for angling, except for pike and perch. (Much interruption.) They know more about the habits of coarse fish in Germany than we do in this country, and their laws relating to fishing are most strict and numerous. They cultivate and like coarse fish as food there, and yet we find they only fence the months of May and June, and permit fishing even with nets in April for all the coarse fish, or summer spawning fish as they call them. The roach is the London and Sheffield club angler's favourite fish; it is in first-rate condition in March and April, and very rarely spawns until late in May or early in June; why then, I ask, should roach fishing be stopped for more than forty days of the fish's best season, and just the days when it gives more sport than at any other time of the year? And what applies to roach applies more forcibly still to barbel, bream, gudgeon, tench, chub, grayling and dace, they are all late spawners with perhaps the single exception of the dace; and in consulting the standard works on angling with reference to this subject of coarse fish spawning, I find Mr. Francis gives May and June for dace. I think he is wrong in this case, but I am not sure. There is another view of the case as regards a three months season, and it is one which I think all anglers ought fairly to take into consideration. There is no doubt whatever that the present Act has

proved a source of immense hardship to professional fishermen, who have to get their living out of angling, and to fishing-tackle makers throughout the country. The Act has already ruined some in both these occupations, and has occasioned very great loss to all, and also to the inns along the rivers. (Much interruption.) I don't think you ought to treat all these interests as of *no account* in amending the Act. How can it act otherwise than to their great injury? After getting through the winter, many of them God only knows how, they find when the waters are getting into good order after ice and snow, that the law steps in and prevents angling for another three months, so that they have only really about five or six months out of the twelve in which to get their living, and autumn floods only too often further curtail the time; and yet anglers expect the fishing tackle maker to have all he wants, the fisherman to have plenty of punts and rods, and the innkeeper to have everything in perfection, and to charge no more than when he used to see his customers all the year round. If the open season were extended, as I have suggested, to the end of May for all coarse fish, except pike and perch, it would prove a great assistance to the classes I have referred to; it would prove a great boon to the poor angler who cannot *pay* to fish in private water, and the angling thus permitted would be perfectly legitimate from a sportsman's point of view—the fish being still in good season. Stop poaching and give legitimate angling for fish in season fair play. In conclusion, gentlemen, there is one little personal matter to which I beg to refer. It has been hinted that I am in the ranks of those who do not altogether like the present Freshwater Fisheries Act, because it acts prejudicially against the sale of my paper. I beg to say in answer to this, that in the first place I hope I am above letting any interests of the FISHING GAZETTE interfere with what I conscientiously think is for the good of the art generally, and lastly that the sale of the GAZETTE increases during the fence months.

The resolution on being put was carried, and

Mr. Bonvoisin then moved the seventh and last resolution that, "This meeting of representative anglers, from all parts of England, are of opinion, that it is desirable that our Freshwater Fisheries Act, 1878—so far as it relates to coarse fish—and our Amending Act, 1881, should be kept free from the Salmon Acts Consolidating Bill; and that a deputation from this meeting should wait upon Sir Joseph Bailey, Messrs. Dillwyn, Dodds and Howard, M.P.'s to urge this opinion, and that the deputation should be empowered to place our amending resolutions into the hands of any member or members of Parliament whom they may think most fit, with a view to their being speedily passed into law."

This having been seconded by Mr. Pattison was carried, and names were taken to form the deputation.

Mr. A. C. Butler, of Reading, with the consent of the chair then moved and carried a resolution stating that,

"In the opinion of this meeting it is desirable that section 11, sub-section 4, of the Freshwater Fisheries Act, 1878, be amended as follows:—'If any person during this close season buys, sells, or exposes for sale any freshwater fish, or has in his possession any freshwater fish, unless he shall specify the justices that such fish in his possession were taken with the consent of the owner of a several or private fishery, he shall on summary conviction before two justices be liable to a fine not exceeding 40s.', and that section 11, sub-section 6 be amended by the omission of the words 'for sale' after the words 'or in possession.'"

The meeting then separated.

SPECIAL NOTICE.

WE ask the special attention of all anglers, all fishing-tackle makers and their employes, all riverside hotel, and innkeepers, and all professional fishermen, to the report of the conference at the Society of Arts, on Monday last, which appears in our columns this week. From the point of view of those who called the meeting, it was a decided success. It was thoroughly well organised, and the arrangements were perfect for the rapid carrying out of the objects of the promoters. The amendments were proposed, seconded, and carried with the precision of clock-work, and anything in the shape of discussion was not wanted, and anything like opposition was cried down. It was a clever idea to catch "The Trent Otter," who believes in rod-fishing all the year round, and get him to propose the three months' fence time for rods, for all fish except jack and perch!

We suggested that in amending the time of the fence months, anglers ought to consider the interests of professional fishermen, the tackle makers, innkeepers and others, numbering many thousands. Every angler knows that the Act has very seriously affected them, and yet the only answer to our suggestion was that they "must look out for themselves," and that the opinion of professional anglers could be made to suit any in-

quirer's views if the enquiry brought a pot of beer into the question.

The thanks of anglers are due to Mr. Huggett for standing up and protesting against giving pike a five months' fence time.

From what we know of the general feeling throughout the country, we are certain that if the votes of anglers could be taken by the ballot there would be a large majority in favour of our suggestion to fence all freshwater fish (except pike and perch) only during May and June, and to allow anglers to fish for them in April when they are in splendid condition.

NOTES ON THE MEETING AT THE SOCIETY OF ARTS.

THE large meeting at the Society of Arts' large Hall, on Monday, must have been exceedingly gratifying to its promoters; its unanimity on some very important questions being very wonderful.

* * * * *

It is true the chairman seemed to have chiefly selected his speakers with praiseworthy regard to this end, and I noticed with regret his impatience when outsiders endeavoured to raise discussion. Had a little more time been taken in considering some of the amendments, I am satisfied that many in the vicinity of where I sat, at least, would have been better satisfied, and probably the intelligent experience of others than those immediately surrounding the chairman might have found a more varied voice.

* * * * *

In Amendment 2, which was carried with but one dissentient, I think it is said "Netting must be abolished in all public waters." Of course this means utterly, absolutely abolished. Good! in so far as poaching is concerned; but what will Mr. Brougham say when he finds that under no possible circumstances, if this becomes law, neither Mr. Forbes, nor the Thames Angling Preservation Society, nor, indeed, anybody else, may endeavour to procure the Thames trout for artificial breeding, or even transplant fish, for the palpable benefit of a river, from one locality to another? Yet this is the effect of that clause.

* * * * *

As for poaching in the upper Thames, I don't quite agree with you, Mr. Spreckley! I am afraid I could name two or three ostensibly fair Thames fishermen, whose poverty has overcome their sportsmanlike instincts, within the domain of the T. A. P. S. Still it is a matter for gratulation that these "black fishermen," as J. P. W. terms them, are not more numerous. Ten years ago there were more of all sorts of poachers between Staines and Windsor than I care to count.

* * * * *

After coming so many miles, and preparing with such evident intelligent care, it is a pity the chairman did not exercise more patience in authority, and allow "The Trent Otter" to finish his very interesting speech. His observations of the various spawning seasons of fish in the Trent were instructive and strictly germane to the subject in hand, and should, at least, have been uninterruptedly listened to. *Apropos* of this, the following seasons are given for coarse fish by Yarrell *versus* Couch, whose statements (especially of the former) were made from comparisons of reports and observations of fish in all parts of Britain. *Pike*: Yarrell says March or early April; Couch says February, March *et seq.* for three months; the smaller fish first. *Perch*: Yarrell, end of April or beginning of May. *Roach*: Yarrell, May or beginning of June. *Carp*: Yarrell, end of May or beginning of June; Couch, May, June, or July. *Barbel*: Yarrell, May, or June; Couch, early summer. *Tench*: Yarrell, middle of June; Couch, when the wheat blossoms. *Chub*: Yarrell, end of April; Couch, early summer. *Bream*: Yarrell and Couch, May. *Gudgeon*: Yarrell, May. *Dace*: Yarrell, in June; Couch, April or May.

* * * * *

Mr. Geen contributed to ichthyology with characteristic precision during the discussion on Amendment 6. He averred that dace spawned twice—once in early season, and once late in the season—for he had seen them heading up. I have had some twenty years at watching Thames fish and their habits, and I confess this is new to me. I have seen them laden with spawn and in rough scale armour early in the year, and I have seen them congregate in vast herds in late summer, but at this later time they have ever been in first-class condition. Perhaps the chairman's dace were *lusus naturæ*—or, more likely mine have been so.

* * * * *

Bream were said (by "The Trent Otter", I think) to be in a fearfully slimy state, even to the time of speaking. What a difference there must be between the fish of various localities therefore. On Sunday night last I called in at Mr. Hatfield's (Star

and Garter, St. Martin's Lane), and there saw tench, roach, and bream from the Lea, and certainly nothing could be said against *their* condition. Mr. H. even called my attention to the bream.

"The Trent Otter" and our respected Editor both agree as to the innocuousness of rod-fishing. So also thought the late Frank Buckland. Now, I ask, how can this seriously be maintained about any water except the teeming and vaunted Norfolk Broads and rivers, when such an enormous aggregate of fish is weighed in at each of the angling clubs every season. Why even the North-Western Society tabulated over 2000 lb. last season.

[Mr. Keene, please think a moment. How many members has the North-Western Society? We do not know; but say there are only 50, then the average of their sport for the whole of last season was the terrible, truly terrible amount of forty pounds per man! Why, ten jack of only 5 lb. weight each would easily demolish the combined "take" of the North-Western Anglers in the same period. Norfolk anglers get more than this in one day frequently. For confirmation of this, see our correspondence columns this week.—ED.]

One spokesman asserted the perch had *no* homes in the Thames owing to the ballasting of shallows and destroyal of eyots and islands. Of a certainty the continual alteration in the bed and banks of the river is greatly against all sorts of fish, but the ballasting is the effect of this alteration. Steam launches, floods, and increased navigation generally are the causes.

I rejoice that the Sunday question was settled, so far as Londoners are concerned, in such an unanimous manner.

J. HARRINGTON KEENE.

PROPOSED AMENDMENTS OF THE MUNDELLA ACT, &c.

DEPUTATION TO MEMBERS OF THE HOUSE OF COMMONS.

A DEPUTATION of anglers waited on Sir Joseph Bailey, M.P., at the House of Commons, on Monday evening last, at 6 p.m. The gentlemen comprising the deputation were all gentlemen that had attended the meeting held the evening before at the room of the Society of Arts, and they were deputed by that meeting to state to Sir Joseph Bailey that in the opinion of anglers who are in favour of the Mundella Act, that Act should stand by itself and not be interfered with by any legislation affecting the salmon and trout. The Right Hon. A. Mundella, M.P.; the Right Hon. S. Walpole, M.P.; Sir Joseph Bailey, M.P.; Mr. Joseph Dodds, M.P., met the deputation in the great hall, and conducted them to a committee room. Mr. Mundella introduced the deputation, and Mr. Geen then briefly explained its object to Sir Joseph.

Mr. Mundella at once stated that as far as he was concerned he would take care that any legislation which threatened at all to cramp, or in any way interfere with the Freshwater Fisheries Act, would not be sanctioned by him. He regarded the Act with paternal solicitude, and would take good care that his child had fair play. He said that one of the gentlemen who were pledged to support the amendment of the salmon laws was Mr. Walpole, his old colleague and assistant in getting the Freshwater Fisheries Act passed, and he was quite certain that he (Mr. Walpole) had no intention whatever, nor did he think Sir Joseph Bailey had any intention, to interfere with the rights of coarse fish anglers as secured to them by his (Mr. Mundella's) Act.—Mr. Walpole then confirmed this statement, as did also Sir Joseph Bailey, he adding that so far from injuring, until he had heard the views of the deputation, he had imagined his proposal to consolidate the fishery laws, and leave the fixing of the close time in the hands of the various fishery Boards, would have met the approval of all anglers.—Mr. Mundella and Mr. Geen, in answer to this, stated that the close time must be general and fixed by statute as, if it were left to the option of the Fishery Boards, it would lead to endless confusion, and anglers would never know whether they were doing right or wrong, and that, moreover, the proposal to place the appointment of these Fishery Commissioners in the hands of the county justices would be giving them a power which it was most undesirable in the interests of coarse fish anglers that such a body should have. They would have the power to take out all the coarse fish in any water under their jurisdiction; and thus, if coarse fish anglers incurred their displeasure in any way, they would simply, under some pretence of protecting salmon or trout, net out all the coarse fish, and thus deprive coarse fish anglers of their sport. It was only natural that gentlemen who were interested only in the protection of salmonidæ would use

their power to the advantage of the latter, and to the disadvantage and damage of the sport of the coarse fish angler.—On being asked to promise that in any future legislation the clauses relating to the coarse fish should not be altered prejudicially, Sir Joseph again stated that he had no intention of interfering with the rights of coarse fish anglers, but that inasmuch as the Act of 1878 was a general one covering salmon and coarse fish, and that only one or two clauses of that Act referred to coarse fish, he could not then say how the proposal of the deputation would affect his measure; he said he would go further into the matter, and asked the deputation to meet him again next Wednesday to discuss the point.—In the course of the meeting one or two other matters of great importance were touched upon. The deputation stated that they felt, and their friends all over the country felt, that if discretionary powers, as regards permission and time of angling were placed in the hands of the county justices Sunday fishing, so beneficial to thousands of working men, would in many districts become a thing of the past.—Mr. Guest, on behalf of the Sheffield anglers, about ten thousand in number, stated that Sunday fishing was a boon they could never part with, and gave, as an instance of the good moral effect it had, the statement of a wealthy and very large employer of labour in Sheffield who said that he found those of his men who went fishing on Sunday always came back to work on Monday morning, whereas far too many of those who did not fish spent the Sunday in the public-house and rarely came or were fit for work on Monday.

Mr. Geen next stated that the amendments of the law relating to coarse fish angling were now prepared, and ready for being submitted to Mr. Mundella in accordance with his promise to consider them whenever the anglers were prepared with them.

Mr. Mundella stated that he was well-convinced there was room for improvement, and promised to get the matter brought before Parliament next session, there being no chance of doing so this.

Mr. Geen, on behalf of the deputation, then thanked the members of Parliament for the very kind manner in which they had been received, and the deputation then withdrew.

The gentlemen forming the deputation were, Messrs. T. Spreckley, president, T.A.P.S.; R. B. Marston, Editor, FISHING GAZETTE; Styring, president, Sheffield Association; T. Guest, Sheffield Association; J. Patisson, The Piscatorial Society; F. Spence, president, Larkhall Angling Society; R. Ghurney, secretary, U.L.A. Committee; Murphy, secretary, Good Intent; Nattress, Richmond Piscatorials; Adeane, W. Park Piscatorials; T. P. Cooper; Field, South London A. S.; Dickerson; Ball; Noble, secretary, Savoy Brothers; Newson; Crumpling, The Gresham; Tibbatts; Rowe; Skeats, Waltonian Angling Society; Otway; Thompson; Richards, Good Intent A. S.; Marriott, Waltonian; Page, Great Northern; Roberts, Good Intent A. S.; Ellis, Beresford A. S.; Poulton, secretary, Beresford A. S.; Starr, Waltonians; Bailey; Andrews; Pledge; Newman, secretary, Carlisle A. S.; and Davis.

[We trust the above is substantially a correct report of the meeting, but any inaccuracies it may contain are due to the fact that it is written from memory only.—ED.]

A MAGNIFICENT WORK ON FISHES.

THE great American publishers, Messrs. Charles Scribner and Sons, of New York, have recently published a simply magnificent work on the Game Fishes of the United States. We have had the pleasure of examining it, and can fully endorse the statement that it is by far the most elaborate and beautiful work of the kind ever issued. It has been received with unanimous approval by the sporting press of the United States, it received the silver medal and diploma at the Berlin International Fisheries Exhibition, and it is published with the sanction of that great scientific body, the Smithsonian Institution of Washington. The work is published by subscription only, and Mr. E. T. Colton, Messrs. Scribners' special agent, will be happy to have the names and addresses of any gentleman who would like to see the work; he is only over here for a short time, and any communications can be sent to the care of the Editor of the FISHING GAZETTE, 12, Fetter Lane London.

EELS AND FLOUNDERS.

WE think anglers ought to make a stand against the manner in which the country magistrates in the majority of cases carry out the law as regards fishing for eels and flounders. Fishing for these fish is perfectly legal all the year round, and Mr. Mundella has frequently stated that this is the case. We refer, of course, to fair rod and line fishing. Mr. Guest, of Sheffield, spoke to Mr. Mundella on this subject on Monday last, and Mr. Mundella again said distinctly that it was legal to fish for eels and flounders. Eels feed well only in the spring months, and don't feed at all in the winter.

THE GREAT MULTITUDE.

ANOTHER angling season has commenced, and all kinds of anglers are at work, from the one who persistently watches his float with all the common patience of fair fishing down to the veriest rough, who foully and disgustingly snatches his fish, but whose numbers are infinitesimally small. There never was a season before this when the multitude of anglers collected themselves together in such shoals on the banks of Father Thames on their first opening day. I do not mean the sixteenth, but emphatically the nineteenth day of June. It was a real sight to see the rodsters turning out at the various South-Western stations, near the different portions of the Thames, and one really began to wonder whether the august body of Directors on that line had the faintest idea as to the immense amount of traffic created by the popularity of the sport. There was certainly no necessity for special trains—no extra arrangements for the anglers—they do not all go to one particular spot—nor do they all go on one selected day—the traffic of anglers is distributed between the sixteenth day of June and the fifteenth day of March, and if a calculation could be made there is scarcely one race meeting that could be compared to the amount of annual traffic supported by the disciples of Izaak Walton. It is true they have made certain liberal concessions of fares to the members of angling clubs, and this liberality is largely prized and enjoyed, but we do not find them giving any pecuniary support to the various preservation societies through whose grand efforts the Thames is protected, and the stock increased for the attraction and benefit of anglers. On the nineteenth of June, so the chroniclers say, there was one united link of fair, honest anglers, between Richmond and Staines—principally members of angling clubs, who are taught and educated to practise the art on true sportsmanlike principles, and having been so educated they can teach and set examples to others. They do this, and by this means anglers as a rule have become a better class of sportsman than they used to be some years ago. There is precious little snatching going on when these men are about. The other day, at that unfortunately well known place of Surbiton, the following conversation was overheard by a friend of mine: one of the anglers detecting another rodster in the act of snatching, called out to him, "You don't call that fishing, catching the fish in that way." The reply was, "I don't mind so long as I get them." "But," said the other, "it is not fair fishing; it is against the law, and if a river-keeper was to come round and find you doing it, he would summon you, and you would find the magistrates would well punish you for it. Don't do it again while I am here, as I am bound to support the law." It had the effect of causing him to desist, and who can tell but that influence and advice had a good result. There is no doubt, as a correspondent in the FISHING GAZETTE said last week, the evil of snatching is practised at Surbiton, and the river-keepers are doing all they can to stop it, but it is a very difficult work to perform. I may have something more to say about this in a future number, and I must now run back to the nineteenth of June, a day in the week when the great multitude can only get out to enjoy one of the most healthy of recreations—one of the most harmless of amusements—and return, it may be, with wholesome food for the family; and yet there are those who would wish to rob them of this day and remove from them that innocent pastime, only to plunge them without doubt into scenes of vice and intemperance. Here is a honest citizen from Monday morning to Saturday afternoon, as the bread-winner of his family working in perhaps some ill-ventilated room all the day, and sleeping in some pent-up dwelling every night. On his only available day he naturally seeks the country air, and as I have frequently witnessed, takes his wife and family with him. The day is one of real enjoyment to all, and as I reflect on the scenes on those occasions, I cannot help saying "What a pity any one should ever think of taking it from them." I never have fished on that day, nor would I, on principle, do it, because I have other days at my disposal, but as long as I can raise my voice on behalf of those who have no other day, I shall support them in it. I am the more ready to do this now, because the anglers of the present day are, generally speaking, men who encourage and practise the true enjoyment of fishing. I never hear complaints now, as there were some twelve years ago; then the complaints of annoyances and disturbances were frequent from residents on the banks of the Thames. Not one word of complaint during the last few years has been received, but, on the contrary, words of praise have been bestowed from those who would have cause to complain if the anglers were any annoyance. I am bound to say this much for them, and I am very pleased to be able practically to do it. There can be no doubt with a favourable season this year, the Thames will be more largely frequented than on any previous year, and there will be a greater regard for the true character of sport. Let us legislate what we can to benefit the anglers, but do not let Parliament put any

check on the sport by the creation of laws which would give power to those who, perhaps, know very little what is required for anglers. Above all let us resist to the utmost any attempt to deprive the great multitude of anglers of their only available day for fishing. The meeting at the Society of Arts on Monday evening last, gave a grand expression of opinion in this respect, and should have a beneficial and influential effect on the promoters of the Bill now before Parliament. B.

FISHERIES PRESERVATION ASSOCIATION.

THE report of the council of the above association for the past year has just been issued. It alludes to the great loss which the Association has sustained by the deaths of such valued members of their body as Mr. Frank Buckland and Mr. Martin Tucker Smith, the latter one of the founders of the association. It next refers to the powerful deputation which, towards the end of last session, the association formed, and went up with the President of the Local Government Board to urge upon Government the necessity of considering the Rivers' Pollution Prevention Act, 1876, and it records the council's disappointment that the Government should take up the question in the present session could not be fulfilled, Mr. Dodson having on the 8th of February last, in answer to Mr. Birkbeck, stated that owing to the pressure of Government business in Parliament he could hold out no hope whatever of Government being able to introduce a Bill on the subject this session.

The report next mentions the various Bills relating to the river and fisheries, which were or had been this session before Parliament, viz., "The Rivers Conservancy and Floods Prevention Bill," the Bill to "Consolidate and Amend the Salmon and Freshwater Fishery Laws of England and Wales," a Bill introduced by Mr. Wortley "To Amend the Freshwater Fisheries Act, 1878," and a Bill only awaiting the royal assent to become law "For the Protection of Clam and other Bait Beds."

The council state that before the Rivers Conservancy Bill left the House of Lords the vice-president of the association, Lord Abinger, succeeded in getting a clause (52) added to it, providing that no dam or weir shall be constructed by a conservancy board without having a proper fish pass for salmon in accordance with the Salmon Acts, 1861 to 1876, and that their vice-president also tried, though ineffectually, to obtain the insertion in the same Bill of words, providing that any proceedings for enforcing the Rivers Pollution Prevention Act may be taken by a conservancy board, without the previous consent thereto of the Local Government Board, the object of inserting such words being to get rid of the grievous delay experienced in enforcing the Act by reason of the present necessity of first obtaining that consent, the Council adding that they will renew, in the Commons, the attempt to get the words inserted.

After referring, *inter alia*, to the proposals to legalise the capture of samlets and the use of the spear for the taking of salmon, and to which the council were strongly opposed, and to the recent reports of the English and Irish Inspectors, and to information received from the Scotch Commissioners on the condition last year of the salmon fisheries of the three countries, the report concludes with the announcement of the unanimous election as members of the council of Professor Huxley, F.R.S. (Her Majesty's recently appointed Inspector of Fisheries) in the room of the late Frank Buckland, Mr. J. H. Phillips, hon. sec. of Board of the Yorkshire Fishery District, and Mr. Martin Ridley Smith, in the room of his late father, Mr. Martin Tucker Smith.

ANGLERS should always be provided with something to take away the swelling and poisonous effect of the bites of insects. They should also have with them something to apply to a cut or sprain. Pond's Extract reduces the swelling and inflammation, stops bleeding and pain, and hastens the healing process in case of any wound or sprain; and it has no equal for application to the bites and stings of insects. Therefore never go on a fishing excursion unprovided with a bottle of Pond's Extract. It is for sale at all chemists, at 2s. 3d., 4s. 6d., and 8s. 6d. per bottle.—[ADVERTISEMENT.]

GREGORY'S SPINNING BAITS.—"The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived. Address, James Gregory, Vyse-street, Birmingham.—[ADVT.]

TO ANGLERS.—W. J. Cummins, Fishing Tackle Maker, Bishop Auckland, is now prepared to forward to anglers his Illustrated Catalogue, which is not only a Trade List but is interspersed with practical hints, useful directions, and valuable information gathered by the river-side from twenty years' experience. The stock consists of his unrivalled Salmon, Trout, Grayling, and Pike Rods, Lines, Reels, Baskets, Artificial Baits, Fly-books, Landing Nets, Gaffs, and last, but not least, his celebrated Trout Flies which for killing powers stand unequalled. Every article kept in stock is of the very best description.—[ADVT.]

GEORGE JAMES EATON, of Starkholmes Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[ADVT.]

Mrs. F. Y. BROCAS, Artificial Fly Dresser, 4, Mill-street, Conduit-street, Hanover-square, London, W. A stock of best flies always on hand. Flies made to pattern. Lessons in fly making given.—[ADVT.]

RIVER REPORTS.

MID-THAMES.

The river is now in fair all-round trim, the recent rains having freshened up and washed away the residuum of the sheep water. From Windsor, Monkey Island and Bray I hear of excellent bottom fishing and that the river in these districts seems “alive with fish,” to use the expression of one of my regular piscatorial scribes. Maidenhead, Cookham and Bourne have recently been visited by scores of anglers—bankers and puntsmen—but little beyond roach and perch have come to bag. At Marlow on Monday a pretty trout of 5 lb. was taken by a gentleman from the weirpool, Tom White being the attendant sprite. A piscator, with Rockwell, has also recently taken trout of 5 lb. and 6 lb., the former, I believe, from Newlock and the latter at Temple Pool. Hurley, on Sunday, was visited by a posse of anglers, and no man went empty away, either fishically or stomachically. A lady and gentleman staying at that ancient hostelry, the Bell, at Hurley, are credited with some grand perch, and the lady, I hear, being the best man. Messrs. Bennett and Mott, out with “the Boy” in the Medmenham waters on Wednesday, got a miscellaneous bag of roach, perch, chub and gudgeon. At Henley, since the opening day of the season, excellent hauls have been had, two takes near the town coming up to 27 lb. and 19 lb. respectively; Mr. Witham, five jack, 25 lb. together; Mr. Pritchard, six dozen roach, 24 lb. The funny race at Henley just now, however, are being swamped by the human races, which are taking precedence of other pastimes.

THURSDAY.—River swarming with pleasure boats and steam-launches; back waters should now be chosen for peace, quietness and fish.—MARLOW BUZZ.

Thames (Goring).

Water very low; not in very good order for fishing; want more rain. Not much doing; have been out four days; best day 10 lb. of good roach; one roach near on 2 lb., some 1 lb. Roach are in bad order now.—JOHN RUSH.

Thames (Halliford).

Owing to the late state of the river, the fishing has been very bad, but the water now is getting more clear and the fish are much cleaner, which makes the prospects for fishing much better. I was out three days last week. First day, 3½ dozen roach and dace; second day, 5 dozen roach and dace and 7 bream, all of which were returned to the river again; third day, ledgering 2 roach, 4 bream, 2 perch and 2 chub, the largest fish weighing 2½ lb.—GEORGE ROSEWELL, fisherman.

Thames (Kingston).

The river is low; we want rain badly; there has not been much done. From 2 to 3 dozen roach and dace a day, a few chub nothing over a pound, and a few jack, nothing over 7 lb., that I have seen; plenty of barbel to be seen jumping, but they won't feed.—JOHN JOHNSON, fisherman.

Thames (Shepperton and Weybridge).

The water is now getting in very good condition for angling; there is a much better prospect for sport now that the fish are getting much cleaner and better on the feed. F. Purdue, one day, 20½ dozen of roach and dace; myself one day 1 dozen of perch, three weighing over 1 lb. each, two bream, one of 2 lb., and one 1 lb.; 1½ dozen of roach and dace.—W. ROGERSON.

Thames (Twickenham).

The water now is in splendid order for anglers, having now lost its grassy tint, and the tide will suit well for next week. I am pleased to say I have had a very fair share of patronage since the opening day, and hope to still increase the same. Since the 16th I have had 35 punts out in all, and each day

our takes improved both in size and quantity, and last week the whole of the Teddington weir being open for the day will, no doubt, add to our river stock, now with well furnished punts, and such experienced fishermen as Pert Hammerton, Jem Hammerton, Spiers Moffat, Henry Dobing, &c., I hope to have a very successful season.—A. PERRIN.

Thames (Windsor).

Water here is not looking in the best of condition, and at Pangbourne and Cookham I saw no difference. At the former place John Rush tells me he has been having good perch, jack and roach, and at the latter Godden has had a slice of luck. Whilst out on Tuesday with a young gentleman, — Bonny, Esq., he took on roach a nice trout of 4 lb. from under the bridge leading to Odney Weir. Seeing him laying up he quietly ran down a lively little gudgeon, and his fate was soon sealed. In this neighbourhood J. Gray has had (Sunday last) over 30 lb. of chub and barbel with a patron, and the day before 25 lb. with a patron. Nottingham George also had a nice brace of chub, going 8½ lb., and at Boveney some good barbel and eels have been had. Roach are not up to much yet, as it is full early for anything except trout. The months for the Thames being August and September, expect then to send some good reports.—B. R. BAMBRIDGE.

Barle and Exe (Dulverton).

Owing to the low and clear state of these rivers, fishing, during the past month has not been worth anything. We have had two or three small floods down, but as these rivers fine down so rapidly, anglers would only get perhaps, one day after them, when a few good baskets were taken with worm and minnow. The only time to catch fish now is in the evening. The best-killing flies being the black ant, coch-y-bondhn, and coachman. Until we have a good quantity of rain, we shall not have any fishing of importance. No salmon have made their appearance yet.—W.

Colne (Thorney Broad).

The water is in splendid order for fishing—not too clear. Every prospect of fine weather and plenty of sport. Mr. Valck, 15 dace, smallest 8 ounces; Mr. Abbott and Mr. Cox, and several other anglers have had some good sport amongst the roach and dace. Mr. Cox took one trout about 1 lb.; bread and bran for roach, and gentles for dace. Anglers wanting copies of our rules can have them by enclosing stamp for reply, or they can be had at most of the fishing tackle manufacturers in London.—E. GODFREY.

Dove (Derbyshire).

Sport has been good during the past week, especially with the minnow. We saw a splendid basket of fish that had been taken with the Derby killer. There was also a take of 6½ brace, on Tuesday, and also another of 7 brace, on the Dove Dale water, both of which were taken by the Derby trout killer. The Windsor bee and universal killer, too, have been the means by which some exceptionally good fish have been taken from both the Dove, Manifold and tributary. As is usual at this period, the fish do not rise much, owing to their having gorged themselves with the May fly, from the effects of which it, generally speaking, takes them a fortnight to wholly recover; and during that period the fly-fisher is often reduced to the necessity of plying the minnow or worm, but, before so doing, there remains still one method of alluring master speckle, viz., by means of the blood-red hairy caterpillar, which artificial is a strict copy of the *Artia Caga* or tiger moth, found amongst shrubs, &c., lining the banks of the streams, from which it falls into the water and becomes food for the trout, chub, perch, and, indeed, every freshwater fish. The artificial in general use here in the Midlands is cast the same as the fly, and then allowed to sink, a slight movement of the hand being requisite to gently work the thing. Some small takes have already been effected by means of this lure, but the natural will not be plentiful for a full week yet.

Exe (Exeter).

We have had a variety of weather during the past week, but mostly suitable to the angler. “They have been able to talk of their triumphs, and boast of their slaughter. How they hooked him, and played him, and killed him so fine, and the battle so gloriously finished in water. Again and again they will fight over in wine,” so says the “Coquetdale fishing song.” Some fine trout have been taken, also roach, dace, perch, and pike, and Mr. J. A. Kelly has shown up as usual a splendid lot of tench, one of 2½ lbs. will be exhibited, duly preserved this evening, at the opening of the Royal Museum Angler's Club. Salmon and lampreys, the latter especially, are very plentiful this season. What a pity these fish are not thought more of in these parts, they treat them infinitely worse than an “adder” or “snake,” mostly on account of their curious appearance, which certainly, at first sight, is rather obnoxious to many, but if these parties would only try them potted, or otherwise, that feeling would leave them. There are no bones to be careful of as in the eel, which, if not properly dressed, are very sharp and annoying. There was a quantity of lampers in the river here lately, but they are all gone, and upwards, I believe.—FRANK GOSDEN, Exeter.

Ilfracombe (N. Devon).

There are several gentlemen fishing the streams east of Ilfracombe, and the report brought here from them by tourists is very satisfactory. I shall not know the exact quantity for at least nine days or a fortnight, as it takes one all that time, if he fishes the streams properly, before he arrives at Lynmouth. Anyone starting from Ilfracombe to fish eastward should commence at Acle, one mile from Ilfracombe, where the stream runs into the sea. You can fish up stream for a mile and a half here, it receives its two tributaries, each a mile long, the one coming down through Common or Rabbit bottom, the other from Wanscombe Bottom. There are fair-sized trout at the head of these streams, and I have often wondered how they can live in so little water in the summer time. The next stream is Watermouth, two and a half miles from Ilfracombe, here, if you can get permission to fish, you may depend on getting good sport; the fish are large and there are plenty of them. The stream runs through the town of Berryharbour, and trout are to be caught for miles up the valley south of the town. In fishing this stream commence at the sea and fish south up stream. Next is Combmartin, five miles from Ilfracombe, and commences above. There is good fishing several miles up stream south. Next comes Sherracombe Valley, and this stream runs over the cliff and falls into the sea at Hangman Hill, having a fall of 40 feet; I am told that salmon swim or leap up this fall, and, after spawning, return again through the fall to the sea; there is good trouting to be had in this stream. The next is Heddownmouth, about nine miles from Ilfracombe, commence fishing at the sea; there is good fishing for trout and salmon peal for miles up stream. The next is Lynmouth, twelve miles from Ilfracombe, by the coast. It takes one a week to fish the streams about this place properly. Sea fishing has been going on with little variation since my

last report. Bream are increasing in numbers, and bass are now playing in shoals off the headlands; they take a bait well that I have made, and which I have named "the temptation"; it is a combination bait, and represents either a trout, samlet, sprat or smelt. I am told they are dead killers for pike. Whiting pout, tamin, cod and pollack are all being caught in fair quantities according to the season, and there is good sport with mullet dabs and other fish from the piers and rocks in the morning and evenings. Prospects looking good for next week.—HENRY COMER.

Lea (Enfield Lock.)

Mr. Dixon, of Old Ford Road, had a fine bream from the pool at the back of my house to-day, weight 6½ lb., the same gentleman also took a trout. Water in good condition.—W. SWINDEN, Swan and Pike, Enfield Lock.
[Should like to have your report weekly.—ED.]

Medway (Tonbridge).

Water in splendid condition for angling. Roach are well on the feed. Gentles and paste are the best baits. Jack and chub require a shower to bring them on. Messrs. A. A. Bartram, R. H. Bartram, and B. St. J. Wag-horne have taken large bags of roach. The number for four days being 178, the largest 1 lb. 7 oz. In addition to these they have taken a bream of 2 lb. and two pike, the largest 6 lb. 7 oz., and the other 3 lb. Mr. Wood, of Chatham, captured a 2 lb. roach, as well as some good carp. Several good chub have been taken with live bait. The bream will not be well on the feed for at least a fortnight. The prospects for a successful season never looked better.—YE MEDWAY WATER RAT. [This came too late for last week.—ED.]

The water is really too clear for thorough good angling, and a good shower would do a deal of good. The prospects never looked better. Pike, perch, roach and chub are well on the feed, and bream will doubtless be so in the course of a few days if the weather continues warm. During the week, Mr. R. Leonard took a chub with a fly near the Old Weir. It was a splendid fish, and weighed 2 lb. 9 oz. One angler exhibited a nice bag of fish—6 brace of chub, taken with a wasp grub; several fine pike have been grassed; and Mr. Wag-horne and friends have been busy amongst the roach, taking 90 on Saturday last with paste besides a good bream and a jack. Mr. Wood, of Chatham, and Mr. Chapman, of Sevenoaks, have also been busy amongst the roach.—YE MEDWAY WATER-RAT.

Suir and its Tributaries, Clonmel (Ireland).

We still continue to have heavy showers, which keep the river flooded with a very dark colour, almost black. We hear of salmon and peal being seen ascending the river from all quarters, so no doubt when the river gets a little lower there will be plenty of sport for every rod. The anglers on the upper waters, who have been idle for the past two months while the water was low, are refurbishing up their tackle and preparing for the peal season, which promises to be unusually good. Already one of the Cahir Club succeeded in killing one. Dr. Donaldson, at Springmount, got four salmon, two of them weighing 16 lb. and 20 lb. respectively. Paddy Keffe killed one of 13 lb. at Newcastle on Monday last on Dr. Cooke's preserves, and the cotmen of Clonmel got 22 for the week of all sizes, from a peal of 2 lb. to a salmon of 26 lb., the majority of them being peal. The trout fishing is at its best; large baskets filled on every stream, and on the Suir every night about nine o'clock numbers of large trout have been caught. The spider wrens still continue favourites for day-fishing and large rails for night, with gold grouse.—DORA.

Trent.

Our rivers have been in capital order for all round fishing the past week. Roach, dace and chub have been well on the feed at both stone bait and gentles, the former doing the principal execution when gettable. Our crack roach angler, Reynolds, had a capital basket of miscellaneous fish last Friday, which weighed 10 lb., in fact, every angler who has visited the river and has understood the Nottingham style of angling, has succeeded in basketing a fair miscellaneous catch. It is positively useless to attempt any other way when the rivers are so low and "as bright as crystal." Another thing anglers will do well to bear in mind, the tackle used should be of the very finest description to ensure any amount of sport. Excellent accounts reach me from anglers who have visited the pools and reservoirs in this locality. Perch, tench and roach are taking all kinds of bait freely. A friend of mine called to see me the other evening with a capital basket of perch, the largest brace weighing 2 lb., and were in first-class order. I am given to understand tench have not been feeding so freely for many years, and excellent sport is in the prospective, so when the pike season commences, I shall look forward to report some excellent takes. At the time of concluding there is every appearance of a change in the weather, as the barometer is rapidly falling, which will prove a source of much pleasure to our trout anglers who have only had but scanty sport since the commencement of the season, owing to the scarcity of water; in fact, some of our streams have been almost dry.—JAMES GREGORY.

Trent (Newark).

The water is in capital condition for general angling; weather mild, with occasional showers; wind, west. Roach, chub, &c., are improving in condition, but bream are not yet in very good order; cad bait and gentles are still the best baits for roach, dace, chub, &c., the worm having been tried several times for those fish, but without much success. Dace will rise during the evening at both red and black palmers, and fly fishermen can whip away for these fish, while the water is in its present trim. There have not been any very great catches of fish as yet; a few odd ones have been taken; eels and flounders are taken in the best of condition, and in fair quantity. I saw a lot of roach and bream last Saturday, said to have been taken in fair angling, but they were very slimy, and not fit to have been taken, but they will now rapidly improve in condition.—THE TRENT OTTER.

Trent (Nottingham).

The water for the last two or three months has been exceedingly low and clear, and when this is the case the channel weed grows very quickly, and consequently the natural insects of the river produces an usual quantity. Then the worm fishers begin to grumble because none of the finny tribe can be persuaded to take their noted fancy bait, which, without a doubt, the worm is, and has been the most killing bait for the bottom fish on the Trent. Now comes the secret I wish to remind the anglers on our river; I remember some few years ago a similar thing occurred as mentioned above, when worms were not worth a penny a thousand, and the men who are generally fully employed in procuring this bait had nothing to do. A private consultation was held among a few of our practical fishermen as to what was the best thing to do. We all agreed that as the fish seemed to be altogether off the worm we must try some other bait, and the final conclusion was that scratching must be tried in still

places where the work could be done with a light quill float. Several of us after preparing the scratching over night (which should always be done) started on the following morning, and the result was, not a single one failed to catch a good basket of chub and barbel. Let the anglers under the present trying circumstances remember these few remarks, and there is not a doubt they will get on better. Keep the worms out of the rivers, and for any of the fish you go after, place maggots or cadbaits on your hook.—W. BAILEY.

Waveney (Beccles).

The water here is now in first-class order for fishing, and as the season advances, some capital sport may be anticipated with confidence. Very little was done here during the latter part of the close time, although, as you are aware, we have no close time for angling, nor is it required. During the past week a few takes of roach have been obtained, and also a few nice perch, but the majority of anglers have hardly commenced to fish yet. The Caxton Angling Club have announced a competition for to-day (Saturday), when it is expected a goodly number will turn out. We may state that the spawning this season has taken place under most favourable circumstances, and is said to be the best for many years.—C. B.

Wye and Derwent (Derbyshire).

Sport in both of the above rivers during the past week has been middling, and only small baskets have been the order of the day with the artificial fly. The best times for catching a few fish have been early in the morning and the last thing at night, and the yellow's light duns, and little blacks have all killed fish. The little blacks being the favourite. There is such a great variety of different kinds of flies on these rivers now that makes the fish very particular about what fly they take; in fact trout are now very fat and lazy, and are in the height of condition, and show wonderful good sport after being hooked. The best baskets that I have heard of since my last report with the artificial fly has not been more than 5½ brace per angler, and a great many fishermen have returned home with empty creels off of both rivers during the week. There was a trout killed near to Whattandwell last Monday with the yellow dun, that weighed 2 lb. all but 2 oz. Dipping with the natural flies in the middle of the day have killed a few good sized trout. There have been some fine both trout and grayling killed off the Darley Dale Club waters with maggots for baits, during the week. Before there is any good fly fishing in Derbyshire we must have a good flood on these streams to make the fish forget the drake, and give them a good stirring up and set them on the feed again.—GEORGE JAMES EATON, Starkholmes, Matlock Bath.

Yore (Yorkshire).

Very little doing beyond an hour or two in the early morning or evening, when by very fine fishing with a well scoured red worm, a brace or two of fish may be taken. I wanted a dish for a friend, so went out last Saturday afternoon, and fished my very best for nearly five hours, at the end of that period all that I had to show was a nice grayling ¾ lb., and a large dace, so I wended my steps homewards, ruminating on the uncertainties of angling in summer. On the portion of the river that I was fishing there are no bushes, otherwise I might have done better by dishing with the natural fly. My friend Mr. Ford, of Caistor, has sent me a few of his flies recently, they are all that can be desired both in point and colour, size, and neat dressing, his yellow dun, iron blue don, and Ford's favourite, are the ones that I am not pleased with. The latter named is a fly of Mr. Ford's own invention, as its name implies, I have often had great success on both the Yore and Wharfe with a hackle fly somewhat similar in appearance, made with bright purple silk and snipes feather, and I think that the fly in question should kill equally well, if not better, anyhow I shall be better able to express an opinion on the subject, when I have tried them practically, which I shall do as soon as there is a chance of successful fly-fishing.—FRANCIS M. WALBRAN.

NOTES FROM SHEFFIELD.

THE doings here have not been anything great this week, most of our anglers reserving their skill until the fish are better on the feed. The New Angling Association had their opening match on Monday last, and was anything but a success, the number of anglers taking part therein being very small, and like the match of the week before. Mr. Robert Spills clearly shows that these early gatherings are not appreciated by the anglers generally. There were several nice trays of roach shown on Sunday and Monday, and most people seeing them expressed their pity as to see them full of spawn, at all places where any show took place it was the same. I heard of a most remarkable incident in "matters piscatorial." Mr. Edward Cowley hooked and lost a good fish early on Sunday morning last having partaken of breakfast, he recommenced fishing opposite to where he had lost his fish shortly before, and after a short time hooked a good fish. Better luck attended his efforts this time, and he succeeded in landing a fine tench of four pounds, with the gut bottom he had lost shortly before hanging from its mouth. This incident, I think, will go a long way towards dispelling the illusion of those parties who believe in the theory of fish not feeding during the breeding time. I heard of one angler (?) who, having been presented with three tench at Boston, for friends in Sheffield, showed two of them in, and took a prize with them. I hope the truth will be found out, and the party punished, as he richly deserves to be.

The question of legalising the fishing for eels and flounders during the close season, I think will be shortly accomplished. The clause to be introduced will read somewhat as follows:—"That eels and flounders may be taken during the close season with rod and line only in tidal waters, no such fishing will be allowed between the hours of sunset and sunrise."

If the above resolution can be carried, I think it will be a great boon to many who live on the banks of tidal rivers, and enable them to provide their families with many a good meal, and others with amusement that will do no harm to other fisheries.—"RED SPINNER."

[We hope anglers will not rest content with the proposal respecting eels and flounders. Why, eels only run at night; ask any eel fisher.—ED.]

TROUTING BY NIGHT.

1.
I stand beneath the fading sky
With my good rod in hand,
The darkening river stealth by,
A hush is on the land.
All noiselessly the swift bats glide,
Athwart the silent sullen tide,
Their dusky figures scarce descried.

2.
For the grand watery giants here
I mean to weave my spell,
And gentle "rises" greet my ear,
Whose music charms me well!
Determined that a trout shall die,
I send the deadly double fly,
Across the waters silently!

3.
A sullen plunge that startles night,
A gallant fish I ween!
His heavy *pull* attests his might—
A monster! yet unseen!
The tardy minutes come and go,
And still my formidable foe
Is darting wildly to and fro!

4.
At length towards the shelving shore
I draw my weighty prize,
And as I feel the fight is o'er,
I *strain* my eager eyes!
Like silver in the net he gleams,
The spotted tyrant of the streams,
To mingle with my future dreams!

F. B. DOVETON.

CLUB AND OTHER JOTTINGS.

MR. HOOLE has made his first start angling for this season, and on Thursday, 23rd inst., under the pilotage of Mr. P. Geen, managed to secure from the Thames, in the neighbourhood of Chertsey, some 30 lb. of large bream.

From the Arun the capture, by an angler, of two handsome carp is reported, the brace weighed nearly 16 lb.; the shorter one scaling considerably more than the other, a long empty fish. A contemporary reminds its readers "That the rudd are now on at Whitstable." To those who are indifferent to quality, and go in only for quantity, this is worth knowing. For my part I never could see any sport in catching such miserable little fry.* I have seen a lot of shows from these dykes, the best being one of 28 lb., which, upon being carefully sorted, yielded 13 lb. odd ounces of fish—2 oz. or over.

I hear that some good tench are being had from Elstree Reservoir. This piece of water is on the Midland Railway; the charge for day tickets, jack fishing, is 2s. 6d.; bottom fishing, 1s. It is some little distance from the railway station, but good accommodation can be had in the neighbourhood of the water.

There is an *on dit* that a local society contemplate undertaking the preservation of the pretty little river Stort. I sincerely hope this may prove true. If such preservation is undertaken, the London anglers ought to give it both moral and pecuniary assistance, more particularly our friends the wise men in the East, whose favourite Lea would directly and indirectly be much benefited if this, one of its principal feeders and breeding grounds, were properly looked after.

The Thames continues to be a very bad colour, a dirty soapy brown, and very low in spite of the showers. On Sunday, in company with Mr. P. Geen, I drove from Chertsey Bridge to Staines, over the bridge round by Penton Hook, over Chertsey Bridge again, to Halliford and Shepperton, and back to Addlestone, by way of Walton Bridge; and by the banks of the river, the greater part of the distance, many punts were out, but they seemed to be doing very little, the bank anglers to whom we spoke, and many of whom we knew personally, had fared worse still, though in many cases they had been at it since sunrise.

Nor had those who fished the Wey, many of whom I spoke to at Weybridge and Addlestone, done any better, if I except one gentleman, who had some 14 lb. of good bream from what he termed a "new shop" on this river.

From Yalding the reports are equally discouraging. A friend of mine, who on the 26th, fished for sixteen hours, succeeded in capturing one bream. He says the river is netted in a most shameful manner.

From the Lea, bright water and lots of weeds militate greatly against good sport. Those who can throw a fly seem just now to be having the best of it, and my friends and brother members, Messrs. Campbell and Billings, succeeded on the 26th, at Ware, in basketing some very fine dace. The last named gentleman losing a good trout, together with his flies and gut cast, through, to use his own words, "the beggar running up the pipe where he lived." The Huntingdon

Preservation Society look after a considerable stretch of the river Ouse, and charge 10s. 6d. a year for the privilege of angling in this water. So far so good. Now, on the 7th day of March, 1881, the receding floods left in the shallow pools sundry fish, among others nine jack ranging from 4 to 9 lb., which jack were quite openly appropriated by some countrymen, and carried off on sticks inserted through their gills, the association's keeper standing by and refusing to interfere. The information comes to me from a subscriber, the secretary of one of our oldest angling societies, who was accompanied on this particular occasion by a friend from London, who will also vouch for the accuracy of the foregoing details. Perhaps Mr. Hawson, the secretary of the Huntingdon Association, can explain. The spot, I understand, was below the Anchor Inn, at Hartford, on the haling side of the river.

From the Welch Harp good takes continue to be the order of the day. On Wednesday, 22nd, a gentleman took 38 lb. of bream and carp, one of the latter scaling over 7 lb. On 23rd, Mr. Stead (the Cure) had a mixed take of roach, bream, perch and jack, 11 lb., and on 26th bream, and perch, eleven fish weighing 18 lb.

Among the North-Western, Messrs. Plumpton and Dr. North, on the 26th, had a nice take, 24 lb. of tench, from a private water.

The Amicable Brothers have their annual summer dinner at the Swan Hotel, Pulborough, on Saturday, the 2nd July. Among the invited guests who will be present is Mr. L. Bonvoisin, the Chairman of the West Central Association.

Mr. J. Lancaster, the fish preserver, of 2, Jeffery Place, Jeffery Street, Kentish Town, tells me that in three days he has received four large carp taken from the Welch Harp for preservation.

To anglers who are puzzled where to go thus early in the season I would recommend the Thames below Teddington, Amberley in Sussex, or the Welch Harp, Hendon.

Of the Anglers' Conference at the Society of Arts on Monday, as particulars will appear elsewhere in the GAZETTE, it is only necessary to say that the big room, capable of containing, I should say, some 500 or 600 persons, was crowded; that the whole of the resolutions as proposed were, with one exception (four instead of five months' close season for pike), carried, and that a more orderly, yet enthusiastic, meeting I never saw. The West and East Central Associations, are to be congratulated in having taken the initiative in this matter. Matters of local interest may interest may safely be left to those hard-working bodies, the preservation societies of the district, but where matters of vital, nay of national, interest are to be discussed, matters affecting, so far as the working men are concerned, the right of continuing to enjoy the sport they love so well, it is the clear duty of the Central Associations to take the lead, unless they are desirous of being charged with neglecting the very kind of work which they were formed mainly to carry out.

CHARGES AGAINST NOTTINGHAM FISHERMEN.—William Leeming and Peter Leeming, both living in the Rose and Crown Yard, London Road, Nottingham; Thomas Keetley, 13, Rose Yard, Bellar Gate, Nottingham; and Walter Bailey, 2, Bromley Street, Nottingham, were charged with unlawfully trespassing in pursuit of fish—to wit, eels and flounders—on land belonging to Sir Richard Sutton, adjoining the Trent at Hoveringham, on the 29th May. Mr. F. Lees, solicitor, of Nottingham, pleaded guilty on behalf of the defendants. He said that the defendants with others were members of an association formed for the purpose of carrying out the provisions of the Act of Parliament under which the present proceedings were taken. Now, he was instructed by the secretary of this society to the effect that any member who transgressed these rules was instantly dismissed. The only object of this fishing association was to provide the sport which its members desired, at the same time so as to thoroughly comply with the Act of Parliament. The defendants had instructed him (Mr. Lees) to say that they had been in the habit of fishing in this vicinity ever since they were lads, and they had not the slightest idea they were doing anything wrong. Under those circumstances he hoped their Worships would deal leniently with the defendants. The magistrates imposed a fine of 15s. each, including costs.—John Bearder, Cavendish Street, Nottingham, John Marshall, 22, Cavendish Street, Nottingham, and Henry Wilson, Bellar Gate, Nottingham, were also summoned for that they did take otherwise than by angling six eels from the Trent on the 29th May, on land occupied by Mr. William Wright, at Fiskerton. The defendants pleading guilty were fined 15s. each.—John Webber, of Carlton Road, Nottingham, and William Forman, of Sneinton Hollows, were charged with a similar offence on land belonging to Sir Richard Sutton, at Hoveringham, on the 29th May, and were fined 15s. each.—Alfred Peters, of Sneinton, William Bellshaw, of Queen's Grove, Nottingham, and James Bellshaw, 9, Queen's Grove, were charged with a like offence on land adjoining the Trent, in the occupation of Mr. William Marriott, on the 29th May. Defendants pleaded not guilty. Police constable Spence stated that on Sunday morning, the 29th of May, he was on duty in plain clothes in company with another constable on the Trent side, in the parish of Bleasby. He saw them stooping forward into the Trent, and Inspector Webster, who was with witness, stopped them. The defendants had in their possession a number of eels and wet lines. Witness did not actually see the defendants fish, as he was a considerable distance away from them. Police constable Stringfellow gave corroborative evidence, after which Inspector Webster stated that he saw the defendants pulling something out of the water. He also saw them put something into a bag, and the eels, which were fresh and alive, were found upon them. The defendants contended that they were drinking from the Trent and not pulling anything out. They were fined 20s. each.

Summer Evening Coaching Trips.—A four-horse coach will leave Ashley's Hotel, Henrietta Street, Covent Garden, every Monday, Wednesday, and Friday, at 5 p.m., for a drive through the most charming scenery round London, returning for cold collation at 9.30. Fares for the entire journey, 5s.; box seat, 7s. 6d.

* The Norfolk and Suffolk rudd are splendid fish, and grow up to over 2 lb.

CORRESPONDENCE.

[We do not hold ourselves responsible for opinions expressed by our Correspondents.]

THE PROPOSED AMENDMENT OF THE MUNDELLA ACT.

SIR,—I fail to see by what right "A Norfolk Angler" arrogates to himself the claim to speak for Norfolk anglers, and I very much doubt "whether" his ideas are endorsed by them. Norwich is not all Norfolk, "not by no means whatsumdever"—and "Pixie," with his "we in Norfolk," is as bad as "A Norfolk Angler."

Now, Sir, "we" in West Norfolk are, practically, as far off the boasted broads as we are off London, and to many of us they are much more difficult of access. This applies to three-fourths of our division of the county, and as we are in much the same position as regards fishing waters as an ordinary English county, I imagine that the lot of West Norfolk anglers would be cast in with the general body of anglers, and not with the anglers of Norwich and the Broad District. However, I have no wish to enter into an argument with "A Norfolk Angler" as he has quite enough to do in trying to land "those Tritons" (Messrs. Geen and Keene), without troubling himself about a

WEST NORFOLK MINNOW.

I am afraid "A Norfolk Angler" is not a good angler, as he possesseth not the virtue of patience and an even temper. W. N. M.

SIR,—For many reasons, I have decided not to answer "The Trent Otter's" letter, which appears in this week's GAZETTE. I cannot see what local politics have to do with the Mundella Act. Misstatements and personal abuse is not argument. Fair criticism on the public doings of any man is legitimate. "The Trent Otter" more than a year ago gave me, in a private letter, a very serious and graphic description of the kind of political persecution I might expect from those who differed with me on matters piscatorial. You now know the result. Seriously, Mr. Editor, I do hope that for the future you will use your utmost endeavour to protect me from similar personal attacks to the one which appeared in your last issue from a townsman, signing himself "The Trent Otter."—I am, &c., H. WEAVER.

Newark, June 27, 1881.

[We do hope our correspondents will endeavour to keep cool in discussing matters of general interest. It must not be supposed we allow a tithe of the "personal" matter which is sent us to appear; but it is an extremely difficult matter to keep correspondents within bounds: anyhow, we invariably let both sides state their views.—ED.]

SIR,—Taking into consideration that alterations are about to be made in the Freshwater Fisheries Act, I sincerely hope that one important fact will not be overlooked, viz., that every inspector or superintendent should have authority to inform the constables in their several districts to warn off or summon any person or persons infringing any portion of the above Act. During the last two years, on account of the fishing taking place in our river, regardless of remonstrance or threat, some of our angling friends applied to the Inspector at the Greenwich Police Station, to ask why the fishing was not stopped, and the answer was, "We have had no orders from headquarters, therefore we are powerless to act."

Now, Mr. Editor, what on earth is the use of having an Act if the police have no orders to summon persons who infringe that Act? During the latter part of last month a friend of mine was at Southend, Kent, and there saw some men fishing in the Ravensbourne, and a policeman standing beside them, looking on, when the following dialogue took place between my friend and the policeman:—

"Why do you allow these men to fish; don't you know that it is close time according to the Freshwater Fisheries Act?" The policeman replied, "That he did not, for he had had no orders from his superintendent, so that he could not interfere." My friend told him he ought to know them. The answer he got was, "If he was to mind his own business, he would have enough to do." Thus you see the power has been kept from those who should be the very persons to put down the bad practices on rivers where there is no protection society or water bailiffs. Trusting this will be a sufficient excuse, I am, &c., DEPTFORD. AN UNITED BROTHER.

SIR,—Would it not be better for those who are so indignant at Mr. Wortley's attempt to amend the Mundella Act, if they would for a moment address themselves to the point, whether it is really a fact in ichthyology or not, that fish do not take bait during the time they are busy spawning, or during the time they are carrying spawn just previous to depositing it? The supporters of Mr. Wortley's Bill allege that this is so, and that anglers, by fair angling, cannot catch the breeding fish, in any quantity, if at all. If that is so, why all this pother about the sentimental part? If the allegation is unfounded, then, why not say so at once and prove it, instead of attributing unworthy motives, &c. Very many, I know, thoroughly believe the allegation true, and I have every reason to believe Mr. Wortley is of the number; and were they convinced to the contrary, they are true sportsmen enough to go in for the amendment suggested in the other direction joyfully. Many of them do think it "hard lines" that owners of fisheries and those having the permission of owners can and do do that which to others less fortunate is forbidden by the Act. Either those who act thus are wrong, and ought to be stopped; or, they are right, and the sooner all are put on the same footing, the better.—I am, &c., L. SHEFFIELD.

[It is a pity this argument about fish not feeding in their spawning time was ever brought up; there is hardly the faintest ground for the assertion.—ED.]

SIR,—Would you be good enough to request your correspondent, anent "Mundella's Bill and the Norfolk fisheries," in future to sign as "Pixie 2nd.," by doing so, will much oblige.—Yours, &c., PIXIE 1ST.

I am requested to ask you if it is possible to get the condition of the rivers, lakes, and ponds within thirty miles of London. June 23, 1881.

[If Pixie will name the places he refers to, and some inn at each place, we shall be very glad to try and arrange the matter.—ED.]

HICKLING BROAD, NORFOLK.

SIR,—A friend and myself had a capital day's sport on Saturday last on this beautiful piece of water. We took with two single hook gut lines 56 lb. of fish consisting chiefly of rudd, a few roach, two eels, each about a pound in weight, and two small perch. These were all taken with red and white paste, and the catch would have been larger had not the wind chopped round to the east for two hours in the middle of the day. The fish were all remarkably healthy, several of the rudd weighing one and a half pounds each, and one two and quarter pound. For the information of those who do not know this locality, I would advise them to write to Mr. Samuel White, Pleasure Boat Inn, Hickling, Norfolk, from whom I obtained my boat, and who has every accommodation for anglers in the way of boats, bait, &c., and, above all, good clean beds. When going from here, book to Catfield Station on the North Norfolk Railway, and drop a post-card to host White, to meet the train with his horse and cart, as it is rather too far to walk when carrying fishing gear.

I would just add, for the information of those who are not aware of it, that by becoming a member of the Bure Fishing Preservation Society (fee 5s.) one can travel on this line, as well as on the G. E. R., to any fishing district, double journey at single fare.—I am, &c., I. W. A.

17, Market Place, Great Yarmouth.

FISHING AT ORMESBY BROAD.

SIR,—A gentleman from Yarmouth had the good luck to take 58 lb. of fish, namely roach, bream and perch, some weighing 3½ lb. Good boats, rods, lines, and bait to be obtained, and every attention a fisherman requires. If you would please to put it in your valuable paper, it would greatly oblige.—I am, &c., S. RICHMOND.

The Sportsman's Arms, Ormesby Broad, near Yarmouth.

[We shall always be glad to publish notes like these from Proprietors of Fisheries.—ED.]

WIRE LINES.

SIR,—I see that Mr. George James Eaton, in his notes on the Wye and Derwent, in your issue, June 18th, strongly recommends a line composed of hair, silk, and wire.

I tried one of these some time ago, and was disgusted with it. In the first place, it was not waterproof; therefore, the line soon got verdigris; secondly, it curls and kinks badly, and, after using it a short time, it got badly knotted; thirdly, it is very difficult to send the line out straight, even in a short cast, and it is almost impossible to throw against the slightest wind.

Surely, Mr. George James Eaton has recommended these lines without giving them a fair trial.

I should advise him to try one of David Foster's "Acme" lines, and compare it.—I am, &c., W. B. GARNISS. Mellor, near Marple.

THE MEETING AT THE SOCIETY OF ARTS.

SIR,—After the meeting of anglers at the Society of Arts was over on Monday night I met a gentleman who had been there. He informed me it was not an open meeting but by admission tickets, and that all the amendments were carried. I asked him if any opposition was made, he answered very little; but they had no chance, for a committee was formed with instructions to vote upon all clauses as they stood; also that "The Trent Otter" was put forward to move that April, May and June be the fence months for all coarse fish other than jack and perch. How do you account for this change, as I believe "The Trent Otter" has said he was in favour of rod fishing at all times?—I am, &c., CAMBRIDGE.

RECIPE FOR MOSQUITO BITES.

SIR,—The following recipe for a mosquito lotion was sent to the *Field* some time ago by Mr. Rae, the traveller in Lapland. He stated that, but for it, he could hardly have carried out his journey. I trust, therefore, that it may be of some use to "Victim" and other anglers distressed in this way. Perhaps he would kindly let us know if it answers.

"Dissolve in a cupful of water as much alum as the water will contain—in other words, make the strongest solution possible of alum and water, add one third proportion of aromatic vinegar, and one-fourth of glycerine; keep it in small flat phials convenient for the pocket, and apply it constantly during the day."—I am, &c., W. P. H.

231, Camden Road, N.

THE ANGLERS' "PLAGUE."

SIR,—Your correspondent, "Victim," will do well to try our "Little Chap," as referred to in Aldam's book. This small artificial is frequently used with immense success here, in the Midlands, in similar circumstances to what he so graphically describes. We have used midges no larger than a grain of mustard seed, on casts as fine as human hair, but if the pond is really as well stocked as "Victim" has been led to imagine, the Alexandra, or what is often even more deadly—the Woolly Bear, or blood-red Caterpillar—which is used in a similar way to the Alexandra, but contains two hooks. This lure has a great reputation for both pond, lake, and river fishing, especially up North, where Sandy designates it a "fearsome beast," but a "reg'lar kill deil."—I am, &c., DAVID FOSTER.

Ashbourne.

THE NEW WIRE LINES.

SIR,—In reply to Messrs. Hardy's queries in to-day's issue of the GAZETTE, we beg to state that the corrosion of copper, in contact with bare silk and hair—i.e., without protection—has the effect of eating through the same in a short time, therefore making the line absolutely worthless.

We affirm that the "Acme" line is perfectly free from corrosion, the wire used being submitted to a special chemical process prior to its being plaited with the silk, and waterproofed in a way so as to enable the line to effectually resist the action of air, water, sea and river fishing, and friction generally.

Owing to the unprecedented success which has attended the use of this article since its introduction by our late father (Mr. David Foster, senior), some fifteen months since, there have been many valueless imitations, which must inevitably

prove prejudicial to the purchaser. The particular line referred to by Messrs. Hardy—who, we presume, have purchased and personally tested a line of this description—was recently denounced in your valued journal (May 25th) by Mr. H. Cooper, of Church Street, Manchester. No allusion whatever, we note, is made by Mr. George James Eaton to this communication, in every line of which the true ring of honest indignation is strikingly apparent. The same convenient indifferent demeanour, however, is not observed by Mr. George James Eaton as regards the important notice you, sir, so generously bestowed upon the "Acme" line in your issue of the 28th August last, as he carefully and studiously makes use of the precise sentences employed by you editorially in the description of the merits of the "Acme" line. We have no trade animosity against either Mr. Eaton or any other tackle dealer, and it was only in response to the queries Messrs. Hardy made public that we deigned to reply.—We are yours, &c.,
Ashbourne. FOSTER BROTHERS.

FISHING AT WEYMOUTH.

SIR,—Perhaps some obliging reader of the FISHING GAZETTE will inform me whether there is any fishing to be had near Weymouth? Pike preferred.—I am, &c., STROLLING PISCATOR.

[There is first-class sea fishing at Weymouth, but we should advise you to write to Messrs. Edmonds and Co., 60, St. Thomas Street, Weymouth. They are fishing tacklers.—ED.]

JUNIOR PISCATORIAL SOCIETY.

SIR,—Enclosed find 10s. 6d. for twelve months supply of the FISHING GAZETTE to the above society. This society was originally held at the Cock, Clapham Common, but fell through there. It has been reformed here, and we number twenty-four members.—I am, &c., ALF. H. BISLEY.
Duke of Cornwall, South Island Place,
Clapham Road, June 28, 1881.

FISHING AT SUTTON, IN CAMBRIDGESHIRE.

SIR,—Will you kindly let me ask in your paper of this week if there is good fishing at Sutton in Cambridgeshire; if free; and if you can fish on Sunday?—I am, &c.,
June 29. S. F. B.

MIDGES.

SIR,—In reply to the appeal of your correspondent on this subject, I am informed that a little Stockholm tar rubbed up with butter and applied to the skin of the face, neck, hands, &c., is a sure preventive or prophylactic against these pests; in fact, all insects shy at it. The only thing against it is the fact that it may somewhat interfere with free perspiration.

Another preparation is olive oil and oil of cedar, equal parts, to be similarly used.—I am, &c., CHAS. C. CAPEL.

AUGUST TROUT FLIES FOR NORTH WALES.

SIR,—Would you kindly insert the following query in your valuable paper at your earliest convenience?

Would any reader kindly suggest the best trout flies for the small lakes and streams of North Wales during the month of August?—I am, &c., G. B. M.
1, Eastbourne Villas, West Dulwich, S.E.

[The maggot fly, as made by Mudford and Co., Tiverton, will kill well in August; so will Mr. G. J. Eaton's "Little Red." The coch-y-bondhu will always kill on the Welsh streams. These, with the blue-yellow and light duns, will kill if anything will; but there is little use in going to North Wales in August unless there has been plenty of rain just previously.—ED.]

FISHING NEAR WORCESTER.

SIR,—Many subscribers to the FISHING GAZETTE have written to me for information upon fishing quarters, &c., in our streams. I will first treat with the Severn, then with the tributaries in relation, as their value in an angling point of view appears to me. I have fished most with the fly, the minnow, and worm, but the fly is my favourite. The first place up the river from the city is Holt, with its wear and ford, and a fine stretch of deep water. It is six miles from Worcester, and can be got at by steamer on Monday at three o'clock, leaving Holt about eight p.m.; also it leaves the city on Sunday morning at seven o'clock, returning at eight p.m. The next place I will name is Bewdley. There is a station on the Severn Valley line. There are some beautiful fords and swims for the bottom fisher; also you can obtain a boat at a small charge. Then comes Arley; and still going up the river is Highley and Hampton, Bridgenorth, Ironbridge, and other places upon the same line. At all there is good fishing, either with fly, gentle, worm, and trowing for pike, and perch. The fly fisher will meet trout, grayling, dace, chub, and roach in July, take the red ant freely. Often baskets of these fish, weighing 20 or more lb., are taken with the gentle. The fishing is free, only you require a trout licence, 1s. each. I supply them. You can, when at Bewdley, take train for Newnham, on the Teme. There is beyond all doubt as good trout and grayling fishing in this district as can be met with, and mostly free. The host at the inn is an angler, and will give instruction; and also he has trout fishing on the river Ree. I have looked out of my sleeping apartment at this inn and seen the fish rising. I will treat upon the Teme from its mouth upwards next week, June 30th. It is all the angler can desire. The streams are in order, and the wind blowing from the south; dull and showery.—I am, &c., JOHN A. GRIFFIN.
Portobello Inn.

P.S.—I make a small trout fly that I always find to rise when the midges are on thick. I rose upwards of thirty in two and a half hours last Saturday week, from 6 to 8.30. I have inclosed one for your inspection. I call it Griffins fancy, No. 2.

FISHING AT UTTOXETER.

SIR,—Kindly inform me, through the FISHING GAZETTE, what fishing there is within two miles of Uttoxeter; also, whether free, or if not, how obtained.—I am, &c., A TYRO.

P.S.—Also what is best in which to breed worms; for any length of time, that is.

[There is good trout fishing in the rivers Blythe and Dove, but you will have to get permission from landowners.—ED.]

POISONING WATERS.

SIR,—I attended the meeting of the Angling Societies, held at the Society of Arts, on Monday last, and derived much satisfaction and information from what I heard—no doubt your to-morrow's issue will give your numerous readers the report *in extenso*.

It struck me as somewhat singular that, although the controversy as to the fence months, appointing keepers, doing away with nets, &c., &c., were very intelligently disposed of, I waited in vain to hear some of my brother sportsmen allude to what I think requires as great attention as the matters they ventilated at the meeting—I allude to the poisoning of waters by manufactories, individuals, &c. I really think that the net would be found an insignificant engine of destruction in comparison to the poisoning which I know goes on. Our respected Lea (I live within a stone's throw of it) I have several times seen covered with fish of all sorts and sizes, dead, stupefied, and dying. I have seen boats with hundredweights of fish in them taken from the Lea by the hand, baskets, &c., &c.

I am well aware there is an Act, entitled, I think, "The Rivers Pollution Act," and I have certainly read of cases prosecuted under that Act, but still the pollution continues.

The splendid river Roding (or Roden), in its way through the meadows at Ilford, could tell a tale of pollution, and the cause still continues, as is well known to the inhabitants.

I refrain from further comments this week, being pressed for time; and hoping I may be in time for you to insert this in your next.—I am, &c.,

HENRY HOUSE,

June 30.

Hon. sec. Walthamstow Angling Society.

CLUB REPORTS.

ANCHOR AND HOPE ANGLING SOCIETY.

On Sunday, June 26, several members went to Amberley, returning with some good shows of fish. R. Smith, 12 lb. 8 oz. roach and bream, 1 bream 3 lb. 10 oz., and a roach 2 lb. 2½ oz.; Mr. W. Streeton, 4 lb. 2½ oz. bream; A. Glass, 2 lb. ¾ oz.; A. Shakel, bream and roach; C. Daniels, bream.—A. SHAKEL, sec.

AMICABLE BROTHERS' ANGLING SOCIETY.

Sunday, June 26, 1881, Mr. Shory, one brace of trout, roach and dace; Mr. Moir, bream, from Dagenham; Mr. A. Lake, bream; Mr. Harding, 6 lb. 6 oz. dace, also roach and gudgeons; Mr. Pedley, roach; Mr. Say, perch; Mr. Wood, roach and dace. The twenty-eighth annual dinner will be held at Mr. Mansel Bayly, the Swan Hotel, Pulborough, Sussex, on Sunday, July 3. Messrs. C. A. Medcalf and W. Say will act as stewards. Total weight, 20 lb.—J. WORLEDGE.

CITY OF LONDON ANGLING SOCIETY.

Only two of our members weighed in on the 26th—Mr. Castell roach and eels from Pulborough, and Mr. J. Chambers bream and eels from Amberley. Blanks were very plentiful. We fish on Sunday next at Amberley for seven prizes pegged down.—CAS.

CLAPHAM JUNCTION ANGLING SOCIETY.

On Sunday last Mr. E. Withers succeeded in capturing two pretty chub from Cookham, weighing 8 lb 5 oz., which are now in the hands of the preservers, and will be added to the collection which decorates the walls of the society's headquarters. Mr. E. Wilson took a nice jack from Earley weighing 5 lb. 11 oz., and 2 lb. 7 oz. of roach, in all 8 lb. 2 oz. Messrs. S. Walkley, T. Smith, T. Sutters, C. Blunden weighing in roach, dace, and perch, altogether making a nice show of fish.—E. WILSON, sec.

June 28, 1881.

DUKE OF CORNWALL ANGLING SOCIETY.

NOTICE OF REMOVAL.

The meeting of this society, formerly held at the Duke of Cornwall, Lismore Haverstock Circus, Hill, is now held at the Wheatsheaf, Lismore Circus, Haverstock Hill, where they had their second half-yearly supper on the 15th, when about 30 sat down to a splendid repast. Great praise is due to the worthy hostess for the way it was served up, and the members seemed well on the feed. After supper the prizes were given away, the successful winners being W. Harriott, Alridge Clark, Hawes, Galloway, Kittle Brothers, Sergeant Patching, Hyde; and a very pleasant evening was spent, some capital singing through the evening by the visitors.—A. CLARK.

FIRST SURREY ANGLING SOCIETY.

June 19th, Bro. G. Taylor, bream and roach from Amberley; 26th June, two roach, turning the scale at 3 lb., from Amberley, sent to Mr. Millar, of East Street, Walworth; also bream. June 22nd, Mr. Bates, three carp from Welsh Harp, weighing 7 lb. 9 oz.; Bro. Harrison, perch from Aylesbury on the 27th June; Bro. Perkins, fine show of bream from the Welsh Harp on the 29th June; Bro. Champion captured a very fine trout from Walton-on-Thames while ledgering with worm. This society was enrolled in the West Central Association of Anglers.—GEORGE J. NAYLOR, secretary.

FULFORD FRIENDLY ANGLING SOCIETY.

On Monday the members fished their first match for this season in the Derwent, at Elvington. By the kind permission of Mr. W. Barmston. The water was in very fair condition for general fishing, and the sport up to the average. At the weighing-in there was a very nice show of fish. Four prizes were given, the successful competitors being:—Mr. R. T. Pinkney, Fulford, 1st; Mr. E. Walker, York, 2nd; Mr. J. W. Davison, Fulford, 3rd; Mr. F. Crammack, Fulford, 4th.—J. A. GREEN, sec.

GREAT NORTHERN BROTHERS.

A considerable number of the members visited Amberley on Sunday last. The takes were very moderate. Mr. F. Watling headed the list with

5 lb. 2 oz.; Mr. J. Fitch (roach) one fine fish, weighing 1 lb. 8½ oz.; Messrs. Butler, Young, Perkins, Walker, Painter, and Hewitt also showed some roach and dace from Amberly; Messrs. J. R. Fitch, Theobald, Parkin, and H. Watling some good roach and bream from the Wey; Mr. Mayes' jack, from the Welsh Harp, 7 lb. 6 oz.; and last, but not least, Mr. J. Page, a pretty tray of roach, weighing 6 lb. 11 oz. from a new found out!—J. A. FITCH, Junior, Great Northern Bros.' Angling Society, Robin Hood, Southampton Street, June 28, 1881.

LIVERPOOL ANGLING ASSOCIATION.

The opening excursion of the season took place on the 20th inst., when some twenty of the members proceeded to Lemymynech to fish the Vyrnwy at that point. Amongst them were experts, both with fly and bait, and, although the water was bad in colour and the weather unfavourable, with skill and perseverance, some fairish trout grayling and chub were taken. At the finish the party sat down to a dinner-tea, served in excellent style at the Cross Keys Hotel, by the proprietor, Mr. Baugh, to which each brought an angler's appetite, and did ample justice to the good things set before them.

Taken altogether, the out was greatly enjoyed by all, and those present will not soon forget the ramble down the banks of the Vyrnwy nor the beautiful scenery and lovely surroundings.

The prize takers were Messrs. Woolfall, Ellis, F. Roberts, and Ramsbottom, the conditions being for the heaviest single fish, barring salmon and pike.

At the usual weekly meeting, held on Thursday evening the 23rd, it was resolved that the next excursion be on the 21st of July, and take place in the same water at Llanymynech, full particulars of which will be duly sent to each member as soon as the arrangements are completed.—I am, &c.,

June 25, 1881.

R. WOOLFALL.

ORIGINAL CLERKENWELL PISCATORIAL SOCIETY.

The members of the above society were again successful on Sunday last. Messrs. J. Drew, Lucy, jun., L. Gorsuch (bream, Pulborough), Neagus (roach, Stort), and several others weighing-in. Several prizes will be fished for next Sunday, any water.—THOS. WM. LUCY, sec.

June 28, 1881.

OPENING DAY OF THE TONBRIDGE ANGLING CLUB.

Thursday last was the opening day of the Tonbridge Angling Club and Fish Preservation Society, and the Medway was in capital order for all kinds of fishing. The newly-formed weighing-in club offered three prizes to be competed for, and this added to the attractiveness of the proceedings. As usual, the Powder-mill Lock above the town was the rendezvous, and shortly after midnight two or three votaries of the gentle art put in an appearance, and at once fitted their tackle and commenced operations with a lively minnow. Mr. J. Eller opened the ball with a fine chub of 1 lb. 11 oz. It was netted in the dark and safely brought to grass. Very soon afterwards the same angler succeeded in getting a second chub. By this time it was broad daylight, and no less than thirty anglers were present. For a short time perch were the order of the day, and then Mr. Cox succeeded in getting a small pike to give him a turn. The youngster only weighed about a pound, but had swallowed the hook so thoroughly that it was obliged to be killed to relieve it of the cold steel. Very shortly afterwards Mr. Eller landed a pretty little pike, and then his opponent, Mr. Cox, grassed one of 4½ lb., a fine well-fed fish. A few perch were taken, and by this time Mr. Geo. Gray, manager of the Tonbridge Powder-mills, sent down a basket of provisions, as well as a plentiful supply of new milk, and a drop of something to take the keen edge off. This was, of course, much enjoyed. During the day the fishing was rather slow, but towards night some good execution was done amongst the chub, perch, and pike. There was a merry party present, who were successfully photographed by Mr. Seymour, of Tonbridge. At half-past eight the Union Jack which had been hoisted was lowered, and a move was made to the Bull Hotel, where the weigh-in took place. It was found that Mr. J. Eller had taken the first prize with pike, perch and chub; Mr. J. Cox the second, with pike and perch; and Mr. Geo. Payne third, with perch and a chub weighing 2 lb. Several others of the members also had fish of various kind.—YE MEDWAY WATER RAT.

READING AND DISTRICT ANGLING ASSOCIATION.

Much judicious activity is shown by this Association in the prosecution of poachers in the neighbourhood of Reading and in stocking the river. Three weeks ago, as we reported at the time, a gang of notorious poachers were convicted by their agency of netting the Kennet. Our readers will be glad to hear that three of these rascals have left Reading—let us hope altogether—being unable to pay the heavy penalties justly imposed by the county magistrates; and no doubt the fourth would have done likewise but that he happened to be undergoing two months' hard labour at Oxford Castle for poaching in the Henley district. Of course, on leaving "durance vile," the warrant against him in the Reading case will be executed. Two more men were last Saturday convicted by an association of fishing in the Kennet during the close season. The one who was using night lines was fined £1, and the other, who appeared a respectable and poor man, was, at the request of Mr. Creed, solicitor (who prosecuted for the association), discharged on paying the costs. On the previous day a man, who was evidently well-disposed towards the gang convicted three weeks ago, was prosecuted by the association for assaulting and threatening William Clark, by whose agency the conviction was brought about; and the borough magistrates, in fining him £1, said they were determined to protect witnesses in such cases, and would visit any future offence of such a character with great severity. The association has this season turned into the Thames over 300 large Wycombe trout, from ½ lb. to over 3 lb. each; and has kept a sharp look out through its bailiffs to see that none of those under 1 lb. are taken. On Tuesday a man was seen to catch one of the smallest of these fish, about ½ lb. in weight, and as he put it in his basket instead of returning it to the river, he has been served with a summons under the Thames Conservancy bye-laws.—A. W. BUTLER, Hon. Sec.

June 29.

ROYAL PISCATORIALS.

A very nice show of fish was on view at this society to-night (June 29, 1881). They consisted of jack and roach, exhibited by Messrs. T. Hughes and G. Lee, the first-named showing a jack of 4 lb., and nearly 8 lb. of roach, among which were three weighing over 1 lb. 4 oz. each. The last named

gentleman weighed-in 10 lb. 15 oz. of jack. I omitted to mention in my last report of this society, that on the 16th June, 1881, Mr. Dally gave the 1st prize of £3 3s.; Mr. Dally, 2nd prize of £2 2s.; and Mr. Randall, the 3rd prize of £1 1s. On the 19th June, 1881, Mr. Hockley gave £3 3s., 1st prize; Mr. Hockley, £2 2s., 2nd prize; and Mrs. T. Hughes, £1 1s. for the 3rd prize.—PIXIE.

The next competition for prizes will take place on Thursday, July 7th, on which occasion Mr. F. Dale, hon. sec., will give £2 2s.; and the much respected manager of the head quarters, Mr. King, will give £1 1s.—PIXIE.

June 30, 1881.

SIR HUGH MYDDELTON ANGLING SOCIETY.

A few of the members of the Sir Hugh Myddelton Angling Society were out on the 26th inst. and gave the waters they fished a good character with regard to colour. Roach and dace are still far from being in proper condition at present, and do not take the bait freely. Mr. Caborn captured a very handsome trout of 3 lb. 4½ oz., while chub fishing with worm; also, a nice eel of 1 lb. 8 oz.; roach, dace, and chub, 3 lb. 7 oz. Mr. J. Rogers had roach, dace, and chub from the Iver; Mr. Duncombe roach from the Colne; Mr. Saunders roach from the Lea. Messrs. Smith and Billing had some nice chub, but were too late to weigh them.—G. CABORN, Sec.

P.S.—Last week's report was made to read rather peculiar. On one side of the paper, the report leaves off with the words "first prize," and then other club reports follows: turn over the leaf, then our report finishes.—G. C.

SURREY PISCATORIALS.

The members of this society competed for prizes on the 22nd ult., and the following is the result:—Mr. Duck won Mr. Peter's of £2 2s. for the first, Mr. Murray took Mr. Heyward's, £1 11s. 6d., and Mr. Humphries succeeded in taking Mr. Tue's, £1 1s. Messrs. Heyward and Linstead also weighed fish. At the meeting held on the 29th Mr. Langlois was presented with the £10 10s. cup that he won last season, the reason of his not receiving it before being business debarred Mr. Langlois from attending the society before. The auditors, Messrs. Boalch and Heyward, gave in their report, which was received by all members present with much satisfaction, and a vote of thanks was returned to those gentlemen for the skilful manner in which they had fulfilled their duties, and placing the society's books in thorough working order for the coming season. The next competition will take place on the 13th inst., on which occasion Mr. Langlois will give for the first prize £3 3s., for the second Mr. White will give £2 2s., and for the third Mr. Cridland will give £1 1s.—PIXIE.

London, June 30.

THE STOKE NEWINGTON ANGLING SOCIETY.

On the 26th inst. a numerous attendance of visitors awaited the arrival home of the various members of the above society; but the display of fish was below the average, Messrs. Gretton and Morrow having roach from Ware; Mr. E. North roach from Amberly. Messrs. Parrot and Webb tried the Thames, but were too late to weigh in. The annual dinner takes place on the 5th inst., on table at eight o'clock. Friends that intend to be present please communicate with Mr. J. King or secretary not later than the 3rd inst.—THOMAS GRETTON, secretary.

WALWORTH WALTONIANS.

At the meeting held on the 24th, Mr. J. Collins exhibited some fish from Staines. It was agreed by all present that the penalty clause be reduced to one-half, viz., the winner of a £3 3s. prize, will have to give 1½ lbs. of a £2 2s.; 1 lb. of a £1 1s.; 8 ozs. and of a 10s. 6d. prize, 4 ozs., and such penalties commence at the beginning of this season. The next competition will take place on Friday, July 8, for three prizes; first, a £2 2s. portrait by Mr. Evans; second, a gold pin for a scarf, given by Mr. Fox; and, third, a £1 1s., given by Mr. Green, sen. Mr. J. S. Weatherhead, was appointed to represent the society at the Conference, held at the Society of Arts, on the 27th.

June 27, 1881.

PIXIE.

WEST CENTRAL ASSOCIATION OF LONDON AND PROVINCIAL ANGLING SOCIETIES.

THE monthly meeting of this association took place on the 17th inst., and was possessed of considerable interest. The minutes of the last meeting having been passed as read, Mr. Murphy was elected to the vice-chair in the absence of Mr. Beckett.

The Hon. Sec. then proceeded to read a correspondence received since the last meeting including a letter from the Surrey Piscatorials enclosing a cheque for their yearage, and a donation of one guinea to the funds of the association. A hearty vote of thanks was proposed and carried unanimously for such donation.

After some further business of minor importance, Mr. Geen, the President of the W. C. A., addressed the meeting on the Bill introduced in the House by Mr. Stuart Wortley for the amendment of the Act of 1878, and, in a few well-chosen words, gave an outline of what had been done in the matter, and stating that, thanks to Mr. Mundella and other members giving their attention to the matter, and opposing the Bill, Mr. Wortley had promised not to move further in the matter until the angling fraternity had thoroughly decided what should be done with reference to altering the Act of 1878. He (Mr. Geen) then informed the association that there was another and more serious Bill before the House affecting anglers, he referred to the Bill for the Consolidation of the Salmon Acts, which, in its present form, placed the law relation to freshwater fish in the hands of county justices, and put a stop to all Sunday fishing. He concluded by urging the association to do their utmost to prevent such a Bill becoming law.

After some remarks from the Chairman and Mr. Ghurney (Secretary of the E. C. A.), the matter was referred to the standing committee, who, supplemented by Messrs. Adean, Osman, Hitchcock, and Ogden, would meet the committee of the E. C. A., to arrange preliminaries, put the matter in proper form, and frame resolutions, to be passed at a Conference to be held at the Society of Arts, Adelphi, on the 27th inst. The Chairman also read a circular which has already been published.

The enrolment of the following societies by the committee was then con-

formed:—The Junior Piscatorial Society, First Surrey, and The Queen's Angling Societies.

A complaint lodged against some members of the society enrolled with the W. C. A. was not gone into, the representative of such society leaving the meeting before the matter could be brought forward.

Some further business of minor importance having been disposed of, the meeting was brought to a close.
CIGARETTE.

21st June, 1881.

WESTBOURNE PARK PISCATORIAL SOCIETY.

The members opened the season with an open match on Sunday the 19th inst., and had a most successful time of it. The first prize was won by Mr. W. Buttery, who had a fine show of bream and perch. The heaviest bream, weighing 4 lb. 15½ oz., largest perch, 2 lb.; total, 18 lb. 5½. Mr. Arthur, secured the second with trout, the best fish turning the scale at 4 lb. 3½ oz.; total, 15 lb. oz. The third fell to Mr. Browning, with 6 lb. 6 ozs., which included carp of 4 lb. 1 oz., from the Welsh Harp. Mr. Oatley was awarded the fourth prize, for 6 lb. 2 oz. of fish from the Kennet; and Mr. Stevens landed the fifth, with fish from Warner's, weighing 4 lb. 1 oz. The total weight was 69 lb. 8½ oz., and a finer all round show of fish was never seen on the trays. The prizes were substantial in the shape of cash, and the members are to be congratulated on such a promising opening. The billiard saloon was requisitioned for the occasion, and Mr. Millhouse, the host, was very energetic in securing the comfort of the members and their friends.—I am, &c.,

G. A.

WILKINSON ANGLING ASSOCIATION, HULL.

On Monday evening the members of the above club held their fortnightly meeting at the club-room, Crown Hotel. Mr. Clayton occupied the chair and Mr. Hamlyn the vice-chair. The minutes of the previous meeting having been read and passed, business in connection with a match for the benefit of the General Infirmary was then proceeded with, the match to be held on July 18th at Farnby Sluice. It was proposed and carried that the match be an open one, and that anglers in Hull and district be invited to join in the excursion. The vice-chairman introduced the question of the proposed amendment of the Mundella Act, and was sorry to see the Wilkinson Association had not taken steps to be represented by proxy, if not in any other way, at the meeting then being held by London and other anglers at the Society of Arts Rooms, London. After some discussion on the matter, it was resolved that this matter and a letter in connection with the same from a Sheffield club should be referred to the committee for their early consideration.—F. T. H.

NORTHERN NOTES.

By F. J. H.

SINCE my last communication I have had an opportunity of personally visiting several localities patronised by the anglers of these parts. From my own observation and experience, added to the best information obtainable, I find nothing to give me cause to alter my opinion in respect to what may be looked for this season; all that I can gather tends to show that we are having a very good beginning indeed.

At Brigham some really good takes have to be recorded, the roach show up in far better condition than last year at this time; from what I have seen of the dace I think they are hardly up to the mark of the usual sample to be found in this stream. Trout are pretty plentiful, and appear to take the worm about as readily as anything.

At Cope's Landing there was taken one of the prettiest basket-fulls it has been my lot to see for a long time, comprising some large and very good-looking roach, perch, dace, and trout. It may be mentioned that the perch were principally taken by the not very much used bait—a piece of scarlet woollen.

At Newport, on account of the new railway appropriations, little, or no, angling can be obtained. Anglers will greatly miss this stream should it remain in present condition, it is a handy place to get to, and for years past has been well used by anglers from York, Leeds, and Hull, to say nothing of the smaller towns near these last-mentioned places.

The River Hull, with the various streams and drains running into it, may be said to be in first-class condition, stocked with any number of fish of all sorts, and although the knowing hands go to certain parts for the purpose of trying for a certain kind of fish, you can hardly get wrong if the object be to make a basket.

At Arram and West Beck the angler may rely on having real good sport; the best and most killing bait appears to be good white paste and red worms, but if good maggots are to be had they will be found of great service. The water is in capital condition just now, and free from the angler's source of trouble—the weeds. These remarks apply more or less to all the waters in or about this district. The slight falls of rain we have had have made no very perceptible difference in the state of the water. Anglers who have had the good fortune to spend a day on the bank have generally been able to show a fair catch for a fair day's labour.

SCOTCH NOTES.

(From the Scotsman.)

LOCHLEVEN.—The weather was exceedingly changeable on Saturday, and sport varied considerably. The morning was very wet, but the sun shone out of a clear sky in the afternoon, with a hard west wind. Mr. Brown had 15 trout, 19 lb. 8 oz.; Dr. McFayden, Stirling, 15 trout, 11 lb. 8 oz.; Major Moor, Stirling, 7 trout, 8 lb. 8 oz.; Mr. William Henderson, Linlithgow, 9 trout, 8 lb.; Mr. Low, Edinburgh, 9 trout, 7 lb. A number of boats came in poorly fished. One of Mr. Brown's trout weighed 2 lb. 8 oz. Mr. Steel, 14, 16½ lb.; Colonel Richardson, 8, 7 lb.

THE TAY.—On Saturday Mr. Gow, the Earl of Breadalbane's keeper, killed on the Taymouth Castle water a salmon weighing 20 lb. On the Castle Menzies water, Sir Robert Menzies, Bart., killed, a few days ago, a salmon weighing 17 lb., being the third fish killed by the baronet since the opening of the season.

THE LYON.—The reports from this river show that the lower sections have yielded good takes of trout since the recent rains, on the Duneaves water, Mr. Haydsyde, of Edinburgh, having made a number of heavy baskets with fly. On the Chesthill water, Mr. Stanton's keeper killed on Saturday a salmon weighing 17 lb.; and on Friday one weighing 11 lb.

ORKNEY.—Fair sport is being enjoyed on the Orkney lochs and streams this season. At the burn at Sebay the other morning a young lad caught 28 fine trout in a very short time, weighing from ½ to 1½ lb, using worms for bait.

LOCH ERICHT.—On Thursday last Mr. Orde had 12 lb. trout; on Friday, Mr. Mitchell had 9½ lb. and Mr. Orde 13 lb.; on Saturday Mr. Orde had 13 lb.

THE EARN.—The copious rainfall of the past week has rendered the Earn in good ply for fishing, and in the end of the week some good baskets were obtained. On the upper reaches on Thursday Mr. John Ginn killed ten yellow trout, weighing in the aggregate about 6 lb., and Mr. Peter McIntosh secured a basket of two dozen and eight, the weight of which, however, was not ascertained. On the lower waters, towards Kinkell, good sport was also had, a few anglers having baskets of trout of from 5 lb. to 6 lb. each. On the mountain burns and streams in the Crieff district better sport was even obtained, Messrs. John Law and William Donn killing on the Almond fifteen dozen and six dozen trout respectively.

THE EDEN.—Capital sport has of late been obtained on the Eden by fly-fishers. Fishers who have tried small flies have been rewarded with heavy baskets. A few years ago, trout of 3 lb. and 4 lb. in weight were not at all uncommon, but owing to the pollution of the stream such fish are extremely scarce.

Now ready. Third edition. Price, 7s. 6d.

THE PRACTICAL FLY-FISHER;

More particularly for
GRAYLING OR UMBER.

With 10 Plates, coloured by hand, representing 120
Flies, natural and artificial.

ANGLING.

Now ready, third Edition.

THE ANGLER'S INSTRUCTOR.

By Wm. BAILEY.

A book on the best modes of Angling in English
Rivers, Lakes and Ponds, and on the habits of the
fish, besides all the latest practical hints on many
things that have not up to now been made public, to
be had of W. Bailey, 170, Kirke White Street, Not-
tingham. By post, 2s. 9d.

HOLBROW AND CO.,

111, JERMYN STREET, ST. JAMES'S, S.W.

Every kind of Fishing Rods and Tackle of the
best quality, and flies specially dressed for all parts
of the world. Speciality in glued-up cane rods. Sepa-
rate department for Polo.

SEVEN MILES OF GOOD FISHING WATER.

THE SHIP INN.

BRAND CREEK, SOUTHERY, NORFOLK.

HENRY PRESTON, Proprietor.

First-class accommodation on reasonable terms.

Come and try it, and you'll come again.

(THE DEVONSHIRE RIVERS.)

FISHING TACKLE, &c.

DEVONSHIRE FLIES (GOOD IN ANY
STREAM), 1s. 6d. per dozen. Flies made
to pattern. A large stock of Rods and Tackle of all
kinds. Some choice SPLIT CANE RODS by
"Copham;" bargains. The Devon and other artifi-
cial Baits, Reels, Lines, Gut Casting Lines, Fly
Books, Wading Stockings and Trousers, Baskets,
and every other requisite. Address, WILLIAM
MUDFORD, Fore Street, Tiverton, Devonshire.
Ticket dépôt for the Tiverton Fishing Association.

TROUT AND GRAYLING FLIES.

J. A. GRIFFIN, Practical Fly-maker, begs to
inform Anglers that he has in stock some of
the best FLIES, both for natural colours and
fineness, combined with strength, at 2s. per dozen.
Best Gut Casts, all warranted to lift 4 lb., 9d. each.
J. A. G. calls attention to his £1 1s. 6-joint Pocket
Fly Rod. Flies and all other Tackle made to order,
and forwarded to any part of the Kingdom, Post
Free, WITH ALL HASTE.

Portobello, Late 15. Tything, Worcester.

NOTICE.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., must be addressed to the Editor of THE FISHING GAZETTE, No. 12, Fetter Lane, London, E.C. and should reach the office not later than Tuesday morning.

Contributions are solicited, but the Editor will not undertake to return rejected MSS., unless accompanied with a stamped addressed envelope.

Correspondents are requested to write on one side of the paper only and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to no notice will be taken of such communications.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls, and of the following, amongst other Fishing Tackle Dealers in London and the Provinces:—

Messrs. Alfred and Son, Moorgate-street.

SATURDAY, JULY 9, 1881

THE ANNUAL DINNER OF THE THAMES ANGLING PRESERVATION SOCIETY.

THE forty-third anniversary dinner of this most useful and powerful society was held in the fine banquetting hall of the of the Star and Garter Hotel, Richmond, on Wednesday, July 6. The dinner was a splendid success in every way. The weather

was lovely. The scene from the balcony windows of the hotel is one of the most picturesque in the world, the silvery Thames looking exquisitely beautiful as it reflected the rosy tints of the sunset. It was a capital idea to get Mr. Birkbeck, M.P., to officiate as president. No gentleman has the interests of anglers more at heart than Mr. Birkbeck, and the gratifying and most unexpected announcements which he so pleasantly made during the evening must have proved to every angler present that though the T. A. P. S. have made many big catches in their time they never caught a more valuable and influential one than the president of the late National Fisheries Exhibition. The grand one of all, being H.R.H. the Prince of Wales, has promised to preside at the next annual dinner of the society, an announcement which was received with tremendous applause from the entire company.

Dinner commenced some time between six and seven o'clock, after the chairman had called upon the Rev. J. J. Manley, M.A., to say grace. Of the dinner itself we will only say that it was excellent in every respect. The printers of the menu created some inconvenience by not sending it until the dessert was being discussed, but this was only a trifle, and Mr. G. R. Hunt, the secretary and manager of the hotel, may rest assured that the company was thoroughly well satisfied with his endeavours to please them.

The attendance was both numerous and influential, and included many gentlemen closely associated with the metropolitan angling world. Mr. Edward Birkbeck, M.P., who, it will be remembered, was president of the late National Fisheries Exhibition at Norwich, occupied the chair. He was supported by Sir Henry W. Peek, M.P., one of the vice-presidents of the society, Mr. Thomas Spreckley, whose name is a household word in connection with the Thames, Sir Trevor Lawrence, M.P., Mr. W. H. Grenfell, M.P., and other influential gentlemen. There were also present amongst others Mr. W. H. Brougham, secretary of the Thames Angling Preservation Society, Mr. Joseph Brougham, Messrs. Clench, Geen, Nattress, Munross, Abbott, Gaunt, H. Dickinson, Thurston, C. P. Wheatstone, Francis Francis, R. B. Marston, J. P. Wheeldon, Rev. J. J. Manley, Captain Hobson, Alfred Jardine, Richardson, W. Oldham Chambers, Philip Soman, H. J. Rolfe, R. E. Tyler, E. Newstead, J. H. Brown, T. S. Dovey, T. S. Kidson, R. Hobbs, A. Nuthall, F. Burkett, J. R. Birney, H. Briggs, A. Mortman, T. Nash, A. B. Day, Andrews, Mason, Allcock, Peirce, Gray, J. H. Lemann, H. P. Lemann, Dunfer, W. D. Lewis, W. T. Covier, Walter, Spreckley, G. H. Carthew, Capt. Alfred, T. W. Styles (her Majesty's swankeeper), A. Allison, &c.

The Chairman proposed "The Health of the Queen," and afterwards "The Health of the Prince and Princess of Wales," both toasts being received with the greatest enthusiasm. Mr. Birkbeck next proposed, "The Health of the House of Commons," coupling with the toast the name of Mr. Grenfell, M.P. The hon. member, in responding, spoke of the time occupied by the Irish Land Bill, and expressed a fear that the measure had to a certain extent set aside legislation upon any measures which anglers had at heart. He, however, believed that next session piscators would have greater attention paid to their desires. So far as he was concerned he should be happy to advance to the utmost of his power any Bill brought in calculated to benefit the river and the works of the society whose festival they had met to inaugurate.

The Chairman then rose, amidst the greatest enthusiasm, to propose "Success to the Thames Angling Preservation Society." It was almost needless for him to remind his hearers that the society was started forty-three years ago, and it had since that time made rapid strides in public favour. The work it had accomplished he need not mention, as it was well known. He was, however, specially pleased to find that the T.A.P.S. had now taken up the subject of fish culture. (Applause.) The society had done an immense amount of good in the way of stocking the Thames, and he believed that they would yet do much more. This had only been accomplished by the friendly aid and countenance of certain gentlemen interested in angling matters, amongst whom he might mention the name of Mr. Forbes, of Chertsey. (Loud applause.) He looked upon the T. A. P. S. as a valuable medium for making the wants and requirements of anglers known. Agriculture and commerce were represented by their chambers, and there was every reason for piscators having the same privilege of bringing the benefit of their experience and knowledge to bear in the legislature. The speaker then stated that he had permission to announce that the Dukes of Buccleugh and Roxburgh, Duke of Northumberland, Earl Percy, Lord George Hamilton, and Sir William Dyke had intimated to him that they should be proud to add their names to the list of vice-patrons of the Thames Angling Preservation Society (Loud applause). He had a still more important announcement to make, and that was that the Prince of Wales had not only consented, but had expressed his royal pleasure to become a patron of the society. (Loud and continuous applause, during which the audience rose to their feet

and cheered lustily.) The chairman concluded by referring to the exhibition at Norwich, and expressed a hope that the Thames Angling Preservation Society would soon emulate the example by having an exhibition of their own in London. (Hear, hear.)

Sir Henry Peek afterwards submitted the toast of "The Health of the Chairman," and urged that at no previous meeting of the society had the members ever had a better president, a statement which was received with the very greatest applause.—The Chairman duly replied, and in the course of his speech expressed the keen interest he felt in the welfare of the society.

Mr. F. C. Clench then proposed "The Health of the Treasurer, Vice-Presidents, and Committee of the T.A.P.S." In Mr. Spreckley, he added, they had not only an experienced angler, but he was a gentleman who was highly esteemed in his particular business in the City. (Cheers.) He not only gave the society the benefit of his purse, but also of his able advice and help. In every shape and form Mr. Spreckley had helped the society; and anglers, however poor or humble, had but to bring their grievance before him to have them looked to. He coupled Mr. Spreckley's name with the toast. (Loud applause.)

Mr. Spreckley, in replying, spoke to the remarkable unanimity with which the society worked. There could be no doubt of the great amount of work that had been done by the society—work that would live when he was dead, and of which future generations of anglers would feel the benefit; but still there was much to do. He referred also to the efforts of the society in the direction of pisciculture. Mr. Spreckley gave "The Board of Thames Conservancy," coupled with the name of "Captain Burstall." "The Press," was proposed by Mr. Rolfe, the celebrated scaly painter, and responded to by Mr. Francis Francis, of the *Field*; Mr. J. Wheelton, of *Bell's Life*; Mr. P. Soman, of the *Norwich Argus*; and Mr. R. B. Marston, of the *FISHING GAZETTE*.

Mr. Jardine, in a capital speech, proposed the "Visitors," and this was responded to in a very pleasant manner by Mr. W. Oldham Chambers, of Lowestoft.

Sir T. Lawrence, M.P., proposed "The Angling Clubs of London." In doing so he referred to the Freshwater Fisheries Act Amendment Bill. He said he had been requested by the Richmond Piscatorial Society to oppose that measure. (Applause, and cry of "Bravo, Richmond.") All he could say about the Bill was that it contained a number of ridiculous clauses. It would have opened the door to all manner of illegal practices and died a natural death, not a single tear being shed on its decease.

Mr. Geen, of the West Central Association of London Anglers, in replying, said: Mr. Chairman and Gentlemen,—

This is not the first time, by many score, that I have been called upon to respond for the angling clubs of London, I have felt it to be a very great compliment on each of those occasions; especially so when a society whose whole efforts are directed to the preservation of our fish have invited me to dine, and have then proposed and received this toast as it has been proposed and received this evening. It is now just fourteen years since I was persuaded that it was my duty to join a London angling club which had been started the previous week. I hope and believe that I shall never forget my first evening in that club room; it made a deep impression upon my mind, and possibly affected in no small degree my then future as connected with angling matters. I remember the secretary announcing that the first guinea to the funds was an accomplished fact, and he was about to hand it over to the treasurer with some little ceremony, when a member rose and claimed to say a few words before the money changed hands. His few words proved to be the first speech, and, after this lapse of time, I can say the best speech I ever heard as to the duties of anglers generally, particularly club anglers, in respect to preservation societies. I have often wished, that a reporter had been present and that speech had been preserved, as it deserved to be; indeed, it should be written in gold, framed, and hung upon a wall in every club room. And then, if angling societies, generally, did not do as we did that night, send their first guinea to the T. A. P. S. at least sometimes during the year, the words upon the wall should be repeated, and guineas to this or some other preservation society would be the result. I am bold enough to claim for the angling clubs of London, that they have been the means of educating their members in a most efficient manner, as to what is fair, honest and sportsmanlike. It is not long since, that anglers fished all the year round, having no respect for a close season. Now look how scrupulously the three months are kept; and I would also call your attention to the undeniable fact that we are unanimous in our desire to give another month in favour of pike and perch. Anglers not only fished all the year round, but they also retained undersized fish; now who can find a club man who would not feel ashamed to keep them? I know this society has, during the past two years, detected men snatching, fishing out of season, and also

retaining under sized fish, but when these cases occurred, I felt confident, in my own mind, that these sinners were not amongst those who have received the education which our angling clubs give to their members. Judging from the effect which this toast has upon myself, I think it would be well—were it possible—that every angler who fishes in that portion of the Thames between Richmond and Staines, should be present and included in this toast, then, each of them must perforce ask himself—as I have asked myself—am I doing anything, and if so, as much as I ought, to assist this society which is doing so much to provide me with that sport which I value so highly? The time must come when men can no longer be so selfish as to fish year after year, and thereby reap the fruits of labours so unselfish and generous as those of this and similar societies, without giving some trifle towards the funds necessary to carry on the unceasing warfare against poachers. The angling clubs of London, have during the past month, done that which under ordinary circumstances would have been unpardonable—they have gone in for politics. Our excuse for so doing is, that certain members of the House of Commons have made attempts to legislate in such away as would be fatal to our interests. Mr. Stuart Wortley, has introduced a Bill which would do away with our fence months. I had the honour to be deputed to wait upon him with a view of inducing him to withdraw his Bill, and one of my chief arguments was, that nine hundred and ninety-nine out of every thousand were opposed to it; he replied, "I am sorry to learn this. I certainly must confess that I know little or nothing about coarse fish or coarse fish anglers, but still I fail to see why I should not persevere with my Bill." To ordinary mortals, knowing nothing about a subject, would be a sufficient reason for not attempting legislation; but from a parliamentary point of view, ignorance would appear to be a special qualification. Fortunately for us, Mr. Stuart Wortley has, since then, received a number of letters, petitions, reports of meetings, and deputations; indeed, he has received a very fair piscatorial education; and he now admits that he knows so much about coarse fish and coarse fish anglers, as to entirely disqualify him for persevering with his Bill. (Laughter.) The second Bill which has caused us to think so much about the House of Commons, is one introduced by Sir Joseph Bailey, and which would, if passed, be fatal to our liberties as anglers. A deputation of representative anglers, from all parts of England, have waited upon Sir Joseph, and we have good reason to hope that he will prove as apt a pupil as Mr. Stuart Wortley. At present, Sir Joseph is perfectly justified in attempting to legislate, inasmuch as he has told us that he knows nothing whatever about the subject. We have the pleasure of another appointment to see him, and you may trust us to make the most of this second opportunity to piscatorially educate him, so that he may become totally unfit to persevere with that portion of his Bill which affects our sport. I must now thank Sir Trevor Laurance, on behalf of the angling clubs of London, for the kind way in which he has proposed this toast, and you, Mr. Chairman and gentlemen, for the cordial reception which you have given it.

"The Secretary" was proposed by Mr. Spreckley, Mr. W. H. Brougham responding in his usual pleasant style, and announcing a large number of donations from various gentlemen. This terminated perhaps the most successful dinner ever held by the T.A.P.S.

TO CORRESPONDENTS.

In discussing any question, we beg our correspondents to remember that they increase the force of what they may have to say tenfold, if they sign their names to it. We mention this, because it has been hinted that most of those who do not agree with the present position of affairs as regards the close seasons, write anonymously, and are ashamed to speak out in their own names. We know this is not true, in many cases, but there is truth in it. Unless you have the "courage of your opinions," do not put them forward. It leaves it open to the other side to say you are an interested party.

THAMES SIDE PENCILLINGS.

A SOURCE OF REGRET.

IT was a matter of great regret amongst those interested in the artificial propagation of fish that the young fry of Thames trout so successfully hatched by Mr. James Forbes, of Chertsey Bridge, have all, or nearly all, come to grief. A sudden change of temperature, from extreme cold to intense heat, will always account for the loss of small fry in closely-confined places, and it was entirely arising from the oppressive character of the atmosphere that the youngsters were lost. Great hopes and

expectations had been formed in the prospect of some fine Thames trout being raised and reared for increasing the stock of those fish in our metropolitan stream, and considerable alterations and improvements had been made at Sunbury for their reception. When the sad intelligence was received from Mr. Forbes that all these hopes and expectations were not to be realised, it caused an unexpected disappointment; and not only had the Thames fish been destroyed, but nearly all the fry of other fish. Another season is therefore lost, and whether Mr. Forbes will be able to get some more ova of Thames trout is at present in obscurity.

A STREAM OF SATISFACTION.

When Mr. Thomas Spreckley visited the Norwich Exhibition he came into contact with Mr. Littlewood, of Huddersfield, who is engaged in the science of fish culture, and this friendship so formed led into correspondence, which culminated in an offer of some fry of trout as a gift to the Thames from Mr. Littlewood and, coming at so opportune a time, was most gladly accepted, and, what is more, there appeared no difficulty in getting them from Yorkshire. Mr. Samuel White, one of Mr. Spreckley's partners in business, is a frequent visitor to the north country, and most kindly undertook to take charge of them from Huddersfield to King's Cross. This has accordingly been done, and two thousand healthy fry of different species of trout, under Mr. White's care, safely arrived at King's Cross, where they were received by Mr. Thomas Spreckley and from whose instructions Henry Walters, the head keeper of the Thames Angling Preservation Society, was also there to take charge of them to the rearing stream at Sunbury, where they arrived the same evening at eleven o'clock and safely placed in their new home, having since given satisfactory evidence that they are fully reconciled to the change. Mr. Littlewood by this act will secure appreciation from the trout anglers of the Thames.

FISH IN TORMENT.

The trout in the Thames, like the other fish, are suffering from a kind of lice, which has more the form of a crab. One of these fish, evidently suffering from the tormenting of these insects, leaped into one of the pleasure boats at Halliford, and a labouring man going past at the time heard the fish jumping about in the skiff took it out, and on examination it was found covered with these lice. The fish weighed $8\frac{1}{2}$ lbs. Not only are trout, but jack and other fish are infested with the plague, doubtless arising from the rank and stale condition of the water. William Milbourne, of East Moulsey, in his report last week, says—"We are getting no fish, only a few jack, and they are covered with lice and are very lean." A good rain and a fair stream will doubtless remove the evil and give freshness and vigour to the finny tribe, who are not yet in the best of form for anglers in the Thames.

SUCCESS IN ANGLING CLUBS.

The angling clubs of London and the suburbs are not only increasing in numbers, but some of them greatly in strength. I attended the last meeting of the Richmond Piscatorial Society, at the club room, Station Hotel, Richmond; three new members were balloted for and elected, four or five others were nominated, and so, under the rule of Mr. F. C. Clench, the club rapidly grows. I think Mr. Munro has some share in it, for that old Scotch whiskey of his has become as popular as the club itself, and it is really so fascinating that the repetition of the dose has become proverbial. A first-rate chairman, a capital vice-chairman, an excellent treasurer, an indefatigable secretary, and a really worthy host cannot fail to make the club—as it is—a very prosperous one. The Gresham Angling Society is another example of success. In a few months it has enrolled nearly 150 members, and such a result must be wholly unparalleled in the establishment of angling clubs and only shows what activity and perseverance can do when all are united in doing it.

THAMES ANGLERS AT THE BROADS.

I expect some of our Thames anglers will be soon getting away on their holidays, combining a change of air and a sea side trip with the delights of angling. The manager of the Great Eastern Railway, in his summer and autumn arrangements, makes the facilities to the Broads of Norfolk and Suffolk immensely tempting. The fortnightly fares to Yarmouth and Lowestoft have undergone a reduction, and the trains have been amazingly accelerated. These places are now little more than three hours' journey from the Thames. Once in the train, the anglers of the Thames, for they like a change, will quickly pass Colchester and Ipswich, and in exact time find themselves landed in the neighbourhood of some of the finest fish farms in the world. Mr. Crisp, of Crown-road, Great Yarmouth, has sent me a copy of his "A B C Ramble Round Yarmouth," and included in it,

altogether for sixpence, is a useful "Handbook to Angling and Salt Water Fishing." It appears worth my recommendation, and I have pleasure in giving it.

B.

A NEW PIPE-STAND.

MESSRS. THORNHILL AND Co., who are always bringing out some useful novelty, have sent us one of their new ladder-pipe stands for notice. It is a really beautiful little ornament for the

smoking-room, and thoroughly strong and useful. It can be used either standing on a table or sideboard, or can be hung on the wall. It will hold eight pipes, and the steps can also be utilised as a place for the match-box; in fact, we do not see why Messrs. Thornhill should not place a small drawer for vestas or cigarettes under the bottom step of the ladder; it should be so made that the drawer will not come right out. We can strongly recommend this ladder pipe-stand to smokers, it will save many a good meerschaum from

being "dusted" off the mantel-piece.

ROACH AND ROACH FISHING.

IN that most interesting and practical work, "The Angler's Guide," deduced from many years' practice, experience, and observation, by T. F. Salter, Gent. there are some very useful remarks on roach fishing. As the book has long been out of print, we will quote them for the benefit of those—and their number is legion—who love a day's roach fishing. At this time of the year, when the dog-roses are in blossom and the scent of new-mown hay comes over the fields, when the roads are dry and dusty and the pavement scorches one's feet, the fields are decidedly the better places to be in. For a few pence the London roach fisher can transport himself from the glare and chokiness of town to spots of the most charming rural beauty. Instead of the harsh rattle of millions of London's wheels, he hears the twitter of the swallow and the song of the blackbird; instead of almost fighting his way through the hurrying crowd, he follows quietly the silent river until he reaches a favourite swim—preferably, this hot weather, under the shade of some willow, or "Sally" tree as the country people call them. Here he settles himself and presently the rod is put together and the depth plumbed. The best roach rods in the opinion of Lea fishers are those made by Mr. F. H. Sowerbutts, of 3, Blossom Terrace, Commercial Street, N.E. They are of cane, and from eighteen to twenty feet in length and cost from twenty to thirty shillings and more; they will last a life-time with careful handling and your true Lea roach fisher gets to look upon his "Sowerbutt" as a respected and beloved friend.

Mr. Salter's remarks, although about sixty years have fled since he made them, are, as far as they go, as good a guide as any the roach fisher can have. He says:—Roach are very numerous in most rivers in England, and by some writers they are considered a silly fish, and easily to be taken; but it requires much skill and practice, with a quick eye, fine tackle, and a steady hand, before anyone can pretend to the character of a good roach angler. I will admit that in ponds, where they are half-starved, roach are easily taken, and also small ones in rivers: at such times and seasons they may be taken with almost any kind of tackle or baits; but pond roach fishing affords little sport to the true and general-informed angler, and little more does taking those small ones on the shallows in rivers: but the taking thirty pounds weight or more of roach, from six or eight ounces to a pound or upwards each fish, out of a stream from six to ten feet deep, with very light rod, single hair line, and No. 10 or 11 hook, in a day's angling (which is frequently done by the London anglers), affords as much amusement to some as any other mode of fishing; indeed, I am acquainted with many anglers who seldom wet a line but for roach, preferring it to every other kind of fishing.

TACKLE FOR ROACHING; WHEN AND HOW TO STRIKE, &C.

To take heavy roach (and those only are worth taking) like an artist, you must use a light cane rod, from eighteen to near twenty feet long, with a fine light stiff top, a single hair line, a tip-capped float, and No. 10 or 11 hook; choose them very short in the shank as roach mouths are very small: observe when so

fishing, that the line which is above the float, and is fastened to the top of the rod, must not be more than twelve or eighteen inches long, or you will not hit a fine bite, from the line being too long, and hanging slack on the water; the line should be so shotted with very small shot, that not much more than an eighth of an inch of the float appears above the water; for roach frequently (and very often the heaviest of them) bite so fine or gently, that, without attending to the above niceties in adjusting your line, you will lose the chance of two bites out of three. In angling for roach, a sitting posture is to be preferred, as, by that means, you are more out of their sight: always keep the top of your rod up over the float, and so high that none of the line above the float lies on or touches the water; and when you see the least movement of the float, either by its being pulled down or thrown a little up, strike quick but lightly (the motion coming from your wrist, not from the arm); for if the jerk is too violent you will break the line, which need not be hazarded, as the least jerk hooks those tender-mouthed fish. If you have hit or hooked a fish, raise the top of your rod, keeping him as much under the top as you can, and the butt downwards, nearly touching the ground, and by thus playing him under the point of your rod, he will soon be your own. In this fine fishing it is best to take with you a landing net, particularly if you fish off a high bank or wharfing, or you will hazard breaking your line or hook in weighing the fish out. Roach may be taken with larger hooks and stronger tackle than those which I have described; but they who fish finest will succeed best, besides the pleasure the angler feels while killing a fish with the elasticity of a hair line, and light pliant rod. Those who object to single hair lines, because they will occasionally break and cause trouble and delay while at their sport, must use the finest single gut they can procure, which are certainly less liable to break, and fit them with float-hook, &c., as described, with single hair: some anglers make their roach lines half single hair, and half the hairs twisted, or as much single hair from the hook as will nearly reach to the float, because, in case the line breaks, the single hair will go first; and in that case, having the float on the twisted, you save it: this way of fitting up hair lines is superior to any other, in my opinion.

BAITS AND BAITING.

The best bait for roach, in still waters and gentle streams, is paste made of second day's baked white bread (the crumb) slightly dipped in water, which must be immediately squeezed out again; then place it in the palm of your left hand, and knead it with the thumb and finger of your right, for ten minutes, or until of a proper consistency; or the crumb of new bread without wetting. Roach will take this paste the whole year round, and by adding a little vermilion or red ochre, it will be of a pale pink or salmon colour, which they sometimes prefer; in summer they will also take gentles, and in the spring also cads; in winter and autumn, baked or parboiled wheat, and small marsh brandlings, blood and red worms, and also greaves; but paste is the most killing bait for large roach. Put a piece on the hook about the size of a marrow-fat pea, and before you begin to angle, plumb the depth accurately, and let your bait gently touch or drift along the bottom of the river.—NOTE: always make it a rule, when angling for roach, barbel, chub, and other fish that require ground baiting, to let your line remain, with the plummet attached to it, in the water, while you are preparing and casting in ground bait, by which means the line becomes stretched and softened, and consequently less likely to break, which gut and hair frequently do when dry and stiff; and also, occasionally, while fishing, dip the line above the float in the water for the same reason, especially in hot weather.

FISHING AT VARIOUS DEPTHS.

During very warm weather, roach occasionally swim near the surface of the water, and will then sometimes take the bait at mid-water, or a house-fly, better than at the bottom; but this does not often occur, therefore always begin to fish with the bait slightly dragging, or touching the bottom. After trying this way without success, you then may angle at mid-water; and you may also fish at various depths when angling in a tidal river, during the tide is making and until high water.

HOW TO CHOOSE A SWIM.

And further note, when angling in rivers and streams, especially for roach, make choice of a swim that is shoal at the end of it, because, as the ground bait separates, it drifts down the stream and will lodge there and keep the fish from going further; and the baited hook will also touch the bottom all the way: but if the end of a swim is deeper than the top or beginning, your baited hook will not, then be at a proper depth as it proceeds, which is material, as roach, chub, and dace generally bite at the end of the swim, especially if the water is shallow or bright. When roach-fishing, you should occasionally take the depth again, particularly if the fish leave off feeding, which they will do if you have lost the

proper depth: this happens in rivers from the water rising or falling from tides, opening of locks, mills, &c.; and sometimes from the line drawing through the caps of the float.

GROUND-BAIT.

Ground bait plentifully before you begin; or if the place be baited overnight it might be better, with small balls of ground-bait made thus: work some clay and bran together into balls or pieces about the size of a pigeon's egg; some add a little crumbled bread to it—if you fish in a stream, always put a small stone in each piece before you cast it into the water, to prevent its drifting away. Also while angling, cast in that or chewed bread, frequently close to the float. When angling for roach in a still hole, or gentle stream or eddy, nothing is so good for ground bait as chewed bread, or bread and bran made into small pellets, and thrown gently in by six or eight pieces together; close about the place your float and baited hook move in.

ROACHING WITH THE HOUSE-FLY, &C.

During July and August, roach may be taken in the following manner with an ant-fly or a house-fly, and also a cad, and sometimes with a gentle put on a No. 11 hook, and single hair-line to a fine rod: put one small shot on about four inches above the hook, to sink the bait, then draw the baited hook gently or slowly up to the surface of the water, and so continue till you feel a bite; the roach generally take the bait as it approaches the top. When fishing this way, try round piles, bridges, flood-gates, and deep still holes, where bushes and trees grow over the water. I have found a wasp grub a killing bait in some waters, but not so in all. . . . In Flanders, half-boiled potatoes or paste are the only baits used for roach, as they will not touch a gentle or greaves in that country,

WHERE TO FIND ROACH.

Roach breed and thrive in canals, ponds, and lakes, but best in rivers; in rivers they are found on the shallows and scours during spring, and among weeds in summer; in eddies and in deep holes during winter; also about bridges, piles, and locks, in ponds; search for them near flood-gates, sluices, and at the mouths of streams that run in and out of a pond, and also about those places where the bottom is clean, gravelly, or sandy. They bite all the year in rivers, but best late in the evening in hot weather in ponds, docks, and still waters, in summer only—or say from April to October.

HOW TO COOK ROACH.

When large roach are scored across the sides, and broiled with the scales on, they are considered by many as a well flavoured fish, especially in the autumn and winter seasons. Here we will end our quotations from Salter's remarks on roach and roach fishing, but to make this account more complete we will add a few notes from that invaluable little

BOOK OF THE ROACH

by Greville Fennell,* in our opinion one of the best living authorities on angling matters. Mr. Fennell mentions on page 62 how he discovered what he has nearly always found to be a deadly addition to paste as a bait for roach. He was bank-fishing with the Hon. R. R., a very skilful roach-fisher, and found himself being beaten both in weight and number to a most shameful extent. He was fishing with a single hair line and light float exactly like Mr. Fennell's, and Mr. F. watched him closely while he took a roach at nearly every swim. He was fishing with paste of a dirty colour, filipping every now and then a few pellets of it at his float, and then carefully returning the paste to a small side pocket in his shooting coat. We asked him with an air of apparent indifference for a small portion of this paste, a request which he good-humouredly declined; observing, in doing so, that one of the fundamental rules of angling was to be independent of others, and therefore he advised us to make our own paste, pointing at the same time to his bag on the grass, in which we should find plenty of the crumb of bread. This awakened our suspicions, and we, watching our opportunity, with a playful show of banter, knocked the paste out of his hand, picked it up, and ran away with it. A glance at the lamp sufficed, and it was as quickly returned to its owner. Now what did this observation afford?

CURIOUS BAIT FOR ROACH.

That the half-digested contents of the stomach of a roach had been mixed with the paste. We took the hint, and then, and often since then, we have had recourse to this experiment and found it (although not invariably) effective.

PEARL BARLEY.

Mr. Fennell says, "with this we have also taken many roach in ponds and still waters. Take the barley and simmer it gently

*Every roach angler should possess this little book, it costs only 2s. 6d. and will speedily repay the cost, even to the poorest angler. There are but few copies left, and on receipt of 2s. 8d. in stamps (sent to the Editor of the Fishing Gazette, 12, Fetter Lane, London) we will send the book to any part of the country.

(don't boil it); then when it is about three parts the size required, strain the water well away, and add fresh warm water to take off the gluten; pour off the second water; and then, thirdly, fill up with cold; let it slowly simmer for an hour or an hour and a half, which will make the barley as white as ivory. There is a core inside each grain into which the barb of the hook should enter—use a No. 15 hook, which a grain of barley will just cover. This bait is very successful, and is much used in the autumn and winter months for roach. It has, moreover, the recommendation of cleanliness, and being ever at hand readily prepared. A little salt should be mixed with it, if required to be kept for any length of time. Mr. Francis Francis, in the FIELD, commenting on the above, says “Pearl Barley stands in the place of paste when you can no longer obtain gentles, towards the winier, and it is held in almost equal estimation with paste by the fish, having this advantage over paste, that you do not strike the bait off at every stroke or so and it cannot well be sucked off”

SILK WEED OR FLANNEL WEED AS BAIT FOR ROACH.

This weed is *conferva rivalis* or crow silk. Mr. Fennell says “several angling friends having taken the hint to try the silk-weed (it is a good lure for mullet in rivers) which is found adhering to stones under water and old wooden piles, have from time to time written us of their success with this aquatic product as bait, more particularly for roach. One of these gentlemen says he has found it beat all other baits, with the exception of the small fresh-water shrimp, or “skipjack,” which you have mentioned as an attractive tit-bit. The weed is, however, all-powerful at times with roach, the shrimp with perch, chub, and grayling. Another angler at Richmansworth says, “I am much indebted for this dodge—the weed—I am taking much the heaviest baskets of any about here out of the Colne. I have no difficulty in getting abundance of it. I have but to use the thickest joints of my rod and fish it up from many places. I shake it about a good deal first in the water to wash it, and it is surprising how green and attractive this fish-salad looks. My method of using it is to take a slip of the fibre, as I might take that of floss silk and wrap it in, ou, and over the shank, until point and all are covered, in the shape of an inverted pear. The larger (comparatively) the bait, the bigger the fish.” Mr. W. J. Woods writes, “I fished on July 26th, at Eglam, on the Thames, in the deepest part of the weir pool, but as much as possible on the Middlesex side, and out of the boiling water; with a very heavy Thames float, the shots of which went down straight, and at once; and I took a smartish lot of handsome roach with this weed, put upon the hook in the manner you were good enough to tell me. Seven of these roach were fully a pound, four of them more than one pound and a half and thirteen over half a pound each.

GENTLES FOR ROACH FISHING.

About the use of gentles doctors differ. Mr. Fennell says, “Anglers are recommended to employ them well scoured; now, all our experience goes to prove that the newer and more offensive they are—to our olfactories—the more fish prize them. Therefore, we say advisedly, always use unscoured gentles.”

A VERY ATTRACTIVE GROUND BAIT FOR ROACH.

Old Corbett, a Peninsular veteran, used to bring heavy baskets of roach from the Lea. Mr. Fennell saw him fishing at Ware one day. “The veteran cast in a lump of ground bait, not bigger than a hazel nut, and had scarcely got his hook down when he struck and shortly landed another plumper. There was something, we thought, odd about this ground bait; we therefore picked up a small piece he had let fall, and asked him bluntly what it was composed of. He frankly told us it was nothing but oatmeal—that pollard would do—browned over the fire in a frying-pan and then mixed into a paste with treacle or molasses. He had learned this from his colonel (Williamson), a very expert and successful roach fisher, and he found it the most attractive ground bait he had ever used. ‘Lor’ bless you,’ said he, after accepting an ounce of bird’s-eye, “I could tell you lots o’ them dodges I learned from Colonel Williamson.”

CLUB AND OTHER JOTTINGS.

By L. B.

THE Amberley and Pulborough excursions are more popular and better attended this year than ever, and on Sunday, 26th June, over 600 anglers and friends availed themselves of the opportunity of spending a few hours amid some of the prettiest scenery of Sussex, and having a ride of 108 miles there and back—which last don’t the young ones (who, by the bye, travel half-price, 1s. 3d. return) seem to enjoy—for the modest sum of 2s. 6d.

From Pulborough good takes of bream, with a fair sprinkling of roach, continue to be had. From Amberley two or three of the old sort of roach have left their homes in the swift and deep tidal water of

Arun for the wilderness of bricks and mortar, ’yclept London—among others a fish 2 lb. 2½ oz., taken by Mr. R. Smith.

From the Stort there are reports of one or two good takes of roach and some good dace. Heavy tench used to be taken in the by-gate holes in this river, but I have not heard of any this season.

A meeting of the West Central Association’s Working Committee took place last Friday evening, at the Portland Arms, Gt. Quebec Street, Baker Street. Messrs. Bonvoisin and Beckett occupied the chair and vice-chair respectively. The principal business done was the bringing about of an amicable understanding between two societies between whom there was a difference, which I am pleased to say was accomplished to the satisfaction of all parties; the enrolment of a new society, viz., The Pictorial, the King’s Arms, Tottenham Court Road, W., host and treasurer Mr. Chapman; hon. sec., pro. tem., Mr. Rayner.

It was also decided that all moneys collected for the widow of the late Geo. Foster should be handed to her at once by the hon. secs., Messrs. Ghurney and Hoole. I regret to hear that Mrs. Foster, who since her husband’s death has also lost her eldest daughter, is in deep distress, and I trust secretaries of angling societies and others who have received moneys towards this fund will forward same to one of the hon. secs. without delay.

My colleague, Mr. Harrington Keene, in last week’s GAZETTE says, concerning the recent meeting at the Society of Arts:—“Mr. Geen contributed to ichthyology with characteristic precision during the discussion of Amendment 6. He averred that dace spawned twice, once early in the season, and once late in the season, for he had seen them heading up.” I am sure Mr. Keene will excuse my setting him right. I sat next to Mr. Geen during the whole of the evening, and had a better opportunity of hearing every word he said than Mr. Keene probably had. What Mr. Geen said was:—“Dace make two upward shifts during a season—or rather, I should say, there are two sets of spawning fish.” A statement which was verbally confirmed by several gentlemen in the vicinity of the speaker.

One gentleman remarking that this characteristic was also peculiar certainly to gudgeon, and he had heard it asserted even to roach. Mr. Keene, I am sure, will excuse my setting him right. The difference in words is not considerable, but the difference in purport is.

On Sunday, 3rd July, several angling societies had their annual summer feeds. The Amicable Brothers at the Swan Hotel, Pulborough, the Alexandra at the Pied Bull, St. Margaret’s, and the Edmonton and Tottenham at the Oak, St. Margaret’s.

I am pleased again to congratulate Mr. R. Murphy, of the Good Intent Anglers, upon his success in securing 2½ brace of pretty trout.

The water at the Welsh Harp is rapidly going down, and there will be some big takes of fish here presently.

On Monday evening, July 4th, the monthly meeting of the East Central Committee was held at the Bald-Faced Stag, Worship Square, Finsbury. Some important matters were discussed concerning the preservation of the sedgy Lea, in which Messrs. Ghurney, Beckett, Manning, Murphy, Oram and others took part. Our friends cannot be too careful in guarding their rights on their favourite river—rights which it took many weary years of unceasing efforts on their part to get publicly recognised, and afterwards confirmed by statute.

A correspondent asked, in a recent number, whether Sunday angling was allowed at Elstree Reservoir?—Yes, certainly.

Another correspondent asked concerning privilege of cheap railway travelling to certain stations on the Great Eastern Railway. The privilege to which he refers is a local one, granted to the members of the Cambridge and Ely Association, who are entitled, upon production of their cards of membership (2s. 6d. per annum), to travel to certain stations, including Cambridge, Newmarket, Waterbeach, and Littleport, at a single fare for the double journey.

My remarks in last week’s GAZETTE, anent rudd, applied to the fry, which abound in the dykes about Whitstable. I am aware, dear Mr. Editor, that rudd in some waters attain a very heavy weight. I have myself taken in the Ouse, at Huntingdon, three fish weighing 5 lb., and one weighing exactly 2 lb., and a particular friend of mine, Mr. R. Hawkins, of the Seymour Arms, Seymour Street, Euston Square, has a brace preserved taken in the same river in the neighbourhood of Brompton, which, after being kept on ice two days, weighed a fraction over 6 lb.

AN ABUSIVE FISHERMAN.—Alfred Harris, a fisherman, of No. 2, Shilvony Villas, Laleham, was charged before the Staines magistrates on Monday, 4th inst., with having used abusive language towards Mr. L. Hirsch, a member of the Piscatorial Society. He was fined £1 and full costs, or in default 21 days’ imprisonment. Harris had been engaged by Mr. Hirsch for a day’s fishing, and arranged to provide live bait. Before starting, however, for the day’s sport, Mr. Hirsch discovered that the bait was neither good nor sufficient, and consequently declined to go out with him, whereupon Harris made use of foul and abusive language, which caused his appearance before the Staines magistrates.

The annual excursion of the employés of Messrs. Samuel Allcock and Co., the well-known fishing tackle manufacturers, Redditch, took place a few days since, the metropolis being chosen as the locale of the day’s amusement. A special train was chartered for the occasion, and after visiting the principal of the London sights, which a large majority had never seen before, the party, numbering upwards of three hundred, proceeded to the Crystal Palace. Mr. Samuel Allcock, the senior and principal partner, accompanied the excursionists, who returned about 10 p.m. from Sydenham, having spent a highly enjoyable and interesting day.

MRS. F. Y. BROCAS, Artificial Fly Dresser, 4, Mill-street, Conduit-street, Hanover-square, London, W. A stock of best flies always on hand. Flies made to pattern. Lessons in fly making given.—[ADVT.]

RIVER REPORTS.

MID-THAMES.

"My business in this state
Made me a looker on."—

SHAKESPEARE.

The heavy rains of the past day or so have very much improved the river for fishing purposes, and lovers of the rod and admirers of scenery cannot do better than at once pay a visit to old Father Thames, for most fish are fairly on, and the surroundings of the river are grand in the extreme. At Henley, Mr. C. D. Johnson has taken a trout of 5 lb., and other piscators have been on the jack trail with success, although I look upon it as much too early for good pike to be taken, and it is a sin and pity to slaughter the innocents. At Medmenham, Mr. Troupe has been doing execution amid the chub with fly, and has also landed some respectable jack. Mr. S. G. Palmer, on Tuesday, in the Hurley waters, had a pretty take of perch, as in two hours worm fishing he landed nine fish, scaling respectively 1 lb. 10 oz., 1 lb. 1 oz., 12 oz., 14 oz., 14 oz., the remaining four together scaling 1 lb. 10 oz. I saw the fish exhibited in the Bell, at Hurley, and a nicer sample in such a short time I have not often seen.

THURSDAY.—River in prime trim for roach, perch, and chub. Wind westerly, with cloudy sky.—MARLOW BUZZ.

Thames (Goring).

Water very low, and in very good order for chub fly-fishing; roach not much on. I have been taking some good chub with the fly; four days, 30 lb. of chub, two chub weighing 8 lb.—JOHN RUSH.

Thames (Halliford).

The river within the last week has improved very much, and is now in fair order for all-round fishing. I have been out four times since I last wrote: First day, Messrs. Innes and Marshall, four dozen roach and dace, which were all returned to the river. Second day, Mr. Wilson, eleven bream, largest weighing three and a half pounds; two dozen roach and dace, and a chub of three pounds three quarters. Third day, Mr. Matthews, five bream and three dozen roach and dace. Fourth day, Mr. Palmer, three chub, four bream, two perch, one barbel, some roach and dace, and an eel of one and a half pound.—GEORGE ROSEWELL, fisherman.

Thames (Richmond).

The thunderstorm of Tuesday night has greatly improved the river, and the dace are feeding well, but the barbel are very backward in coming forward—you can see them jumping about, and that is the angler's share; for bait with what you like, you cannot entice them to take it, for every barbel I have taken this season up to now has cost me quite 1s. for worms to bait. The dace fishing this season is very good, the fish being well fed and strong, afford some good sport, more especially when caught in a sharp stream; the average takes during last week were between six and seven dozen each punt per day. C. Brown's two best days, eleven dozen dace; G. Howard's two best days, twelve dozen; H. Howard's two best days, 17 lb.; J. Brain's two best days, thirteen dozen dace; H. Wheeler, one day, eight dozen roach and dace. I have been out myself every day, and averaged seven and a half dozen each day.—JOHN BUSHNELL, fisherman.

Thames (Sunbury).

The water is in good condition for all fishing. Prospects, good. Sport during the past week: T. Stroud, five days, best day 2 dozen roach and 6 chub

A. Stroud, two days, best day, 4 dozen roach and 6 bream; J. Stroud, best day, 6 dozen roach and 8 bream; and Abram Stroud, three days, best day, 2 dozen roach and 2 jack.—ALFRED STROUD.

Thames (Twickenham).

The water is now getting into excellent condition after the heavy rains. Since my last report I have had no less than twenty-three punts out, and taking the average they have done remarkably well. The dace are in splendid condition, and as I have only a limited number of punts, and any man sending a postcard or telegram in advance, will secure a punt at all times. N.B.—I shall be pleased to see any of my patrons on Saturday at No. 8, Marquee, in Queen Anne's Ride, Windsor Park, where I am appointed by his Royal Highness Prince Christian to provide for the "inner man."—ALFRED PERRIN.

Thames (Windsor).

We have had a good storm here with plenty of rain—as a result, water is rising and very thick, and anglers should lose no time in trying the worm, as barbel, perch, chub, trout, &c., may all be had in the same swim and make a very pretty show if one is so fortunate as to get a few representatives of each. In a bad water, which we have had, James Gray has succeeded in showing his patrons some sport; and on the 3rd inst. he had three chub, going 9 lb., with barbel to make the bag bump the scale at 25 lb.; on the 5th inst., he had, after 7 p.m., two perch, 6 chub, and pretty trout, one of the small-headed sort, going 5 lb., taken whilst ledgering with worm, near the Needles, Eton College way. I have noticed a great many chub about, and after this water settles, some good bags would be had with fly from a boat, providing you have a friend well up in the use of a pair of skulls. Jack are very poor—have seen some sorry specimens—give them this month, and they will look better.—R. B. BAMBRIDGE.

Ancholme.

Not much has been done yet on this river or, rather, canal. The hot weather has put the fish off the feed, and very little can be done except in the early morning and late in the evening. It will be a month or two before the pike get well on the feed, as they have not yet recovered from the enervating work of spawning. I had a day's coarse fishing in private waters on Saturday last, and made a good basket of roach, perch and eels. The former fish were, however, in very poor condition, being covered with slime. I trolled for an hour or two for pike where there are plenty of good ones, but I neither obtained a run nor saw a fish.—THOMAS FORD.

Avon (Binton).

The water is now in first-class condition for angling, if anything, a little too clear; but, of course, that's not to be wondered at, considering the spell of dry weather we have had, but taking all things into consideration, there is every prospect of our having a first-class fishing season. We have had but little rain here, however—not sufficient to make any difference to the river. Myself and friend have had very good sport among the chub, dapping with the natural fly. We bagged between us about two dozen varying from $\frac{1}{2}$ lb. to 1 lb. each. The bream, roach, &c., are getting into deep water, and I have no doubt we shall be hearing of some good catches.—A. W. WARNER.

Barle and Exe (Dulverton).

These rivers are still very low and bright, even after the heavy rains of Tuesday night and Wednesday morning. They did not seem to affect them hardly at all, and now they are as clear as ever. The weather has been intensely hot, with a good deal of thunder, about so very little fishing has been had. Yesterday the air was much cooler and a nice breeze, and some trout were caught on both rivers. Heath caught a nice few in the morning with the worms on the Barle, and I caught a dozen on the Exe in the afternoon with fly and minnow in about three hours, but lost a great many, owing to them taking very short. I am sorry to have to mention that lately poaching (in the way of trammelling) has been going on to some extent in the Barle. It is a great pity that such should be allowed to go on, and that persons who ought to be above such a thing, should so lower themselves. They are not doing any good for themselves, but are simply spoiling the river, and "cutting their own throats" in a money-making way; as it is chiefly the fishing and stag-hunting that brings "grist to the mill," and puts money into the pockets of most of the inhabitants of this quiet little town. However, the river is now being closely watched, and if they continue their malpractices, they will most probably meet their deserts at the hands of justice. The sooner this poaching is put a stop to, the better.—W.

Colne (Thorney Broad).

The water is in first-rate condition for angling. Every prospect of good baskets of roach and dace. During the past week some good roach and dace and chub have been taken, and Mr. Hawkins a trout 1 lb., which he turned into the water again; Mr. Drake, 1 trout 6 lb., and there has been a quantity of fish seen lately. For roach and dace, bran and bread and gentles.—E. GODFREY.

Coquet (Northumberland).

On July the 1st the river was flooded, and on the 2nd there was splendid sport. J. Hilton, and John Hilton, of Newcastle; Wood, of Linden; Mr. Scoat, of Linden Hillhead, and W. Mathews, of Longhershley, did well; their baskets were from 5 to 7 lb.; the largest trout $1\frac{1}{4}$ lb., killed by Mr. Scoat, Linden Hillhead. The salmon run freely from the sea, and the river is flooded again to-day, so we may look to have plenty of salmon all the season. A heavy thunderstorm and rain passed over here on the 5th.—A. GLASS, Angler's Inn, Weldon Bridge.

Dove (Derbyshire).

This (Wednesday) evening rain is falling heavily and the river should be much discoloured by to-morrow morning. Some heavy grayling have been taken in the dusk of the evening, both up stream and down, notably one taken at Mayfield, which scaled over 2 lb. The fish now rise pretty freely, particularly at dusk. The July dun, jenny spinner, and pale evening dun have been the taking flies, but when the shades of night have descended, the coachman and the moths have been in full swing. Above Dove Dale, we hear of a dish numbering some 6½ brace being landed, whilst at Hartington the spinners and duns have been killing well. The water has been too bright and clear for minnow spinners, but the present downfall should make up the deficiency. The Henmore brook has again been poisoned. This occurred on the night of the 4th inst., and some large quantities of fish were destroyed.

Exe (Exeter).

The river is very low again, and but very little sport to record, although in the estuary bass, whiting, pouting, flounders, small brills, turbot and

codling are extremely numerous, and are taken as high up as Topsham. Whitebait are also very plentiful this season, and are taken in large quantities daily at Turf. Mr. J. A. Kelly still continues to bring in some excellent baskets of tench, another of which I have preserved, but for himself this time. It is larger than the 2½ lb. fish preserved for the Royal Museum Angling Society, which was so successfully opened last Monday evening, when many members were enrolled, and business will be formally commenced this evening, Monday, July 4th. The following appeared in the *Exeter and Plymouth Gazette*, Tuesday, June 28th: "A meeting of fishermen was held at Mr. E. Blake's, Royal Museum Hotel, last evening, for the purpose of starting a club with a view of offering prizes for successful salmon and trout fishing, and bottom fishing for coarse fish. Mr. Kelly was voted to the chair, and the vice-chair was filled by Mr. E. Blake. A preliminary meeting had already been held, at which the scheme had been warmly taken up by several employes of the Great Western Railway who happen to be enthusiastic anglers. At last night's meeting it was resolved to form a club, and the names of several gentlemen were enrolled as members. The subscription was fixed at five shillings per annum, and the entrance fee 2s. 6d. The election of officers, it was resolved, should take place at the general meeting, which will be held on the 4th of July for the purpose of transacting the business of the club. Mr. Frank Gosden, who is one of the moving spirits in the scheme, was unable to be present through severe illness, but a hope was expressed that at the next meeting he would be able to attend and give them the benefit of his experience. The club would seem to have made a good start, and it promises to be successful." I have not the slightest doubt about the success of the undertaking from the manner in which it has been handled, the chairman and vice-chairman being well up to their work, and those who have as yet enrolled themselves can hold their own against all comers, but for myself I am sorry to say I shall not be able to meet them this evening, but sincerely hope to do so next Monday.—FRANK GOSDEN.

Lea (Cook's Ferry).

During this fine weather we have been favoured with a great number of anglers, who have returned to London with huge bags of fish, and now the hay-maker is hard at work, filling the air full of sweet fragrance, and there is encouragement given to lovers of the sport. On Tuesday, July 5, Mr. James Humphery, of Chingford Hall, Essex, summoned Charles Patcher, a poor boy living at Cook's Ferry as potman, and, according to his statement and the wording of the summons, which was as follows—"did unlawfully commit damage, injury, and spoil to and upon certain property there of a private nature, and belonging to William Gilbert, that is to say to and upon certain herbage there, growing in a certain field there situate, in the occupation of the said William Gilbert, thereby then doing injury to the said property to an amount not exceeding five pounds." At the hearing of the case, Mr. Humphery made his statements, and, on being asked if he was the owner, he said no; but he was there on behalf of Mr. Gilbert, and then he was asked if the field was private, and he said it was. The writer of this letter was then called as a witness, when I made the following statement. I told the honourable bench of magistrates that I was the proprietor of the Cook's Ferry, and had been so nearly four years, following my wife's uncle, who had the house for five years. Before my time, and during the whole time I and those before me had been in the house he had proved himself such an avaricious man that he wanted the big doll and all the toys, and because he could not have all his own way he had brought this case before their notice. Assuring them that the boy had done no damage, he being 70 feet from the road, and he walked along a footpath 16 inches in width. After this explanation the magistrates dismissed the summons without costs.

SAMUEL SEWELL.

P.S.—This case should stir anglers, and I for one will work might and main against an invader of the angler's rights.

Lochawe.

A splendid basket of salmon, grilse, and trout has been got at the Portsonachan Hotel. It consisted of one salmon weighing 10½ lb., two grilse weighing respectively 5½ and 5½ lb., and 4½ lb. of trout.—W. J. CAMERON.

Swale.

For those who like night fishing now is the time to try the moths—white, brown, yellow, all will kill through the twilight. The red dun (called in Hampshire the sedge fly), will also do execution—either natural or artificial. Like the moths this fly is best fished at night. The chief flies for the daytime, when the waters are suitable, are the ant flies, crimson brown, dotted drake, sanded dun, and bank fly. In the beck, the bluebottle or flesh fly, fished naturally, will prove most effective. The red ant fly is best made as follows:—Body, orange silk, with four turns of peacock's harl at tail. Legs, red hackle. Wings, starling's quill.—THOMAS FORD.

Trent (Alrewas).

Scarcely anything doing worthy of report from the river since my last. Owing to the intense heat, very few anglers have ventured forth on piscatorial art intent, and the takes have been anything but brilliant. On Saturday I made an early start, but did nothing till mid-day, and then nothing to brag about. The river was low and a nasty brown colour; the bottom of nearly every swim I found covered with the greatest nuisance anglers have to contend with this time of the year—"flannel" weed. After a deal of patience and perseverance, I bagged 8 lb. of roach and dace, the largest fish 1½ lb., and would have been considerably larger if it had been taken a month later. The same day, Mr. Adams Parker, fishing with the "coroner," had a miscellaneous basket of perch and chub, and, what is a novelty in this locality, a nice carp 4½ lb. Monday was a regular "hot un" as far as the weather was concerned. Reynolds, for once, reports it nearly settled him, and he returned home early with a 7½ lb. basket of good fish, a fair result, considering the tropical state of the weather. Heavy rain has fallen since Tuesday, which has not materially altered the state of the river. And, although the thermometer shows a considerable decrease in the temperature and the barometer rising, it is not my intention, in this erratic climate of ours, to assume the character of a prophet. I am a firm believer in the advice given by the late Mr. Artemus Ward when he said, "Never prophesy unless you know," and frankly I confess I don't know what the next few hours may bring forth in the state of the weather and probable results for the next week.—JAMES GREGORY.

Trent (Newark).

The water is very low, and rather a curious colour, owing to the grass being cut down on the banks, and floating down the river; but, notwithstanding this drawback, the water is not in very bad condition; maggots and caddis are still the best baits for roach and dace, while a few bream and tench have been

taken with worm. I noticed a lot of barbel "pitching" last Sunday in a well-known swim a short distance below Newark, but another week or two will be soon enough to bait a swim for these fish in the Trent. As a general rule fish have not been feeding very freely this week; an odd good catch or two have been had, but they have been the exception and not the rule. A good fresh rain is required to clean out the river, for there are such a quantity of insects in the water and on the weeds, and until they are swept away fish will not take a bait freely. Our fish have very much improved in condition this last week or two, even a bream or two that I saw this week were not so very much amiss.—THE TRENT OTTER.

Trent (Nottingham).

Perhaps barbel fishing on the Trent during the summer months is more important as regards trout than any other description of angling, therefore I will first make a few remarks on the doings of the rodsters in this locality. The water, I need hardly state, has been extremely low and clear, and the weeds cover the bottom in most of the best swims, and those that have employed a travelling float have found the fishing for barbel very difficult; besides, when this is the case, the fish refuse to take worms in anything like a kindly manner; and although several of the noted places have been baited, the catches were not so good as we expect at this season, the sport was doubtless better in some of the spots below Nottingham, and about six miles down the stream several nice barbel were taken with worms for bait, the largest 7 lb., and two others among the rest of the fish weighed 6 lb. This was the best catch I have heard of, though several smaller takes have been made. The bream fishers at Weston and other places up the river seem to have had bad luck, as after baiting the spots with the usual quantity of worms, failed to get the fish on the feed; the same might be said as to angling for roach, dace and perch, some of our best rodsters having been fairly defeated; and the only reason, to my thinking, is that we must have a change of water, which will doubtless make all the difference in the fish feeding; and, until this takes place, the sport is certain to be indifferent. Several nice pike have been taken by spinning, but the weeds were very troublesome. A few barbel have been had with scratching for bait, but roach, as yet, seem to refuse malt and wheat. I am of opinion, from what I have observed, that the bottom fishers cannot do better than stick to worms. The weather at the time of writing is now more favourable, for the temperature is considerably lower than what it was in the early part of the week; and the change has made a wonderful difference to the fish biting, and we hope the weather will continue as it is this day, Thursday.—W. BAILEY.

Waveney (Beccles).

The water here has been quite bright and clear for the past few days, but the beautiful rain of Tuesday night and Wednesday will give it again just a nice tinge. Roach are still rather shy at feeding, but perch and jack are quite voracious, and splendid perch fishing may now be had here. Several good takes have been had within the last few days, and an immense number of splendid fish have been observed by several people. Jack are not yet in condition, and roach and rudd are very slimy, but perch seem in first-class fighting order and are affording much sport.—C. B.

Wear.

The much-looked for flood came on the 29th ult., consequently the bottom fishers have had full sway, and there have been really some first-class trout brought to bank, the minnow being the most fatal bait. This lure has been unusually killing on this water this season. The fresh water did slightly run towards the close of the week, which enabled the fly fishers to turn out, but with indifferent success, the trout being evidently glutted with flood feed. M. S. had 19 trout and W. M. 12 trout on the 2nd inst., got on the shallows. The black gnat is going off, which will be a boon to the fly fisher, and will result in better takes being recorded.

Wye and Derwent (Derbyshire).

We have had a very great deal of heavy thunder rain fall in Derbyshire since my last report, which has discoloured both rivers a little. Trout have fed much better since the downfall with holly fly, minnow, and bottom, and some handsome baskets of good-sized fish have been killed, both trout and grayling; and some coarse fish have also been killed out of the deeps in the Derwent, both on the Darley Dale Club waters and on the Whatstandwell length. Several healthy trout and grayling, over a pound a-piece, have been killed with maggots and worms. Sport with the artificial fly has been very fair for the last couple of nights, both on the Wye and Derwent, and baskets of from four to nine brace per angler have been made. The killing flies have been the small grey goose duns, yellows, little blacks, sand, and spider flies. The small Derby trout-killer has been the death of some good trout on the Derwent during the past week. The night-line party have taken some fine eels on their lines with large lobworms for baits during this blowy week. Sport on the ponds has been very fair with bottom and top. The killing flies have been claret body, bramble, red spinner, and sand flies. Dabbling with the natural fly has also killed a fair quantity of trout during the week, both on the Derwent and on the ponds, the small blue bottle and downlooker flies doing the trick. In reply to W. B. Garniss and Foster Brothers' remarks respecting "wire lines," I can only say that the "Acme" line I recommended through the *FISHING GAZETTE*, made by Messrs. Joseph Peach and Sons, fishing tackle manufacturers, 10, St. Peter Street Derby, is in every way as I represented it to be, viz., the very best fly line that I have ever used or seen. It neither kinks, or casts, or gets knotted, and for throwing against the wind it is everything that can be desired. All anglers that have used Peach's fly lines and rods are mostly highly satisfied. If they are not, they are very hard indeed to please. I have not seen Foster's "Acme" lines myself, so I can't speak of their goodness until I have both seen and tried them, which I shall do shortly.—GEORGE JAMES EATON, Stark-holmes, Matlock Bath.

Yore (Yorkshire)

The long-wished-for change in the weather has come at last, and all anglers in this district are expecting to have a few day's real good sport. A tremendous thunderstorm passed over the county on Tuesday night, during which the rain came down in torrents, and it continued to fall more or less heavily during the whole of next day, so that there will be a chance with worm, minnow, and fly. The red and black ant flies, the fern fly, and the orange dun are capital flies for the whole of this month, the latter especially yielding great sport when there is a tinge of colour in the water. Your printer made an error in my report of last week, in mentioning Mr. Ford's flies; the sentence containing the words: "Not pleased with," should have read "Most pleased with." I have, no doubt, however, that your readers would perceive the mistake themselves, as the remainder of the sentence showed it to be one.—FRANCIS M. WALBRAN.

CORRESPONDENCE.

[We do not hold ourselves responsible for opinions expressed by our Correspondents.]

ANSWERS TO CORRESPONDENTS.

T. MARKHAM.—See the article on roach-fishing which will appear this or next week.

W. J. CLARKE (Stratford).—In reply to your query as to the fishing at Hunstanton, we think there is no freshwater fish of any account very near, and you had better stay at Lowestoft—a pretty place, splendid air, and close to the best coarse fishing in England.

C. L. BARTLEY.—There is a good barbel and chub fishing at Maidenhead. Write to Mr. John Rush, fisherman, Goring, for information about the river at Maple Durham and Pangbourne; if he does not know, he will tell you who does. Perch don't seem very plentiful in the Thames, but they had a very successful spawning and ought to show up better next season or so. There are plenty at Goring now if you can get them on. But chub-fishing under the boughs is your sport this hot weather.—[ED.]

THE ANGLERS' CONFERENCE AT THE SOCIETY OF ARTS.

SIR,—Perhaps scores of your readers may be asking themselves the same question that "Cambridge" asks in last week's GAZETTE, "How do we account for the change in 'The Trent Otter,' for he has said that he is in favour of rod fishing at all times?" If you, Sir, will kindly allow me a few lines in your next issue, I will explain why I agreed to propose the sixth resolution. I can assure "Cambridge," and all whom it may concern, that "The Trent Otter" has not changed his private opinion with regard to rod fishing. If "Cambridge" asks his friend who heard me speak at the meeting, I think he will remember my using words to this effect: "My experience and my wanderings by the river side, and my study of ichthyology, have revealed to me that rod fishing will not hurt a river in the slightest degree." I was just going to explain why, and give some facts in support of that, when I was told rather abruptly that "Time's up," and the chairman requested me to read the resolution; this was like putting an extinguisher over me. I, somehow or other, cannot help thinking that I was not treated very well. I think I ought to have been allowed to explain my views, and then the meeting could have rejected them, as they most certainly would, for the organisation was complete, and any opposition was met by a storm of interruption. I consider that our respected editor was treated shamefully, he ought to have been allowed to speak, and listened to respectfully; he has peculiar facilities for getting to know the opinions of anglers up and down the country. I consider that he represents some thousands of anglers, and this being so, he ought to have been allowed quietly to make his remarks. I could not help thinking that the delegates of the London Clubs had received instructions to at once put down any opposition to the views of the "Central committee, and so the tempest of interruption that our editor had to contend with during his remarks can perhaps be explained that way. When I was interrupted, I was just going to explain why fish are self-protected against the rod. I again say, fearlessly, as I did at the meeting, that "Rod fishing will never hurt a river in the slightest degree." Fish are wonderfully reproductive of their kind, and I maintain that if a rod is put into the hands of half the male population of England, and they are allowed to fish all the year round, fairly and honestly, fish will not decrease to any extent in a dozen years, that is, if netting, blowing up, poisoning, snatching, and every other unfair means of taking fish, were entirely abolished. Civilisation, in its onward strides, has not spared the fish; they are perfectly wide-awake to the angler's doings during the greater portion of the year, and take particular care that they are not taken by any sort of tackle and baits. I remember once fishing a rare roach swim during the latter part of August. I had well ground-baited the hole, and I fished with the very finest of tackle and the most approved of baits, the water was in rare condition, and I had hoped for a good basket of fish; but, after several hours' fishing, I only succeeded in landing about half-a-dozen half-pound roach. I felt convinced that plenty of fish were in the swim, and so, as evening advanced, I fetched a man who owned a cast net, and told him I wanted to try an experiment, and got him to throw his net directly over the place where I had been fishing, and where the ground bait had settled, and what was the result? Why, at one haul, he secured as many fine roach as would fill a good sized basket, and many of the fish were a pound and upwards in weight; this incident confirmed my former observations, that the roach were exceeding cunning, and were not to be taken anyhow with rod and line; and so I have concluded that fish are self-protected against the rod; and, if this were not so, and all sorts of poaching and unfair practices were totally abolished, the fish, as I before remarked, multiply to such an amazing extent, that the water would soon get overstocked with them, and rods alone would scarcely keep them under, even if, as I have just said, a rod was put in the hands of half the male population of England, and leave given them to fish fairly all the year round. I suppose it is a recognised fact, that a certain water will only support a certain quantity of fish-life in a natural way; and, if the fish are protected and left to increase and multiply of their own free will the water becomes overstocked with fish, why, of course, the natural resources of the water are not sufficient to support the extra fish life, and, as a natural consequence the fish cannot grow to a larger size, and, instead of the water having to support a fish of a pound, it is called to support half-a-dozen small fish of two or three ounces each. I think, myself, that one roach of a pound is worth half-a-dozen three-ounce fish; and, if the water will only support a certain quantity of good fish, how can we expect it to support four or five times the quantity, and expect the increased supply to be as good fish as before. If our rivers are over-protected, I am confident that this will be the result in a number of years; and, what with the wonderful fecundity of fish, and their extreme caution and cunning, we shall, in course of time, catch only very small fish where we used to catch pounders. Holding these views, then, anglers may wonder why I agreed to propose the sixth resolution; and a very few words will suffice. My motto is, the greatest good for the greatest number; and I am now convinced that the great majority of anglers think that, in order to protect fish properly, it is necessary to have a close time for rods, as well as nets, &c., and this being so, I am willing to sink my private opinions, and go in with the majority; and so, on those grounds, I thought I would propose the resolution; but anglers must not think that I thoroughly agree with the resolution; but I am willing to abide by the opinion of the majority. I thank Mr. J. Harrington Keene for his remarks in last week's GAZETTE. I was going to point out the chairman's dace, but Mr. Keene's words are exactly the words I should use, and so I will say nothing more about

that subject, but only ask your readers to carefully consider this letter; and then, I think, the reason why I proposed the resolution, will be made clear. In fact, I have a notion that I should not have been allowed to have spoken at all, if I had not agreed to propose something of the kind; and if I had been allowed to have finished my remarks quietly, I should certainly not have troubled you, Sir, to publish this letter, for what I have said here I should have said there, and also given them the reasons why I proposed the sixth resolution. Thanking you in anticipation for the space.—I am, &c.,
13, Collingham Row, Newark.
THE TRENT OTTER.

SIR,—I was very pleased that you, Sir, at least, said something against the resolutions passed at the meeting of anglers held at the Society of Arts, on Monday, the 27th ultimo, and helped to prevent a still longer protection being given to the tyrant of the streams, which I cannot think is in the least desired by trout fishers, certainly not by roach anglers (who are in considerable majority of all other class of fishers) if I may judge by my own feelings upon this point, and I think I may safely do so.

The two months you suggest (May and June) for all fish other than perch and pike, would, I think, suit everyone; and even the working man, I believe, would conform to such a fence time, as it would give us all the Easter holidays, and the only days we should be shut out would be Whitsun holidays, supposing we could not afford, or did not feel disposed to go in for a shilling's worth at one or other of the private fisheries.

I have fished the Lea for many years, and I've never known roach to begin spawning until the second week in May, this in favourable seasons, but in late seasons it has been the last few days in May or the beginning of June. I was at Dagenham on the 18th ult., and the bream were floundering about near the sedges all day long, undoubtedly cleansing themselves after spawning. Can anyone assert that these fish could not have been taken up to April 30th in splendid condition.

Dace and chub spawn early, and they might be added to perch and pike, I should certainly exempt flounders and eels from the operations of the Act.

The meeting at the Society of Arts represented a certain portion of the anglers, but I am of opinion that it did not represent the majority; and if you, Sir, could see your way to carry it out, I would suggest that you print two tickets on the advertisement page of your paper thus:

No. 1.
For May and June being
fence months.

No. 2.
For April, May and June being
fence months.

to have name and address added or not, as in your opinion best; each angler to send in to you by a certain date, the form which is most in accordance with his views and opinion, the form not sent to be destroyed, and the result to be made known by you, Sir, in your paper. This may not be a perfect scheme by which the true wishes of the anglers can be ascertained, and it is doubtless open to improvement if the suggestion is good; but I leave it, Sir, to your better judgment to put it forward or not, as you please.—I am &c.
E. J. H.

Stratford, July 5th, 1881.

[We think this is a good idea, and will endeavour to carry it out in some way later on.—ED.]

SIR,—In your GAZETTE of Saturday, there is a letter signed "Cambridge," in which is the usual fate of hearsayers and misrepresenters. I am one of the committee of "W. C.," and can write "facts." The meeting was by tickets, of which six were sent to every club on the "E. C." and "W. C.," so one club should be as fairly represented as another, and in papers, I think your own included. Any club not enrolled, or "E. C." or "W. C.," could have them on application. The two committees went over the resolutions very carefully before printing them, and thought they would do. The fact of one only being altered, proved it (four months, instead of five, for jack). Mr. Geen, on each resolution being seconded, asked for any opinion on it, asking any answer to be brief, on account of time, and on two occasions, were speakers called to time. If "Cambridge" thinks the few committee, say twenty, could sit on 450, he must be a (shall I say it) fool.

"The Trent Otter" was asked by Mr. Geen to propose the three months, and was quite agreeable to do so. I suppose a man may change his opinion. I can only say, attending all the meeting, that the committee worked for the benefit of the London and Country Anglers, to the best of their knowledge, and the adoption of the rules proved the anglers thought so, but they may not be quite perfect, yet. I hope "Cambridge" will speak of facts in future.—I am, &c.,
105, Camberwell Road, July 4, 1881.
G. H. FIELD.

P.S.—Mr. Geen said dace did spawn twice in the year, but he also expressly said he could not say they were the same fish; but they do so, all old anglers say.

THE AMENDMENTS TO THE FRESHWATER FISHERIES ACT.

SIR,—Allow me very cordially to thank you for your practical speech at the meeting of anglers at the Society of Arts as reported in your issue of last week.

I can confidently assure you that your ideas are not only strictly in accord with my own, but nine out of every ten who know anything about the time the fish of different species deposit their spawn will endorse all you stated. I am really surprised to read that my friend, "The Trent Otter," should so far have forgotten himself when proposing the resolution to close for all fish with the exception of pike and perch from the end of March till the end of June, to remark "That the time would about suit the fish in the Trent." If he had given the subject only moment's thought, I feel sure he would have seen his error in even supporting, much less moving, a resolution that would prevent trout anglers fishing through April for the fish I have enumerated, and when, in point of fact, they are not only in the best condition, but the weather more suitable for the angler to enjoy his favourite pastime than any other month in the year. There seems to me only one chance for the anglers in the provinces, and that is, to look after their own interests; and I would suggest that petitions be placed in every fishing-tackle shop throughout the provinces. Get them signed, and presented by the different Members of Parliament. I would suggest that from the last day of April to the 30th June, is quite long enough to cease fishing for barbel, bream, chub, and roach. Dace and grayling spawn the latter end of March and the beginning of April; so the close time from March 15th to June 30th for pike, perch, dace and grayling would be about the correct time. In conclusion, should my views meet the desires of my piscatorial brethren, I will most willingly look after their interests in this district, and ask the favour of our Borough members to give the matter their support when the

Bill is brought before the House of Commons. May I ask, in conclusion, why a delegate from Birmingham was not asked to attend the meeting.—I am, &c.,

JAMES GREGORY,

July 7.

Hon. Secretary Birmingham and Midland
Piscatorial Association.

SIR,—I wish as briefly as possible to say a word on the above subject. First, I will notice your remarks, Mr. Editor, arising after the report in this week's GAZETTE, and in connection therewith, the letter in the correspondence signed "Cambridge," which if allowed to go uncontradicted would leave a very false impression to go abroad. With regard to the meeting being by ticket, how did the West Central people act after discussing the matter at their own meeting, and getting the approval of the delegates to the proposed alterations? They next send a report to the FISHING GAZETTE, so that their ideas may be laid before every angler in the kingdom, next they send circulars to all the clubs, accompanied with half-a-dozen tickets. I suppose what took place in our club took place in most clubs; we had a discussion on the matter, and the six gentlemen who were deputed to attend the meeting received the instruction of the meeting as to what they were to support. The members assembled were almost unanimous in support of the proposed amendments, the only thing it was pointed out was, that although the owners of fisheries would be pleased to have a summary way of dealing with poachers, they would not submit to the three day clause. Owners, no doubt, will retain the right of giving a general permission in writing. What better means could have been adopted to have a truly representative meeting? The tickets merely insured that the clubs would have the best spokesmen present to represent what their feelings were. Mr. Keene in his remarks on Mr. Geen stopping the "Trent Otter's" speech are more keen than correct. "The Trent Otter" is evidently a man of ability, and his speech was very interesting, but he didn't quite know when to stop. The interruption and cries of time compelled Mr. Geen to give Mr. Martin a hint, which he did in a manner that no reasonable man could find fault with.—I am, &c.,

A. J. MARROTT, Waltonian Angling Society.

SIR,—Mr. Mundella asserted a short time ago in a published letter, that our freshwater fish "were fast becoming extinct." I suppose he meant at the time his Act was introduced. Was it a fact or not? According to the weekly statements in first-class sporting newspapers which surely must have some truth in them, even allowing for exaggerations, it used to be just as common to read of large takes of fish in the Thames as it is now. I have never yet heard of any river where coarse fish seemed at all likely to become extinct, or even scarce, except where netting prevailed. If fish are really sensibly diminishing in numbers near London, what a pity it is that the London angling clubs do not devote their funds to stocking their rivers, instead of spending so much money in prizes—an utterly bad system, by the bye. It is evident that at the so called "representative" meeting at the Society of Arts everything was pre-arranged and dissentients were not given a fair hearing.

I am sorry for the poor "Trent Otter," who was neatly trapped.

Can you explain why it is that every one considers saltwater fish, such as mackerel, herrings, smelts, &c. in their prime when full of spawn (of course excepting Mr. Geen and a few others), if freshwater fish in the same condition are unfit for food.

On the last day of last season, March 14th, I met several London anglers by the riverside, one and all complaining of the absurd fence months for roach.

I trust that anglers generally will not be hoodwinked by the Society of Arts meeting, but insist on having April at least an open month for bottom-fishing, though I maintain that they should have the whole year.—I am, &c.,

July 6.

A COUNTRY ANGLER.

THE NEWARK ANGLERS.

SIR,—The attention of the committee of the Newark and Muskham Fishery Association has been called to a letter, in your issue of June 25th, signed "Trent Otter." And I am requested to contradict *in toto* the assertions made upon, and the insinuations thrown at, the association, as base fabrication. "The Trent Otter" is not a member of either of the angling societies established at Newark. The statement, therefore, that he is backed by 200 anglers must be looked upon as bounce simply.—I am, &c.,

Newark, July 5th, 1881.

JAMES NEAL, hon. sec.

THEY FLIP THEM WITH SPRAY FROM THEIR TAILS.

SIR,—Anent the letter of Mr. Harrington Keene, concerning the flipping of flies with their tail by the brook trout, we should like to see this subject discussed in THE FISHING GAZETTE; it is a vexed question. Sportsmen all over the States, who wield a fly-rod, have ventilated their ideas about the matter in "Forest and Stream." And seemingly without getting the unanimous opinion of fishermen; our own experience in fishing the closely-matted streams of the North-west has been, that trout when in schools, will jump clear out of the water for flies, so keen is the rivalry existing when in search of food; but when laying hiding behind some log or root, and a fly comes dancing over the surface of the water, "Skip and a jump," then the keen-eyed trout, carefully measuring the rise and fall of the fly's flight, flips a quantity of water into spray, with his tail, and quietly gathers in that little fly. We have watched many times the dancing flight of a small blue dragon fly, that we call "The Devil's darning needle," but the movements have been so quick, that the only positive thing we have seen has been the shower of spray, and heard the peculiar "chug" that is caused by the breaking of the water by a trout. The fly certainly disappeared in the spray, but too quickly for our senses to say if down the throat of the trout. This we, of course, inferred to be the case, others have advanced the theory that this action of the trout was pure sportiveness.

The old story of fishes being found in the milk has been told in many forms. In the village of Boxmoor, about twenty years ago, an old milkman made the rounds, he was noted for his love of beer, and we teased him unmercifully about milking the "Spotted Bull," the public he used to get his beer at. Across his route, close to Two Waters Mill, there ran a culvert that drained some clear cold springs of bright bubbling waters; in the mouth of the culvert we boys could always catch large numbers of young shiners (dace). Old Bates was in the habit of filling up his milk-cans from this water, so we suspected and watched him. One Sunday morning, in the early summer, at breakfast-table we found two lively young shiners in the milk. We instantly transferred them into a large glass jar, containing clear river water. We kept them during the entire week, changing the water daily, and aerating the same with a common water syringe several times during each day.

The next Sunday morning, when the milkman came, all the family was up, ready for breakfast. We brought out the jar, containing the minnows, and almost made the old man wild. We teased him about the fish coming from the "Spotted Bull." At that time, we lived at the Mill House, and as we had many visitors, Bates's minnows from the "Spotted Bull" were objects of curiosity. We kept them some time, until some new freak engaged our attention, then we turned them into the head race of our mill.

Chicago, U.S.A., June 20, 1881.

W. DAVID TOMLIN.

[We cannot say what the 'cuteness of Yankee trout may not induce them to do when hungry. We have fished most of the English trout streams, and can safely say our English trout "go" for the fly straight with their mouths. We never even saw a trout jump at a fly which was more than an inch or two from the surface, we have seen a school of little fellows jumping up at gnats just hovering over the surface. Salmon will jump yards into the air, and fall with a splash, quite a distance from the place they left the water, so will trout occasionally. The salmon is merely restless and impatient for a flood to let it get up stream to spawn; the trout is worried by some parasite; neither do it for food. The peculiar action of the grayling often causes it to appear that that fish knocks the fly under with his tail, and then takes it. We have hooked more grayling by the tail and other parts than any other fish. The cause is, that they, as the Yankees say, "kind o'" roll over the fly, and if they rise at one of the droppers, the stretcher or end fly will often catch hold of them when the angler strikes. A two-pound grayling, hooked by the tail on a fine line, will give you all you can do to kill him. We hope our readers will give us the result of their experience in this matter. We have the deepest reverence for the sagacity of trout, and great admiration for their "impudence"; and, in this connection, it must not be forgotten that there exists a fish, which is provided with a squirt, and that this fish is a deadly shot. He swims under the surface, and when he sees a fly perched on any leaf or stone within range, he fires off a drop of water at him, and when the soused fly tumbles off into the water, as it generally does, he charitably puts an end to its suffering by eating him. Where is your Yankee trout, after this well-established fact, in natural history?—ED.]

LARGE TROUT.

SIR,—I had the pleasure of inspecting this week a fine specimen of a Bull Trout (*Salmo eriox*) which was caught early on Thursday morning, at Ludford Bridge, in this town. The weight and measure of the fish, taken by myself were as follows:—Weight, 5 lbs. 9½ oz., total length from snout to end of tail 24½ inches, girth of body 13½ inches. The fish was male with mandible hooked, fitting in a recess in the upper jaw. The colour of the body was brownish pink, having dark spots on gill and same on body. Although these fish in some waters are very common and run to a great size, I am not aware of their being so in the Teme.—I am, &c.,

A. M.

Ludlow, July 1, 1881.

THE NORFOLK BROADS.

SIR,—Shall be much obliged if some of your correspondents will kindly afford all the information they can regarding the Norfolk Broads, distance from Yarmouth, charge for fishing, and kind of fish, &c., through the medium of your valued GAZETTE.—I am, &c.,

LANDSEER.

3, Landseer Road, Bow, E., July 2, 1881.

[You can get all fish, except salmon and trout; the rivers are all free, boats can be had at 1s. per day. We recommend Coldham Hall, near Brundall Station, then Buckenham, and then Cantley for big roach. The Broads are nearly all accessible by rail from Yarmouth. You should stop an hour or two at Norwich, and consult Mr. Greene, the fishing-tackle maker of London Street, as to places, tackle, &c.—ED.]

GREY MULLET IN FRESH WATER.

SIR,—I have access to a river in which grey mullet ascend in great quantities, bushels of them being frequently taken by net. Will you allow me through the medium of your columns to ask your readers whether these fish can be caught by angling, and, if so, the method to be adopted, best bait to be used, &c.? The people living in the neighbourhood of the river say the fish cannot be caught with rod and line, but I cannot obtain any evidence of anyone ever having tried for them. I intend doing so, and trust some of your readers who by chance may have had some experience in this line will kindly assist me with a few hints, and should anything worthy of note come of it I (should you care to insert it) would send you the result.—I am, &c.,

M. B. CLIFT.

P.S.—Being large game fish, good sport would be the result of hooking them.

POACHERS.

SIR,—I have read with great interest the proposed amendments in the Fresh-water Fisheries Act, as reported in the FISHING GAZETTE. Might I be allowed to suggest that a clause be inserted to empower police constables to search persons on any highway, &c., whom they reasonably suspect of coming from any water where they have been illegally taking or attempting to take fish, and to seize any fish, nets, &c., and to summon offenders, and any penalty recovered to be paid to the Police Superannuation Fund; in fact to give them the same powers as they now have now under the Poaching Prevention Act (25 & 26 Vict. c. 114). This, I am of opinion, would be a great boon to anglers.

In this part of the country the only water in which any fishing can be obtained is a canal which is teeming with very small perch, roach and bream, and a fair sprinkling of carp and gudgeon, and there would be excellent pike fishing, but for the wholesale netting that is practised in this district by a gang of men who net some part of the canal every month, and their depredations extend for miles. There is an arm or wharf in the canal (within a short distance

of this town), about 600 or 800 yards long, which seems to be a favourite place for pike. It was netted about six weeks ago, and amongst other fish 54 jack, ranging from $\frac{1}{2}$ lb. to $1\frac{1}{2}$ lb., were taken out, and this sort of thing has been practised for several years in open day, generally on a Saturday afternoon, and all fish, however small, that the net will hold, are killed. I was informed, by a gentleman to whom this arm belonged, some years ago, and who then preserved it, that he frequently took pike up to nearly 10 lb. in weight, and perch 2 lb. and 3 lb., and I have no doubt if this wholesale netting could be stopped there would soon be an abundance of good fish. But the landowners adjoining the canal will not trouble themselves to prevent it, and the only remedy is to empower the police to take proceedings, in these cases. I have no doubt other parts of the country suffer from a similar cause.

On Saturday last I went with a few friends by invitation for an afternoon's fishing to a brook some distance from this town, where, I was informed, there was a good supply of roach and perch. We went fully prepared to do some execution, but were disappointed; but one of the party was fortunate enough to get a nibble. We gave up in disgust, thinking we were the victims of a practical joke. On returning through the village on our way home a labouring man inquired if we had had any sport; we replied in the negative, and he said, "You're not likely to have when these things are about," referring to a net he was then washing. Apologising for troubling you—I am, &c.,

Hinckley, July 6th.

WALTONIAN.

ANOTHER NEW ANGLING SOCIETY.

SIR,—It is with much pleasure I inform you of the establishment of the Godalming Angling Society. President, Major-General Marshall, C.M.G.; hon. sec. Mr. Dawse; treasurer, Mr. W. Hoar, the Sun Inn, Godalming, where weekly meetings will be held on Tuesday evening at eight o'clock. There are at present seventy members.

The society is preservative, having the permission of the lord of the manor and the landowners to prosecute in cases of illegal fishing, &c.; also permission to fish the water of the several owners to the extent of about four miles. The subscription is rather low, 3s., but it suits the working man, and it is hoped, that by setting a good example, there may be no necessity for enforcing the law. "Happy thoughts,"—and surely this is one—the society is thinking of opening its ranks to the young hopefuls at half-price, of whom there is a goodly number.

The hon. sec. of the Portsmouth Waltonians, hearing of what was going on, wrote us, saying that as soon as he knew that the affair was a floating concern, he would willingly send a subscription. You will be able to guess the pleasure such an instance of the good feeling, so inherent in the true angler, gave us; and I am certain it will gratify him, and many others to know of the existence of the Godalming Angling Society.—I am, &c.,

Godalming, July 5, 1881.

G. W. KITSON.

[Shall be glad to see the new bait can.—ED.]

CLUB REPORTS.

ANGLER'S PRIDE SOCIETY.

This society went out on Sunday, the 3rd inst., and competed for three prizes, the place selected being Amberley, and the following is the result:—Mr. T. Fiddes, gave a silk umbrella, which was won by Mr. Wall, with 4 lb. 7 oz., bream and dace; Mr. Hurst gave two splendid vases, which were won by Mr. Dawe, with 3 lb. 14 $\frac{1}{2}$ oz. bream, one fish scaling 1 lb. 12 oz.; and Mr. Tillman gave half a guinea, won by Mr. T. Fiddes, with 2 lb. bream; also the following members weighed-in: Messrs. Mallett, Austin, Haines, Hayes, Watkins, Scutt, &c. Total weight, 13 lb. 2 oz.—D. MALLETT, sec.

July 5, 1881.

ANCHOR AND HOPE ANGLING SOCIETY.

A match took place at Amberley, on Sunday, July 3, 22 members competing R. Smith, first, bream; C. Daniels, second, perch and bream; A. Glass, third, perch and bream; A. Shakel, fourth, bream; H. Pieraccini, fifth, bream; T. Bowling, sixth, bream; W. Stretton, seventh, bream.—A. SHAKEL.

July 5.

AMICABLE BROTHERS' ANGLING SOCIETY.

The twenty-eighth annual dinner of the above society was held at Mr. Mansel Bayley, Swan Hotel, Pulborough. Forty members and friends sat down to a very satisfactory repast, provided by the host. Messrs. C. A. Medcalf and W. Say acted as stewards in a very efficient manner. Several who ought to have dined were conspicuous by their absence. A great many of the members angled, but with very little success. Mr. Muir was the only one who weighed in the club house at night. Members are requested to attend on Wednesday, July 13, to arrange a pegged-down match.—J. WORLEDGE.

July 3.

CANONBURY ANGLING SOCIETY.

The above society was well represented on the 3rd inst. by the following members, who weighed-in:—Mr. Bennett, bream and roach; Mr. Keys, bream, roach and dace; Mr. Riches and Mr. Pearce, trout; Mr. Wayne, roach and dace; Mr. Jones, roach; Mr. Books, roach; Mr. Finigan, bream and roach; Mr. Leach, roach; Mr. Wellstead, bream; and Mr. Gay, roach and dace.—W. H. PEARCE.

July 4.

CAXTON ANGLING CLUB, BECCLES.

The second competition this year for the prizes given by this little club took place on the Waveney, on Saturday afternoon last. Starting from the boat-house at 2.30, the party pulled down the river for about three miles to a beautiful piece of water, a little way below the railway swing-bridge, when rods were put together and operations commenced, but alas! not with so satisfactory a result as the generality of their competitions produce with regard to the quantity of fish taken, although a number of very good fish were caught. The heaviest roach of the day was caught by Mr. Ulph, and weighed 1 lb. 1 $\frac{1}{2}$ oz., for which he was awarded a special money prize. The day was almost unbearably hot; in fact, just such a day as it must have been when a gentleman

who fancied himself a poet, as he was staying in the same house as Byron, wrote—

"The sun's perpendicular rays
Illumined the depths of the sea,"

But being called from the room when he had got thus far with his effusion, Byron, who chanced to see it, added—

"The fishes beginning to sweat
Cried, O Lord, how d—d hot we shall be."

The state of the weather, alas! was against the fishermen, being "as clear as gin." In consequence of this state of affairs, some of the competitors "turned it up" and contented themselves with a quiet pipe. Mr. Chase, whilst angling with worm, hooked a small jack, but, as he was under a pound, he was discharged with a caution. Mr. Godbold, who was fishing from the same boat, having hooked a small roach was drawing it up, when it was struck at by a nice jack, which he succeeded in landing. The heaviest weights in the three hours' fishing were: Mr. Holland, 3 lb. 9 oz.; Mr. Ulph, 2 lb. 10 $\frac{3}{4}$ oz.; Mr. Hooker, 1 lb. 8 oz.; and Mr. Lea, 1 lb. 4 $\frac{1}{4}$ oz. Several other members also weighed in.—CAXTON.

July 6th.

CITY OF LONDON ANGLING SOCIETY.

A few of our members fished a pegged down match at Amberley on the 3rd., after a smart contest, Mr. Martin proved the winner, with nearly 3 lb. of bream, Mr. Hales second, Mr. Perry third, and Mr. Mortimer fourth. Messrs. Fowler, Parkins, Castell, Osmond, Plumstead, Head, J. Chambers, and Dunmarsh taking some fine eels. Messrs. Pratt and Hobbs weighing perch from the Lea.—CAS.

EXCELSIOR ANGLING SOCIETY.

Several members of the above society were out on July 3, the most successful being Messrs. Blackman and Smith, these gentlemen having a very fine show of chub, barbel and dace, one of the former being a very handsome fish of about 3 $\frac{1}{2}$ lb.; we have also just received from Mr. Cooper a case of four very handsome perch, taken by Mr. Hayward, March 11, which may be seen at the club house.—A. THOMAS.

July 5.

HAMMERSMITH UNITED.

The 3rd of July saw the first of our two days' competition in the Thames for three prizes, but the takes were very meagre indeed, doubtless owing to the low and bright condition of the water, steam launches, &c. The second day's fishing takes place on Thursday, the 7th inst., when the traffic may possibly be less, so that I am in hopes of giving a more cheerful report next week. It is with much regret that I have to record the death of one of our old members, Mr. Marsh, who was respected by all who knew him.—VORTEX.

July 4.

IZAAK WALTON ANGLING SOCIETY.

Mr. J. Hilliar, sen., and Mr. J. Hilliar, jun., had bream on June 29; Mr. G. Rolt and Mr. G. P. Rolt had roach on the same day; Mr. W. H. Mecham had some beautiful roach on July 3, from Pulborough; Mr. J. Hilliar, sen., also had some roach from the same place, the largest weighed 1 lb. 10 oz. The Sunday members and friends dined at the Rye House, on the 3rd inst.; the dinner was served up in a very first class manner. The weather was beautiful, and the grounds attached to the house were in splendid condition, which, with the excellent catering, enabled the members and friends to spend a very enjoyable day. The Wednesday members and friends will dine at Mr. Lyndsell's, the Pied Bull, Stanstead, St. Margaret's, on the 13th inst.

July 5.

KING'S CROSS UNITED ANGLING SOCIETY.

Mr. Treadwell, of 12, Cumberland Street, Barnsbury has been appointed secretary of this society, vice Mr. Emms, resigned. Secretaries of clubs will please make a note of this. Several members out on the 3rd instant; the following having fish—Mr. Morley, roach; Mr. Davis, chub and dace. Gentlemen desirous of joining a society, will find this one of the most conveniently situated in London, the club house being the Albion, Caledonian Road, King's Cross, two minutes from the Metropolitan, Great Northern, and Midland Railways. Meeting nights Sunday and Monday.—G. TREADWELL.

July 5th, 1881.

LITTLE INDEPENDENT ANGLING SOCIETY.

We had a handsome show of fish on Sunday evening. The following weighed-in:—Mr. R. Hopton, bream, 22 lb. 9 oz.; Mr. H. Moore, bream, 9 lb. 4 oz., and jack, 1 lb. 10 oz.; Mr. Hurwood, roach, 3 lb. 14 oz.; Mr. Humphreys, jack, 2 lb. 6 oz., and roach, 1 lb. 3 oz.; Mr. Scott, Roach and gudgeon, 1 lb. 6 oz.; Mr. F. Moore, roach, 1 lb., 4 oz.; Mr. Grey, bream, 1 lb.; Mr. Heelas, dace, 10 oz., likewise a few pounds of eels. Last evening we had our first general meeting on the Central Association, and had a comfortably filled room. We had some capital harmony, the following gentlemen contributing:—Messrs. G. Letch, F. Moore, C. Watling, Julius Harding, Jennings, J. Fitch, jun., Ducrece and L. Rocksby. Our chairman, Mr. Pipe, presided in his usual happy and able manner, and the evening was most enjoyably spent. The next visit on the Central list will go to the Buckland Angling Society.—W. BROWN, hon. sec.

July 6.

LIVERPOOL ANGLING ASSOCIATION.

At the weekly meeting held on Thursday evening, the 30th June, the date of the next excursion was changed from the 21st to the 20th inst., the water to be the same—viz., the river Vyrnwy, at Llanymynech. The members will be conveyed by road free of cost from Oswestry to Llanymynech and back, thus avoiding the vexatious delay through the Cambrian Railway not running their trains to suit those of the Great Western. Members as far as possible are requested to take their tickets (Anglers' to Oswestry) the previous day at the railway office on the Landing Stage at Liverpool, and proceed by the 6.0 a.m. boat to Woodside on the Wednesday morning. By the kindness of Mr. Davies, of the Great Western, a saloon carriage will be provided for the convenience

and accommodation of the party. The prizes to be competed for are as under :—By Messrs. Ellsiger and Boulding: 1. A pair of fishing boots of not less value than 24s., for the heaviest creel of fish; 2. A fishing jacket for the heaviest single fish of any class. By the Association: A one guinea rod for heaviest take of trout and grayling; a half-guinea reel for the next heaviest take of trout and grayling; a one guinea rod for the heaviest take of chub, perch, roach, &c.; a half-guinea reel for the second heaviest take of chub, perch, roach, &c. In this competition no salmon, pike, jack or eels to be weighed in. Weighable fish to be as per scale laid down in the rules. The members on reaching Llanyrnach will assemble at the Cross Keys Hotel, and no one will be allowed to start, on pain of disqualification, until all are ready, the preliminaries adjusted, and the word go given by the chairman who, if present, will have charge of the competitors.—RD. WOOLFALL, hon. sec.

Liverpool, July 5, 1881.

A quarterly meeting was held on Thursday evening, June 30, and a goodly number of members were present. The balance sheet for the past quarter, showing £28 4s. 2d. to the credit of the association, was read by the hon. sec., and unanimously adopted. The success of the association is assured, as it now includes the right sort of metal—anglers who not only love the “gentle art,” but who do not grudge their time attending the weekly meetings, helping and encouraging the executive by their presence and advice. The weak-kneed ones have one by one dropped away like rotten branches and left the body firm, vigorous and flourishing. Members of the proper grain are joining weekly, and there can be no doubt that ere another twelvemonth passes away the society will number 200 good men and true, prepared to support the true interests of anglers, and in their own persons prove the softening and humanising effects of being brought face to face with nature in their many wanderings far away in the heart of our own glorious valleys.—RD. WOOLFALL, hon. sec.

July 6.

GREAT NORTHERN BROTHERS' ANGLING SOCIETY.

On Sunday last, Messrs. Theobald Parkin, Painter, Young, and H. Watling showed some very good bream and roach from the Wey, Mr. Parkin having a pretty roach, 1 lb. 1 oz. From Pulboro' and Amberley the following members showed some fair takes:—Messrs. J. Watling, J. Fitch, J. K. Fitch, and Mr. Perkins, dace; Messrs. Cooper and S. Smith, rudd and roach.—J. FITCH.

July 5.

ORIGINAL CLERKENWELL PISCATORIAL SOCIETY.

The members of the above society had some excellent fish last Sunday. Messrs. Lucy, jun., J. Drew and Long had bream and perch from Pulborough; Mr. F. Neagus had a splendid tray of roach from the Stort, several weighing over 1 lb.; Mr. W. B. Gorsuch had also chub from the Lea.—THOS. WM. LUCY, sec.

July 5.

PRINCESS OF WALES ANGLING SOCIETY.

Our members were out on Sunday last, July 6th, and most of them succeeded in landing some very decent fish. Messrs. Glaister and F. Robson weighed in the heaviest takes, each having some handsome perch. This society, which has only been founded six weeks, has already enrolled forty-one members, and, as it is limited to a hundred, gentlemen desirous of joining are particularly requested to attend the club any Thursday evening at the Prince of Wales, Great Barlow Street, High Street, Marylebone, W., or communicate with the secretary, Mr. F. Robson, 19, Great Barlow Street, Marylebone, W., who will be pleased to forward all particulars.—E. PERCY.

ROYAL PISCATORIALS.

On the 3rd, Mr. Dale, the well-known secretary of this society, succeeded in getting a nice trout weighing about 2 lb., and some chub from Hertford. Thursday, 7th, Messrs. Hockley and Canton gone to the Thames. [Not yet returned. Telegram: “Messrs. Hughes and Lee. Send for fish per last train, 11:30, Waterloo. Wire name of winner of first and second prize.”]—PIXIE.

July 7.

SOUTH LONDON ANGLING SOCIETY.

Messrs. Buckham, Brewood, Ellis, Head and Palmer went to Amberley yesterday, and had fair sport; and Head two roach, weighing 1½ lb.; Palmer, one bream, 3 lbs.; the other roach from Dorking. Boorman, 4½ lb. roach; Gearing, 3½ lb., ditto; also Mitchell and Frost brought home roach from Datchett. Mr. Sargent, 5 lb. eels, and a few dace; over 25 lb. of fish weighed in yesterday evening. The members fish next Sunday, either at Pulborough or Amberley for an oil painting of “Cremorne,” the Derby winner, given by Mr. Mitchell, heaviest weight to win, bar jack.—G. H. FIELD.

July 4, 1881.

STOCKTON ANGLING SOCIETY.

The members of the above club held their first competition of the season on June 27, in the river Swale, at Morton bridge. The Swale being in splendid condition, good baskets of trout, pike, chub, dace and perch were taken. The following are the presumable prize takers:—Messrs. G. Jarrett, J. Brown, T. Bradley, S. Walters, W. Johnson, P. Clarke, G. Cherici, T. Young. The fish were weighed at the Albion Hotel, where the remainder of the night was spent in songs, &c.—WILLIAM LAWES, hon. sec.

July 4.

STOKE NEWINGTON ANGLING SOCIETY.

Members of the above have not yet obtained any large shows of fish. The following being the result of the weekly competition on the 3rd inst.:—Mr. T. Gretton, 2 lb. 1 oz. bream; Mr. A. Parrott, 1 lb. 15½ oz. roach and bream; Mr. W. Webb, 1 lb. 1 oz. bream—a slight improvement on the previous week.—THOS. GRETTON, sec.

THE UNITED BROTHERS' ANGLING SOCIETY.

Sixteen members of this society fished a peg-down match at Dagenham, on Sunday last, for four valuable prizes; but the catches were not very great, only

three of the prizes being taken. A few other members also weighed in. Fish taken mostly bream.—GEO. MAY.

WALTONIAN ANGLING SOCIETY.

The following gentlemen weighed-in on the 31st July:—Messrs. Roland, the best take, 6 lb. 4 oz.; M. Malcolm, next, 5 lb. 12¼ oz.; Mr. Packman, jack, 4 lb. 15 oz.; Messrs. Waltham, Jukes, J. Moore, and Good, jun. On the Wednesday previous Mr. W. Putnam weighed-in four bream from the Harp, weighing 14 lb. 1 oz., the largest 5 lb.—A. J. MARRIOTT.

July 5, 1881.

WALWORTH WALTONIANS.

On the 1st., Mr. Boalch succeeded in getting some roach and dace from Richmond. The same evening, Mr. Pearson and a well-known “pedal ornament maker,” decided to compete on the 6th for the tackle case, given by Mr. Gold on the 10th. Mr. Pearson was entitled to it by the weight of fish he exhibited on that date; but, owing to an infringement of Rule 10 (which states the time for weighing fish on competition days), and as the well-known P.O.M. was the party most concerned, he, with his usual generosity, purposed that they should compete for it at the next competition, the heaviest of their two weights of fish to take the prize. On the 3rd, Messrs. Cain and Bedford visited Pulborough, and managed to get among some nice perch and roach.—PIXIE.

July 6.

CATCHING FLIES FOR DAPPING.

I used to find it a very difficult matter to procure the natural fly (for dapping) in any number, and have often paid river keepers, &c., a shilling or more for a small lot of very stale specimens; sometimes, indeed, I have failed to get flies at any price in sufficient numbers to justify a dapping expedition; in fact, it is as hard a matter to many people to secure the fly as to secure the fish. The following plan is easy, simple, and never fails when the flies are out. Get a light, shallow deal box, say two feet long, with a close-fitting lid, on hinges (I always use an old Coleman's mustard box); take it into the nearest wood, or indeed under any trees, and having placed it, open, on the ground, bait it with some fresh horse, sheep, or other dung; then prop the lid partly open with a short stick, attach one end of the line to the centre of the stick, and retire four or five yards with the other end of the line in your hand. In a very few moments, if the day is favourable, hundreds of flies will settle on the dung; by a jerk of the string release the lid, which falling shuts in the flies. At once place a weight on the top of the box to keep the lid closely shut (for the flies will find their way out through the smallest crack), and you have your flies in the box. All this is easy enough, and I imprisoned thousands before I hit on the plan to get them from the box into the bottle in which I carried them to the river. This is the way to do it. In one of the sides of the box cut a hole a trifle smaller in circumference than the mouth of an ordinary pickle bottle, and having a sliding cover. When your flies are caught in the box, push back the sliding cover, and hold the mouth of the bottle over the hole; the flies will swarm to the light, and about three takes will fill a pickle bottle. Care must be taken to cut the hole in the side of the box, and not in the top, as the flies do not go upwards readily. Should you wish to use a smaller bottle than a pickle bottle, or to provide several fishermen with bait, use a pomatum bottle, or in fact any glass vessel with a wide mouth, only take care to have the hole in the box smaller than the mouth of any bottle you may select. Of course you can cut several different-sized holes in the same box, to fit different-sized bottles. Corked up, the flies soon become half-dead, when they can be shaken into whatever sort of perforated box you may like to carry them in, and with air and enough space will soon revive. For my own part, I think they are quite as good for bait dead as alive, if not stale.

I should not have troubled you with a description of this plan had I not met so many men to whom it is unknown, and who complain of the great difficulty and uncertainty of obtaining flies. Perhaps, however, you do not think dapping sportsmanlike?—WILLIAM F. H. MAJENDIE in the *Field*.

LOB WORMS.—In consequence of the difficulty experienced by London anglers in procuring lob-worms, Mr. Gillett, fishing tackle maker, of No. 40, Fetter Lane, has arranged to keep a constant supply; also of other worms and gentles, &c.—ADVT.

ANGLERS should always be provided with something to take away the swelling and poisonous effect of the bites of insects. They should also have with them something to apply to a cut or sprain. Pond's Extract reduces the swelling and inflammation, stops bleeding and pain, and hastens the healing process in case of any wound or sprain; and it has no equal for application to the bites and stings of insects. Therefore never go on a fishing excursion unprovided with a bottle of Pond's Extract. It is for sale at all chemists, at 2s. 3d., 4s. 6d., and 8s. 6d. per bottle.—[ADVERTISEMENT.]

GREGORY'S SPINNING BAITS.—“The Gregory,” the “Flexible Cleopatra,” the “Oxford,” and the “Colorado,” pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name “Gregory” is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived. Address, James Gregory, Vyse-street, Birmingham.—[ADVT.]

GEORGE JAMES EATON, of Starkholmes Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[ADVT.]

TO ANGLERS.—W. J. Cummins, Fishing Tackle Maker, Bishop Auckland, is now prepared to forward to anglers his Illustrated Catalogue, which is not only a Trade List but is interspersed with practical hints, useful directions, and valuable information gathered by the river-side from twenty years' experience. The stock consists of his unrivalled Salmon, Trout, Grayling, and Pike Rods, Lines, Reels, Baskets, Artificial Baits, Fly-books, Landing Nets, Gaffs, and last, but not least, his celebrated Trout Flies, which for killing powers stand unequalled. Every article kept in stock is of the very best description.—[ADVT.]

CARP IN AMERICA.—As the hot weather is now fairly upon us, the excuse is all the better for going fishing, or at least to lounge around upon the banks of some of our beautiful clear streams, bathe in their waters, and feast on the fat country chickens and fresh buttermilk. Charles B. Erwin, R. C. K. Martin, and Julian Cooley left a few days ago for South Harpeth, where they propose rustivating and angling for at least a week. Colonel Griffith and a party are at "Buffalo." From the Cumberland and tributaries goodly numbers of fish are being taken. Since the passage of the fish law there has been a perceptible increase in the number of fish taken in small creeks near the city, which had been almost entirely depopulated. It is astonishing how readily the law has been accepted, and the new impetus given to artificial fish culture. Dr. W. M. Clark, Judge Jno. C. Ferris, and Temple O. Harris are building each large ponds, in which they propose raising carp and game fish. The growth of the carp in this latitude is incredible. Mr. F. Pride, residing near Cedar Hill, in Robertson county, has a large pond sub-divided into six compartments, with an abundant supply of cold spring water, in one of which he placed fourteen carp about one year and a half ago. He reports them as being over twenty inches long, and weighing about three pounds each; last

November he added ten more, which are now nearly a foot long. Of his method of treatment he says, "I feed them as I do my pigs—on vegetables and corn." In the other ponds he has nothing but bass; these he procured when minnows, about two years ago. On the 8th of May he discovered great numbers of small fry in the pond, which he could not believe were the offspring of his two year-olds, but their appearance excited his curiosity, and he caught two of the older fish with hook and line, which happened to be females, full of eggs. He would like to have your opinion about the matter, and also at what age bass spawn in this climate, and what kind of food he should give to the young. As he can draw the water from his ponds, he intends, as soon as the spawning season is over, to do so, and separate the different sizes of his fish. Mr. Pride gave the above information in a letter to Fish Commissioner Colonel G. F. Akers, who, in answering, suggested to the gentleman that the *Chicago Field* and some good book on fish culture was what he should possess himself of at once, and then he could give his funny pets scientific care, and profit largely by it. It is singular that with such a store of information on such matters as the *Chicago Field* contains that anyone owning a pond or a gun should be without it.—CLIMAX, in the *Chicago Field*.

1st AWARD MELBOURNE EXHIBITION, 1881. DAY, SON AND HEWITT'S STOCKBREEDERS' MEDICINE CHEST.

FOR ALL DISORDERS IN HORSES, CATTLE, CALVES, SHEEP AND LAMBS.

In this chest are the following matchless and world-renowned remedies, all that a Farmer can require to cure disease amongst his Stock and keep them in fine, healthy, and buoyant condition:—

"CHEMICAL EXTRACT," for Wounds, Swollen Udders, and Ewes Lambing.

"GASEOUS FLUID," for Colic, Scour, and Debility.

"RED DRENCH," for Cleansing Cows and Ewes, &c.

"RED PASTE BALLS," for Conditioning Horses.

"BRONCHOLINE," for Husk, Hoose, or Cough.

"GASEODYNE," for Heaving or Paining.

"ALCOHOLIC ETHER," for Colds and Chills.

"CARMINATIVE CHALK," for Diarrhoea in Lambs and Calves.

Price of Chest, with "Key to Farriery," £2 16s. 6d., carriage paid. Each article can be had separately.

Patronised by Royalty, and used for over 40 years by the Leading Agriculturists of the British Empire.

CAUTION.—See that the Name of DAY, SON and HEWITT is on all Bottles and Packets.

DAY, SON AND HEWITT,
22, DORSET ST., BAKER ST., LONDON, W.,
AND WANTAGE, BERKS.

GREAT EASTERN RAILWAY.

—Seaside.—TWO MONTHS' RETURN TICKETS are now issued by all trains to YARMOUTH, Lowestoft, Cromer, Hunstanton, Southwold, Aldeburgh, Felixstowe, Harwich, Dovercourt, Walton-on-the-Naze, and Weeley (for Clacton-on-Sea).

Fortnightly, and Friday or Saturday to Monday: First, Second and Third Class Return Tickets are also issued at REDUCED FARES by all trains to Hunstanton, Cromer, Yarmouth, Lowestoft, Walton-on-the-Naze, Weeley (for Clacton-on-Sea), Dovercourt, Harwich Felixstowe, Aldeburgh or Southwold.

BROXBORNE and RYE HOUSE every Sunday by any train before 3.30 p.m., and every Week-day by any train before 3.0 p.m. Fares, 3s. 6d., 2s. 6d., 1s. 6d.

For Full particulars see Handbills and Time Tables.

London, July, 1881.

WILLIAM BIRT, General Manager.

DIPLOMA OF HONOUR AT THE NATIONAL FISHERIES EXHIBITION. NORWICH, 1881.

Hines' Spring Plummets.

Small size, 6d.; Large do., 7d. Post Free.
The Trade supplied.

AGENTS WANTED IN EVERY TOWN.

Address—THOMAS HINES, The Bazaar,
Adelaide Street, Norwich.

THE SPRING PLUMMET.—Mr. T. HINES, the inventor of this useful fisherman's accessory, has received a highly satisfactory testimonial of its worth from the well-known anglers, Messrs. A. G. JAR-DINE and H. L. ROLFE.

FISHING GAZETTE Plummets, 8d. each post free.

(THE DEVONSHIRE RIVERS.)

FISHING TACKLE, &c.

DEVONSHIRE FLIES (GOOD IN ANY STREAM), 1s. 6d. per dozen. Flies made to pattern. A large stock of Rods and Tackle of all kinds. Some choice SPLIT CANE RODS by "Copham;" bargains. The Devon and other artificial Baits, Reels, Lines, Gut Casting Lines, Fly Books, Wading Stockings and Trousers, Baskets, and every other requisite. Address, WILLIAM MUDFORD, Fore Street, Tiverton, Devonshire. Ticket depôt for the Tiverton Fishing Association.

TROUT AND GRAYLING FLIES.

J. A. GRIFFIN, Practical Fly-maker, begs to inform Anglers that he has in stock some of the best FLIES, both for natural colours and fineness, combined with strength, at 2s. per dozen. Best Gut Casts, all warranted to lift 4 lb., 9d. each. J. A. G. calls attention to his £1 1s. 6-joint Pocket Fly Rod. Flies and all other Tackle made to order, and forwarded to any part of the Kingdom, Post Free, WITH ALL HASTE.

Portobello, Late 15. Tything, Worcester.

ANGLERS should try "PISCAMANNA," the best bait for Roach, Dace, Chub, &c.; is not offensive. Post free 13 and 26 stamps, A. Tuczek, 33, Brook Green Lane, Hammersmith, W.

TAPER SALMON AND TROUT LINES.

Enamel Waterproof in 4 sizes, either single or taper at both ends; these we have made for many years without a single complaint; all speak well of them; they have more spring than the wire centred line (fine cast, no splash), being made exactly on the principle of a tandem whip; used by all noted anglers. See letters in catalogue; wear dress these lines and return them in five days equal to new for 1s.

WIRE CENTRE LINES.—(Enamel Waterproof), Salmon or Trout. These we have made for upwards of 7 years, being the first inventor of them; but our Taper Lines have quite superseded them.

DEEP SEA LINES.

Double Cable Waterproof; we are the largest makers in the world of this class of line, which we spin and cable direct from the raw material. Will outlast four ordinary undress lines; all sizes from whitening to conger; sold by the single line or cwt. For samples, address, with two stamps,

COTTON TWINE SPINNING CO.,
MANCHESTER.

FOR ANGLERS, ARTISTS, &c.,

PORTER'S VEIL SPECTACLES

(REGISTERED).
An entire Protection for the Face and Neck against Midges and all other Flies, Dust, Sun Glare, &c., &c. Price 21s. Sent free on receipt of Cheque or P.O. Order.

CARY,
Optician by Appointment to the Admiralty and Royal Geographical Society, &c., &c.
181, STRAND, LONDON.
(Established over 100 years).

LONDON and COUNTY ADVANCE and DISCOUNT COMPANY (Limited).

Cash advances from £10 to £500, without preliminary fees or deduction for interest, for short or long periods, repayable by easy instalments, at moderate rates, upon personal security, life policies, furniture without removal, deeds, shares, bonds, &c. Bills discounted. Forms gratis. Offices, 35, Farringdon-street, E.C. JOHN STONE, Secretary.

LAKES OF KILLARNEY.

SALMON AND TROUT FISHING.

THE MUCKROSS HOTEL,

JOHN ROSS, PROPRIETOR.
Anglers, Visitors and Tourists are respectfully informed that this Hotel is situated at the foot of Mangerton, and between the Upper and Lower Lakes, and a few minutes' walk from Muckross Abbey, Torc Waterfall, &c. It stands in the very centre of the Lake and Mountain Scenery (as a glance at the map of the Lakes will show), thus securing a decided advantage over the other Hotels, which are situated far away from most places of interest. It is the most economical and comfortable, and combines the best situation with the most Moderate Tariff of any first-class Hotel on the Lakes.

Please note Proprietor's Name, and see that the Bus you enter bears the inscription—

THE MUCKROSS HOTEL,
JOHN ROSS, Proprietor.
There is excellent Salmon and Trout Fishing on the Lakes, which are free.

GLASGOW AND THE HIGHLANDS.

ROYAL ROUTE.

Via Crinan and Caledonian Canals.

Special Cabin Tickets for Tourists issued during the season—For one week, £3; or two weeks, £5; giving the privilege of the run of all the Steamers to any part of the Highlands where the Steamers may call at during the specified time.

By Royal Mail Steamers,

"COLUMBA," OR THE "IONA,"

From Bridge Wharf Daily, at 7 a.m., and from Greenock at 9 a.m.

Conveying Passengers for Oban, Staffa, Iona, North and West Highlands.

Official Guide Book, 2d.; Illustrated Copies, 6d. and 1s. Bill, with Map and Tourist Fares, free, at Messrs. Chatto and Windus, Publishers, 214, Piccadilly, London; or by post from the Owner, DAVID MACBRAYNE, 119, Hope Street, Glasgow.

LIFEBOAT SERVICES.—During the Storms of the past seventeen months the NATIONAL LIFEBOAT INSTITUTION has contributed, by its Two hundred and seventy Lifeboats and other means, to the saving of Eleven hundred and fifty-five lives from various shipwrecks, and Forty vessels from destruction. CONTRIBUTIONS are thankfully received by Messrs. Coutts and Co.; by all the other Bankers; and by the Secretary, Richard Lewis, Esq., 14, John Street, Adelphi.

N O T I C E.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., must be addressed to the Editor of THE FISHING GAZETTE, No. 12, *Fetter Lane, London, E.C.* and should reach the office not later than Tuesday morning.

Contributions are solicited, but the Editor will not undertake to return rejected MSS., unless accompanied with a stamped addressed envelope.

Correspondents are requested to write on one side of the paper only and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to no notice will be taken of such communications.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls, and of the following, amongst other Fishing Tackle Dealers in London and the Provinces:—

Messrs. Alfred and Son, Moorgate-street.
Messrs. Price and Co., 8, Seymour-street, Euston-square, N.W.
Messrs. Williams and Co., Great Queen-street.

SATURDAY, JULY 16, 1881

AN INTERNATIONAL FISHERIES EXHIBITION.

MR. BIRKBECK, M.P., at the Thames Angling Preservation Society dinner last week, stated that a movement was on foot for the formation of an International Fisheries Exhibition to be held in London, and he suggested that the Thames Angling Preservation Society should take the matter in hand, and carry it

out. We quite agree with Mr. Birkbeck that such an exhibition would undoubtedly prove a grand success, but we cannot help thinking that it would be somewhat out of the province of the Thames Angling Preservation Society to undertake its establishment. No society can boast of more efficient and hard-working officers than the one in question, but have they not got their hands more than full at present? We are quite certain they will be only too glad to co-operate in every way in their power towards the success of the undertaking, and their assistance will be of immense value.

The work of getting up an International Exhibition is simply enormous, it involves correspondence and arrangements with every nation of the world, from America in the West to Japan in the East, from Greenland in the North, to Tasmania in the South. A wealthy, powerful, influential, and directly and generally interested body should take the matter in hand. In the Worshipful Fishmongers' Company we have a body which possesses all these requirements, and we cannot but hope that they would receive the proposal with the most friendly consideration; in fact, the splendid support they so generously and willingly accorded the Norwich National Fisheries Exhibition attests both their interest in the subject and the value they attach to it.

We notice that our Scotch friends are proposing to make their forthcoming fisheries exhibition an international one; this proposal we sincerely and respectfully trust they will now abandon. If an international exhibition is to be held in Great Britain we feel certain every Briton will freely admit that the neighbourhood of the metropolis is unquestionably the place for it. The committee of the Norwich Exhibition had applications from all parts of the world for space, and they might easily have enlarged the scope of their exhibition, and made it an international one, but they wisely and unselfishly decided that an International Fisheries Exhibition held in the British Empire would be out of place anywhere but in the Metropolitan area. If our Scotch friends persist in their proposal and make their exhibition an international one, they will not do themselves much good, and they will certainly do the fishing interests much harm. We do not think they will persist now that they know the idea of a grand International Exhibition is seriously entertained by England, and particularly by all those Englishmen who set on foot and carried out so successfully the recent Norwich exhibition. Apart from any question as to which would be the better place, Edinburgh or London, we venture to suggest to the committee of the Scotch exhibition that they really cannot have an international exhibition in the true sense of the word, that is if they adhere to their present date for its opening—they will have no time to get exhibits from countries on the other side of the world; and if, in the meantime, it is announced that an International Exhibition will be held in England during 1883, what foreign exhibitor will not say to himself. Well, I will wait for that; my goods will then be seen by hundreds of thousands of people instead of by tens of thousands!

The ambassadors of all the countries of the world which are likely to exhibit are stationed in London. Will they, knowing that an International Exhibition is to be held in or near London in 1883, advise their Governments to go to the trouble and expense of sending to an exhibition to be held in Edinburgh in 1882?

THE PRINCE OF WALES AND THE THAMES ANGLING PRESERVATION SOCIETY.

IN our report of the Thames Angling Preservation Society last week, we made a mistake in announcing that H.R.H. the Prince of Wales would preside at the next annual dinner of the society. This was, at any rate, a premature announcement, as it was necessary that H.R.H. should first become a patron of the society; now that is an accomplished fact, and we sincerely trust the Prince will be able to preside at the dinner next year.

THE NORWICH NATIONAL FISHERIES EXHIBITION. MEDAL.

THE engravings which we publish this week will interest all the firms and individuals to whom medals were awarded at the recent exhibition at Norwich. They are engraved by Messrs. Hare and Co., and represent the smallest and the largest of twelve different sizes in which they have engraved them. They have been made for the purpose of selling copper casts, or electros, as they are technically termed, to medal holders who may desire to have them for printing purposes, in advertisements, catalogues, on note paper headings, trade cards, &c., &c. The electros are all taken from extremely fine wood engravings, and will print equally as well as the wood blocks themselves. We advise all our friends who obtained medals to write to Messrs.

Hare and Co., 31, Essex Street, Strand, for their price list of electros of the medals of this and other exhibitions. Their prices

are extremely moderate; for instance, the two small ones which we print from only cost 1s. each, and the two large ones, 2s. 6d. each.

REMINISCENCES OF DOVEDALE.

In the heart's album there are treasured faces,
Our household darlings, friends which are our own,
And with them favourite haunts and cherished places,
So dear, they seem but made for us alone.

THOMAS GOLD APPLETON.—"Places."

"I LAM* on the Dove." What happy memories—how long lain dormant—do those words awaken in my mind! Though it is from eighteen to three-and-twenty years ago, it seems to me but yesterday, and the day before, and the day before that, when my steps were wandering by that "delicate, clear river," in thine enchanting glen, Dovedale! I can, indeed, speak to the truth of the concluding remark of the writer of that interesting article, that the angler who pays the Izaak Walton and Dovedale a visit "will not regret it, but will in after-days treasure up the remembrance of it, as being one of the pleasantest excursions in their angling experience." That the angler must, however, be a *senior-angler*, in order to insure him much sport in such a naturally difficult water, and one so over-fished, has not Mr. Walbran almost, if not altogether, himself premised?

May I, Mr. Editor, give your readers my recollections of the Dale and the hotel? From an angling point of view my experiences of them are, perhaps, a trifle above the average. Not, however, by reason of any great achievements of my own; for I make no pretensions to having ever taken highest honours with the trout-rod, fly or minnow; while at the period of which I propose to speak, so far from being a master-workman, I was not even a journeyman; in fact, during the earlier portion of that period I was one of the rawest of 'prentice-hands at the gentle art.

My first acquaintance with the Izaak Walton and Dovedale was

* Not "Flam," Mr. Printer. But yet you have a *particeps criminis* in high quarters. For, oddly enough, in *Ephemeris*'s edition of Walton's and Cotton's Complete Angler there appears (p. 250) a woodcut of "Islam Hall." One would almost expect from that to see the *Crescent* flying from its flag-tower, and to hear a whisper of a little mosque within the mansion, for use in the devotions of the *Islamites*.

in '58. I was then resident in the neighbourhood. So one sunny, balmy day in the early spring—the lark singing aloft in the blue sky—I set off to see the beauties of which I had heard so much. Rail and steam sped me merrily on to "romantic Ashbourne." Thence I walked along the high road by the hill-side, the five miles to the Izaak Walton, then, as now, if not a Royal hotel, at least a *Prince-ly* one, I was going to say; but I find I must not tax my memory quite so far as to assert that, though I cannot help inclining to that impression. Arrived there safely, and refreshed duly, I strolled up and down the Dale leisurely, admired it freely, angled in the Dove (in fancy), most successfully, chatted with a native neighbourly, dined comfortably, rested moderately, and then, smoking meditatively, sauntered lingeringly along the river, adown the valley, back to Ashbourne, und so *weiter*—as our German friends phrase it—and so on, home again, after—

"One of those heavenly days that cannot die."

My next visit was paid at the end of May of the same year. On that occasion, which was an angling excursion, I was accompanied by my piscatorial master X.—

"A better angler ne'er brushed dew from lawn."

We walked over from Ashbourne, reaching our destination towards dusk. Next morning's dawn (about 4 o'clock) saw us by the river-side. Our exemplars were not the lilies, who, we are told, "toil not, neither do they spin." A complete novice or tyro, I kept toiling and spinning away in the most patient and persistent, but in anything but the most approved, professional fashion. I was spinning in the *pitching*—not the casting—style, with (for want of a better) a ten-foot hop-pole of a pike-rod, and with a line of about a foot less in length. The tackle and the bait were right enough, for they were X's. My sport was altogether of a very tantalising nature, since it consisted in seeing the trout come pretty freely after my minnow, more than once two at a time. But they truned tail as soon they caught sight of me; and that they did catch sight of me, under the circumstances aforesaid, in good time to turn tail was the rule which had not any exception. My companion, however, who worked—with ease, single-handedly—a rather powerful fifteen-foot rod, by the time we came in to breakfast showed that he had not laid his talent up in a napkin, nor lost it in the river. The contents of his basket drew exclamations of no slight surprise from our host (was it really Mr. Prince?) who confessed that, from a word or two which he had heard us let fall over night, he had rather doubted whether we were not a shade too sanguine, making scarcely an adequate allowance for the very highly-trained intelligence of the denizens of the Dove. As Mr. Walbran puts it, "They know a hawk from a hernshaw."

Before our breakfast was over we were joined by two gentlemen who had been whipping the water for a week or more with very scaly, or rather, with very scanty, success. They had seen our fish, and were intensely curious to know how they had been caught. "Minnows!" "Spinning!" "Might they come for a little while and see us fish?" "Oh, certainly!" So, breakfast over, and a fresh spinning-flight or two made up by X. (those Dovedale waters are a little wearing), we, and our new acquaintances with us, were off again to ye bankes and braes o' bonnie Dove. And here I had my best luck, and my worst. In that very pool out of which Mr. Walbran had the "beautiful golden trout just under ½ lb.," something very like a two-pounder came from beneath those same submerged thorns, or their predecessors, and seized my minnow in the open, boldly in full sight of us all. "There's no fool like the old fool," they say. But in angling it is sometimes rather the other way, I fancy. In my youthful impetuosity I struck too hard—with so very stiff a rod far too hard—and the chain went at its weakest link, which, strange to say, was the swivel. That was the first and the last swivel which ever betrayed my trust, although I have always used the very finest of swivels in spinning for ordinary brook and river trout, so fine, indeed, that I suppose they cost quite, and more than quite, their weight in gold. For a sovereign, I should say, would weigh down many more than a hundred of them. At the hooking of that fish those gentlemen became more eager and excited than ever. They would send off at once to Ashbourne and get minnows and minnow-tackle. The outcome of their enthusiasm we left too soon to learn. But even had they obtained the proper baits and tackle, they would have been taught in due course—by the hard logic of facts—that there is no royal road to minnow-spinning. How many years of the closest and most patient practice are needed in order to make a master-minnow-spinner! Nay, after all, *nascitur, non fit*. He is born, *not made*. The gift is Nature's, though its perfection be a work of art.

Later in the day, as X was angling up the Dale, and I was admiring an extra-handsome specimen of *salmo fario*, which he, the serpent, or he with the wisdom of the serpent had just beguiled, one wherein "the elements"—of gold, and vermillion,

and crimson, and pearl—"were kindlier mixed" than is common, even in the case of those gloriously-painted Dovedale-trout, two elderly ladies, whom I had for some time past noticed following us, and watching us intently, could keep back their feminine curiosity no longer. They came up to us, and said: "Pardon us, gentlemen, we are frequently in the Dale, and are constantly seeing people fishing; but they never seem to catch any fish. Yet you appear to have no difficulty. *How is that?*" I did my best to demonstrate to the old ladies the *how* and the *why* of that by a little syllogism (in *Baroko*):

All expert minnow-spinners are able to catch trout.

Some people were not able to catch trout.

Therefore some people were not expert minnow-spinners.

Ere the evening X. had again given most practical and substantial proofs of his expertness as a minnow-spinner. My proof that day in respect of expert minnow-spinning was, I am afraid, principally limited to the theoretical or logical proof which I made of X.'s prowess to the old ladies. I wonder whether they were ancient spinsters?

Next morning, if I recollect rightly, we did not fish, but after breakfast walked back to Ashbourne, following, as far as the village or hamlet of Mappleton,

"The valley's course, the river's winding."

The stream here and there through those reaches is overhung with very fine chestnut trees, which were then out in full blossom—

"Alas! Our memories may retrace

Each circumstance of time and place,

Season and scene come back again,

And outward things unchanged remain;

The rest we cannot reinstate,

Ourselves we cannot re-create,

Nor set our souls to the same key

Of the remembered harmony."*

* * * * *

One other day—another angling day, and with the same peerless angling companion—I have had in the Dale. That was early in July, '63; and I had, by then, I hope, somewhat improved in my practice. We spun on that occasion also. The weather, however, was so extremely hot, and calm, and bright, that—with a clear, low water—our fishing was confined to an hour or two on the evening of our arrival, and to the early hours—from three to nine—of the following morning. The hotel being full, and overfull, and our turning-in being consequently on couch and floor, our turning-out was not quite so arduous an undertaking as it might, possibly, otherwise have been—for one of us at least. From 12 to 2.30 were, I well remember, the limits of our rest *that night*. Our total take in the evening and the morning (the bulk, of course, being X.'s) was some 14 or 15 lb. of fish, including four grayling which would weigh together nearly 4 lb., one of them being a good pound and a half fish. They were all taken spinning the *natural* minnow. There are, I know, those, and not a few of them, who doubt gravely a grayling taking a minnow, except by the merest chance, the veriest fluke, the rarest freak of nature. But "the proof of the pudding is in the eating," though I don't mean to deny that the proof of the eating is in the appetite and the palate. Of course, the proof—in the sense of the cause—of catching grayling by spinning the minnow, lies in the kind of minnow spun, coupled with the style of the spinning. Let those sceptics (if master-minnow-spinners they be) just try spinning—slowly, very slowly—the smallest of minnows, on the finest of hooks and tackle, through a good grayling-stream, when the water is low and clear, and the fish are feeding, and they will very soon prove to themselves, and in the most practical and agreeable manner—by their own success—the fallacy of that opinion of theirs. A large minnow, mounted on coarse hooks and gut, and drawn rapidly through the water, while it is very far indeed from being the best form of spinning for trout, would hardly kill a single grayling in a score of years. For the grayling's mouth is very small. And he *must* be fished for with the finest of tackle. And he will never—or hardly ever—follow a bait *horizontally*. There are my "reasons, as thick as blackberries," as Falstaff has it, for my opinion. Twice I have taken large roach spinning a small minnow on fine tackle; one was a 1½ lb. fish out of the weir by Godfrey's house at West Drayton. G., coming out, and seeing it lying on the garden-lawn, held it up "pour encourager les autres" angling about. "There's plenty more," said he, "quite as good as that, where that came from Had X. on that day in Dovedale of which I am writing fished with as small minnows, and as far off, and as wonderfully fine as he now fishes, he would have taken a good few more fish, both

trout and grayling. Old heads, though, are *never* to be found on young shoulders. Only

"In years which bring the philosophic mind"

is the art of any artist ever consummated.

I recollect that morning our falling in with the old keeper just below the Dale, and on his seeing my companion's basket, his saying: "Gents comes here and says there's no fish; but there's a plenty of 'em for them as knows how to catch 'em. Wouldn't our squire like to see that basket!" What stock of fish there are now in the Dovedale waters I know not, but I imagine that those highly-educated parties still contrive to preserve themselves pretty nearly as well as the old keeper or his successor can do it for them. Moreover, is not Dovedale in the midst of closely-preserved waters, always replenishing it from above and below?

After breakfast we tried again for an hour or so, quite counter to the inclination of X., who knew too well that nothing more could be done before the cool and shade of evening. Not only were the bright, hot, airless weather, and the low, still, glassy water both very greatly against the feeding of the fish, but there was also, involved in those circumstances, a cause of want of sport of no less force, the absolute impossibility of keeping out of the fishes' sight. Spinning in the (now long since by X. abandoned) old-fashioned method of pitching, on a sultry day at midsummer, in an open stream like the Dove in the Dale, where there are no bushes, and stumps and roots—no holts to hide the fish and screen the angler—and when the water is as clear as gin, and as low as love after its labour lost—a minnow-spinner, how good soever he be—the best in the world, in the old fashion—has not a ghost of a chance. He is, *and must be* foiled. Foiled once again, in like manner, years afterwards—on the Monnow at Pontrilas—the effect on the genius of X.—is not Necessity the mother of Invention?—was his discovery—then and there—of a new mode of minnow-spinning, which he afterwards elaborated and perfected, with the greatest of pains until, if I mistake not, it is destined to become the minnow-spinning of the future. That may be defined as "Fly-fishing with the Spinning-Minnow." Forgive me, reader, if I seem to wax enthusiastic, when I say that it is an invention not unworthy of an age of science. For it blends the loveliness of fly-fishing with the deadliness of minnow-spinning. It does more, far more. It more than doubles, it multiplies for ordinary trout-fishing manifold the deadliness of either of the old forms of spinning—the pitching method and the casting method. It is flower and fruit in one. With the same rod and line, and almost in the same style—the whipping out of the bait lying at the base of all—the angler can fish fly or minnow alternately, at his own sweet will. And he can, when he has mastered the art, fish as fine and as far off with the minnow as with the fly; he can, in fact, fish the minnow much finer than most folks fish the fly. For he fishes it with a pliant fly-rod. And most folks fish the fly far too coarsely. But I am digressing.

Finding the game was up, I gave in at last to my companion, who, lying languidly at full-length, face downwards, "under the hawthorn in the dale," kept drowsily urging me to give it up, and let us go off home, before it was too late, and shoot rabbits round the woods of some very good friends of ours, and take them the spoils of our bows and spears, or—to call a spade a spade—of our rods and guns. So away we went about noon, getting home in time to kill a couple or two of the "feeble folk" in the evening. On reaching our friends' house we found them in much distress. For

"In that mansion used to be
Free-hearted Hospitality."

And numerous guests had come in unexpectedly from various quarters; but (to deepen to the tragic the tone of that lamentation of Mr. Walbran's on losing his 1½ lb. trout) *horribile dictu!* there was nothing to give them for their suppers! The only butcher's shop in the nearest little town had just been drawn blank! We got our hospitable friends out of their trouble famously. For what hostess, even in Derbyshire or Staffordshire, often gets the chance of setting before her guests—above all, in such an emergency—a grand dish of Dovedale trout and grayling? And what guest dropping in, in a friendly way, would ever expect such a thing? The surprise and preliminary pleasure evinced by our friends' guests or being shown (under those circumstances) that dish of fish, ere it was entrusted to the cook for their ultimate benefit, may be faintly imagined. Need I say that one toast that night was not forgotten: "Dovedale, and better luck still there the next time!"

And now—a word to the wise. Don't go to the Dale at Easter, or Whitsun, or any other holiday tide! And when you do go there, make the most of your mornings from daybreak to breakfast time, more especially if you spin the minnow. And have every "wrinkle" in your mind's-eye, and every other (or more

* LONGFELLOW, "The Golden Legend."

manual) mystery of the gentle art in your wrist and at your fingers' ends when you are endeavouring to do those canny ones of Dovedale, whether with fly, or minnow, or grasshopper, or what not.

Of the scenery I enter into no details. For, though it is "beautiful exceedingly," I am only just jotting down a few simple angling-reminiscences of old times, with an occasional, fraternal hint to a brother-angler. I will merely say of the scenery: he that hath eyes to see let him see!

But I may venture to remind the reader of "The Complete Angler" that not far from the head of the Dale stood (and I suppose still stands) "in a kind of peninsula, too, with a delicate, clear river about it," that fishing-house of Cotton's, with all its associations of Izaak Walton, and with that immortal inscription over the door—PISCATORIBUS SACRUM. "Why then," said Viator, when he had read it, "I perceive I have some title here, for I am one of them, though one of the worst."

I have but to add that I look forward to the coming of a day when I shall make another pilgrimage to Ilam, on the Dove, with, for angling companion, none other than the one of old, whose right hand has not forgot—and may it never forget! its marvellous cunning; who has, with ever more delicate and deadly angling, filled many a good basket with the best of trout and grayling out of the limpid waters of the Dale, long since those happy days when he and I were there together. A.R.I.E.L.

London, April 19th, 1881.

IN DOVEDALE.

Izaak! still thou anglest near me
By the green banks of thy Dove,
Still thy gentle ghost may hear me
Breathe my reverence and love.

Thou, whose ears drank in the warble
Of all streams in crystal play—
Will thy bones beneath cold marble
Lie in peace so far away?*

O, my kindly old piscator,
See'st thou not these waters clear?
Time, thou changeling, Time, thou traitor,
Give him back—his home was here!

Lo! at yonder bend he standeth,
Where round rocks the wave bells out,
See! with skilful touch he landeth
Now a grayling—now a trout.

Stream of beauty! winding, singing
Through the world's divinest dale,
Ever to thy music bringing
That old spirit calm and pale!

Learned in all honest learning,
Trustful, truthful, pure of heart,
Peaceful, blameless honour earning
By the magic of his art.

In life's fitful turmoil often
Have I longed to be like him,
And have felt my nature soften
Musing on that phantom dim—

Now a trout—and now a grayling—
Luring from the shaded pool,
God's white clouds high o'er him sailing,
All around the beautiful!

HENRY GLASSFORD BELL.

ARISTOCRATIC EEL-FISHING.

A REMINISCENCE.

IT is now, alas! how many July's ago since I wandered through the counties of Devon and Somerset, following the windings of the lovely river Exe, one of the most considerable rivers in that part of the country. Like all the streams of that rocky district, it flows, in a transparent and joyous current, through wooded and romantic vales. For the most part its course is south and in a run of nearly sixty miles, its volume is refreshed and increased by very many tributaries. It took me in all nearly seven weeks to explore its beauties from its rise on Exmoor to the Bristol Channel, which may be considered good travelling when detours had to be made at each of the tributaries to gain a bridge, wild hills to surmount, and in several places dense underwood at the immediate banks to push through. But the verdant meadows which intervened, soft to the foot and gladdening to the eye, amply made up for any temporary opposition to one's progress.

* He (our Izaak) is buried in Winchester Cathedral.

Nothing can be more beautiful than where the river Barle unites with the Exe not far from Brushford.

After passing Tiverton, where I stayed the Sunday, the moon being at its full, I determined to make what progress I could by its light, for I was due at Exeter on a given day fast approaching. It was not far from Bamford Speke—where the river Culumb, and, a little further down, the Creedy, run in—that I heard voices distinctly proceeding from the water. At first I thought it proceeded from poachers, and I determined from a hiding place to give them a startle. But upon listening the conversation, or tone, was not that of vulgar men fearing no disturbance, but soft and low, and albeit refined; the faculty of water conveying sound giving me every opportunity for judgment. Approaching closer and closer to the spot from which the sounds proceeded, I saw that there were five boats or punts moored in a quiet part of the stream each with its occupant. Every now and then I heard a knock as if an oar had struck against the rowlocks, but each boat was motionless. What could these men be about at that time of night? There was something weird and ghostlike about the whole picture. My curiosity was soon gratified when, from under the shadow of a tree, I watched their every action. The knock was often repeated from one or other of the boats, and I began to suspect some mystic ceremony was proceeding when I heard one exclaim, "I have just lost one of full 4 lb." So they were fishing for something; but what? Bream? no, they had no rods, but somewhat short staves like mop handles. Eels? yes, they are bobbing for eels. And what a more rational pursuit than, after giving the sweltering blankets the good bye, to pass the whole night here on the surface of the cool waters, the attention sufficiently occupied to keep the eyes open, and the mind awake? Ashamed of being any longer an eavesdropper, I made my presence known to them; and my name being asked and given, I was invited by one of the party to come on board his punt, which, having accepted, he brought it across the river for me to get into, and I became as earnest in the interest of sport as any of the others, although I was not fitted with tackle; nor, had I desired it, could I have had it, as I afterwards discovered these three gentlemen were fishing a match, this competition being among one amongst several eccentric sporting freaks which they often astonished their neighbours. A report of the match—which had been kept perfectly secret until it was decided, and which it was stated was for £100, subscribed in equal parts by each of the persons engaged—which appeared in the local papers, and as a matter of course was concluded by a dinner, revealed the fact that the Hon. Viscount H. D., two baronets, the clergyman of a neighbouring parish, and the agent to the first-named nobleman, composed the little band of bobbers.

I shall not inflict here upon my readers a description of the mode of bobbin for eels; that is too well known to justify space. But there was one provision for the security of the fish, and diminishing their chances of escape which, I think, could be used with great advantage by those who seek the rivers at night for such purpose: hooked to the outside of the gunnel of the punt a pail of the form of a churn was sunk, so as its top rose an inch or so above the surface of the water, when the bobbers felt a bite, and the teeth of the eel was supposed to have got well entangled with the worsted which strung the lobworms together, the bait was raised with great care and caution, and the eel brought over the pail when the tap or knock I have before alluded to, on its side, shook the victim into its imprisonment, from which there was no escape by reason of the form of the utensil.

To the best of my recollection the agent obtained the prize; but what even then surprised me not a little was the ravenous manner in which the eels bit, as they are not generally supposed to rove or feed much during moonlight. The shade of the hanging wood and hills under which the boats were moored may have had something to do with this result. I ought to mention that the four competitors ceased their operations while the kind-hearted clergyman fetched me on board his boat.

CREEL.

THE POACHERS ARE AT WORK.

WE were talking to a club angler who was fishing the Lea at Ponder's End last Saturday week, and we were talking to another club angler fishing at Tottenham on the Lea last Sunday, and we were very sorry indeed to hear that the poachers have been at work, and they had been seen with nets reaching across the river. Mr. Caborn, the secretary of the Sir Hugh Myddleton Angling Society in his report in our columns this week, makes a similar charge against poachers on the Wey, and from what we hear, we feel sure this prolific stream is subject to very frequent netting. What is the use of preserving the fish during the fence months, if they are to be taken wholesale in this way as soon as the season opens?

MY FIRST SAUMON.

A' ye wha try the gentle art—
That pastime dearest to the heart—
To you the news I saw impart,
How I felt stunn'd
Catchin' a saumon naething short
O' twenty pund.

Walton, thy name tho' world wide,
And fishing was thy dearest pride,
I question while the art ye tried
If e'er ye took

A saumon such as I describe
Wi' line an' hook.

To Birnam, on the river Tay,
In early spring I bent my way,
Resolved at least to hae a day;
Syne got a boat,
Then on the waves, swell'd with snaw broo,
We set afloat.

We tried to please the saumon brood,
And tempt them wi' a' sorts o' food;
But when the phantom crossed his hood
He lap, I ween,
And being in a taking mood,
I nailed him clean.

Thus, sittin' in the boat fu' snug,
The reel it gaed a fearfu' rug;
To feel a twenty-pounder tug,
I bawled, "He's on it!"
And just to prove 'twas nae humbug,
Up went my bonnet.

A scene ensued—tho' cold, I trow,
The sweat came tricklin' frae my brow.
The beast he made a fearfu' row,
And off did spin;
It took a hale half hour to cove
An' haul him in.

After a brisk but deadly fire,
It must a leader's breast inspire
To see the vanquished foe retire,
Their courage fail,
And watch a captive king inspire,
In silver'd mail.

I felt a sort of hero now.
The fish lay gaspin' in the bow;
So oor wee boat did landward row.
And then, for fun,
Fired off twa pistols just to show
Victory was won.

We charged again; but, to our woe,
The clouds discharged a shower of snow.
We lingr'd on twa hours or so,
Then wi' our load,
Well pleased, we walked the dead march slow
Along the road.

Whae'er has gout or killin' pain,
Wha's work produces stress o' brain,
An antidote ye may obtain
That's worth possessin',
If ye some way tad tak the train
An' try the fishin'.

Sweet Birnam seek, where on its way
So proudly rolls the noble Tay,
Where a' the fish worth sport and play
In shoals abound there,
And ye, like me, may catch some day,
A twenty-pounder.

GEO. DOBIE.

SOME SCOTCH ANGLING CLUBS.

Name of Association or Club, with Secretary's Name.

The Aberfeldy Club—William Cowper, jun., Aberfeldy.
The Aberfoyle Angling Club.
The Alyth Angling Club.
Avon Conservancy Association—W. Horn Henderson, Linlithgow.
The Bonnybridge Angling Club—Alexander Mitchell, Greenbank Cottage, Bonnybridge.
The Brechin Angling Club—R. Lowdon, 2, Trinity Road, Brechin.
The Buckland Angling Club—William Cross, 41, York Street, Glasgow.
Caddonfoot Fishings—H. W. Cornillon, 130, George Street, Edinburgh.
Callander Angling Club—D. Melrose, Callander.
The Canmore (Forfar) Angling Club.
The Coatbridge Angling Club.
The Cockburn Angling Association—George E. Y. Muir, 1, W. Crosscausway, Edinburgh.
The Coldstream Angling Association—John Tait, High Street, Coldstream.
The Denny Angling Club—Robert Shearer, Dunipace, Denny.
The Dundee Angling Club—D. Ireland, 24, Commercial Street, Dundee.
The Dundee Western Angling Club—Gow, Dundee.
Dundee Walton Club—W. Mudie, 3, Athole Terrace, Maryfield, Dundee.
The Dunfermline Angling Club—G. T. B. Barron, Dunfermline.
The Doune Angling Club—R. Shard, Doune.
East Stirling Hire Association of Anglers—J. A. Miller, 144, High Street, Falkirk.
The Echaig Angling Club—John Clark, 17, Royal Exchange Square, Glasgow.
The Edinburgh Amateur Angling Club—J. Gordon Mason, 34, N. Castle Street, Edinburgh.
The Edinburgh Angling Club—William Menzies, 18, Picardy Place, Edinburgh.
Ellem Fishing Club, Dunse—George Low, The Laws, Chirnside, Berwickshire.
The Esk and Liddle Fisheries Association—R. M'George, Langholm.
The Falkirk Angling Club—J. A. Millar, 144, High Street, Falkirk.
The Forfar Angling Club.
Forfar, Dons Angling Club.
Forth Angling Club.
The Fountain Angling Club.
Gala Angling Club—Robert Hall, 131, High Street, Galashiels, Glasgow Dodgers.
The Haggs Angling Club—George Mirk, Haggs, by Denny.
Kinross Angling Club—Thomas Steedman, Kinross.
Kirkcaldy Angling Club—Johnston, Kirkcaldy.
Lanark Amateurs Angling Club—John Dunlop, 62 High Street, Lanark.
Lanarkshire United Anglers' Protective Association.
Lochleven Angling Association (Limited)—George Bogie, Kinross.
Midlothian Angling Club—Joseph A. Cowan, 33, Frederick Street, Edinburgh.
Motherwell (Star) Angling Club—James Brown, Motherwell.
Perth Angling Club—Fenton, Perth.
The Penicuik Angling Club.
The Perthshire Fishing Club—Robert Reay, City Chambers, Perth.
Sauchie and Whins of Milton Angling Club—William Reid, Whins of Milton, by Stirling.
The Skinflatts Angling Club—William Russell, Skinflatts, Bothkennar, Falkirk.
St. Ronan's Angling Club—Cossar, Innerleithen.
The St. Mungo Club.
Stirling Angling Club—J. D. Mathie, Stirling.
The Strathmore (Forfar) Angling Club.
Trout Preservation Society—D. B. M'Gregor, 51, West Regent Street, Glasgow.
The Walton Angling Club—James Grant, 26, Royal Crescent, Edinburgh.
Waverley Angling Club—John M'Dougall, 3, Rutland Place, Edinburgh.
West of Scotland Angling Club—D. B. M'Gregor, 51, West Regent Street, Glasgow.
The Western Angling Club—John Wilson, 59, St. Vincent Street, Glasgow.
Upper Teviotdale Fisheries Association—Walter Haddon, Hawick.

NOTE.—As the Council desire to make the foregoing a complete list, they invite the members of the Association and others, into whose hands the report may come, to forward to the Secretary the names of Associations and Clubs which may not have been included.

LOB WORMS.—In consequence of the difficulty experienced by London anglers in procuring lob-worms, Mr. Gillett, fishing tackle maker, of No. 40, Fetter Lane, has arranged to keep a constant supply; also of other worms and gentles, &c.—ADVT.

GEORGE JAMES EATON, of Starkholmes Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[ADVT.]

GREGORY'S SPINNING BAITS.—"The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived. Address, James Gregory, Vyse-street, Birmingham.—[ADVT.]

RIVER REPORTS.

MID-THAMES.

"Perpendicular rays of the sun
Illumined the depths of the sea,
The fishes beginning to sweat,
Cried dam-me how hot we shall be."

—BYRON.

Perpendicular rays of the sun are just now illumining the depths of the Thames, and the fishes are doubtless indulging in a game of naughty adjectives at thus being prematurely got into hot water, for feed they will not, except perhaps a wee bit in the early morn or dewy eve. Not even gudgeon will wag a fin or be tempted with ever so wriggly a tail of a worm. Perch are very wary, barbel shy, and jack more artful in their weedy haunts than their would-be masters. The only fish that is affording sport just now is the chub, which early and late are freely taking the white and black palmer, white moth, and other barbed delicacies. The Windsor and Eton Angling Association has recently placed some eighty brace of fine trout in their water. This is a most sensible thing to do at this season of the year, for it is useless to attempt to stock a particular water during the winter flood times.

THURSDAY EVENING.—River low and bright and few fish being had. This may be accounted for perhaps by the absence of anglers. Weather blazing hot and dry, and very much ditto—MARLOW BUZZ.

Thames (Goring).

Water in good condition for round fishing. Prospects, good. Some good perch have been taken; best day four dozen, two perch going 3 lb., one jack 3 lb. Gudgeon are biting well with worms. To-day, Thursday, when gudgeon-fishing, a large snake, 3 feet long, swam across against the boat, but could not get it.—JOHN RUSH.

Thames (Richmond).

This has been a very enjoyable week for the lovers of the rod, the weather being delightfully fine, and the fish have been feeding very well. It is not often you have the good fortune to get weather and water to perfection as we had it this week. The fish fell off feeding towards the end of last week, but have begun again in earnest. In two days' fishing yesterday with Mr. Anderson, and to-day, Thursday, with Mr. Macfarlane, I caught a half hundred weight of splendid dace. Most of the fishermen here have been out every day, and, I think, every one has had a fair day's sport, in the fore part of the week the pants arranged between five and seven day dace a day. There have been a few barbel taken this week also, but nothing to speak much about. I hooked a fine fellow this evening, and after half-an-hour fair play he broke away from the hook. I think he must have been hooked foul. Any one wanting a day's fishing, now is the time to have a day while they are on. While fishing at the end of Glover's Island to-day there were some boys bathing. One of the little boys got in, and had it not been for me would have been drowned, as we had to rub him some minutes before he came round. He is all right this evening, I am pleased to say, and I am not much the worse for my ducking.—JOHN BUSHNELL, fisherman.

Thames (Windsor).

The bailiffs, George and James Gray, in the employ of the Windsor and Eton Angling Preservation Society, this morning turned in 130 fine healthy trout up to 1½ lb., all of them being of a size, save where jack and perch abound. The most suitable places were selected to receive them, and there is no doubt but that they will do well in their new waters, where there is abundance of feed, and it is to be hoped that when any are taken they will be returned if under 2 lb., as they are doubtless safe till next April. Sport here has been as good as could be expected considering the weather, and chub appear to be most tried, for some good fish being had with fly, notably the Windsor bee, tipped with a gentle, but it is a pity so many small fish are retained. Everyone knows what a greedy feeder the chub is, especially the small ones lying under the banks, with a fly rod, fine cast, and gentles, some years back I used to catch them for live bait instead of dace, thinking nothing of four and five dozen before breakfast, but now that the winter chub fishing is getting poor, this certainly ought to be stopped. I hear of large bags, but know full well they are not large fish. Some good perch have been had in the Windsor weir stream with tail end of lob worm, one gentleman in an evening taking a pretty dish of 9, from ½ lb. to 1½ lb. Barbel decline to have much to do with this bait, and from experience I have found that greaves, if good, are far better this time of year; of course baiting the swim previously. Roach are still small and shy, and require very fine tackle, with patience. The bait I have generally found answer well during summer months has been arrowroot biscuit crushed, moistened and well worked up into a paste, keeping as clean as possible. Use a small hook, No. 11 or 12, short shank Carlisle, on the finest gut, and chew a biscuit, throwing in pieces occasionally. I hear of no gudgeon being had or even tried, and as the season for them is very close they are worth a trial. A good bag might be made, with the chance of a perch or barbel; of course the old twenty-six dozen to a punt cannot reasonably be expected yet. Jack are still being tried for, but are very poor when caught. I have seen some this week that would look better in a few weeks time and afford better sport.—B. R. BAMBRIDGE.

Thames (Shepperton and Weybridge).

Water is still low, but in very good condition for fishing. Prospects of fishing for the next few days are very good, the fish are much better on the feet. H. Purdue, two days, 6 dozen roach and dace and 2 dozen gudgeon; F. Purdue, three days, 5 dozen roach and dace and 7 dozen gudgeon and 6 perch; Mr. Blamey, fishing himself, caught one dozen barbel. Several good

perch and chub myself, four days—first day, five large roach and a perch of 1½ lb.; second day, two dozen roach and dace; third day, 9 dozen roach and dace and two chub; fourth day, one jack, 3 lb., 11 eels, largest 2 lb., fishing for barbel.—W. ROGERSON.

Ancholme.

On Monday evening, in connection with some juvenile members of my family I had a run over to this river. We caught a fair basket of coarse fish and eels. I landed one small pike, and hooked two other fine ones, but both of these, owing to my fishing with fly line, broke away; one was about 1 lb. in weight, and took a good roach of ½ lb. for its supper, with the customary flight of hooks which, I fear, would be too strong for digestion. It is a pity this stream is not well stocked with carp and tench; they would thrive famously. Perhaps Lord Yarborough would, if proper representations were made to him, supply a stock of the former fish from Croxby Lake.—THOMAS FORD.

Barle and Exe (Dulverton).

These rivers are still very clear and low. It is useless to fish by day, but during the past week some very good baskets have been taken in the evening between nine and midnight. Heath, who has been out every evening since my last report, has had capital sport with the fly, the smallest number being twenty, weighing over 4 lb. A curious incident occurred to a young man who was fishing the other evening, but one which I have known happen before, and no doubt many of your readers have also. He caught a small trout, and as he was landing it, another trout seized hold of it, and he brought both to bank, the larger trout still holding on to the other; but not touched with the hook. I have not heard any more about the trammelling, so I hope that "our friends" have taken the hint, and stopped their little game.—W.

Coquet (Northumberland).

On the 9th, Messrs. T. Gillespie, Jameson, S. Braben had splendid sport, their creels being from 6 to 9 lb. On the 11th, A. Story of Bathal, had 7 lb.; Mr. Young, Morpeth, 5 lb.; W. Matthaus, Longhorsley, 4½ lb.; all with worm. Mr. Gillespie, thirty-two trout, is the second best basket that has been killed in this water for this season. The river is in a fair condition for fishing. A. GLASS.

Dove (Derbyshire).

The weather this week has been all that could be desired, and trout and grayling have been rising excellently. Great numbers of anglers are now out daily, and the average of takes this week must be from five to six brace. The killing flies are the jenny spinner, the various styles of moth, and the blood-red caterpillar. Some good barbel have been captured at the junction of the Dove and Trent, and I hear of a few salmon having been observed kicking about. The river is running at nice height and in good colour.—THE SPODGER.

Exe (Tiverton).

The river is very low and clear, and little or nothing can be done except in the evening, when trout sport very well, and some good sport is being had. The flies that are killing best are the usual ones, viz., fern web, black gnat, red spinner and coachman; the fern web is doing exceptionally well—WILLIAM MUDFORD, Tiverton.

[Are there any salmon in the Exe yet?—ED.]

Ilfracombe (N. Devon).

We have had some very good sea-fishing since my last report. There is a variety of fish to be caught here now, viz., bass, bream, cod, pollack, mackerel, whiting pout, dabs, &c. Bream scale from one to six pound per fish, bass 6 lb. each, and cod from one to twenty pound each, pollack from one to three pound each, mackerel from one to two pound, whiting pout and dabs two and three to the pound. Catches vary from twenty to seventy pound per boat per tide both morning and evening. Prospects looking good for the next week.—HENRY COLLIER.

Lea (Cook's Ferry).

On the 10th we had a great number of anglers (the weather fine and the condition of the water good and full of fish), the result of the day being to send them back to their homes with their arms and baskets all nearly full of fine fish, their health improved, their faces brown, and their pockets lightly taxed; no headache, and ready and willing for their duty on Monday. These are the pleasures of the true-minded angler. As such fishing is near at hand it will be well to prepare your tackle, for I see the waters are full of fine fish. As I sit in the evening I often think how the jack fisherman's heart would move to see them spring in the water. Last season no water in or near London produced more than these waters did, the largest being 24 lb. in weight, taken in the month of September, 1880, by Mr. Smith; this has been stuffed, and no doubt when the London show takes place that will prove the lion of the day, and those who will have the pleasure of seeing it will have but one voice and say that it is a great fish and that the gentleman who took it has a great pleasure in being the owner of it, remembering at the same time that there are as fine fish in the water as have ever been caught.—S. SEWELL.

Medway (Tonbridge).

The water is really too clear for good angling, and rain is very much needed. The bream are on the feed and the same may be said of roach. Chub are plentiful, and may be taken in the early morning or evening with a fly or a gentle. Mr. Woods, of Chatham, took some good roach; Mr. Chapman, of Sevenoaks, a brace of jack; Mr. Swinnard, of Tonbridge Wells, and I, have taken bream, chub and roach. On Monday, a match was fished near the Railway Bridge, at Barden, between J. Cox, of Tonbridge, and J. Eller, of Tonbridge, for a small wager. There were a large number of spectators. Cox secured a good bream and a splendid dish of roach, and won easily. Eller, who was carelessly run into by a boat, which broke his line, only grassed a bream.—YE MEDWAY WATER-RAT.

Ormesby Broad.

Water here in first-class condition, and fish now coming on the feed. Mr. Linstead and Mr. Vesey, of London, are now getting good sport, consisting principally of bream, rudd, with a few perch and roach; Mr. A. C. Critchfield, of Dalston, can boast of an even take of bream to-day, the 12th, twenty weighing 40 lb., besides some good roach. Every accommodation. Clean beds, boats, bait, &c. Return ticket from Great Yarmouth, 10d., and about 200 acres of water.—SAMUEL RICHMOND.

Severn and Teme (Worestershire).

SIR,—These streams are in fine order for angling, and many good takes have been caught with the fly and gentle. Mr. J. A. Griffin landed and weighed in nine brace of trout and 2½ brace of grayling, with the blue dun and red spinner.

Mr. Hopkins, near 7 lb. of chub and dace, and Emos Bosworth lands 6½ lb. of chub and dace; Mr. Guillham weighed-in 4 lb. 11 oz. of trout; best brace of fish, 1 lb. 10 oz. There was other members of the Boughton Club, caught some large chub, some fish over 2 lb. each. There is upon the books upwards of 27 lb. of trout, taken mostly with the fly.

J. A. GRIFFIN.

Portobello Inn, St. John's, late 15, Tything,

Suir and its Tributaries, Clonmel (Ireland).

The river is everywhere swarming with peal and salmon. The last few floods brought up great quantities of them and happening as they did during the weekly close season, they were enabled to get to the upper waters, while the nets were off the river. We hear of [a good many peal being taken by the rods everywhere, some gentlemen killing to or three in the evening, amongst the most successful were Messrs. R. O'Donnell, R. Hutchings, F. Clibborn, Dr. Cooke, and Thomas Phelan (Kilmainham). The cots are now reaping their harvest, some of them getting from ten to twenty peal, and an odd salmon each day. The Clonmel men got eight together in one haul yesterday, another clear at Derrinland, sixteen. The trout fishing is only middling this week, but there is a very good rise, first about nightfall, which continues for an hour or so.—DORA.

Trent (Nottingham.)

Although the river still remains low and clear, and the weather exceedingly hot, most of the fish have been fairly on the feed, more especially barbel, which, under the present state of things, was not expected, and all the best anglers had come to the conclusion that barbel would not be worth mentioning until we had a change of water. In this, however, we have all been agreeably surprised, for on Saturday last while a gentleman, with very light tackle, at Sawley, expecting to catch dace or bream, hooked and landed a barbel 9 lb., and several others 3 lb. and 4 lb. each. He thought at one time of changing his tackle for something stronger, which would have been a mistake, as he had killed every fish that was fairly hooked, so he thought he would well alone. The hook was only a No. 8, and the tailend of a lob for bait. Several other anglers, while fishing with similar tackle, got the barbel on the feed, and I am of opinion that it is the height of sport to hook a good barbel with dace tackle; not only that they can be frequently caught with a small piece of worm when they would not look at a whole one. But mind this is the case when fish are not very eager to feed, and when the water is bright and clear and no baiting has been thrown in. This, of course, makes all the difference, as the following will show:—One of our anglers baited a place on Monday night with a thousand of worms, and on the next day with the usual barbel tackle took sixteen good fish, most of them 3 lb. and 4 lb. each. The anglers with scratching have also been doing very good work among the barbel, and it has been a toss up among the fishermen which was the most killing bait; and I believe it was decided at some of the clubs that while the water remained in its present condition scratching would prove the most killing; and as 3d. worth is sufficient for a day's fishing, the rodsters do not like to pay the great price now charged for worms. Roach are beginning to take malt and wheat, but not so freely as they will in a week or two. Several fair catches have been made with maggots, both roach and dace preferring them to worms. Bream are biting, but not freely. Weather very hot, and the best time for fishing is early in the morning.—W. BAILEY.

[Yes, send the article on barbel fishing.—ED.]

Trent (Newark.)

The water is very low, and in a fearfully filthy condition, and bottom fishers are tormented with flannel weed; the bait is scarcely in the water above two minutes before it is covered. Weather to-day has been about a tropical heat. I have heard of a few odd barbel being taken down here, with scratchings for bait, and a few very nice catches of bream have been had with worm; chub will now take a big fly or a locust if you can get them; early morning or evening the best time. Anglers will be pleased to hear that the roach are coming on the feed. Several nice fish have been taken with both maggots and plain bread paste, the bread paste being the most successful. Rain is sadly wanted to clear out and purify the river.—TRENT OTTER.

Tweed, Teviot and other Border Rivers.

The angling in these rivers during the past fortnight has been of a pretty good character. The late dry and altogether unseasonable weather for angling having been broken by a few good pluvial descents about ten days, made matters look rather better for the partisans of old Izaak, and advantage was, of course, at once taken by the patient angler. On the Sprouston water, Mr. Waddy had a good dish of 9 lb., and Mr. Robertson killed in Teviot 10 lb., while Mr. Mills, in an hour and a half, had 8½ lb. to his credit with worm. In the same river, on Thursday, Mr. George Malcolm had 7½ lb.; Mr. Baird, 6 lb.; Mr. D. Maxwell, 10 lb., which included about 3 lb. of eels. Saturday's fishing was bad; the same may be said of Tuesday. On the latter day, the glass showed a very considerable fall, and rain fell in torrents late at night, and although it cleared away considerably during the night and early morning, it again came down with a vengeance from four o'clock on Wednesday morning, continued all Thursday with little intermission, and lasted until well on on Thursday morning, with the wind north-east. This very welcome rain will greatly improve the fishing, and cannot but bring down the rivers, which are much in need of a right good clean out, having got very rank and dirty in their bottoms, thus rendering anything like first-rate angling out of the question. In the Jed very little has been done for a month, but the Ewes, Wauchope, and Liddle have afforded fair sport lately, and the same can be said of the river Esk, many good baskets having been killed, one reaching 14 lb., while not a few sea trout have also been killed. A week ago a party of anglers bagged sixty brace of perch and one and a half brace of pike at Yetholm Loch, and the day was a very bad one for angling. To-day (Thursday) the rivers are running full flood, and marked, at the Tweedometer, on Kelso Bridge, between three and four feet of flood water.

Wye and Derwent (Derbyshire).

The weather here during the past week has been excessively hot in the middle of the day, and very few anglers have cared to turn out; only those that are fond of dibbling with the natural flies. There has been some handsome pound-trout killing all up and down the Derwent in the middle of the day with the small bluebottle fly, by dibbling with it under the bushes and trees. There have also been some good catches made on both the Wye and on most parts of the Derwent with the artificial fly, the last thing at night, the fish rising well from 9 p.m. to nearly ten o'clock; in fact, while even you could see. Fish have been rising freely, and this is the only time that the angler has a chance of getting a few brace. There have been baskets made from two brace to nine and a half brace per angler of a night. The killing flies have been the dun, spider, sand and little black flies. Sport has been very good on the

Derwent in the evening from Whatstandwell down to Ambergate, and some large fish have been killed, both trout and grayling. The bottom fishers on this part have also killed some fine eels, bream, roach, and dace, one eel being over 3 lb. This was killed in the weir hole, near Ambergate, with worm for bait. There are some very large pike in this part of the Derwent, but they have not begun to feed as yet. Minnow fishing has been followed with fair success. In the beginning of the week one visitor, staying at Matlock Bath, killed a most splendid well-fed trout with the natural minnow on the Darley Dale Club Water; that was over 3 lb., besides some very fine trout. The bottom fishers also killed a fair sample of fish during the time the Derwent was discoloured, with maggots for bait; several trout being killed near the Matlock Bridge, weighing from 1 lb. to 2 lb. The Derwent has a good sample of fish in it just now, and they take a very great deal of catching. Rain is much wanted by the angler, as both rivers are very low and clear.—GEORGE JAMES EATON.

Yare (Norwich.)

Norwich anglers of late have fully realised the good the Yare Preservation Society has done for them. Hardly a day has passed during the last few weeks but some immense takes have been shown at the various clubhouses in the city. At every station on the above river numberless fish are reported to have been seen, and great has been the havoc amongst them. Any person watching the different trains as they discharge their human freights will find most of the angling portion of them staggering under their load of fish, the result of one day's good sport. Bream are now well on the feed, and a great many good-sized fish have been secured. In fact, old anglers will begin to tell you that it looks like old times again, when the great "black-backed uns" begin to roll about. Swarms of roach are travelling about, and one gentleman informed me he took no less than 280 fair-sized fish in one day. The various clubs in the city are bestirring themselves, and several contests are announced during the present month. Those who have nerve enough to be at it by daybreak experience the best results.—ANGLER.

Yore (Yorkshire).

Both this river and the Wharfe have been in capital trim for fly, minnow and worm fishing during the past week, and there having been some nice breezy days, with the air free from thunder, some grand dishes of fish have been taken; one gentleman in the Ripon club water heading the list on three days. The Yore to-day is a grand colour for the fly, and is not yet run down to its usual summer level, the ant fly (red and black) should kill well until the August brown comes in; the latter is a good killer on the Yore, in my opinion equal to the far-famed March brown, which it much resembles, but is rather less and lighter in colour; some anglers contend that it is a later edition of the March brown, but I am inclined to think not. Weather to-day fine and warm, but not oppressively so.—FRANCIS M. WALBRAN.

SCOTCH NOTES.

(From the *Scot-man*.)

LOCHLEVEN.—The weather was dull and cloudy on Saturday, with a light breeze from the west, and a drizzling rain in the afternoon. The sport generally was fair, and several good baskets were landed. Mr. Smith, Brighton, had 17 trout, 16 lb.; Mr. Isles, London, 10 trout, 11 lb.; Provost Milton, Sr. Andrews, 15 trout, 16½ lb., one a fine fish, weighing 2 lb. 12 oz.; Mr. J. B. Gowans and Mr. Ritchie, Perth, 9 trout, 10 lb. 12 oz.; Mr. G. D'Egville, Edinburgh, 11 trout, 8 lb. 8 oz.; Messrs. Steele and Blackie, Glasgow, 8 trout, 7 lb.; Mr. Harrison, Yorkshire, 8 trout, 7 lb. 8 oz.; Mr. G. A. Taylor and E. P. Dykes, Hamilton, 9 trout, 8 lb.; Mr. Lindsay, Dunfermline, 9 trout, 9 lb. 4 oz. This gentleman came in the previous night, late, with 14 trout, 17 lb., while Mr. Lawrence had 14 trout, 17½ lb.

ANGLING IN PEEBLESHIRE.—Last week, three gentlemen, staying at the Crook Inn, Peebleshire, killed in four days 68½ dozen trout, returning all the small. A fine basket of large trout was taken on one of the burns. Two gentlemen from Helensburgh had also good sport.

THE TAY.—In the Castle Menzies water Sir Robert Menzies' keeper killed on Friday a salmon weighing 12 lb., this being the only salmon reported to have been killed on the upper reaches during the past week. Good takes of trout, however, were obtained on the Strathay waters, and Edinburgh gentleman having made in a few hours a basket weighing over 11 lb., the favourite lure being a black-winged, hare's-lug bodied, and grouse-hackled fly. On Pitnacree water a plump trout, weighing over 4 lb., was killed with fly. This river is now in good form for allowing the river to have an easy ascent. Good sport is, therefore, expected on the upper sections.

THE AWE.—On Thursday, on the Awe, near the Pass of Brande, where the river runs out of Loch Awe, Major-General Campbell had excellent sport, killing a fine salmon weighing 29 lb., and two grilse, weighing respectively 10 lb. and 6 lb.

CRIEFF ANGLING CLUB.—The members of the Crieff Angling Club had another competition on Saturday, the angling water on this occasion being the Almond and braan, both of which were in good order. The following were the principal prizetakers:—(1) John Don, 11 lb. 7 oz.; (2) William Comrie, 10 lb. 1 oz.; (3) Alexander M'Favish, 8 lb. 9 oz.; (4) John Bell, 8 lb. 7 oz.; and (5) John Sharp, 4 lb. 6 oz.

BUN-RANNOCH HOTEL, RANNOCH.—In the river, on Friday, one gentleman killed 16 lb. trout, a second, 10 lb., and a third, 8 lb., in a few hours' angling.

THE BRORA.—On the river Brora, Sutherland, Mr. T. R. Hodge, Balmacoll, is having some good sport. On the 7th inst., he killed 1 salmon, 3 grilse, and 18 sea trout; on the 8th, he had 3 grilse and 27 sea trout, the latter averaging 1½ lb.; also a lot of fine yellow trout.

THE FISHMONGERS' COMPANY.—A special court of this company will be held at their hall on Thursday, the 21st inst., to elect to eighteen educational exhibitions, viz., under series No. 1, four each of £20, £30 and £50 per annum, tenable for four years, in aid of the education of sons and daughters over ten years of age of freemen and liverymen of the company; and under series No. 2, two each of £20, £30 and £50 per annum, tenable for two years, only for such pupils between the ages of fourteen and sixteen years, who have previously held exhibitions under series No. 1.—*City Press*.

MRS. F. Y. BROCKAS, Artificial Fly Dresser, 4, Mill-street, Conduit-street, Hanover-square, London, W. A stock of best flies always on hand. Flies made to pattern. Lessons in fly making given.—[ADVT.]

CORRESPONDENCE.

[We do not hold ourselves responsible for opinions expressed by our Correspondents.]

ANSWERS TO CORRESPONDENTS.

H. KNIGHT (Ryde).—It is legal take jack after June 15, but they are not in good condition before August.
H. ROBERTSON (St. George Street, Langham Street).—We believe that the fact of your not being more than sixteen years of age will not prevent your entering any angling club. Get the "Angler's Diary," price 1s. 6d., published at the Field office, Strand.

THE MUNDELLA ACT.

SIR,—In answer to your editorial remarks relating to the controversy on the law of fishing, I hasten to at once comply with your request. Further remarks from me at present are needless, for until I see "The Raven's" gauntlet taken up by those who are opposed to the rights of the rod fisher, and until I see some argument employed by those who advocate the law of force as opposed to that of reason—and who, when they lack knowledge and a good cause, resort to abuse, and with an unvarnished delivery bestow such epithets as "fool," &c., on their opponents—I think one may justly leave the discussion in the hands of a clique which, by self-laudation, headstrong obstruction, and unmanly invective, is a living exemplification of the true nature of its own component elements. At the same time, I will not acquiesce in the doctrine held by "The Trent Otter," which advocates the upholding of that which is wrong—recognised by one's self as wrong—simply because it is the whim of a presumed majority known by its blatant ignorance.

I, on this account, take my stand on the ground taken up by yourself, Mr. Editor, and by "The Raven," and will therefore, in accordance with your wish, whatever may have been my *nom de plume*, append my name in support of any piscatory knowledge I may possess.—I am, &c.,

ROBERT BALDERSTON,
Lecturer in the Natural Sciences, late Professor and
Scholar in Science, &c., &c.

THE FENCE MONTHS.

SIR,—I for one am pleased that our friend, "The Trent Otter" has offered an explanation, and trust all roach fishermen will read his letter.

The bulk of London bank anglers fish mostly for roach and bream; I was therefore surprised to find that not one old fisherman was called upon to give his opinion upon the proper time to fence these fish, and that so much valuable time was taken up over the jack. Had it been to exterminate these natural poachers it would have better suited roach fishermen.

I obtained a ticket for the meeting at the Society of Arts, intending to put an amendment (if I had the chance) "that fishing for roach, bream, &c., should be open till mid April;" but from what Mr. Geen said, I felt there was no chance of carrying my point.

I agree with all the present amendments to the Mundella Act, except being made an April fool of in casting my rod on April the 1st, when these fish really spawn much later.

A month before, and a month after spawning should be sufficient for each kind of bottom fish, as the Act is intended for all England. May and June are decidedly the best months, we could make the close season for roach, chub, bream, barbel, tench, &c. Jack, perch and dace having a time to themselves, I fail to see the occasion of so long a close season as the proposed three months, April, May and June, considering what follows.

Twelve of our members, the "Waltonians," visited the Loddon on July 10th, result, about 1 dozen roach, just weighable; and the accounts from the Thames ran quite as bad, few fish being taken. A few chub were caught, but they require a boat, and no doubt this state of things will continue for at least another month or six weeks. So, Mr. Editor, you were quite right in saying the close season is practically six months; and this, time will prove.—I am, &c.,

T. MALCOM.

SIR,—I have been informed that at the recent meeting at the Society of Arts, that the question of the evening was the fencing of jack. I have always been under the impression that jack fishermen were few by comparison with roach anglers; how then, Mr. Editor, do you account for this?

I thought the meeting was called to thoroughly go into the question, viz., "The proper time to fence bottom fish." The Mundella Act, as it now stands, having been proved a failure throughout the country.

Fortunately I am not a member of a London club. I say fortunately, as I have seen several friends alter for the worse since they have joined clubs, and obtained the privilege tickets. One, a good honest angler before he joined, has now turned out a regular prize hunter. I think with "Cambridge," the meeting should have been an open one, and not by admission ticket, if you want to get at the real feeling of anglers.—I am, &c.,

E. WHITE.

39, Gt. College Street, July 13.

P.S.—I wish to put my name down for May and June, being sufficient for roach.

TROUT LICENSES.

SIR,—Please answer through your columns the following, and you will oblige some of your readers, "Is it necessary to have a license to fish for trout in the tributaries of a river, such as the Trent, and what does a license to fish in a river entitle you to?"—I am, &c.,

JAS. DICKSON.

Dudley Street, Wolverhampton.

[It is only necessary to take out a trout license when the river you wish to fish is in one of the salmon and trout fishery districts, and the Fishery Board issue the licenses. A license to fish entitles you to fish in such waters as may be under the jurisdiction of the board which issues the ticket.—ED.]

FISHING ON DARTMOOR.

SIR,—Can any reader kindly inform me the best place to stop at in the vicinity of Dartmoor, Devon, to enable me to get some fishing and see something of the Moor and the Tors.—I am, &c.,

W.

July 12.
[We should advise you to go first to Buckfastleigh on the Dart. There is good fishing there after rain, as we know from personal experience. It costs 2s. 6d. per day, if we remember rightly. When there, if there is plenty of water

in the river, you can work on up past Ashburton to Chagford, to the free waters; but it is almost useless to go if the water is low, as the Moor streams are small, and soon run down.—ED.]

FISHING IN NORTH WALES.

SIR,—I have seen the query with respect to August flies, but as I shall visit North Wales during August and September, for the first time, I should be pleased to receive a few remarks on locality, &c.

Our kind editor, with his usual courtesy, has answered the question; but is there no other angler who regularly visits North Wales? If so, I would respectfully ask him to reply to the following. The answers will benefit other gentlemen besides myself.

1. What are the chief fishing stations?
2. Best route?
3. Flies or other bait?
4. Is the river Dee a free one; if not, how far is it so?
5. Can both sides be fished?
6. Which are its best tributaries for sport?
7. What bottom-fishing may be had?
8. Best time to angle?
9. Is there a tackle-maker's at Chester who can be applied to?

My head-quarters will be at Chester, but I do not wish to travel further than Corwen or Llangollen. Apologising for occupying so much space, I am, &c.,

H. T. H.

[If H. T. H. gets the information he requires it will certainly be "useful to others," or else we should not feel justified in giving him so much space. Will A. R. I. E. L. kindly answer a few of the questions? We know he can if he will; but anglers, as a rule, are very reticent about telling all the world their favourite haunts, and we do not blame them. However, it is our duty to give as much information as we can, and we advise H. T. H. to get a copy of the "Angler's Diary" (1s. 6d.) published at the Field office. It gives a list of fishing stations in Wales, hotels, &c., and by writing to the hotels named we have always been able to get a general idea of the places we have wished to go to. There is good trout-fishing at Corwen on the Dee, which H. T. H. can get, and we would advise him to write to the postmaster at Wrexham, and ask him to give him the address of a gentleman who resides in or near Wrexham who publishes an Angler's Guide to North Wales, with particulars as to flies, &c. We cannot find our copy at the moment.—ED.]

FISHING NEAR WORCESTER.

SIR,—We are now upon the Severn, two miles below Worcester, where the River Teme empties itself into the longest river in England, its source is Mount Plintimon, in North Wales; in fact, the Severn and Teme both rise from the same mountain, the Severn on the north-east side and the Teme on the west. The mouth of this beautiful river the Teme is a favourite place for large salmon. I have known fish, 40 lb., taken there with the net. We will now proceed up the Teme to the Powick Bridges. We have fords and deeps continually, until we come upon the weir, this is called Lower Teme; and you can fish if in possession of a trout licence—you must have that to fish in any stream in Worcestershire. The tickets to fish the Lower Teme are for the season, 10s. 6d.; one week, 2s. 6d.; one day, 1s. From the bridge all up the river is private water, but you can get leave from the millers and farmers. I will try to explain the way to go about it. The next place is Bransford; there is a station upon the Malvern and Worcester line, five miles from the former and three miles from the latter. The hostess at the Fox will direct you to the fords. The next place handy for strangers, Leigh Court Station, upon the Worcester and Bromyard line, five miles from Worcester. You must take your refreshments with you for this station, as you are at least three miles from an inn, but you can get leave to fish either the Leigh Brook or the Teme off Mr. Essex, of the Court, or book on to Knightwick; there you cross the Teme by bridge to Mr. Brownning, of the Talbot inn, where you can get lodgings, and all that is required for the inner man at moderate terms, with good fishing free. I have taken in one evening, 8½ brace of grayling, eleven fish, weighing 15 oz. each, the best run of fish I have ever caught, though not the best take as to numbers. Any one staying at Malvern can get to this fishing by driving seven miles, or by taking train for Henwick, then book for Knightwick; there are also excellent fords all up to Martley; by asking the farmers, leave is generally given. We will now pass on up to Stanford Bridge; there is again every thing to make an angler comfortable. The inn is alongside the bridge, and the host, Mr. Smith, will be pleased to see a brother angler; he is one, and I know that he will give instructions to any gentleman.

JOHN A. GRIFFIN.

Portobello Inn, St. John.

FISHING IN THE ISLE OF WIGHT.

SIR,—Would you, in your next issue, kindly tell me if you know of any freshwater fishing in the Isle of Wight?—I am, &c.,

H. H. H.

9, Cork Street, London, W.

[About fifteen years ago we had some splendid sport in the Brading river, not far from Ryde—flounders, roach and carp—the river was then literally swarming with fine fish. We believe that since then extensive drainage works have been carried on at the mouth of the river, and we cannot say how this may have affected the fishing; the water is small, but sluggish, and deep in places. There is good trout fishing near Carrisbrook Castle, but it is not open to the public.—ED.]

FISHING AT MAIDSTONE.

DEAR SIR,—I shall feel extremely obliged if you would be so kind as to inform me what fishing there is to be had near Maidstone? what fish I may expect to catch? and lastly the name of some place where I can put up for a week or so.—I am, &c.,

NORTH BRIXTON.

[According to that invaluable little book, the Anglers' Diary, there is but little fishing at Maidstone on the Medway, but excellent sport can be had at Leed's Castle, six miles off, but permission is required; also at Lord Romney's Park at the "Mole."—ED.]

HAVE FISH FEELING?

SIR,—Having seen letters at various times in your columns respecting the above question, I venture to trouble you with a few lines with regard to a case that came under my notice lately. On Monday last, while fishing at Acle with a friend, I caught a small roach by the eye in striking the fish and extracting the

hook I of course entirely destroyed the eye, and was about to put it out of its misery, when it jumped out of my hand into the water.

I still continued angling, when about ten minutes after this, strange to say, I caught the very same fish with the eye still bleeding and hanging out of the socket in rags. It had taken a small branding worm.

I will leave it to wiser heads than mine after this to say whether fish have any feeling or no.—I am, &c.,

ROBT. H. PALMER.

East Anglian Piscatorial Society, Norwich, July 13.

WHAT WILL CLEAN A FISHING PANNIER OR BASKET?

SIR,—What is the best thing to clean a fishing pannier (basket) with? I thought common soda, but was afraid it would injure the osiers.—I am, &c.,

Tadcaster,

H. T. H.

[Wash it well, first in warm soap-suds, then in clean water, and dry in the sun; do not rub soap into it, as it sticks in the osiers; a little soda may be added.—ED.]

INVASION OF ANGLING RIGHTS ON THE LEA.

SIR,—When I wrote my river report to you last week I was late, and to get the letter in time for post I had to be brief respecting the case that was tried at Waltham Police Court on Tuesday, the 5th July, 1881. Mr. Humphrey was asked if there was a right of way, and he said he had known the place for years, and he never heard of one. Now, the fact of the case is this: Mr. Hunt, of Chingford Mill, let the waters to Mr. Wicks; then the waters were let to Mr. Lewes, and after that to a person who gave to Mr. Hunt part of the money he took from the anglers; but since I have been the proprietor of Cook's Ferry he has acted like a gentleman to me, and being in possession of a generous heart, and wishing to be liberal to anglers, has given me in writing the free use of the waters for myself, my servants, and my friends; so therefore I give the most pressing invitation to members of all clubs and others. Mr. Hunt has to pay yearly a due to the Dean and Chapter of St. Paul's, who are the rightful owners; and I can state from the lips of Mr. Hunt that he is prepared to give £50 towards the cost if any one doubts his right, and will try the question in any law court; so I say three cheers for Mr. William Hunt, of Chingford Mill. Long may he live to see anglers enjoy their sport, and I am sure all anglers will join with me.—I am, &c.,

S. SEWELL.

Cook's Ferry, Angel Road, Edmonton, July 11.

GENTLES AS A BAIT FOR ROACH.

SIR,—As I perceive you differ from Mr. Fennell as to well-scoured liver gentles being most tempting for roach, and consider these baits cannot be too rank or foul to suit the taste of such fish, it may be as well to state that I have an article cut from the *Field*, written by that gentleman, under the *nom de plume* of "Old Swivel," which served him as a *soubriquet* for many years in that journal. He therein points out the many objections to the unclean gentles. He says, besides their offensive odour, they are too tender to remain on the hook and in a running stream, they are soon reduced to skin alone. On the other hand, the well-scoured gentles are rendered tough and consistent by the process, and if they are attached to the hook, by their blunt end, will remain living in the most seductive state for a comparatively long time. He, however, elsewhere alludes to the attractive nature of the maggots bred in pigs' dung; and, as these, although they may be classed as carrion, do not require any particularly process of cleansing, they may possess advantages not generally known. He further speaks of an artificial gentle which supplies the place of the natural one, or supplements it as a top-dressing, and the description of this and how it is made—not an easy task, however—may be found in his Book of the Roach, but when once made, it will last for years, requiring only to be soaked in warm water before commencing a day's fishing.

C.

[We think, and have always said, that baits cannot be too sweet and clean for roach. The statement is taken, word for word, from the Book of the Roach; and we thought we were quoting Mr. Greville Fennell's opinion as in favour of the use of unscoured gentles.—ED.]

THE NEWARK ANGLERS.

SIR,—I seem to be the subject of a good deal of comment in your valued paper just now, and I hope all your readers will carefully consider the letter I sent to last week's *GAZETTE*. I expected a reply from that Triton among the minnows, Mr. J. Neal. One of the committee told me I might expect one, as the subject was brought up before the Committee of the Newark and Muskham Fishery Association. I won't use the words of that member of the committee, or Mr. J. Neal may be very much shocked. He tries to find a blot on my piscatorial escutcheon, and the only one he can find is that I am not a member of an angling society. He denies *in toto* my assertions; and all I can say is that part of my statement in the letter he refers to I can vouch for by personal experience, and my informant for the other is a perfectly trustworthy man.—I am, &c.,

THE TRENT OTTER.

BAIT FOR GREY MULLET.

SIR,—I see in your last issue M. B. Clift inquired for bait to catch grey mullet. I was a long time in the same fix as he is now; I could see them nearly every day at this time of the year playing about the mouth of streams where the fresh water runs into the sea, and sometimes they would be accompanied by sea-birds. On one occasion when I was cleaning a fish in the stream I threw some of its liver to the birds, and I saw the mullet would take it as fast as the birds; accordingly I rigged my rod and line, and many a 4 or 5-pounder I have landed since, and all over 5 lb. would break away. The bait I use is thornback liver, and I can supply any one twice a week with the liver, all fresh, if required, and give instructions how to keep it and how to use it. I always keep a little by me for my own use.—I am, &c.,

10, Broad Street, Ilfracombe.

H. COMER.

A DISCLAIMER.

SIR,—In your issue of the *FISHING GAZETTE*, July 2, you mention having heard of one angler having three tench given to him to present to friends at Sheffield, and he showed two of them, and took a prize. Now, I was at Boston with Edward Cowley, and caught two tench, and brought them to Sheffield, to Mr. Machin, the White Heart, Wicker, and took a prize; but the fish were

honestly caught, and I will be obliged to you, as the incidents are very similar in outline, if you will please publish the affair in your next issue with my name; as I do not want the public to think I am the rogue you refer to in your *GAZETTE*.—I am, &c.,

Sheffield, July 7, 1881.

JOHN FOX.

CLUB REPORTS.

ANCHOR AND HOPE ANGLING SOCIETY.

Several members went to Amberley on Sunday, returning with some good shows of fish. Mr. R. Smith, bream; Mr. Pieraccini, bream; Mr. T. Bowling, roach and bream; Mr. T. Bating, bream; Mr. D. Davis, bream; Mr. B. Booth, roach.—A. SHAKEL, sec.

July 12, 1881.

CITY OF LONDON ANGLING SOCIETY.

The following members weighed-in fish on the 10th:—Mr. J. Chambers, roach and a pretty jack from the Roding; Mr. Castell, bream and perch from Pulborough; and Mr. Perry, bream from the Wey.—CAS.

FIRST SURREY ANGLING SOCIETY.

A magnificent show of bream was placed on the trays of the above society to-night, to the credit of Mr. Bates (treasurer), viz., five bream weighing 17 lb. 5 oz., the largest fish, weighing 5½ lb., being sent to Mr. Cooper, Radnor Street, St. Luke's, for preservation.—P. D. MANNING, dept. sec.

July 13.

GREAT NORTHERN BROTHERS ANGLING SOCIETY.

We had a very fair show of fish on Sunday last. From the Wey the following members weighed some fine dace, roach and bream. Mr. C. Warren 2 lb. 3 oz.; H. Watling, 1 lb. 11 oz.; Parkin, 4 lb. 13 oz.; Theobald, 7 lb. 2 oz.; J. K. Fitch, 4 lb.; C. Painter, 6 lb. 13 oz. From Amberley Mr. J. Fitch, 7 lb. 12 oz.; Perkins, 3 lb. 3 oz.; Young, 2 lb. 12 oz.; Smith, 1 lb. 7 oz.; Major, 1 lb. 3 oz.; Butler, 2 lb. 9 oz.; 1 roach 1 lb. 6½ oz.; Walker, 1 lb. 10 oz.; Reynolds, perch; Patman, 4 lb. 12 oz. from Welsh Harp. Total, 52 lb. 1 oz. Mr. Theobald won the two prizes fished for on the first and second Sunday in July. We have a competition at Dagenham Lakes for a large number of prizes on July 24; three superior conveyances will be engaged to convey about sixty, starting from the club house at 11.30. We shall have a few seats to spare; any member of a club can join us by giving in his name not later than Tuesday, July 13.—J. A. FITCH, sec.

July 12, 1881.

HAMMERSMITH UNITED.

The two day's competition for three prizes was won as follows:—Mr. Hobden, 1st; Mr. Thomas Hoole, 2nd; Mr. Hitchcock, 3rd; several others being close up. On the 7th, Mr. Walters had a good show of trout, roach, &c.; Messrs. Hobden and Reynolds had perch, all from private water. On Sunday numerous members journeyed down the South-Western Railway, but only a few arrived in time to weigh-in, owing to the delay of trains through the Windsor Review.—VORTEX.

July 11, 1881.

HOXTON BROTHERS ANGLING SOCIETY.

The next eastern district visit of angling societies will take place at the Jane Shore, High Street, Shoreditch, on Monday, July 18, 1881, when we hope to have the favour of your company, and as many of your members as can make it convenient to attend.—R. GHURNEY, secretary.

KING'S CROSS UNITED ANGLING SOCIETY.

The following members of the above society were out on the 10th inst., but were not very successful:—Mr. Davis, having roach, bream and perch from the Ouse; Mr. Morley, roach and bream from the Arun; and your humble servant, roach, perch, bream and dace, also from the Ouse. Mr. Bell was out, but could not get anything more than an eel or two. I hope soon to have a good account to render, as the members have made up their minds to have a good bid for success.—G. TREADWELL.

July 12, 1881.

LARKHALL ANGLERS.

Mr. Croutel, having resigned the post of reporter to our society, you will receive all reports, &c., for the present, from myself. There have been no great catches of fish at present, owing, no doubt, to the water being very low and bright, the only exception being Mr. G. Watkins, who had a splendid tray of fish, from Egham, taken in the rough water under the weir; 20 lbs. barbel, together with some nice roach and perch; Mr. Davison, trout, from Tunbridge; E. Watkins, jack and barbel, from Egham; Messrs. G. Penn and F. Boyce, roach and dace, from Datchet; and, Mr. G. Spencer, our esteemed president, some good chub from Weybridge.—W. TUCKER, hon. sec.

P.S.—I enclose you a copy of our new book of rules and prizes.—[Very neat and useful.—ED.]

July 9, 1881.

LITTLE INDEPENDENT ANGLING SOCIETY.

On Sunday evening we had another handsome show of fish. The takes were as under:—Mr. Latch, bream, 33 lb. 9 oz.; Mr. Hopton, bream, 16 lb. 13 oz.; Mr. Hurwood, roach, 1 lb. 12 oz.; and the following members:—Messrs. Scott, Wightman, Humphreys and Heeles, roach and dace. In addition to the above we had a couple lb. of eels.—W. BROWN, hon. sec.

July 13.

MAZEPPA INN ANGLING CLUB, DERBY.

The opening excursion of the season took place on the 2nd inst. Thirty-five members proceeded to Willington, many more friends accompanying them to see the sport. A very enjoyable afternoon was spent; on time being called

by Brother Henry Poyser, every one was ready, and the sight was a really grand one. The weather was all that could be desired for the comfort of all. There were some crack-fishermen in the match, and the catches were very good. Taken altogether, the outing was greatly enjoyed by all, and those present will not soon forget the ramble, some getting lost on the Burton Road; but they were soon brought right again by some members who went to seek for them. The prize takers were:—1st, George Cotton; 2nd, William Bartely; 3rd, John Marcer; 4th, A. Cormack. Councillor George Daykin, presented a beautiful roach-rod to the first winner, with his accustomed liberality, and Mr. Martin, two dozen of bottoms for Nos. 5 and 6.—G. CLARK, hon. sec.

[P.S.—The landlord takes THE FISHING GAZETTE in every week for the convenience of members.—ED.]

ORIGINAL CLERKENWELL PISCATORIAL SOCIETY.

There were again some excellent trays of fish last Sunday. Messrs. Obbard, Long, Saunday, Drew, Gorsuch, jun., bream and roach from Pulborough; Mr. W. Gorsuch, sen., had some splendid dace from the Lea.—THOS. WM. LUCY, sec.

July 12.

PORTSMOUTH WALTONIAN ANGLING SOCIETY.

On Coronation Day, June 28, a few of the members of the above society organised a very enjoyable pic-nic party to Rookesbury Park, the seat of J. Carpentier-Garnier, Esq., M.P., to whose kind permission to fish the two lakes in the park the members are indebted for one of the most successful days of the season. About forty, consisting of the members and their wives, assembled at Mr. Easton's, Golden Fleece Hotel, Commercial Road. Two commodious brakes and a capital team of horses were provided by Mr. Westbrook, of Portsea, while many of the members chose their own mode of conveyance, in the shape of landaus, traps, &c. After two hours' drive through delightful scenery, the party arrived at the park lodge gates, where evident signs of a good reception awaited us, a path having been mowed through the long grass down to the edge of the lake for the ladies. The catering was placed in the hands of Mr. W. Maybourn (well known in this locality), who provided an excellent luncheon and dinner, comprising all the delicacies of the season. Several prizes were competed for by the members, one of the principal events of the day being a silver belt presented by Mr. A. L. Emanuel, of Ordnance Row, Portsea, our ex-president, to be competed for by the nominees of ladies present, and it was eventually won by Mr. Smith, No. 2, and presented to Mrs. Smith by the president in the evening, amid the applause of the ladies. A handsome prize of a gold locket, presented by Mr. E. Hollander, to be competed for by ladies only, was won by Miss Buck, with 4 lb. of carp. The sport was most excellent, the large lake abounding in fine English carp averaging 1 lb. each, one being taken of 3 lb. 2 oz. At four o'clock, the contest being concluded, the members and their wives wended their way to a portion of the park, where, under the shelter of three gigantic oak trees (with which the demesne abounds), Mr. Maybourn and an able staff of assistants had improvised a dining-table, and a welcome spectacle awaited the hungry piscators. A salmon weighing 18 lb. graced the top of the table, and was flanked by the good old English fare, roast beef, turkey, fowls, brawn, salad, &c. After a sharp drive home to the clubhouse, the Golden Fleece, where the members weighed their fish, it was discovered that a very large quantity had been taken, the total weight being 105 lb. 8 oz. Mr. Smith, No. 2, took first prize, Mr. Tranter the second, and Mr. A. L. Emanuel, third honours, while Miss Buck was the successful candidate for the ladies' prize.—W. TRANTER, sec.

PRINCESS OF WALES ANGLING SOCIETY.

During the past week some capital sport has been had by our members. On Friday, the 8th inst., Mr. Percy, our chairman, had the fortune to capture a splendid pike, weighing 12 lb. 15 oz., which was duly conveyed to Mr. C. Short, of Marylebone, for preservation. On the 10th inst. Mr. Aston captured some handsome barbel, one fine little fellow weighing 2½ lb., and his father, a regular "old 'un," who, no doubt, had previously cheated many an old angler, and who scaled just over 8½ lb.; Mr. Porter got among the roach, as did several others; but although they had a good number, there were no specimens among them.—F. ROBSON.

July 12th.

ROYAL PISCATORIALS.

The result of the competition, which took place on July 7, 1881, Mr. Canton won Mr. Dale's £2 2s.; and Mr. Smithers took Mr. King's £1 1s., with fish, from the Thames; Messrs. T. Hughes and G. Lee exhibited jack and roach. Competition on the 10th for £2 2s., given by Mr. R. Mole; and £1 1s. by Mr. Kelly; Mr. Canton won the first-named prize, and Mr. F. Dale succeeded in taking the second. The next competition will take place on the 21st; first prize, £2 2s., given by Mr. Osborne; second, a fly rod, given by Mr. W. Randall. One night this week, Mr. Wheeldon, exhibited an enormous amount of barbel at this society. Some of the gentlemen present on the occasion assured me that they had never such a show of barbel before.—PIXIE.

July 14, 1881.

ROYAL MUSEUM HOTEL ANGLING CLUB (EXETER).

A very large and influential meeting was held at the above hotel on July 12th, the most particular portion of the business being the election of a "referee," which point had remained unsettled from the previous meeting, although a "referee's" name had been proposed and carried unanimously, it was on account of his absence through indisposition it was not settled forthwith. But upon taking the chair for the evening, Mr. Frank Gosden, ex-conservator of the river Exe, was informed amidst general acclamation to have been duly elected to that very important post. Several fresh members were enrolled, and the shows of fish were most startling, that is in this way:—Mr. J. A. Kelly, the tench champion, with a basket of fine perch; Mr. Geo. Lee, of salmon fame, a bag of large eels, 8 lb. weight, and one 2 lb. trout; and Mr. C. Blake, instead of trout, showed eight fine dace and one trout, taken in twenty minutes at Woodford Bridge, in the glare of the midday sun.—FRANK GOSDEN, hon. sec. pro tem.

July 12, 1881.

SIR HUGH MYDDLETON SOCIETY.

On Sunday, July 3rd, only two members weighed-in. Mr. Caborn took a nice perch of 1 lb. 9½ oz., also roach and dace 4 lb. On the same day Chas.

Irwin, sen., had a nice show of bream 7 lb. 8 oz., from the river Wey. Mr. Irwin informed the members of the society that he saw three men netting the river Wey, in the vicinity of Ripley Lock. One of the men was the lock-keeper. At their first haul they had sufficient bream to fill a sack. Mr. Irwin, being single-handed, thought it best not to interfere with these three rough-looking fellows. Something ought to be done with regard to this wholesale slaughter of fish. Our delegate, Will Fowler, will bring this matter forward at the next delegate meeting. On the 10th inst. Mr. Caborn captured a nice little trout of 4 lb. 4 oz., also a smaller one. This makes a brace and a half in three Sundays. He also had roach, dace, and perch, 5 lb. from the river Iwer. Messrs. Rogers and Fowler had roach, dace and chub, 8 lb. 9 oz., from Iwer.—G. CABORN, sec.

SOCIAL BROTHERS.

For the information of distant members and friends, I have to say that we are progressing in a very satisfactory manner. We have made nine new members since the opening of the present season, and we have a very good prize-list, donors not being backward in coming forward. As to the takes of fish I must tell another tale, the only take worth recording being by Mr. G. Monk, who set the ball rolling on the opening day of the season, and managed to capture 8 lb. of roach and dace. It has not been for the want of trying, all members trying, and among the number your reporter, who was on the job the first Sunday from daylight till three o'clock in the afternoon, and not a touch. What do you think?—J. GOUBOT.

July 12.

[Why, that if you rake out a bundle of weed from the bottom of the river you will find it full of live animalculæ, and that the fish have more food than they can eat just now.—ED.]

SOUTH LONDON ANGLING SOCIETY.

Messrs. Head, Mitchell, Palmer, and Ewin went, on Sunday, July 10, to Pulborough to compete for an oil painting of Cremorne, the Derby winner. It was won by Mr. Head, who, among other fish, caught a roach weighing 1½ lb., being the third of the same weight since the season began. Mr. Elliss had a nice show of roach from the Rib, and Johnson roach from Woking. I visited Thorney Broad yesterday. Anglers were very scarce there, but fish were equally so.—G. H. FIELD.

SURREY PISCATORIALS.

On the 8th inst., the chairman of this society and some of the members visited Rickmansworth, and succeeded in getting some nice dace, the largest turning the scale at 11½ ozs., the smallest going about 5 ozs. There was also a good supply of roach, among which were five, weighing 2 lb. 2½ oz., which, considering the condition of the water higher up the country, were not bad fish. A competition took place on the 13th, and the following is the result:—Mr. Linstead, 14 lb. 14 oz. of bream and rudd, from Yarmouth; Mr. Pugh, from Henley, barbel, chub, roach, dace and perch, the largest of the last-named, weighed 1 lb. 11½ oz.; Mr. Beckett, from Windsor, jack, barbel, chub and dace; Mr. Boalch, jack and chub; Mr. Whitby, chub, 2 lb. 7¼ oz., and some roach; Mr. Hayward, dace, roach and gudgeon; Mr. Duck came next, the gross weight of fish exhibited nearly 50 lb. The next competition will take place on August 1, for £2 2s., given by Mr. Wheeldon; a box of cigars, by Mr. Towers; and a volume of THE FISHING GAZETTE by your humble servant.—PIXIE.

July 14, 1881.

STOKE NEWINGTON ANGLING SOCIETY.

A very good show of fish took place on the 10th inst., some of our members meeting with much better sport than hitherto. The result of the competition being as follows:—Mr. Ed. North, 6 lb. 14½ oz. roach and bream; Mr. A. Parrott, 5 lb. 13 oz. roach and dace, also an eel of 1 lb.; Mr. T. Gretton, 4 lb. 6 oz. bream and roach; total, 18 lb. 1¼ oz. I regret to say that our old friend, Mr. E. Morrow, has disabled his left hand, and was unable to compete. The annual dinner took place at the club-house on the 5th inst. Mr. J. King presided. After a most excellent repast, the remainder of the evening was devoted to harmony. Messrs. Parrott, North, Brookman, Tye, Webb, Channell, Hutchins, Wilson and Berry contributing to the success of the gathering with songs and recitations. Mr. Thos. Harris officiated at the pianoforte, ably assisted by Mr. H. Morrow. A unanimous vote of thanks was given to the host, his catering being faultless.—THOS. GRETTON, sec.

July 12.

THE WALTHAMSTOW ANGLING SOCIETY.

The ordinary general monthly meeting was held at the clubhouse on Tuesday evening last, the president in the chair, when several new members were proposed and others balloted for. A pleasant evening was spent. The general remarks as to angling since the opening day seemed to lead to the impression that very little has yet been done. One member (Mr. Chillingworth) reported having had a good catch of perch—about 22 lb.—several scaling 1 lb. each. Two members reported that they had seen netting going on in the Lea, near the Robin Hood Ferry. When will this be put a stop to?—HENRY HOWSE, hon. sec.

WALTONIAN ANGLING SOCIETY.

About a dozen of our members had a delightful outing on Sunday to fish for a prize given by Mr. Webster. The competition took place at Loddon Bridge, one of the most picturesque spots I have ever seen, and a very fishy-looking bit of water. However, the Fates were unpropitious, the takes being ridiculously small. The winner was Mr. Togwell, with 1 lb. 3 oz. of roach. A dace prize, given by Mrs. Edward Watkins, to be competed for at the same time and place, was not taken. Some of our members went elsewhere, but the takes were very meagre. Mr. Good, jun., and Mr. Roland were the best with 2 lb. 4 oz. each.—A. J. MARRIOTT.

July 12.

WALWORTH WALTONIANS.

The members of this society competed for prizes on the 8th., on this occasion "Father Thames" proved most liberal to those members that visited him nearest "The Great City" (Messrs. Pearson and Boalch, at Richmond), whilst those members that went to Pangbourne (Messrs. Brown and Co.), their great expectations came to grief, and were not realised. The "Figaro" of our

little village and Mr. Howard, jun., travelled as far as Huntingdon, but the Ouse, like most provincial rivers, was not very benevolent to the strangers at first, they, however, managed to get sufficient to induce them to come again. Mr. Fox visited Boxmoor. Here he says, "I caught a net full of roach, but not one that came up to our standard; and, therefore, I returned them to the water again, much to the surprise of the natives that were standing around me." Our old friend, Mr. Evans, also had some fish. The result of the day's outing is as follows:—Mr. Pearson, won Mr. Evans' £2 2s. portrait, and also Mr. Gold's leather tackle case, beating Mr. Boalch, by 2 oz.; Mr. Boalch came second; he takes Mr. Fox's gold scarf pin; Mr. Delehaye followed third, and is entitled to Mr. Green, sen., £1 1s.; Mr. Brown came next, followed by Mr. Howard, jun. The next competition will take place on July 24, 1881, for £1 1s., given by Mr. Piolaine; and 10s. 6d., given by Mr. Irons.—*Pixie*.
July 12, 1881.

ANGLING CLUB SUMMER DINNERS.

The Summer Dinner of the Piscatorial Society will be held at Mr. Deacon's, at the Ray Mead Hotel, Ray Mead, Maidenhead, on Thursday next, July 21, at 5 o'clock. Mr. Joseph G. Andrew in the chair, and Mr. Norman F. Harrison in the vice-chair. The summer dinner of the Friendly Anglers, Hyde Park, will be held at Mrs. Goddard's, the New Inn, Eton, Windsor, on Saturday next, July 23, at six o'clock, sharp.

CLUB AND OTHER JOTTINGS.

By L. B.

FROM Elstree Reservoir good takes are being had, jack and tench being the chief spoil. Mr. Underwood, of the N.W.A.C., has been having some very nice little lots indeed. The Pulborough and Amberley excursions continue to be well patronised. Fancy anglers with their wives, sweethearts, little ones, and friends, to the number of 900, mustering the other Sunday at the station—a two good trains full. Mr. Excell (what a capital name for an angler), of the Battersea Friendly, has had, with the fly, a good take of chub from the Thames. I am pleased to notice that fly-fishing (undoubtedly the prettiest and cleanest style of fishing) is rapidly increasing in favour among London club men.

The Little Independent have had a return visit, and it was well attended. They deserve it, for a better club at visiting there isn't in London. Apropos of club visits, they seem just now almost at a standstill; and it isn't to be wondered at. No jolly angler will be accused of being a sickly, sentimental, squirming, wriggly æsthete, and most of us can draw our tankard of heavy ale, and honest Sir Walter Raleigh, who first introduced the glorious weed, holds a place in our hearts second only to that consecrated to our patron, Sir Isaac Walton. But with the glass standing goodness knows how high, the bare thought of the blazing gas, the smoky atmosphere, and the hot, close-packed piscators is, well—too utter.

Monday, August 1st, being Bank holiday the monthly meeting of East Central Committee will be held on Monday evening, August 8th.

From Mr. Ghurney, *re* the Anglers' Benevolent Society, a report comes to hand that there is a marked improvement, and that a greater number of members have joined since the 1st of May than in the corresponding period of last year. This is good news, but still not enough, and the committee must keep pegging away until every club angler in London is a member of the Anglers' Benevolent Society.

A new society has been started in the City—the Caxtonians, the Falcon, Gough Square—which, by the time this is in print, will have been enrolled on the West Central Association's books. I have been favoured with a copy of the book of rules, which appear excellent; one I could not help noticing particularly, viz., prizes to be given for specimen fish only.

To those members of the West and East Central Association who may feel annoyed at the anonymous letters which have appeared during the last few weeks, misquoting the sayings and misrepresenting the intentions of the trusted and generally respected chiefs of both these bodies, I would repeat the words of Mr. Thomas Spreckley, the respected president of the Thames Angling Preservation Society, at the recent anniversary dinner of that society:—"And now I should like to say a few words about a work which has been done during the past few weeks—not by our society, but by others—and which I look upon as one of the greatest and best efforts ever made to improve the prosperity of angling, and I shall be much mistaken if the fruits of this work do not live to be a benefit to our children and to those who come after them."

On Tuesday, July 12, a deputation composed of Messrs. Thomas Spreckley, president of the Thames Angling Preservation Society, P. Geen, president, and L. Bonvoisin, chairman of the West Central Association of London and Provincial Angling Societies, R. Ghurney, secretary of the United London Anglers Central Committee, and F. Clench, president of the Richmond Piscatorials, waited by appointment upon Sir Joseph Bailey, Bart., M.P., at his residence, 9, St. James Square, to lay before him the views of the London and Provincial Anglers, expressed at the recent meeting of the Society of Arts, with respect to the Salmon Consolidated Acts introduced by himself and Mr. Dodds—so far at least as that Act related to coarse fish or would limit the liberties at present enjoyed by coarse fish anglers.

The resolutions passed at the Society of Arts meeting were laid before Sir Joseph, and carefully explained to him, but the one request, repeated again and again and again, was: "Please leave us out of your Salmon Act altogether—leave us out in the cold; we will look after ourselves, and strain every nerve to get such a measure passed for the protection of our despised scaly ones, as will satisfy 99 out of every 100 anglers in England."

Sir Joseph, in reply, assured the deputation that it had never been his intention to interfere with coarse fish anglers—he represented a

district where, fortunately, coarse fish were almost unknown—but he had been compelled as it were to take the Freshwater Fisheries Act of 1878 into his Consolidating Act, as it treated principally of trout and bass, but a very small portion indeed being devoted to coarse fish. Moreover, it was therein (Mundella Act) distinctly stated "that that so far as consistent with the tenour thereof, it should be read as one with the Salmon Act, etc." (vide Bill). Now he, Sir Joseph, was quite of the opinion expressed by the deputation that the interest of salmon and coarse fish are so distinct and opposite that they cannot be legislated for in the same Act; adding in conclusion: "I have had to abandon my Bill for this session, it having met with much opposition both from the upper proprietors and the present Government, but in any future action I may take I will carefully consider what you have stated. You would, however, be materially furthering your own interests and clearing my way if the amendments you have laid before me were carried into law, not in the form of an amendment to the Freshwater Fisheries Act of 1878, but as an entirely new Act—repealing at the same time the old Act—taking care, however, to embody in the new measure those few portions of the original Mundella Act relating to coarse fish, of which you appear to approve, and I shall be pleased at any time to be of service to you in any way I can." The deputation then thanked Sir Joseph Bailey and withdrew.

From the Welsh Harp fish continue to be had. Mr. Stead, N.W.A.C., on Thursday had a nice jack—1 jack, 5 lb. 8 oz.; 1 carp, 4 lb. 1 oz.; and bream, 9 lb. 14½ oz. (heaviest 3 lb. 12½ oz.) Messrs. Plumpton, junior and senior, and North from private water, weighed in over 40 lb. tench; Mr. Smarth, of the N.W., is also credited with 15 lb. good bream from the Welsh Harp; Mr. Bonvoisin being credited with 3½ dozen of fine dace from Richmond, which, however, he was too late to weigh in.

I had the pleasure one day this week of seeing the splendid trout caught by Mr. Harry Brookwell in the River Lea. It has been capitably preserved, and will form a splendid addition to his grand collection. The fish weighed 12 lb. 14 oz. I believe, up till now, it is the champion of the season, from our metropolitan waters at least. Will it remain so, or yet be beaten by a Goliath from old Father Thames?

Re rod-fishing all the year round, speaking of the 2000 lb. of fish weighed in during last season by members of the North-Western Angling Club, Mr. Keene is reminded by our editor that supposing the club is 50 members strong, it only gives an average of 40 lb. of fish per man. Very good, Mr. Editor; now let's go a bit further. 2000 lb. is a good deal above the average weight of other London societies, which, for practical purposes, may be put down as 15 lb. 12 oz., or 13 cwt. 2 qr. 0 lb. I allow 12 lb. for fish brought into the club room but not weighed, on account of being under regulation size. Now, by multiplying 13 cwt. 2 qr. by 150, the number of London clubs, we shall arrive at the enormous weight of 101 tons 5 cwt. There can be no doubt that the weight of fish annually killed by persons residing in the metropolis, and unconnected with any angling club, is at least considerably more than double that killed by the, in most instances, poorer clubmen, whose opportunities for angling are in many instances few and far between. If these figures are allowed, (and I feel sure they are rather under than over the mark), we shall have the enormous total of 303 tons 15 cwt. of fish annually killed by Londoners alone, almost entirely from a few rivers in the comparatively near vicinity of London. Such figures speak eloquently for themselves, and I think will induce all thinking men to agree with me that there arrives a time when the heavy spawn-laden fish's life becomes too valuable to be sacrificed to the selfishness of the small number who consider a few hours' amusement of greater moment than permanent interests of thousands, who, thank goodness, hold opinions better worthy of sportsmen and disciples of Honest Isaac Walton.

NOTES FROM SHEFFIELD.

THE angling season may now be said to have fairly commenced, thanks to the fine weather we have had of late having helped the "finny tribe" in their work of nature, and we are now having dishes of fish shown in very fair condition. The anglers here hope that the proposed amendments to the Freshwater Fisheries Act will be carried out as soon as possible, so as to become law for next season. The matches fished during the month of June clearly showed the necessity of extending the close time, the greater portion of fish shown being full of spawn, and anglers, being aware of this, will not enter in these early matches, which accounts for their failure.

On Monday last, July 4th, Messrs. Siddell and Sowater gave £20 to be fished for in Wath Canal. There were 254 competitors, and, as usual at this time of the year, very little fish were taken—Mr. Fieldsend winning the first prize of £6 with 8½ oz.

The New Inn Angling Club, held at Mr. Geo. Turner's, had their annual outing also on Monday, at Crowle Wharf, about eighty members and friends going down. The takes of fish were not large, but running very close together, the first four being respectively 1 lb 6 oz., 1 lb. 1½ oz., 1 lb. 1 oz., and 1 lb. 1½ oz.

At the Suffolk Club, Mr. A. Crofts showed a very nice dish of roach in very good condition, weighing above 12 lb.; Mr. Tomlinson, a dish of jack; several other fair catches were also shown.

At the Cup Inn Club, Mr. Morton Littlewood showed a dish of dace from Laneham—the best I have seen for a long time. The number of fish was fifteen, and weighing about 8 oz. to 11 oz. each. Bream and roach were also shown by the various members, one bream completely bursting with spawn.

Mr. Charles Fry had a splendid show of bream from Dunham-on-

Trent—twenty-two fish, weighing 60 lb., all in good condition, and clearly showing that river fish are at least three weeks in advance of canal fish.

The Napoleon Angling Club held at Mrs. Swift's, Green Lane, fished their annual match on Monday last at Saxilby, 90 members and friends going down, they had a very fair catch considering their fishing in a blazing midday sun, and the heaviest weight nearly 2 lb was taken by a cool customer, Mr. G. Winter, the third and fifth prize falling respectively to H. Frost and T. Frost.

Mr. James Dixon's club, the Crown and Anchor, competed for their annual prizes at Lincoln on Monday last, about 50 of them taking part in the competition.

The Trent is just now in splendid condition, water both low and fine, but by all accounts the barbel have not yet commenced biting, several parties having baited for them with no result.

The Witham also in good condition, but the stream being more sluggish, the fish are not in as "good form" as the Trent fish.

There has been a great complaint made from Boston about the very unfair manner of taking a large quantity of good tench when spawning in the weeds, by men calling themselves anglers taking them with their landing nets. It is time such abominable practices were put a stop to. It is a great pity that such pot-hunting scoundrels were not seized by the water bailiff, and thrown into the water they were despoiling. Would not the proposed amendments to the Freshwater Fisheries Act meet such cases as this?—RED SPINNER.

P.S.—I was very glad to see the second reading of Sir Joseph Bailey's Bill was discharged on Monday last.

TO ANGLERS.—W. J. Cummins, Fishing Tackle Maker, Bishop Auckland, is now prepared to forward to anglers his Illustrated Catalogue, which is not only a Trade List but is interspersed with practical hints, useful directions, and valuable information gathered by the river-side from twenty years' experience. The stock consists of his unrivalled Salmon, Trout, Grayling, and Pike Rods, Lines, Reels, Baskets, Artificial Baits, Fly-books, Landing Nets, Gaffs, and last, but not least, his celebrated Trout Flies which for killing powers stand unequalled. Every article kept in stock is of the very best description.—[ADVT.]

ANGLERS should always be provided with something to take away the swelling and poisonous effect of the bites of insects. They should also have with them something to apply to a cut or sprain. Pond's Extract reduces the swelling and inflammation, stops bleeding and pain, and hastens the healing process in case of any wound or sprain; and it has no equal for application to the bites and stings of insects. Therefore never go on a fishing excursion unprovided with a bottle of Pond's Extract. It is for sale at all chemists, at 2s. 3d., 4s. 6d., and 8s. 6d. per bottle.—[ADVERTISEMENT.]

1st AWARD MELBOURNE EXHIBITION, 1881.

DAY, SON AND HEWITT'S STOCKBREEDERS' MEDICINE CHEST.

FOR ALL DISORDERS IN HORSES, CATTLE, CALVES, SHEEP AND LAMBS.

In this chest are the following matchless and world-renowned remedies, all that a Farmer can require to cure disease amongst his stock and keep them in fine, healthy, and buoyant condition:—

"CHEMICAL EXTRACT," for Wounds, Swollen Udders, and Ewes Lambing.

"GASEOUS FLUID," for Colic, Scour, and Debility.

"RED DRENCH," for Cleansing Cows and Ewes, &c.

"RED PASTE BALLS," for Conditioning Horses.

"BRONCHOLINE," for Husk, Hoarse, or Cough.

"GASEODYNE," for Heaving or Paining.

"ALCOHOLIC ETHER," for Colds and Chills.

"CARMINATIVE CHALK," for Diarrhoea in Lambs and Calves.

Price of Chest, with "Key to Farriery," £2 10s. 6d., carriage paid. Each article can be had separately.

Patronised by Royalty, and used for over 40 years by the Leading Agriculturists of the British Empire.

CAUTION.—See that the Name of DAY, SON AND HEWITT is on all Bottles and Packets.

DAY, SON AND HEWITT,

22, DORSET ST., BAKER ST., LONDON, W.,
AND WANTAGE, BERKS.

THE Fishing Gazette Pliers.

(DESIGNED BY THE EDITOR OF THE F.G.)

This Pliers will be found extremely useful to all classes of anglers, as they combine six useful tools in one, viz:—

- Strong round nosed pliers for every purpose of a pliers.
- Knife for splitting shot, large or small.
- Fine wire cutter.
- Strong wire cutter.
- Screw driver.
- Rimer for making holes in wood, leather, &c., or clearing out a ferrule when the top or other joint is snapped off short in it.

The Pliers weigh only three ounces and are made in the best manner and of the best steel, and will be found thoroughly reliable.

The *Field* of Oct. 9th, 1880, says:—Messrs. Barron and Wilson, 436, West Strand, have brought out a handy little tool which will be found very useful to anglers. It looks like an ordinary pair of pliers, but contains really six tools in one—shot cutter, pliers, wire bender, cutting pincers, turn screw, and leather borer or rimer. We have not often seen a handier little apparatus for anglers who are given to make and repair their own tackle. It ought to have a leather case to keep it in, so as to be capable of easy conveyance either in basket or pocket, as convenience is everything in such matters.

Price 4s. Post free on receipt of stamps.

Every genuine pair is stamped "Fishing Gazette Pliers," and has the makers' name on them, Barron and Wilson, 436, West Strand, London.

The Fishing Gazette Spinners.

In consequence of some complaints from anglers that they do not know how to use these spinners, we hope shortly that some will be ready, mounted on trace, and with hooks attached ready for use. They will be advertised in the GAZETTE.

THE Fishing Gazette Lead

(For the spinning trace or for live bait fishing).

Messrs. S. Allcock and Co., of the Standard Works, Red ditch, are sole wholesale makers of this lead. It is cheap, and can be put on or taken off the trace without disturbing the fastenings of the trace in any way.

TROUT AND GRAYLING FLIES.

J. A. GRIFFIN, Practical Fly-maker, begs to inform Anglers that he has in stock some of the best FLIES, both for natural colours and fineness, combined with strength, at 2s. per dozen. Best Gut Casts, all warranted to lift 4 lb., 9d. each. J. A. G. calls attention to his £1 is. 6-joint Pocket Fly Rod. Flies and all other Tackle made to order, and forwarded to any part of the Kingdom, Post Free, WITH ALL HASTE.

Portobello, Late 15. Tything, Worcester.

TAPER SALMON AND TROUT LINES.

Enamel Waterproof in 4 sizes, either single or taper at both ends; these we have made for many years without a single complaint; all speak well of them; they have more spring than the wire centred line (fine cast, no splash), being made exactly on the principle of a tandem whip; used by all noted anglers. See letters in catalogue; woredress these lines and return them in five days equal to new for is.

WIRE CENTRE LINES.—(Enamel Waterproof), Salmon or Trout. These we have made for upwards of 7 years, being the first inventor of them; but our Taper Lines have quite superseded them.

DEEP SEA LINES.

Double Cable Waterproof; we are the largest makers in the world of this class of line, which we spin and cable direct from the raw material. Will outlast four ordinary undress lines; all sizes from whitening to conger; sold by the single line or cwt. For samples, address, with two stamps,

COTTON TWINE SPINNING CO.,
MANCHESTER.

FOR ANGLERS, ARTISTS, &c.,

PORTER'S VEIL SPECTACLES

(REGISTERED).

An entire Protection for the Face and Neck against Midges and all other Flies, Dust, Sun Glare, &c., &c. Price 21s. Sent free on receipt of Cheque or P.O. Order.

CARY,

Optician by Appointment to the Admiralty and Royal Geographical Society, &c., &c.
181, STRAND, LONDON.
(Established over 100 years).

LAKES OF KILLARNEY.

SALMON AND TROUT FISHING.

MUCKROSS HOTEL,

JOHN ROSS, PROPRIETOR.

Anglers, Visitors and Tourists are respectfully informed that this Hotel is situated at the foot of Mangerton, and between the Upper and Lower Lakes, and a few minutes' walk from Muckross Abbey, Torc Waterfall, &c. It stands in the very centre of the Lake and Mountain Scenery (as a glance at the map of the Lakes will show), thus securing a decided advantage over the other Hotels, which are situated far away from most places of interest. It is the most economical and comfortable, and combines the best situation with the most Moderate Tariff of any first-class Hotel on the Lakes.

Please note Proprietor's Name, and see that the Bus you enter bears the inscription—

THE MUCKROSS HOTEL,

JOHN ROSS, Proprietor.

There is excellent Salmon and Trout Fishing on the Lakes, which are free.

DIPLOMA OF HONOUR AT THE
NATIONAL FISHERIES EXHIBITION.
NORWICH, 1881.

Hiles' Spring Plummets.

Small size, 6d.; Large do., 7d. Post Free.

The Trade supplied.

AGENTS WANTED IN EVERY TOWN.

Address—THOMAS HINES, The Bazaar,
Adelaide Street, Norwich.

THE SPRING PLUMMET.—Mr. T. HINES, the inventor of this useful fisherman's accessory, has received a highly satisfactory testimonial of its worth from the well-known anglers, Messrs. A. G. JARDINE and H. L. ROLFE.

FISHING GAZETTE Plummets, 8d. each post free.

GLASGOW AND THE HIGHLANDS.

ROYAL ROUTE.

Via Crinan and Caledonian Canals.

Special Cabin Tickets for Tourists issued during the season—For one week, £3; or two weeks, £5; giving the privilege of the run of all the Steamers to any part of the Highlands where the Steamers may call at during the specified time.

By Royal Mail Steamers,

"COLUMBA," OR THE "IONA,"

From Bridge Wharf Daily, at 7 a.m., and from Greenock at 9 a.m.

Conveying Passengers for Oban, Staffa, Iona, North and West Highlands.

Official Guide Book, 2d.; Illustrated Copies, 6d. and 1s. Bill, with Map and Tourist Fares, free, at Messrs. Chatto and Windus, Publishers, 214, Piccadilly, London; or by post from the Owner, DAVID MACBRAYNE, 119, Hope Street, Glasgow.

LONDON and COUNTY ADVANCE and DISCOUNT COMPANY (Limited).

Cash advances from £10 to £500, without preliminary fees or deduction for interest, for short or long periods, repayable by easy instalments, at moderate rates, upon personal security, life policies, furniture without removal, deeds, shares, bonds, &c. Bills discounted. Forms gratis. Offices, 35, Farringdon-street, E.C. JOHN STONE, Secretary.

ANGLERS should try "PISCAMANNA," the best bait for Roach, Dace, Chub, &c.; is not offensive. Post free 13 and 26 stamps, A. Tuczek, 33, Brook Green Lane, Hammersmith, W.

NOTICE.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., must be addressed to the Editor of THE FISHING GAZETTE, No. 12, Fetter Lane, London, E.C. and should reach the office not later than Tuesday morning.

Contributions are solicited, but the Editor will not undertake to return rejected MSS., unless accompanied with a stamped addressed envelope.

Correspondents are requested to write on one side of the paper only and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to no notice will be taken of such communications.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls, and of the following, amongst other Fishing Tackle Dealers in London and the Provinces :—

Messrs. Alfred and Son, Moorgate-street.
Messrs. Price and Co., 8, Seymour-street, Euston-square, N.W.
Messrs. Williams and Co., Great Queen-street.
Messrs. Gee and Co., St. Andrew's-street, St. Martin's-lane.
Messrs. Gee and Co., Gray's Inn-lane (near Holborn end).

The Fishing Gazette.

SATURDAY, JULY 23, 1881

SPINNING FOR TROUT.

By W. J. BULLOCK.

SPINNING the natural minnow is not only one of the most certain methods of securing a good basket of trout, but also one of the most difficult of all the arts of angling to thoroughly master. When good sport is practicable with

the fly, then that truly elegant style of fishing beats all others ; but how often is it that the low fine water, bright sky, and hot days of June or July, makes fly-fishing totally unprofitable as regards the creel and sport. It is just under such circumstances as these, that the scientific troller comes to the rescue, finds good sport for himself and good speckled trout for his friends. That there is a vast amount of uncertainty of sport for the angler with the artificial fly, be he ever so clever, is too well known to all experienced anglers. That fishing with minnow just supplies this deficiency and gives good sport, will not be doubted by any but those whose opportunities or angling abilities have debarred them from a trial. It is far wiser to be able to control circumstances, than let circumstances control you. This idea led me to make minnow fishing a study for the last thirty years, with a result that in nine times out of ten I am the master of angling circumstances and not the finny tribe. The qualifications required to be a high class angler with the natural minnow—and the same applies to the use of all the artificial baits (except baiting)—are : I.—Baiting or putting on the minnow so that it shall spin well. II.—The ability to pitch the bait at least ten yards and with wrist action to drop it gently into the water so as not to disturb the feeding trout. III.—A thorough knowledge of the likely feeding places of trout, in any stream, for the same principles applying to all streams where trout do most congregate. IV.—The use of the finest gut, swivels and hooks for the trace possible, compatible with strength to kill the largest fish. V.—The knowledge and nerve to draw the spinning bait at the exact speed through the water and when a fish is seen to run never to increase or slacken that speed. VI.—To know how to fish a stream without being seen by the feeding fish, or for any shadow of yourself or rod to have a similar effect. VII. To have an ability to pitch your minnow into curls, under the bushes, and the very many difficult spots where all the big trout select for their quarters and feeding ground. The angler who is a thorough master of these seven characteristics, can write himself down an M.A. of the trolling art. I very much doubt if my numerous readers of former articles in the FISHING GAZETTE did not find baiting the most difficult point of all, and the most perfect verbal or written description will, without personal explanation and actual example, I fear, in most cases lead to failure. One hour of practical instruction on a river will teach more than columns of written theory. As my description of baiting appeared in the FISHING GAZETTE on August 8th, 1879. I will not repeat it now. The use of one of the many excellent substitutes for natural minnows, the artificial baits, answers every purpose for practising the trolling art, and every angler should have one or two in his book to fall back upon when minnows run short; but, long and wide experience in hundreds of rivers in Europe and America, has convinced me that it is far easier to kill ten brace with the real minnow than three brace with the best artificial bait yet made or invented. In certain brooklets, where the water is rapid and trout are small and fed well, no doubt a cleverly fished artificial will be nearly as effective as the natural bait, but in larger streams where trout are more difficult to get at, I find there is no comparison between the two plans. Next in importance to having a good spinning-minnow on your trace, is the power to pitch it to the exact spot, where a good judge thinks his trout lies feeding. Your rod should be light, rather stiff, and about sixteen feet long. The line should be about two feet shorter than the rod, and the bait is propelled by an under hand pitch, with a peculiar wrist action, and never thrown over hand. Just as the bait gets near the water the hand through the wrist, must make a slight sudden drop, which causes the bait to rather glide than flop into the water. It should be allowed about a second to sink, then drawn down hill or across the stream at one uniform speed, for any increase or diminution in the drawing rate when a fish runs will, in nine times out of ten, cause master trout to stop running. With the natural minnow I never make a halt and start again ; but, when using the artificial minnow, it is often advisable to do so, as trout are not so dashing at this, and will not run so far as they will after the real article. It is also very advisable when trolling for salmon with colley (loach) or minnow to make short stops and start again, as salmon never dash and follow like the trout will, but rather take the bait with a grab as it passes near them. The drawing pace, too, for salmon is several degrees slower than when trolling for trout alone. If a minnow is drawn too slowly a trout will hardly look at it, not so the salmon or pike. In trolling you never need fish the same water twice, and about four pitches is enough to fish an average-sized stream. The part of the stream nearest you should invariably be fished first, then the centre, third the farthest side, and lastly the curls or covered spots most difficult to get at. The lower the level the angler can keep the better will he hide himself from observation, and by wading up stream, an angler can get closer to a feeding trout unseen than from any other position. I have seen a trout not three yards above me in a stream feeding freely, and by pitching the bait about a yard

above him have killed him close to where I stood, for, once a fish makes a start to run, he seems to lose all fear of consequences. In June and July, unless the day be dull or showery, the times for the minnow are early in the morning and from 6.30 to dusk in the evening. Trout, after a hot day, leave the deep water and get out in the shallows and into the streams, and will travel from 50 to 100 yards to a good feeding place, so that places then must be fished, that at other times are always drawn blank. No matter how low or clear the water is, a good troller who keeps well out of sight, will kill fish when the sun has gone down, if his minnow spins properly in what streams there are. As a rule, drawing against the stream is to be avoided, except in such cases where trees or other impediments compel you to do so. It is ten times as easy to induce a fish to rush down stream, or across from his lair than to run him up hill. The proper plan is to pitch the bait above the spot, and draw it close enough, in passing his feeding spot, to be seen. Where this cannot be accomplished of course you must pitch it to where he lies, and draw up stream; but it is in this case that your skill will tell, in gliding the bait into the water, as any flopping will frighten him off his feed. The knowledge, when glancing on a stream, where trout will select for their feeding ground for all kinds of angling, is of the highest importance, but more so in trolling than any other, as this knowledge tells you exactly where you should spin the bait, and how you should pitch it, and afterwards draw it, and the exact position you yourself should occupy. The biggest trout do not as a rule feed in open streams, but rather in some quiet secluded curl near a good hold, or under a shelving bank under which he can hide himself, or at the head of some stub, or trees in the water, or under some bushes where the water comes round. When large fish are killed on the open stream, it is a sure sign that they are well on the feed. Small $\frac{1}{2}$ lb. trout are found chiefly in the slack waters by the side of a stream, and in the open places; or if there is a stake or other impediment to break the water in a stream, that spot is sure to hold a feeding trout. When water is very clear and low it is far wiser to run the risk of being broken by a big fish through using the finest made traces, than frighten your fish away by coarse gut and hooks. When the water is full and slightly discoloured, this precaution is not so necessary, in fact, trout will take the minnow more freely in a stained water, either before a rise or when falling, than at any other time. The artificial bait then, too, I have found to be more effective than in clear water. Trout very often, when caught, vomit or force the minnow off the hook up on to the gut. With care the minnow can be again placed in its proper position without being destroyed, but unless it spins well, cast it off and put on a fresh one. The medium-sized minnows are the best, and large ones the worst, though when a large bait spins well it need not be wasted. In my experience, all the very big fish have been caught with the middle-sized minnow, which is about $1\frac{1}{2}$ inch long. When the baits are full of spawn, this should be pressed out, after baiting, as, then, they spin more naturally. The dark-backed and white-bellied minnows are far the best, and the stream-pink or red-finned ones the worst. I have now in my house a wonderful example of the longevity of some minnows kept in confinement. When grayling fishing in November, 1878, I left my bait can, with some dozen minnows, in the water, where they remained until the spring of 1879, when I found them still alive. These I brought to London, and put them into a glass globe, about one foot in diameter, with a small hole of 2 inches wide at the top. The water has been changed about every two days, and a few flies, bread-crumbs, and bits of meat have been their food. Three of these minnows are now alive and healthy, and when a fly is dropped into the globe they all dash at it and look for more. Formerly they numbered a dozen, but several were used for baits, two or three died, but three still survive. All there is in the globe are a few shells and gravel pebbles, and for such delicate little fish to live so long in the London water, as supplied to my residence, is no small compliment to its purity. As I am now resident in London, if any piscators who received my traces will bring a few minnows or make an appointment by letter, I shall only be too happy to give them the true method of baiting and making the minnow spin, so that few trout can resist its tempting fascinations.

20, Colville Square, W.

RIVER AND SEA FISHING IN SOUTH DEVONSHIRE.

IF any of our readers require any information about the fishing in Devonshire, we can advise them to send to Mr. Hearder, of 195, Union Street, Plymouth, for his Guide to the Sea and River Fishing. The rivers described are the Plym, Yealm, Tavy, Walkham, Nottar and Inney, Erme, Avon, Dart, Teign, Slapton Lea, &c. It is a most useful guide and catalogue in one.

FISHERIES PRESERVATION ASSOCIATION.

A MEETING of the Council of this association was held on Wednesday, the 13th of July. His Grace the Duke of Northumberland in the chair. It was called mainly to consider the question of the "Fish Supply of London," and how the association could best assist the present movement to remedy the great defects of that supply—namely, its inadequacy, defective distribution, and excessive dearth.

After considering the subject, the meeting, while most cordially approving of the steps that were being taken to remedy so crying an evil, as under its existing conditions the London Fish Supply undoubtedly was were of opinion that until some definite proposal for redressing the evil was before the public, it was better for the association to defer taking any action in the matter, but that when the period arrived at which the association could usefully aid the movement, the council thought it certainly ought to do so.

Mr. James H. Crossman, who was present, on the invitation of the council, at the discussion, kindly engaged in his capacity of a member of the Fishmongers' Company to bring before the court of that company anything connected with the question which the council might wish to have brought before it, and also generally when opportunity offered, to aid the movement in any way he could.

The meeting considered the short Bill of Mr. Stuart Wortley and Mr. Dodds "to amend the Freshwater Fisheries Act, 1878," now before the House of Commons, and there was no particular objection to the proposed amendment, which was one to permit fishing for freshwater fish with rod and line during the close time (15th March to 15th June).

The "Rivers Conservancy and Floods Prevention Bill" was then considered, when, finding that the Select Committee had expunged from the Bill Clause A, which empowered Conservancy Boards to enforce the Rivers Pollution Prevention Act, 1876, the council thought that though, for various reasons, it was very unlikely the Bill could be proceeded with this session, still some effort should be made not only to get the clause re-inserted, but that certain words should be added to it, to enable the boards to enforce the Pollution Act without the necessity of first obtaining the consent of the Local Government Board.

Mr. Birkbeck, M.P. for North Norfolk, who was present, thereupon undertook to see that a notice was placed on the notice paper of the House of Commons of the amendment desired.

The meeting expressed its satisfaction at finding that while the Bill was in the House of Lords, the vice-president of the association, Lord Abinger, had succeeded in procuring the insertion of a clause (clause 52), providing that no dam or weir shall be constructed in any salmon river without a proper pass for salmon, in accordance with the Salmon Acts, 1861 to 1876.

It was stated at the meeting that the Bill "to consolidate and amend the Salmon and Freshwater Fishery Laws of England and Wales" had been withdrawn. The meeting also heard, with pleasure, that as one result of their inquiry into the disturbances of last winter in the district of the Upper Wye, the Inspectors of Fisheries had reported decidedly against any legalisation of the capture of samlets or the shearing of salmon.

After some merely formal business, the proceedings then terminated.

HINTS TO WANDERING ANGLERS.

By J. P. WHEELDON.

IT is more than likely, that when the present cool and temperate weather (I am writing just after the first great thunderstorm of the swiftly passing summer) has had a spell of its own sufficient to make us all long for its further continuance, it will be succeeded by a second edition of the scorching tropical heat through which we have just managed to exist, most of us panting, and some few weary nigh to death of the glorious beauty of the sun. Then shall we have the rivers low again, and bright as crystal, while fish want an infinity of skill in even approaching, and an almost superhuman exhibition of craft before they can be deluded into nibbling at a hook, be it ever so daintily concealed, with snow white pellet of paste, or luscious yellow bunch of wriggling twisting gentles. In July and the early part of August many toilers cease for a while their constant labour. The ever-thinking, ever-reflecting, many times aching brain, is at rest, the hands lie idle, and many weary plodders in the rank and file of life, —an honourable battalion—taste once again the sweets of genuine idleness. It is only the constant worker, the everlastingly busy bee, who can really appreciatively enjoy thoroughly idle hours. Some tramp, off with a knapsack girded over their shoulders, stout stick in hand, to "do a mountain." Let them "do" it, I'll none of it, rely upon't. Others take long walking tours, for the express purpose of being able to tell Tommy Tiddler, when they get back to "the office" that they have "reeled off" so many hundreds during the fortnight. Well, that is another species of amusement that I am not partial to. Dreaming by the sad sea waves is very nice dreaming, and particularly if one's mind is "set fair," at that ridiculously impressionable

period of one's life when one swears by one's mistress' eyebrows, when bloaters and mutton chops seem repulsive, and one feels equal to slaying one's own grandmother if a suggestion is made that the loved idol is anything short of an immortal goddess, condescending for one's own special behoof and gratification to walk the earth an ordinary human being. With none of these have I anything to do, or a single thought in common. My hints, such as they are worth, are addressed to my fellow craftsmen, and such of them as have been day dreaming for months, as I have done in days gone by, over their dusty musty ledgers, or among the clang and clash of hurrying wheels and ponderous machinery. Thinking, aye, of terrible battles with the finny tribe, perilous encounters, full of strange chance and marvellous incident, and which, as a rule, never—well, hardly ever—come off. I propose, therefore, good readers, with your kindly consent, to drop a hint or two, possibly serviceable, possibly not, *in re* two of the most popular forms of amusement and recreation known to the London angler or to most of those living in large towns. I boldly proclaim, at the risk of being Boycotted or suffering some other direful fate, that roach fishing is the prettiest and most skilful angling in the whole category of sport, while barbell—ah, barbell—is the grandest, the most exhilarating fun in the world. Always supposing you can get 'em on. In that lies the whole secret. If you can, you can snap your fingers at all the expensive luxuries that go to sum up a man's happiness; if you cannot, you can but go home and try to find relief for your disappointment in tea and skittles.

What trout fishing, with all its subtleties, is to the wealthy, so roach angling from the bank, with all its patient *finesse* and delicate attention to the matter in hand, is to the humbler, yet not a whit less true and honest, disciple of the art, the poor artisan or clerk. What salmon fishing is to the noble owner of a Scottish or Norwegian river, what mahseer killing to the wealthy Indian nabob—with his tribe of attendants, fan wielders, hookah bearers and slaves cunning in the mystery of making cooling iced drinks, punkah cooled tents, and an elephant to take him home to tiffin—so is a punt on a lovely Thames reach, with an attendant in the shape of an old fellow with bared arms, the veins and sinews standing out like whipcord, his head covered with a battered straw hat, a gallon of beer in a stone bottle, a long landing net, and a sack of Nottingham lobs, a tub of clay, and a jolly litter of moss and chopped worms, to the man who can screw a sovereign or two together and treat himself to a day or two's barbell.

The mischief is that but few of those who have only a spare day at command at long intervals really know where to go to or what to do to ensure a fish or two when the long-looked-forward-to holiday does come to hand. Thus I offer a suggestion or two; and premising that it is more than likely we may have a repetition of the late sweltering weather, when ordinary well known styles of angling for roach and barbel are next door neighbour to being absolutely useless. I start with a few notions out of the common every-day track. First, as to roach, where to go and what to do. The Lea, beyond all doubt, is one of the best, if not the very best, rivers near London for roach fishing. It has one drawback, however, and that is that it is constantly fished day after day by the very best roach fishers in existence, and as they do not always "score," it is fair to assume that the fish are getting remarkably well educated and up to snuff, or gentles, as the case may be, and a little "too too" on the score of artfulness. St. Margaret's, the Rye House waters, teeming with fish and ancient local associations; Broxbourne, with its acres of loveliest roses; "Cook's," higher up; and that most charming of all the Lea waters, "Ford's," accessible from Park Station, on the Great Eastern Railway, are all favourite roach waters. In a short paper like this it is impossible to enumerate the various "swims," nor would I advise the pick of a well-known and hence much fished sitting, when scores of others may be found that might turn out "very good goods indeed." At Ford's water, as I recollect it, some few years ago, there are some perfectly charming corners, where, on a scorching hot day, a few fish, and generally good ones, may be picked up "dapping" with a grasshopper, a bright yellow cowdung, or a bluebottle. During the heat of summer roach are always in the weeds and the margin of thick tangled beds of them, or the open bits between the pads of water lilies are good and likely places. Use a long light rod, a stout bit of silk "topping," and a fine round gut bottom. Not too big a hook, nor too thick in the wire, and put your bluebottle or grasshopper on "as an you loved him." Keep well out of sight, that is a *sine qua non*. Do not walk straight up to a likely looking spot, and peer over the bank to see if you can spot any basking fish. Rather creep up on your hands and knees, and poking out your rod slowly and carefully, drop your baited hook, light as a bit of thistle down, in and among the open spots, and let your fly or hopper "biz," and make little rings upon the surface of the water. If there are any big roach there, mark me it will not be long before they rise slowly, and after swimming cautiously round and round the baited hook, appetite at last gets the better of reflection, and they do the deed entirely.

Swiftly moving water, or "runs," between banks of weeds are also wonderfully likely places. Here, if the fish are not amenable to good yellow gentles, or sweet clean paste, generally as good baits as can be found, I would strongly advise a trial of the freshwater shrimp. In hot weather they swarm in the shallows, and can be easily caught with a small gauze net. In fishing with this tender bait use a fine wire hook of small size, run the hook point in at the shoulder of one shrimp and draw up the shank. Then take another, as lively a specimen as you can pick, and just "nick" him through the tail, letting the point of the hook come out on the upper side.

Another curious bait, and by no means a popular one either, is *Conferva rivularis*, "crow silk" or "flannel weed," and found

nearly everywhere in the heat of summer. It may be seen adhering to old piles, stones, sluice gates, and large boulders under water, and from its fine silky appearance is unmistakable. Numbers of anglers entirely ridicule this notion of killing roach, asserting that it is preposterous in the extreme to imagine that when the fish have an unlimited supply close at hand, they are likely to take one's bait. I confess there is a good show of reason in the argument, yet how is it, that when baiting, say with carrion gentles, and throwing in many thousands of the wriggling vermin fish instantly, if upon the feed, annex the bait offered them, and many cases when it is not "scoured," but is in precisely similar condition to those already thrown in. One thing is absolutely certain, and that is that many grand bags of roach have been made by the use of this very weed, well washed and freed from impurities, and then simply strung or wrapped round the shank and bend of an ordinary hook.

Again, edible shrimps, and particularly the pink ones, are famous baits for big roach. They should, of course, be used upon ledger tackle of a very fine character. Always peel them clean of any external skin or shell, and put the hook carefully in, so that the bend of it corresponds very much with the bend or shape of the bait itself. Give a fish plenty of time with the bait. He will usually nibble a long time, but when he pulls at the top joint do thou likewise, but t'other way about.

Roch are, of course, found in nearly every yard of Thames waters, but it is a river nevertheless that I cannot conscientiously recommend to the bank fisher. As a rule the catches from the bank run very small, save, it may be, in the winter time. The reason is obvious at once. Nine out of every ten anglers who fish the Thames regularly do so from a punt. Hence the fish are kept constantly hanging about baited swims, and the best of them fall to him who happens fortunately to catch them in a taking mood. Of all places I know of, commend me to Goring, Mapledurham, Streetly, and Windsor, on the Thames; but for a regular paradise for the roach-fisher let me whisper of the Hampshire Avon. There the fishing is literally marvellous, both for size and number, and I have little hesitation in saying that an "artist" could fill his basket with thumpers every day in the week.

Now, *re* barbell. I am quite prepared to find, although I have just had a most wonderful day on the Thames myself, that the present season will be a bad one for this king of all the game fighting fish of the river. The water is so low that there is little, if any, stream in their usual haunts. I am much inclined, therefore, to think that, when it is possible for them to do so, they will head up to the weirs, so as to get the best chance of a mouthful of aerated water. Half the failures in barbel fishing, however, may be traced to three separate causes. In the first place, a good many anglers—simple-hearted, unsuspecting men as they are—leave "baiting a swim" to their puntmen. Well, that, rely upon it, in nine cases out of ten, is a hideous error. I am not prepared to say that *all* would neglect their customers' interests, but I know that a good many would, and laugh in their sleeve into the bargain. Then, say I, do as I do, and bait for yourself. A second fruitful source of disappointment arises from the fact that in scores of cases not one-half the quantity of worms, nay, nor a quarter, necessary for properly baiting a big swim are ever used. From ten to twelve quarts are positively not one too many; but after this quantity the fish should be given at least twenty-four hours' rest, and let not another worm be thrown in in the interval between baiting and fishing. Then, again, there are numbers who bait at night—sometimes the very last thing, too—and fish in the morning. How is it possible, under such circumstances, that one can expect fish to feed? To my mind, it appears like feeding a bilious alderman or common councillor on a tremendous dose of real turtle and green fat one hour, and offering him a dish of fat pork chops swimming in grease the next. Some one may say at this point, Well, I know an alderman or two that would "come on the feed" directly. In answer, I would suggest that although they might do so, barbel wouldn't. In barbel fishing the first thing necessary is a heavy baiting done under your own nose; the second, plenty of time given to the fish before angling; and the third is a pick of a likely locality and a suitable place.

To point out a special place upon the Thames is not an easy matter. Barbel are here, there, and everywhere; but certainly Shepperton, Penton Hook and Laleham, Old Windsor weir, and the old river, Windsor itself, and Boveney, Monkey Island, and higher up, Sonning and Mapledurham are splendid "shops." At the present time, I should strongly recommend weir fishing, for the reasons given earlier. If it be possible to find a deep back run, swift and characteristic of running straight up to the head of the weir fall, and it is found also possible to get a ledger lead to lie there, bait such a place well, and I do not think it will be found to have been labour in vain. On the other hand, if there is no weir close to the scene of your pleasant holiday, find out the swiftest and deepest run close under marly shelving banks. In any event, I wish you success right heartily.

ANGLERS should always be provided with something to take away the swelling and poisonous effect of the bites of insects. They should also have with them something to apply to a cut or sprain. Pond's Extract reduces the swelling and inflammation, stops bleeding and pain, and hastens the healing process in case of any wound or sprain; and it has no equal for application to the bites and stings of insects. Therefore never go on a fishing excursion unprovided with a bottle of Pond's Extract. It is for sale at all chemists, at 2s. 3d., 4s. 6d., and 8s. 6d. per bottle.—[ADVERTISEMENT.]

MRS. F. Y. BROOKS, Artificial Fly Dresser, 4, Mill-street, Conduit-street, Hanover-square, London, W. A stock of best flies always on hand. Flies made to pattern. Lessons in fly making given.—[ADVT.]

SCENTED BAIT.—HAVE FISH FEELING?—THE
MILLER'S THUMB.

IT would be a source of great interest if somebody would try the various recipes given by early writers on fishing for scented pastes, and report thereon. Oppian speaks of

"A paste in luscious wine the captor steeps,
Mixed with the balmy tears that Myrrha weeps."

Pliny talks of a vegetable gentle termed "the earth's poison" (of the *cyclamen* family), used by the Campanian fulemen. Another later writer gives assafoetida, oil of polybody, of the oak, oil of ivy, and oil of bete, mixed into a paste—a delightful mixture truly. What shall be said, however, of the prescription left by Mons. Charas, which consists of man's fat, cat's fat, mummy finely powdered, cummin seed, distilled oil of spike and aniseed, civet and camphire? Even the powdered bones of a dead man's skull are recommended as a flavouring for worms, as well as oil of whelps or puppies, and fat from a heron's leg.

* * * * *

Do fish become insensible or delirious when out of the water? I fancy some do, but it is a ticklish question. Mr. F. Mather (U.S. Fish Commission) writes me about the blue fish of America, that they are fearfully spiteful when detached from the hook, and only second in ferocity to the shark, snapping at anything within reach. The eel, of all freshwater fish, seems to invariably retain its faculties when out of its element, and the conger is notably fierce and determined in its resistance after capture.

* * * * *

Have fish feeling? asks Mr. Palmer, and instances his taking a roach after its eye had been accidentally torn from its socket. Before replying to his question, I may say that Mr. H. C. Pennell (author of the "Modern Practical Angler," &c.), once caught a perch with its own eye, and an exactly similar event happened to me; moreover (as detailed in my "Practical Fisherman," page 25), I once cut out the eye of a tame carp—which certainly, however, was hanging by a slight portion of nerve or integument—and the same fish, minus the eye, responded to the call of its keeper to be fed at its normal time.

Now, as to the question—perhaps he will forgive me if I quote from my book aforesaid, supposing of course that he refers to the pain caused by ordinary capture. Of the pike, after quoting instances, I say—

In any case, it amounts to a certainty that the struggling fish on ordinary tackle does not suffer the excruciating agony which is supposed to accrue from the anticipation of capture. The foreknowledge of death is denied man, unless he can gather it from his surroundings, or it is communicated by speech—it is never intuitive. The hooked fish can certainly not reason from cause to effect. It seizes a bait; pain of a slightly discomfiting nature warns it of something being abnormal, and it appreciates at once that its movements are not absolutely free. But I conceive that this resistance only heightens the enjoyment of its capture of the bait, which, were it not for the sense of physical discomfort imparted by the presence of the hook to the fish, would be unalloyed whilst it lasted. The hunting spirit is inherently a pleasure in all animals of prey—the pleasure of satisfying hunger—which having been enhanced by its exercise, is its crowning joy. The struggle is not painful, but must be pleasurable, for it is merely an exercise of muscular power, and the exercise of power of any kind is, up to limits dictated by the organism, a pleasure. In man the intelligence, which in some cases foresees a failure to get the object aimed at, becomes helpless in the strife, and then the strife becomes pain. With the athlete, racing, walking, jumping, or wrestling, the *finis coronat opus* is before him. Take away the crowning hope, and the struggle is slavery; and slavery is, to a fine intelligence witnessing the extent of the failure, excruciating torture. Suppose, however, the crown possible of being won, then contest is a natural pleasure, which shows itself throughout animate creation. Thus it is with hooked fish. We have seen that the pliant rod and fine steel hook can cause but little inconvenience—in fact, it simply stimulates the zest in the antagonism at work. The fish, especially pike, with a minimum of nerve material, anticipates no untoward ending and, until its vital force is exhausted, it is not discommoded, and even then its condition seems to me to be more that of a wearied contestant than that of a combatant hopelessly struggling against superior force, yet tortured with a full sight of his inevitable doom. Indeed, I am inclined to the belief that, as the pain of the hook wound is almost nil, the pike enjoys the fight, *per se*, recognising nothing behind or before, above or below, the combat.

The whole fallacy which condemns fishing as cruel consists in

an ignorance of the vast distinction and difference between fish and some other objects of sport.

* * * * *

The derivation of the name of *Cottus Gobio*—Miller's Thumb—is not generally known. Yarrell indicates that it is derived from the fact that the thumb of a miller (being, of course, the most sensitive of all fingers in every case) so frequently employed in the estimation, by feeling, of the quality of the meal, is rendered broader at its extremity, hence its similarity to the chestnut shaped nail and end of the thumb of a practical miller. As an addendum, I may add that there is no doubt but that almost every mill-stream in the kingdom possesses this fish. "Bullhead," its other *nom de plume*, declares itself. Mr. Manley gives a string of verbs showing the obvious derivation: bull-trout, bull-beggor, bull-briar, Bullier, bull-dog, bull-fice, bull-finch, bull-frog; all of which verbs have reference to a real or fancied preponderance of "head and front" development.

J. HARRINGTON KEENE

A NEW FRESHWATER FISH.

ON the borders of Westmoreland, nearly fifteen hundred feet above sea level, the river Greta issues from Stainmore Common, from whence it runs its swift course of some twenty odd miles, joining the Tees near to Rokeby Hall, three miles below Barnard Castle. Its upper portion partakes of the character of many another moorland burn. Nearing the village of Bowes, as if ashamed of itself, the water several times disappears, leaving the regular bed of the river quite dry, and at intervals of about half a mile bursts through rugged masses of stone into its ordinary bed. Below this it is joined by the Sleightholme Beck, a tributary of somewhat similar size, but partaking of a more wild rugged scenery.

Happy are the favoured few who have permission to fish those waters. The fish, though not of the largest, are plentiful and good in flavour, showing good play when hooked, as the disappointed angler finds to his cost, when, hooking a fish slightly larger than his brethren, he snaps some favourite cast and regains his liberty. Half-pounders are by no means uncommon, with a slight sprinkling of much larger fish. They are capital risers to the fly, and it is a thousand pities that in so good a river for the artificial fly, proprietors, when so kindly granting leave to fish, do not restrict angling to that means of taking them, and consign the minnow, creeper, stone fly, worm (especially clear or low-water fishing, with the worm), and all such pot-hunting lures, to oblivion, or some larger stream where their continued use will not spoil the fishing. Owing to its mossy source, the water, even when very low, is coloured, and a slight spate is quite sufficient to give it a deep porter colour. Fishing one summer's day in just such a water, with varied success, I neared Gilmonby Hall. Thanks to the breeze blowing from Bowes Moor, so noted for its grouse-shooting, the day, though very bright, was not uncomfortably hot, and the rises just sufficiently plentiful to prevent the attention flagging. Near Gilmonby Bridge the river falls, by a series of miniature cascades from pool to pool, a very haven for one of those large trout you hook once in a lifetime; and under that ledge there, just where the water is in such a boil, sure enough there he is! Note his beautiful golden colour—the very pink of condition. Rising too, so quietly and regularly. Just as, according to books, a large fish should rise. None of your splash and bluster about that customer. He means business, and I quickly cover him with my end fly. He rises at it, but comes short. I repeat the process with similar results: I change the fly; I try many flies. He still comes, but more warily. At length the truth dawns on me. It is a fish from the pool above, has been hooked, has broken the cast which is now lapped round that stone which is just visible through the dark water. He must be hungry, or he would not rise so frequently. If I leave him he will starve. Could he have broken his hold he would have done so by this. I'll net him. Cautiously I crept along, keeping well out of sight, my landing-net deep in the water so as not to alarm him. I take one more peep to see if he is still there, plunge my net under him, and bring to the surface the tail of a large yellow cat, whose body I now can plainly see laid on that large stone with a brick round his neck.

W. S. L.

TO ANGLERS.—W. J. Cummins, Fishing Tackle Maker, Bishop Auckland, is now prepared to forward to anglers his Illustrated Catalogue, which is not only a Trade List but is interspersed with practical hints, useful directions, and valuable information gathered by the river-side from twenty years' experience. The stock consists of his unrivalled Salmon, Trout, Grayling, and Pike Rods, Lines, Reels, Baskets, Artificial Baits, Fly-books, Landing Nets, Gaffs, and last, but not least, his celebrated Trout Flies which for killing powers stand unequalled. Every article kept in stock is of the very best description.—[ADVT.]

A CAPITAL BOOK FOR ANGLERS.

MR. J. HARRINGTON KEENE'S name is so well-known to our readers that it is with the greatest pleasure we notice a work entitled "The Practical Fisherman" by him, recently published at the *Bazaar* office, 170, Strand, London. We will say at once that, in our opinion, this is one of the best and most complete works on angling which has appeared in recent years, and every angler should add this charming volume to his library. Mr. Keene treats—and in a very pleasant, chatty style—of the natural history, the legendary lore, and the capture of our British fresh-water fish, and of tackle and tackle making. Under his own supervision, a most competent draughtsman, Mr. H. White, has delineated the various fish from nature, as also the best tackle, floats, &c., in vogue. The specimens of the illustrations which we

opinion there is no rod superior to a well-made Japanese cane 'telescope' rod, that is, for ordinary still bank fishing. 'Why?' it may be queried. 'Because' of the following reasons, gentle reader. The ideal of a roach hole accessible from the bank, and not only the ideal but the general character of all the successful swims of the bank angler, is as follows: Chiefly gentle running water, considerable depth, weeds beyond, or a rapid stream, as well, probably, as such inconveniences as sunk stumps, roots or boughs, from which it is desirable to restrain the fish when hooked.

"Take up a Japanese 'telescope,' therefore, and observe the fulfilment of the requirements indicated. You have a rod, when extended, of almost perfectly symmetrical build. It is *light*—very light; it is sufficiently pliant, yet, in proportion to its length (of, say, from fourteen to twenty feet), it is a stiff rod, and is nearly perfect for restraining your fish, when hooked, from entering the 'inconveniences' surrounding the scene of action."

Our want of space forbids our completing the remarks on these Japanese rods, but although we never saw them until we accidentally opened at page 115 just now, we are glad to find

print in connection with this notice will speak for themselves; though, in justice to Mr. White, we must mention that his cuts printed for the book on fine-toned paper, must look better than when printed with the text by thousands in our columns. Except in the case of works illustrated by enormously expensive steel plates we know no engravings of fish better than these, and, as being true to nature, none so good.

Mr. Keene is a practical angler, and a very clever writer. It is a pleasure to read his pages, and we venture to say there is not an angler living, however experienced, who may not learn something, and get much pleasure from his book. Open his pages where you will you will find something good. We did so after writing these lines, and came on the following:—

In speaking of roach-fishing, he says:—"Plunging into this branch of the subject, I may be first allowed to make a selection of a suitable rod. In my

they so entirely coincide with our own opinion as to the proper rod for the bank angler for roach. An ordinary cane rod is a very cumbrous affair, and tires the arms to a degree only equalled by spinning with a hard wood rod. These Japanese rods will easily kill any fish except pike, barbel, trout, or very heavy carp; they are very cheap. The only suggestion we offer respecting them is that the top should be supplemented by a fine lance-wood top, and that light brass ferrules should be put on the joints, and rings and winch fittings. The whole cost of this, including the rod, will only be about five shillings.

The salmon and trout fisher will find Mr. Keene's book of great interest to them, and the instructions and illustrations in fly-making are very good. We conclude by most cordially recommending it, and congratulating the publishers on the very handsome manner in which they have got it up.

THE ROYAL RIVER OF THAMES.

THE royal patronage which has been extended to the operations of the Thames Angling Preservation Society makes the Thames, as regards the fishery of the "City waters," a royal river, and invests the association with a position of the highest importance. It is now to all intents and purposes a royal society, and should secure a more general support from the anglers of the lower Thames, who ought to regard its operations as deserving of their pecuniary recognition. There can be no doubt that the society as the oldest and largest Preservation Society possessed a well-grounded claim on the patronage of royalty, and the act of Mr. Edward Birkbeck, M.P., in obtaining H.R.H. the Prince of Wales as patron commends itself to every Thames angler. Since the attachment of Mr. Thomas Spreckley to the society, its work and character has become manifest to all; the time which he has given, the influence he has bestowed, and, above all, the well known pecuniary liberality with which he has supplemented all his efforts, has without doubt given such an impetus to the society as to make it more popular and more deserving of support; and I am sure nothing pleases him more than to find the anglers rallying round the standard of the society, and by becoming annual subscribers recognising the work of himself and the committee who are his fellow labourers in it. It is generally remarked that the Thames Angling Preservation Society has become a really active institution and a national association. It has now the Prince of Wales at its head, supported by the Duke of Buccleuch, the Duke of Roxburghe, the Duke of Northumberland, Earl Percy, M.P., Earl Ducie, Lord George Hamilton, M.P., and Sir W. Hart Dyke as vice-patrons, and therefore, under such royal and noble auspices, its funds should materially increase, and in proportion to this increase the work of protection will be more largely carried out. In these days, when the sport of angling is more largely patronised—when anglers have in numbers increased to an enormous extent—when London and suburban angling clubs are something like one hundred and fifty in number—it is naturally expected that the Preservation Society which has now been established for nearly half a century should so protect the river as to make it safe from poaching, but it is utterly impossible to do this without the generous aid of those who are to enjoy the benefit of Thames preservation. The excuses for netting still going on are of no avail, neither are they supported by facts, and even if a case of poaching goes on by accident who is to blame? Why those who give no support or encouragement to the work of the society. There is a necessity for a larger staff of river-keepers, and only let the income of the society become doubled, and two more wholly paid men introduced, every guarantee would be given that netting would be next to impossible. We are, I firmly hope, coming on to this desired period, and the Thames having become a royal river, will and must greatly strengthen the position of the committee, and enable them to appeal for greater support from the general public on higher grounds than it has ever done before. The Thames Angling Preservation Society has a London office, and has ever been ready to assist in the formation of new associations in different parts of the country and in the resuscitation of those that were dying out. It has, through the liberality of owners of private waters, by the work of netting, increased most considerably the stock of fish in the river. It has completely preserved the spawn of perch from destruction by swans and prevented the escape of fish from the channel of the river. It has now engaged to undertake the rearing of trout, and the stream at Sunbury is now entirely in its charge. It has on the committee representatives from all the angling clubs in London affiliated to the three great central associations; and Mr. P. Geen, who has now become a resident on the banks of the river, as the representative of the West Central Association, holds a deputation to act as an honorary river keeper, with a wholly paid keeper within a short distance from his residence. It has, in fact, all the framework for being made even more useful, and the work of protection considerably enlarged—everything, in point of fact, is arranged for this perfected state of things, as soon as its funds will justify the expenditure; and nothing certainly can be more appreciative to the Prince of Wales in becoming patron of the society, than the voluntary liberality of all anglers, and the general public too, in placing the society in that position. Let there be no unfounded reports of netting, or unfair destruction of fish, which have on recent investigation been entirely disproved, but let all put their shoulders to the wheel and their hands in their pockets—then the work of the poacher will be completely crushed and our lower Thames become a model fishery. One great systematic effort can accomplish this end. The chairman and committee, who are all practical anglers, and the secretary, who has had nearly twenty-two years of experience of the river, will be equal to the greater work, and cause the standard of true and legitimate sport shortly to be erected over the grave of poaching and all unfair practices. One more word

and I have done. The thanks of all anglers are warmly due to Mr. Edward Birkbeck, M.P., for making the "City waters" of the Thames a royal river! B.

THE FRIENDLY ANGLERS' SOCIETY'S PRIZES

FOR 1881.

THE Society of Friendly Anglers, which holds its weekly meetings at the Albion Tavern, Albion Street, Hyde Park, has recently issued its prize list for the season of 1881, and which, considering they are nearly all contributed by members, is of a highly creditable character, inasmuch as the private prizes amount to no less a sum than £101 4s. One of the principal items is that of eleven guineas, which has been raised for the "summer outing," which takes place this day, July 23rd, in the neighbourhood of Windsor, terminating with what is called the Summer Dinner, at Mrs. Goddard's, the New Inn, Eton, a report of which will appear in the FISHING GAZETTE of next week. Although some of the prizes are for gross weight, there is a large preponderance of prizes for large and specimen fish. The Society has long been wanting to possess a specimen jack of 20 lb., or upwards, and one of the special prizes this year, is one of five guineas for a fish of not less weight than 20 lb., the condition being that it becomes the property of the society. It will doubtless be a stimulant to some of the worthy members, and it is to be hoped that the prize will be won. Amongst the contributors for private prizes should be notably mentioned that of Mr. T. R. Sachs, who is not a member of the society, but a guest at the annual dinner, and on which occasion he displayed his usual liberality by offering as a trout prize one of his largest enamel gold pins of a trout, of the value of five guineas. This unselfish act of generosity will be fully appreciated by the Friendly Anglers. It will not be necessary in a list of forty-eight prizes to detail the particulars of each, but the totals offered for each fish. There are four prizes given for trout, amounting to £18 7s. 6d.; the first being ten guineas for the greatest number over 1 lb. each, caught with a fly. The jack prizes amount to thirteen guineas, including the one previously mentioned. There are three prizes for perch, amounting to £6 5s., the best being one of £4 14s. 6d. for the largest fish. Six prizes are announced for the roach anglers, of the aggregate value of eleven guineas, the principal being three guineas for the largest Thames specimens. The dace fishers have six prizes to compete for, representing a total of £5 15s. 6d. Three for the fly anglers, and the other for what is termed rod and line fishing which may, perhaps, be designated as Dr. Johnson's style, but not with his foolish appellation. Four prizes are offered for chub of the total value of £7 6s. There are only two prizes for barbel, one of £2 12s. 6d., for the largest, and three guineas for gross weight. The members last year were unfortunate with the barbel, and it is perhaps owing to this the competitions are so few. It is the opinion amongst the fishermen this year it will be a good barbel season, and as a word of encouragement to the "Friendly Anglers," it is hoped both the gross weight and largest will prove a glorious realisation. The bream have a couple of prizes, one of £1 11s. 6d. for the largest, and the other of one guinea for gross. There is one guinea for grayling, one guinea for carp, and one guinea for tench. The sum of six guineas appears for the greatest number of specimen fish. £6 15s. 6d. is allotted for three specified days. The lively gudgeon has a prize of half a guinea for gross weight. There is a "Consolation Prize" of one guinea for the unfortunates who have made the greatest number of shows without getting a prize. £2 12s. 6d. is offered for the gross weight of the year, and three prizes of half a guinea each for "best specimens." The rules are exceedingly good, both as regards the prize givers and the prize takers—of the former the order is "all prizes to be paid in before the 30th of November," and of the latter "to take only three prizes." It is evident what the "Friendly Anglers" do, they do it well, and in a business-like spirit. They cannot fail to prosper in such an element, for it is as essential in angling clubs as in all other societies to conduct its operations with a strict regard to business—it is a principle which tests the soundness of all institutions—and having this in view, amongst other things, the great toast of to-night, "Success to the Friendly Anglers," will without doubt be drunk with the greatest possible enthusiasm. B.

GEORGE JAMES EATON, of Starkholmes Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[ADVT.]

SOME FISHING QUARTERS IN THE SOUTH-WEST OF ENGLAND.

THERE is no time of year, except the actual close season, in which an ardent angler will not endeavour, when opportunity is offered, to try to throw his fly for his favourite trout. But unfortunately for many fishermen—for those who do not live in some quiet country place, where they can nearly always obtain an evenings' trout—the open waters of England are yearly becoming fewer. Among the many parts of England, however, where the casual angler may be able to enjoy his favourite pastime, the south-west is perhaps as favourable as any. For Londoners it has the special advantage of being easily accessible by rail, which places such as the lowlands of Scotland are not. Nor is it the least of the advantages of the south-west of England that it is essentially a picturesque part, though, after all, who does not find something delightful in the bright colouring of the wild flowers which grow by every trout stream. A good headquarters for the fisherman in the south-west is the town of Axminster, where he is close to the Axe, as charming a trout stream as any angler need desire. It is not, perhaps, the most lively of towns, but what is more to the purpose, the express trains on the South-Western Railway stop there, and the George Hotel is one of those comfortable old-fashioned houses which are becoming rarer in these days of limited companies. The Axe is preserved by an association, whose water extends from Weycroft Bridge, above the town, to Chard meadow, in which space there is ample opportunity for the fisherman to show his skill. The price of the tickets is fifteen shillings for a month, and thirty shillings for the season. The Axe flows through meadows, especially delightful in the spring time, with nice open "stickles" and pools, in which capital trout are to be taken. It is true they are somewhat shy, but after all that need only add piquancy to the sport. Light dun palmers are especially favourites of the Axe trout, and no one should go down to the south-west without a good supply of these flies. In addition to Axminster the angler can also fish the upper waters of the Axe by staying at the Tytherleigh Arms, Chardstock, not far from Chard Junction. Here he will have the benefit of a more bracing air than at Axminster; but he will not find the trout so good as regards size as in the lower waters, and he may perhaps prefer his chance of fewer pound-trout to more numerous quarter-of-a-pounders. Again, too, if he likes the sea, some six miles from Axminster he will find Lyme Regis, one of the quietest and most old-fashioned and inexpensive of watering places, where an omnibus daily runs to Axminster.

Let us now go more to the west. Suppose our angler this journey to take the Great Western Railway to Taunton. Thence journeying on the Barnstaple line, he will, in some three quarters of an hour, find himself at Dulverton Station. Here, as the old itineraries, say, is the Carnarvon Arms, where the fisherman may enjoy comfortable quarters and delightful scenery, and if he finds the water in good trim, no mean sport with the trout. It is just below the station that the Little Exe and the Barle unite, forming the stream which henceforth becomes the Exe properly so called, and some three miles of fishing are reserved to the hotel, whilst in addition there are various pieces of free water. A great advantage of this spot is that the hotel is within a stone's throw of the station, and the Barle a few hundred yards from the house. But the passing angler may, perhaps, be disappointed if he finds the water low and clear; these streams run rapidly down, and their normal condition is to be in this state. Both the Barle and the Little Exe are much surrounded by hazel bushes and wading for thoroughly fishing these waters is certainly necessary, and in the larger stream it is the only way to get at some of the best casts. Light tackle and small flies, and careful and thoughtful fishing will, however, even when the water is low, prevent the fisherman from returning home empty, and he may secure a nice basket of quarter and half pounders. Some seven miles from Dulverton—which town, or rather village, by the way, is about a mile from the station—is the picturesque little village of Winsford, charming in the summer time, hidden in trees in the depths of the valley of the Exe, hemmed in by steep hills. Here there is a primitive but by no means uncomfortable little inn, where the fisherman may well spend a few days if the water is in anything like fair fishing order. The Exe is here almost wholly free, but quite a small stream; but there is no doubt that better trout are often to be found beneath the turf banks of the narrower stream than in the wider reaches of a river, where food is really less plentiful. The straying angler may certainly go farther and fare worse if he neglects at some time or other to spend some part of his piscatorial year on the banks of the Axe or Exe. So far as the writer's experience goes he prefers the Axe, in the lower waters of which the vicissitudes of the weather are not so much felt; and there can be no question that this is a considerable boon

for the wandering fisherman who so often spends his few days by the side of crystal streams, or mirror-like lakes, to depart when the stream is rising or the winds are beginning to blow.

REMINISCENCES OF DOVEDALE.

I HAVE read with much pleasure the paper by A. R. I. E. L., under this head. It contains that peculiar charm of attraction which to me has the especial gift of making the reader, for the time, the companion of the writer, sharing with joy in his success and sympathising with his disappointments. Were it not for these disappointments, angling would lose many of its delights. The loss of fish, if taken philosophically, increases the satisfaction, of a capture, and there is more joy over one caught than the many lost, while experience is gradually learned by the several unanticipated advantages taken by the fish, and to which, if we are just, we give them every credit. How often have I had a heavy fish, which after using admirable art to compete with its tactics, has proved itself indomitable in courage, while resisting to the last gasp. I say, how often have I felt that if I were beaten by that unequally-weighted compeer, I was ready to accord it the honour of victory, and rather felt a satisfaction at its regaining its liberty than otherwise. This may be considered by some a Quixotic sentiment, but when it is recollected that I always fish for sport, and not for an eight-day clock, there are those, I know, who will share in the sentiment which others may scoff at.

There is a good deal of excellent advice in A. R. I. E. L.'s letter which ought to be borne in mind by all intended frequenters of the Dove. Keep away from its waters during holiday times. One of the chief attractions of that lovely and classical river is its holy quietness. And next to the presence of excursionists, I know no greater infliction, unless it would be the apparition of a metropolitan policeman on its "beloved" banks. I can corroborate the writer on the fact of grayling taking the minnow; I took seven, weighing $8\frac{1}{2}$ lb., one morning, in the stream at Wilton, above Salisbury, and while fishing with the late Dr. French (the physician who undertook to bring the good Sidney Herbert, when on the point of death, home alive), and these were taken spinning with a small minnow, and very light and almost undiscernible tackle when in operation. Your correspondent says truly, the grayling will not take a minnow when passing horizontally through the water, and that it cannot be spun too slowly (that is, of course, while it does spin). Here I would say that my greatest success has been to mix trolling with spinning—in other words sinking and rising the bait, and this accords with the habits of the grayling which darts to take its prey generally from a lower level, and at an angle described by the bait. It may be that the fish takes the small minnow as it is rising from the deep for one of those insects to which they are so partial, and which pass their greater span of life in the rocky bed of the rivers, ascending to take upon themselves that wonderful transformation which arrest our wonder and reverence.

Should any of my brother anglers desire comparative seclusion on the Dove, and to essay less frequented waters than those mentioned—I do not say more prolific, although I am inclined to believe so, than those that cannot lose by A. R. I. E. L.'s graceful compliments—I would suggest that they made, not more than a couple in company, for a spot about four miles south-west of Buxton, below Axe Edge, where the Dove is joined to a nameless branch, whose course will be found not less beautiful than that of the main stream. Hereabouts there may be not many pounders, but I have filled a pannier during a cloudy sky, with cerulean interstices, with 12 lb. to 15 lb. of trout, averaging from $\frac{1}{2}$ lb. to $\frac{3}{4}$ lb. These trout are in their native fastnesses, "as strong as houses" (not of the modern construction) giving and taking the best of fun, as though, like hunted foxes, they enjoyed the sport. I don't know what it is now, as the face of England is so changed by the advent of the "miscellaneous" poured out upon the fair face of the earth by the railway. I can imagine from the reports I receive from friends in the Dale that sometimes little short of insult may wait upon the angler by the "do as I like" tribe; but I offer these retreats for what they are worth.

There are, however, parks and private grounds on the Dove, accessible to the respectable angler by a proper and respectful application; and, above all, the voluntary avowal to submit to any restrictions the proprietors may think fit to impose. For obvious reasons I shall not name the privileged spots, but I may safely mention the Bentley Brook, near Ashbourne, and what was in my time called the Henmore Brook, now termed the Schoo Brook, neither not far from Ashbourne, and others which, by intelligent enquiry in the neighbourhood, the necessary information might be acquired. One thing is certain, they all contain trout, are less frequented than the Dove, and there is more chance of being unmolested, or rather bothered, by impertinent strangers, than elsewhere.

THE RIGHT HON. A. J. MUNDELLA, M.P.

AMONGST the London and Sheffield, and other Provincial angling clubs, Mr. Mundella's name is as well-known as that of our patron saint, Izaak Walton, and it is with much pleasure that we are able this week to give a fine portrait of the member for Sheffield.

Mr. Mundella is the eldest son of the late Antonio Mundella, of Italy, by Rebecca, daughter of J. Allsop, Esq., of Leicester. He was born in 1825. He has extensive factories at Nottingham. As a member of Parliament he has turned his attention chiefly to labour and education questions, and to legislation for the protection of the coarse fish. Of fish and fishing, Mr. Mundella does not pretend to know anything, and he frankly stated this to the deputation which waited on him after the recent meeting of club anglers at the Society of Arts.

At the instigation of the Sheffield club anglers, he took up the question of fencing our coarse fish, and every angler, whatever his political views generally, or personal views on the Freshwater

2. All other fish, such as roach, bream, chub, barbel, tench, gudgeon, carp, &c., from the first of May to first of July.

3. Eel and flounder fishing all the year round.

This would give us fair fishing in April, and thus include that great fishing holiday, Eastertide. None of the fish, except the pike, perch, and dace, spawn until May, June, or July, and this we can prove by abundant testimony from all the standard authorities—Couch, Yarell, Francis Francis, Manley, and a host of others.

It should always be remembered in discussing this question that the Freshwater Fisheries' Act really only applies to public waters, and we know for a fact that those anglers who can afford to pay for fishing can get it, and do get it, all the year round in private waters. Thousands of pounds are spent every year by angling clubs in prizes for takes of fish; if but a tithe of this money were devoted to the artificial cultivation of coarse fish, we have not the least hesitation in saying that for every thousand fish caught by rod and line a million could be put into our rivers. To talk of our freshwater fish ever becoming extinct is sheer nonsense. A year or two ago there was not a single carp on the American continent. The Americans imported fish from Germany and now there are

THE RIGHT HON. A. J. MUNDELLA, M.P.

Fisheries' Act of 1878 may be, will, we are sure, admit that nothing could exceed the courteous attention and indefatigable services which Mr. Mundella has given to further the interests of those anglers who have applied to him for help in legislating for what they conscientiously think is desirable.

For our own part, and we are absolutely certain that thousands of anglers—including very many in Sheffield itself—agree with us, we think, as we have before said, that angling with rod and line for fish in season will never do the least harm, if netting is rigorously put down at all times, except for scientific purposes or for keeping down any particular kind of fish. It seems that those anglers who were instrumental in passing the Mundella Act will not at present trust anglers on the waters to fish for fish in season, in case they might take fish out of season, which is, in our opinion, rating the sportsmanlike character of anglers at a very low figure. Is not a compromise possible? We should be content, and we think most anglers would be content, with the following as fence seasons:

1. Pike and perch from first of March to first of July.

millions—the result of artificial propagation. A few years ago there was not a trout in New Zealand: Frank Buckland stocked the New Zealand rivers with trout from ova sent twenty-five thousand miles, and now there is splendid trout fishing there, and also in Tasmania. The coarse fish are more prolific, hardier, and more suited to all kinds of water than trout, and their artificial propagation is a much simpler and less expensive matter. Abolish poaching, breed fish for your waters, and rod fishing will become a necessity in order to keep the fish from starving.

It is not pleasant to be accused of wishing to take fish out of season, and if those who are opposed to us would calmly consider the matter, we feel sure they will admit we have never advocated this. Considering the matter, even from an economical point of view, our proposal to cultivate fish artificially and to stop poaching will be more beneficial than the present drastic fencing system; but the only consumers of freshwater fish, other than eels and salmonidæ, are the Jews, and the arguments about "increasing the food of the people" generally, are puerile, for no English people will eat coarse fish when sea fish, of infinitely superior quality, are more cheaply and easily to be had.

A LIVELY SALMON.

ONE of the most pleasant books of travels published of late years, is "The Two Americas," written by Sir Rose Price, Bart., and anglers will find it of much interest to them from the accounts it contains of salmon and trout fishing in America.

Our readers may remember an article on the Californian salmon which Sir Rose contributed to this paper some two years ago; it was a strong protest against the proposed introduction of that fish into British waters, and we believe it had the effect of stopping the introduction of *salmo Quinmat*, which is very subject to a frightful disease, and which will not take the fly.

The first fishing which Sir Rose describes was sea fishing at St. Vincent. The anglers used stout bamboos, fourteen feet in length, for rods, and baited with legs of small crabs, mashed crabs being used as ground bait to attract the fish. The sport was fast and furious, and the fish caught were of different varieties, nearly all armed with some kind of prickle, some of the prickles being poisonous, and "all of them bit like mad at everything within reach," when hauled out of the water.

THE SOAP FISH AND PORCUPINE FISH.

One black ugly fish caught, about a pound weight, was called

ANGLING IN PATAGONIA.

In Patagonia our author met with some most "fishy" looking rivers, but after trying many kinds of fly, &c., both natural and artificial, with the result of a few half-pound fish something like a trout, thought the promising appearance of the lake and river "was merely a pitfall, a snare, and a delusion, and that the angler has no place for his calling in the lovely, but deceitful, water of Patagonia."

SALMON FISHING EXTRAORDINARY.

We next find Sir Rose wetting his lines in the little fished salmon rivers of California. He thus speaks of the salmon fishing at Soda Springs:—

The river is about a hundred yards from the house, one of the best pools being the nearest spot. We found it full of fish. They would not rise at a fly, but took bait greedily, and were so easy to catch and so little sought after, that, having all the river at our sole command, we took it very easily, never commencing before breakfast, and invariably returning to dinner. The proof of the pudding is in the eating, and without entering into any lengthy dissertation on a sport so well known and so enjoyable as salmon fishing, I give the result of a week's work to my own rod, the record for the remaining period I stayed here being very similar—in fine days

A LIVELY SALMON.—(FOR DESCRIPTION, SEE NEXT PAGE.)

the soapfish, and on being stirred about in a small pool of salt water soon caused it to lather like soapsuds. "A porcupine fish (*diodon hystrix*), weighing about seven pounds, was perhaps the most curious fish we caught. The men treated this gentleman with the greatest possible caution, evidently regarding him as a dangerous brute. A more awkward one to handle it is quite impossible to conceive, as he was entirely covered with small spikes, dispersed over sides, back, and abdomen, in such a manner as to prevent effectually anyone touching him. On being hauled up he came grumping out of the water, and, as lay on the rocks, commenced swelling himself out by successive gulps of air, which he inhaled with such noise and vigour that he soon resembled a cross between a distended football and an angry toad. Its skin was so tough that it resisted easily the pike thrusts which saluted it, and only after several efforts was it despatched with a sharp and strong clasp-knife. Its maxillary and inter-maxillary bones are soldered together, so as to render the jaw immovable. Its entire mouth appeared plated with some kind of enamel, and M. told us its powers of crushing were so great that, when fresh from the water, one of them could easily crumble any of the lumps of scoria lying about, were a piece placed between its powerful jaws."

sixty salmon, the majority over ten pounds weight, and the largest 23½ lb.

On only one day did I work really hard, and killed in eleven hours and a half including luncheon, twenty-seven salmon from ten to nineteen pounds weight each, and half of them gaffed and landed without assistance.

This fishing, gentle reader, is yours, if you like to come for it. Without one penny of cost, all the rivers of the West are at your disposal; and when I remember the prices charged at home on the Lochy, the Thurso, Castle Connel, and a host of other places, where the sport obtainable is not one quarter as good, I am surprised ingenious youth does not occasionally find its way out here, where deer, bear, and salmon, are only waiting their disposal.

THE MCLEOD RIVER AND "DOLLY VARDEN" TROUT.

After leaving the Sacramento Sir Rose went on to the McLeod River, which is, he says, "Without exception the 'gamest' river I ever fished on, and in no other water in the world have I ever seen trout so perfectly conditioned or so well fed." "The Dolly Varden" is looked upon by the natives as, if not a *lusus nature*, at any rate, a fish peculiar to the waters of the McLeod,

and they are consequently proud of possessing what they believe to be a peculiarity.

The ordinary McLeod trout are beautifully shaped, and indeed possess the most perfect forms of symmetrical excellence I have ever seen in trout. Their bodies are deeper, their heads smaller, and their general colouring more brilliant, than the trout of our native land; but above all these attributes, they have a gameness and determination when hooked which is only equalled by our sea trout. We killed none above 3½ lb., and they seldom exceed that size. The Dolly Varden which is also found in the McLeod river, Sir Rose describes as an ugly brute, a trout in shape like a pike, and as rapacious. It grows up to 10 lb.

A LIVELY SALMON.

We now come to the description of our author's fight with a salmon, which is depicted in the accompanying illustration. He was fishing the Sacramento, and of the fish, says: "As to their affording no sport, I can only say, that I have fished in Norway, Nova Scotia, Scotland, and Ireland, and have never handled gamer fish.

"One of my favourite casts was at the head of a large deep pool, into which flowed a heavy rapid; close to where I stood a shelving bank afforded good landing ground, but a steep rock and some overhanging trees prevented a fish being followed. The pool was so large and deep that a salmon seldom tried to leave it; still, occasionally they did, I was unable to control their headlong rush. In case this inability might be attributed to either inexperience or personal decrepitude, I may as well state that I have killed salmon for over twenty years, commencing at the tender age of thirteen. That the tackle I used was the strongest and best I ever had, that I walk over 14 stone, and was never a week sick or sorry in my life, and yet no less than five different fish compelled me to swim, with my rod in one hand, this long stretch of water, ice-like in temperature, from the small streams following from the perpetual snows of the Sierra Nevada Mountains, and by no means the kind of water one would select for a bath in a shooting coat. I could not get round the bank; I had to follow my fish or lose him, and I preferred to follow.

"On another occasion I saw a salmon, after running out eighty yards of line, take a big backwoodsman a quarter of a mile down the river, and then the fish did not give in till after twenty minutes' more severe play. The Sacramento, Klamath, Shasta, and McLeod rivers, are not more than twenty miles apart, and come into order in succession so that the very cream of each may be gathered by a man visiting them one after the other. In the Klamath and McLeod, the salmon run very heavy, and in the Shasta they take a fly."

We trust our readers will refer to Sir Rose Price's book for further accounts of his sporting adventures. It is published by Messrs. Sampson Low, Marston and Co., of Fleet Street; and we venture to suggest to them that if republished at half-a-crown it would sell well among all lovers of the rod and gun.

FLY AND BAIT CASTING TOURNAMENT.

(In aid of the Funds of the Anglers' Benevolent Society.)

WE beg to state that it is our intention to offer prizes in the shape of first-class fishing rods, &c., to the successful competitors in a fly and bait casting tournament, which we propose shall be held in aid of the funds of the Anglers' Benevolent Society, at some Hotel on the Thames which may have suitable ground for the purpose, some Saturday afternoon in August (we should prefer Richmond).

The competitions will be arranged somewhat as follows:

I.—A prize for the angler making the longest cast with a double-handed fly.

II.—A prize for the angler making the longest cast with a single handed fly rod.

III.—A prize for the angler making the longest cast from the reel in the Nottingham style.

IV.—A prize for the angler making the longest cast with line coiled at feet in the Thames style.

The judges will consider style of delivery of the flies or bait, and accuracy, as well as distance, and for this purpose the following scale of 100 points will be adopted.

	Points.
Distance across the wind	20
Distance with the wind	20
Style of delivery of flies and bait	30
Accuracy	30

Competitors will be allowed to use their own rods and reel lines.

There will be an entrance fee for competitors and also a small charge for admission to the grounds, and all money thus received will, after paying actual cash expenses, go to the funds of the Anglers' Benevolent Society. The judges and referee will be well known anglers.

Tournaments of this kind are becoming quite popular in the United States, and we are indebted to Mr. Fred Mather, editor of the New York "Forest and Stream," not only for the idea but also for the outlines of our present proposal.

Such an exhibition of skill as this match will afford, will undoubtedly be a most interesting sight, and we confidently ask the angling world to support our attempt to introduce this novel competition into this country. Anglers who want to learn how to throw the fly or the spinning bait, will learn more from an exhibition of this kind than from all the books on angling put together.

If any fishing tackle firms will give second prizes in the shape of rods or tackle, we shall be very glad to announce their generosity in this paper.

We expect a large attendance of anglers and hope to see "the ladies" also present; in fact it would be a graceful ending for the tournament if some lady were chosen to distribute the prizes. This match will not be open to professional anglers; their match will follow we hope.

The rules of the match and further particulars will be published as soon as possible. In the meantime we shall be obliged if all anglers who would care to witness or compete in the match will send a post card, giving name and address, and signifying their approval of the idea, to Mr. R. B. Marston, editor of the FISHING GAZETTE, 12, Fetter Lane, London.

The casting will take place over a lawn, or over water, if possible, on which the distance can be readily measured.

We respectfully ask all secretaries of angling clubs to support us and to let us know what they think of our suggestion. We feel confident it will bring in a substantial contribution to the funds of that most deserving society the Anglers' Benevolent Society, which was instituted in 1878 for the relief of distressed anglers and of which we hope shortly to publish a full report. We venture to predict that these casting tournaments will soon become popular all over the country.

Although they will not compete, we propose, if possible, to get one or two "crack" professional fishermen to exhibit their skill in throwing from the reel and in the Thames style.

SPLENDID LINES.

WE have received from the Manchester Spinning Company, of Corporation Street, some samples of their very various silk and other lines for sea and fresh water fishing. The lines are beautifully made, and very strong and very cheap. They also supply a new dressing for lines, which is, in our opinion, simply the best in the market. It is just the thing anglers want, and we predict a great sale for it. We hope to notice the lines and the new dressing more fully shortly, and, in the meantime, we strongly advise our readers to send for samples, mentioning the kind of fishing they want the lines for; and they should also ask to have a piece of line with the new dressing.

ANGLING AT EVENING.

Hot was the day—and still—and bright;
But with the advent of the night
There comes the cooler air:
Gone is the glare, the blinding blaze,
The sun with softer, milder rays
Is setting, O how fair!

His disc is sinking momentarily:
Across the landscape wondrously
The lengthened shadows lie;
Each thing that bars his level beam—
Tree, tower, or mount—o'er mead and stream
Its shade shows far and nigh.

Who lives and feels not fall the power
Upon his heart of this sweet hour—
On-coming—of the eve;
Before the night, after the day;
After Sol's reign, before the sway
Of Dian we perceive?

Yes, there behold! she shines above,
The Queen of Night, the Orb of Love;
But pale and faint as yet
Is thy light that, thou summer-moon,
Shall silver over this scene soon—
For see! The sun has set.

But not yet quite—an interval—
The gorgeous Twilight over all
Its interregnum first
Must hold: the glories of the sky
Be briefly born, and briefly die;
E'en as in Eden erst,

Are blent now with the light-blue West
Pink—crimson—purple: do the Blest
In their own Isles see more,
With heavenly sense, of heavenly sights?
See more celestial evening-lights?
More deeply to adore?

Forgive the doubt! for look! there throws
That crimson cloud its richest rose—
The *After-glow's* full gleam—
Yonder, where runs on—in and out—
Ringed-o'er by many a rising trout—
The valley's lovely stream!

Like to like, there they dart, they dash—
The crimson sport with crimson splash—
A splendid sight to see—
Above the rose they make a bound,
Sub rosa then to the profound
Glance down and dive in glee.

Thus rise they that did not by day;
Come, angler, now, thy skill display!
Cast now thy fairy-flies!
Again—again—again—again
Thy good rod bends—another slain—
Another dares—and dies.

Creatures of brilliance manifold—
The ruby's radiance set in gold—
The sparkle of the star—
Scales that as angels' armour shine
And flash—a dazzlingness divine—
How beautiful they are!

The lilies of the field are fair,
And Solomon—in glory rare—
Was not arrayed like them;
Yet they beside of these as dim
Would be as they were bright o'er him,
Dulling his diadem.

But lo! where, lingering on the bridge,
The village lass o'er pool and sedge
Doth—*nay!* she doth *not*—gaze:
No eyes hath she for handsome *trout*;
She waits to meet her lover out,
What ill-luck him delays?

Ere long beneath yon brightening moon—
With thoughts, words, looks (and lips) in tune—
The youth and maid will rove,
Will wander by the winding stream,
Lit then but by the tender beam
Of Luna's Lamp of Love.

But thou, mine angler, then wilt roam
No more, but wend thy glad way home—
Singing the nightingales,
And glow-worms glittering in the grass—
Gay, elfin sparks—as thy steps pass,
Whilst round the night-hawk sails.

The night-dews rise, charged with the scent
The honeysuckles all have lent,
To waft abroad for thee:
Thine every sense wild with delight,
Thou heavy-laden one this night—
Is Angling vanity?

July 4th, 1881.

A.R.I.E.L.

[We think most anglers will agree that A.R.I.E.L. paints the glories of the close of day in very natural colours. At this time of the year, when there is no real night, we know of nothing more refreshing and cooling and generally enjoyable than carefully wading a *well known* bit of trout water, smoking a good weed, and getting a brace or two of fine trout for breakfast. We have done it many and many a time and hope to again. The presence of the angler at night is a great nuisance to the poacher.—ED.]

THE PROPOSED INTERNATIONAL FISHERIES' EXHIBITION.

I AM sure that everyone interested in fishing matters, this side of the Tweed at least, will agree with every word uttered under the above heading in the last issue of the GAZETTE. It is eminently desirable that the next exhibition be held in the metropolis, and this especially so if its nature is to be an international one, thereby attracting attention from all quarters of the world, and enhancing the fishing industry to an incalculable extent. I have had considerable facilities for ascertaining the feeling of the London tackle-makers and others in reference to the Scotch exhibition, and can safely say that it will receive but sparse attention from them. The considerations which urge such people to exhibit are purely of a commercial character, and it is generally felt that a journey to Scotland would by no means result in the increased trade and distinction which is necessary to pay the cost of transit. It may therefore safely be predicted that the suggested Scotch exhibition will be to a great extent local, and ought in no sense to lay claim to being even a national—much less an international—demonstration. Large and truly representative exhibits, such as that of Little, Farley, &c., at the late Norwich event, would find no place therein; and however much the deficiency might be supplied by Scotch firms, the affair could not be nearly so satisfactory in any sense as a metropolitan truly International Fisheries' Exhibition.

The time is furthermore ripe when an international assembly would be in the very highest degree stimulative of the hitherto inadequately recognised interests of fish and fish-culture. Our Scotch friends would partake in the benefit, which would be immediate and permanent, arising from the emulation of many nations, including those deeply imbued with piscicultural importance, such as Germany and the United States. Exhibits of appliances from America would be specially interesting, and would run some of our best manufacturers very closely in the race of competition.

The Worshipful Fishmongers' Company is unquestionably the best executive in the organisation and general ordering of such an exhibition, and State aid would, as a matter of course, be offered and accepted. The present time is not a whit too early wherein to begin the task of formation. Admirable and generally satisfactory as was the Norwich Exhibition, much would have been improved had less haste been observed, and some very reasonable grounds for complaint existed in the cases of more than one important competitor; moreover, though from a numerical and financial point of view the exhibition was a success, the standard of excellence in some classes was far from being as high as might have been expected—in a so-called national gathering.

J. HARRINGTON KEENE.

A DAY WITH THE PERCH.

NEXT to fishing with the fly, I think the most enjoyable sport is catching perch with the minnow, and I generally take a field-day after them about the middle of July, when the heat and brightness of the sky and lowness of the water give but little hope of trout. Accordingly, on the 12th, I started with a good kettle full of minnows, for a spot which has seldom failed to reward patient labour. The day was broiling hot and I had two hours to go by rail, but I was able to refresh my tender charges twice on the road, so that we arrived without many casualties. Here, as I expected, everyone was so busily engaged in the hay field that not even a boy could be found to carry my basket and bait-can, and, as the heat made it necessary to keep the latter sunk in the river, at least half my time during the day was taken up with pulling up the bait and lowering it again every time I had a bite. With heart fluttering between hope and fear I began in the water at the tail of a mill, and was rewarded by an immediate response. I had, however, apparently hit upon the infant school of the needle-finned tribe, and half a dozen babies in succession were restored to their anxious relations to become bigger and wiser fish. I have my doubts, however, as to the appropriateness of the last adjective, for I once caught a perch in the afternoon with the hook in his mouth, of which he had broken the gut when I struck him about four hours before, whence I gather that a perch does not, like a trout, derive practical lessons from experience; nor is he so easily frightened, for I have repeatedly caught a fish after he had danced away with my hook merrily but unsuccessfully three or four times. But to return to our history.

Leaving the infant school, I next tried the spot where adults might with most certainty be expected; a delicious little angle receiving a slight eddy from the stream which rushes past from some huge hatches, where the bank is protected by camp-shedding (or camp-sheeting, or sheathing, or shooting, whichever is the right term), just high enough to cast about a foot of shadow upon the water. Cautiously and stealthily I approached, and the first touch of the bottom with my plummet was answered by a vigorous pull, and suddenly half a dozen beautiful fairy forms, plump, and with well marked bands, rose to take an affectionate farewell of their captive sister as she ascended to the upper air. The farewell, however affectionate, was not for long; they were rapidly promoted to form part of nobler bodies. One merry tumbler, while on his last journey, escaped from the upper hook in mid air, but the fates were against him; the lower hook gaffed him as he fell, and he found his appropriate resting place in the basket. By this time the foot of shadow had diminished to an inch as the sun moved round, and the striped darlings were evidently losing their appetites, while I had long ago found mine, so I had no difficulty in arranging an armistice for three hours, which I employed

in burying the dead and regaling the living. I confess with shame that the sight of a well-fed family lying among some thin weeds tempted me to violate the terms and to drop a bone of contention in the shape of a minnow among them, but they were far too honourable to break their side of the engagement in the full blaze of the sun, and scarcely took a contemptuous glance at the glittering tempter. At 5 p.m. the ashes of the calumet of peace were knocked out and the battle recommenced with ever increasing vigour on both sides, and the lower the sun sank in the sky, the bolder was the enemy in charging and the more numerous were the casualties. Ammunition, however, began to run short, but while there was a shot left in the locker, or a minnow in the can, I stood to my colours bravely, taking as many prisoners as possible, while they seemed to race for the honour of sharing the fate of their brethren. At 8 p.m. the last cartridge had been fired, just as my watch warned me to beat a hasty retreat if I would sleep in my own bed. The steel-yard at the station told me I had 11 lb. of perch in my creel—not a bad result, considering the time I was compelled to lose by being alone on so hot and bright a day.—C. C. J.

NIGHT FISHING FOR BREEM.

THERE is no doubt but that the old enactment still exists rendering it penal to angle beyond an hour after sunset or the same period before sunrise, but the salient reasons that influenced the legislature in passing such restriction are now lost in obscurity, and may merely be left to conjecture. It is obvious that one of these considerations referred more to the system of netting to hold in cheek the professional fishermen, still the clause is plain and unmistakable as including all modes of taking fish whether by rod and line, night lines, nets or other description of engines. Eel baskets were, however, exempted in most of the acts, particularly in reference to certain rivers, chartered rights, &c. That all fish feed more during the stillness of night than during the hubbub and human traffic of the day, there is no doubt. Those who have indulged in a night's sport for bream, &c., or used the white moth for trout are well aware of this. And whether during these tropical days when not a nibble can be had the practice can be justified must be left to the conscience of the angler who is pretty safe from prosecution under this almost absolute injunction of our forefathers. I have always considered the presence of anglers upon the water during the still hours of the night one of the very best preventives to the incursions of poachers, between whom and the illegal marauders there is a natural and wholesome prejudice. It is a question, therefore, whether the good that might accrue by the annulling this effete act would not result in more good than harm. I have mentioned bream in particular as feeding at night, and those whose experience is derivable from the Ouse, the Trent, and other highly stocked bream waters are fully aware that during darkness or semi-darkness—for there is seldom decided obscurity on the waters in the summer months between night fall and early morning—that the bream are ravenous until the first tinge of azure appears in the east when the fish gradually fall off, and the sun seems to be the signal that it is a proper time for them to cease their meal. Then the bream, their appetites satisfied, if not satiated rise to the surface, and have a gambol in that exuberance and satisfaction which a full stomach engenders. This is called "priming," and the effect is as if the whole school was indulging in a game of leap frog. This is the signal for the night angler to leave off, for he knows that scarcely another bite will be got. He therefore quits the stream for his inn, and perhaps a siesta, loaded with a hundred-weight or more of mostly sample fish, and probably meets a brother or two who have come down by an early train, bent upon an awful slaughter, but upon comparing notes upon the afternoons departure of the train for town the contrast between their respective bags is simply ounces for pounds, if that.—F.

AMATEUR FISH STUFFING, &c.

THERE is nothing at all difficult or beyond the reach of moderate well-directed practice in taxidermy as applied to fish. The specimen to be preserved should be wrapped, as soon as is possible after quitting the water, in silver or tissue paper, which will adhere to the fish by its own moisture and greatly preserve the delicate scales and evanescent colours of the surface. Those examples intended for scientific examination are best preserved in spirits, with a label of block tin or lead, having a number cut or engraved on it, having reference to your note-book, in which each specimen should be entered at once, with a memorandum of where taken, date of capture, and weight when taken, to ascertain afterwards the proportion of loss by what a learned professor terms "imperceptible perspiration." Perhaps one of the most simple plans of making a collection is suggested by Dr. Parnell, of Edinburgh. He tells us to divide the fish longitudinally, so as to preserve on one side the skin and fins in an entire state, also the dorsal and caudal fins. Begin at the head and work downwards to the tail, removing the skin carefully. The coating of tissue paper will greatly assist the operator, and when the skinning has been effected, the paper can be removed, after being damped with a wet sponge. Reduce the bones of the head, thin down the base of the fins, and anoint the whole with arsenical soap. Then take a sheet of pasteboard larger than the fish itself and covered on one side with stone-coloured paper; sew the skin by its lower edge to the pasteboard, using a fine-pointed saddlers' awl as a piercer. Now stuff in chopped tow till the skin is

filled to the natural size, sewing the upper margin to the paper as the work proceeds, from the tail to the shoulder, and glue the head to the pasteboard. The fins may be supported in their natural position by means of slips of paper gummed to them, and these may be removed after the skin is dry by wiping them with damp sponge; then two or three coatings of copal varnish are given to the skin, and this finishes the operation. The scientific name should be written or printed in the left hand corner of a card below. The skin may be simply glued to the pasteboard and then varnished. If the fins of perch, for instance, are painted, they should not be over-coloured, as is too often the case, which gives the fish an unnatural look, especially if the pigment is heavy and opaque instead of being light in the coating and transparent.

Any apothecary can prepare arsenical soap from the following recipe:—Camphor, 2½ oz.; arsenic, powdered, 1 lb.; white soap, 1 lb.; salt of tartar, 6 oz.; chalk, powdered, 2 oz.

Cut this soap into very thin slices, put them into a pot over a very gentle fire with very little water, stirring with a wooden spoon. When dissolved, add the salts of tartar and chalk, take it off the fire, add the arsenic, and stir the whole gently; pound the camphor in a mortar with a little spirits of wine and mix.—F.

SOCIAL BROTHERS.

I HAVE to congratulate Mr. Gourbot upon his confession of fishing from early morn until dewy eve without a touch. If we had a more general admission of blank days, our information would be better to be depended upon, and abject disappointment less. But while the professional puntsmen compete with each other who shall salt their reports to the highest state of kipperism, and the gentleman angler is reticent, men will be attracted like flies by the system now known on the Thames as "Catch 'em alive O!" Your note, which is appended, to the effect that Mr. Gourbot should "rake out a bundle of weed from the bottom of the river and he will find it full of live animalculæ, and that the fish have more food than they can eat just now," are words of wisdom founded on experience. There is no greater fallacy than to suppose you can attract fish, to any extent, with any other description of bait than that by which Mother Nature, at this particular period, has provided them. Many a tyro, who has taken down to the river some special treat, as he called it, has found this out. Let, therefore, Mr. J. Gourbot and others, if you will permit me to supplement your editorial note, lookout these same animalculæ—take the largest, more particularly those of a shrimp form, and fish with a minnow hook, placing two or three thereon. Mr. Wix, of Clay Hall House, Leytonstone, who wrote a clever brochure upon roach fishing, always, at this season of the year, went down to the Lea or Thames, perfectly unprovided with any bait than paste, depending entirely upon his observations upon what the fish were feeding. This is easily ascertained by opening the first that is caught with a sharp knife, spread the contents of the stomach upon the palm of the hand, and it will be seen that that nearest to the gullet is less digested than the rest, and therefore its character more readily discernible. It has always appeared strange to me that while this practice is almost universally pursued by the fly fisher, to whom it gives so obvious an aid to certain success, no attention whatever is paid to it by the bottom fisher. You hold a fish in your hand, and you find an exudation of aquatic vegetation proceed from its vent, yet no thought of trying the silk weed of which this discharge is composed occurs to you, and you go on with paste gentles, or worms, until the close of the day without adding to your bag, when, if you took a hint from your own gastronomic inclination, with the temperature at 90°, you would or ought to consider that a salad would be as acceptable to fish as it is to man.—F.

A GARDEN OF WILDINGS.

MY GARDEN WILD AND WHAT I GREW THERE. By Francis George Heath, editor of the new edition of Gilpin's "Forest Scenery," author of "The Fern World," "Sylvan Spring," "Peasant Life," &c. London: Chatto and Windus.

THIS new volume of Mr. Heath's is suggestive of delightful possibilities. What genuine angler is there who has not a thousand times been charmed by the wealth of floral beauty in his piscatorial surroundings—meadows flushed with the hues of ripening grass, blue where the speedwells lie and golden with the buttercup, or river banks rich in colour by the presence of many clustered wildings. The active sparkling streams, full of pebbly shallows, and loved by trout and graced by ferns, either on their rocky margins or upon the boulder islets against which their impatient currents murmuringly splash; the river of quiet deeps where tench lie under the great leaves of the water lilies confess the crowded presence of flowering rush, of willow herb, of purple loosestrife, forget-me-not, and pimpernel. But the flora of river or brook side is far too abundant for us to indicate even what is most prominently typical of it. The angler who has eyes and a keen sense of the beautiful—and what true angler has not?—ought to be an accomplished naturalist. But, be he so or not, perhaps a perusal of Mr. Heath's "Garden Wild" will at least induce him to take a new interest in the wild plants which fringe his path on almost every fishing excursion he makes. If the readers of the FISHING GAZETTE follow Mr. Heath's advice, and have natural instead of stiff, formal and conventional gardens around their dwellings, they will add a new attraction to the pleasures of angling—for

they have such peculiar and exceptional facilities for the nature-teaching upon which the author of "My Garden Wild" lays—and very properly lays—so much stress. Mr. Heath does not make the particular suggestion to anglers, but we venture to think that they might do much worse than fill empty creels—when their fishing luck has gone the wrong way—with wild flower and fern roots for the garden at home. Such a practice might greatly mitigate the bitterness of disappointment in the matter of "sport;" and the plants brought home would furnish pleasant reminders of many spots where the scenery was beautiful, even if the fish did not "bite." But even where the "takes" have been good, if the weight of fish to carry be not overwhelming, a root or two at least might be added to the cargo, and the stock would soon accumulate in the "Garden Wild." We advise those of our readers who would like to know how to enjoy this especial kind of delightful pastime to obtain Mr. Heath's book, which contains some three hundred pages, and can be had for less than the price of a bottle of good port.

ANSWERS TO CORRESPONDENTS.

J. W.—We do not think there is any free trout fishing on the Darenth, Cray, or Roding worth having.

H. GREENWAY.—No charge. You will find Lowestoft a first-class place to stay at, and by rail thence you can get in five minutes to Oulton Broad. You should row up the Dyke, which runs into the Broad, until you meet the Beccles river, and just at the spit of land at the junction you will find ten or twelve feet of water, and we have always had splendid sport there, and got larger fish than in the Broad or the Dyke. You will get good perch on the Broad. For big bream you should go by rail to Cantley and Buckenham, on the Yare, and also for splendid roach. There are very fine bream in Ormesby and Wroxham Broads.

CORRESPONDENCE.

[We do not hold ourselves responsible for opinions expressed by our Correspondents.]

FISHING IN NORTH WALES.

SIRE,—

"When a pretty woman shows her hand
What can a poor man do?"—

but adore it—the old song says. And when an Editor, with even only his forefinger, beckons up a contributor to answer a few of the questions of a correspondent, what can he *loyally* do, but obey his liege? Therefore, although I am not an "angler who regularly visits North Wales," and consequently am not, I feel sure, nearly so well qualified as many of your readers are for the office, I will do my best towards answering *some* of the queries put by "H. T. H."—subject always to correction by any one speaking with more authority.

My angling experience of the district indicated by "H. T. H." is limited to having—as a learner—watched my piscatorial teacher "X." fly-fish with the spinning-minnow "the sacred Dee" at Corwen for three days at Whitsun, '80. I did not, except for a few hours, angle at all myself. Under the most adverse circumstances, "X." got upwards of 40 lb. of trout in the three days, which *rather* astonished the natives, who—as the saying is—couldn't catch a fish. You recollect the weather, and the water on the Coquet then? No rain since Easter, no water, all flannel-weed, north-east wind, sharp frost at night, bright sun by day! No angling, save the very highest, had the slightest chance of success. And so, and in order also to make one less spoiling the river for "X," I did not angle, but looked on at his little game.

There is an Angling Association at Corwen, and another at Llangollen. The Corwen water extends some six miles, with angling from both banks over the greater portion. Tickets are 1s. 6d. a day, 4s. a week, and so on. There are printed rules of that association. "H. T. H." should write the secretaries. The trout angler who finds fault with the run of the river at Corwen, or the charge for fishing it, must be hard indeed to please. But what fish he catches, that, of course, is a question which none but he can answer. "Therein must the patient minister to himself."

We stayed at the Owen Glendower Hotel, Corwen, and were made very comfortable. A Mr. O. Jones—a jolly fellow, fond of gun, and rod, and all the rest of it—was, and I trust still is, and likely to be, the landlord; for I hope to pay him a visit again before very, very long. The way in which "The Only (of course, The Only!)" Mrs. Jones shows off a stranger-angler's big dish of trout to a local expert is *wickedly bewitching*. Poor Mrs. O. J., I doubt she doesn't often get the chance. "Hard, hard, hard is it" upon the innkeepers by all of our best trout-waters that their guests so often—owing only to their own 'prentice-hands—go "empty away," and then give the beautiful and abounding stream a bad name! How she begged us to come again when things were at their best, instead of at their very worst! And how delighted we shall be, Mrs. O. J., whenever in this work-a-day world we can do so, and X. can sing the Corwen experts "a more excellent song than the last!"

About April is the height of the season for river-trout in the Dee, and all over North Wales. The lakes are a little later. But there is good fishing both in lakes and rivers in September, given only proper weather and water.

I cannot speak to the special flies for the Dee.

Mr. Huggett's letter on the angling at Corwen, which you published some months ago, should be consulted, as well as the little Wrexham book which you referred to. I have it, but cannot find it. The cost is only 1s., I think. And there is a somewhat larger work which I have read. In the catalogue of the London Library it is entered as "Cliffe (T.H.) Notes of an Angler among the Mountains of Wales 12mo., 1860." That work gives the results of the author's fishings of a good few of the lakes and streams of the Principality.

As regards bottom fishing at Corwen, I have reason to hope that coarse ground fish are not quite "as thick as herrings in a barrel" thereabouts. Some grayling might be had, no doubt, either with worm or gentle, as well as with fly, or grass-hopper, or spinning minnow. The pike are kept down pretty fairly by the keepers' nets. But higher up, towards Bala, I fear they have it rather too much their own way. In Bala Lake—a short run by rail from Corwen—there is said to be good pike, perch and roach fishing.

In the autumn there is some salmon-fishing at Corwen.

The scenery is charming, a portion of it being the celebrated Vale of Llangollen.

Hoping the above information—partial and defective as it is—may be of help to "H. T. H." and trusting,

"Now my task is smoothly done,"

I may retire—with further fealty respited—I am, Sire, your tricky spirit
A. R. I. E. L.

"Merrily, merrily shall I live now
Under the blossom that hangs on the bough."

TO A. R. I. E. L.

SIR,—It is always a pleasure to read the communications of your correspondent A. R. I. E. L., whether in prose or verse—they are always graceful, full of healthy feeling, and so bright. May I venture to ask him to lay us under a further obligation by describing the tackle he uses when "fly fishing with the spinning minnow, and also what is the line he finds equally useful for both fly and minnow?—I am, yours, &c.,
A CONSTANT SUBSCRIBER.

Bradford, July 19, 1881.

FISHING AT HATFIELD PARK.

SIR,—Can any reader give me any information as to what fish are allowed to be taken out of the above water at this time of the year, and more particularly if there is good roach fishing?
H. P.

Regent's Park, July 18, 1881.

FISHING IN THE WARWICKSHIRE AVON.

SIR,—Will some one kindly inform me of one or two good places on the above river for fishing, and say if there are any trout and grayling? I think there are many heavy pike?—I am, &c.,
FALSTAFF.

Falcon Court, July 19, 1881.

FISHING IN NORTH WALES.

SIR,—If "H. T. H." does not intend visiting North Wales until August or September, he had better try the mountain lakes, the rivers will be mere threads at that season. Barmouth would be a good place to make his headquarters, there being a great many lakes easily accessible from there. There is also some fair sea fishing, and large quantities of bass in the estuary of the Mawddach, they may be taken from the viaduct between the Barmouth junction and the town.

Pritchard, of Wrexham, is the publisher of "The Angler's Guide to North Wales."

If "H. T. H." has decided on fishing the Dee, he cannot do better than go to Corwen; there is a very comfortable hotel there. The "Owen Glyndwr," and the river Alwyn, and other tributaries of the Dee are within an easy distance. It is best to get flies from the "local talent."—I am, &c.,
Budleigh Salterton.
E. GOSLING.

FISHING AT MAIDSTONE.

SIR,—In answer to "North Brixton," I may tell him that three years ago I was troubled with the same query, and went to Maidstone, so as to personally investigate. I found that there was very little, if any, fishing to be had there, in consequence of the water being polluted by some oil mills a little further up the stream, so I continued my walk until I came to Watlingbury, a very pretty little place, four miles from Maidstone, and suitable for headquarters. Good accommodation can be had at Mr. Woolley's, close to the railway station; or if a private house is preferred, "N. B." can put up at one of a row of cottages close by; this is very handy, being opposite the boat yard, where good boats can be had, and at a moderate charge. The fishing is free and very fair, both up and down the river, for roach, chub, bream, pike and eels. The small charge of 1½d. per rail will convey him to Yalding, and in a back stream, called the "Bult," in the far corner of a meadow, close to the railway station and sluice, is a deep pool, in which the finny tribe abound. I have fished this place for three years now, with very fair success, *vide* FISHING GAZETTE reports for August, of last year, in which my catches are reported. Any further information I shall be pleased to give. Apologising for trespassing on your valuable space.
ROYER.

P.S.—There is also a large nice pond at Watlingbury, full of carp, chub and roach, &c., belonging to Mr. Tumlin, who readily gives permission. Try the upper pond, not the lower one.

[Many thanks for the information. Yes, should much like to have the reports you refer to.—ED.]

FISHING NEAR WORCESTER.

SIR,—Your correspondent, Mr. J. A. Griffin, writing under the above heading, in last week's GAZETTE, says that the "Teme" rises on the same mountain as the "Severn," viz., Mount Plinlimmon; this is incorrect, it being the "Wye" and the "Severn" that rise on this hill. The "Teme" and the "Ithon" both take their source on the Kerry Hill, about nine miles to the south-east of Newtown, on the borders of Montgomeryshire and Radnorshire, the latter river taking a southerly course through Penybont and Llandrindod, and emptying itself into the "Wye" at Newbridge, the Teme taking a contrary direction, flowing easterly through Knighton, Ludlow, and Tenbury into the "Severn" below Worcester.
E. A. STEVENS,

Belle Vue Road, Leacombe,
Liverpool Angling Association.
July 18, 1881.

FISHING AT DOVERCOURT.

SIR,—Will you inform me, through your correspondence, which is the nearest and best river by Dovercourt, Harwich, for a day's fishing, the river Stour or the river Orwell, and what fish is to be obtained in either of them and would there be any particular bait to use for them there? By supplying this information in your issue of the 23rd (as I am going on the 27th) you would greatly oblige,
A YOUNG PISCATOR. u

GREY MULLET.

SIR,—Mr. Clift will find a great deal of useful information about the capture of this fish in "Useful Facts and Hints on Fishing and Shooting," Field office, Strand.

Thornback's liver is very good bait, also small bits of mussels or rag worms. They are, however, a very uncertain fish, and rarely to be taken in shallow water, which they much affect in hot weather. I have, however, caught a few in four or five feet of water, by using a Nottingham dace rod, line and hook, and taking very long swims; ground bait of some sort is necessary, green crabs pounded, fish or fish refuse chopped very small, is the best.

The best places are in deep eddies, by piers, &c., or at the mouth of a sewer,

in these places use a floated paternoster, with small hooks of stout wire; if fine, like roach hooks, they will draw with the struggles of the fish.

FOSTER FUND.

SIR,—This fund is now closed. Secretaries who have not yet handed over their collections will please send direct to "Mrs. Foster, 19, Bride Lane, Fleet Street, E.C."

The committee decided the fund should be closed and cash handed over to Mrs. Foster at once.

Messrs. Hoole and Ghurney waited upon Mrs. Foster on the 18th inst., and handed over to her the following subscriptions, viz. :—

July 19.

THE FENCE MONTHS.

SIR,—I doubt the correctness of your correspondent's figures, signed "L. B." (Bonvoisin), and "H. K.," with regard to the weight of fish taken by members of the London clubs, &c., and, as Mr. L. B. mentions, from a few rivers round London.

I am, therefore, led to ask the following questions, as those legislating for us must not be misled.

First: how many miles of water are there in the few rivers, subscription waters, reservoirs, &c., that are visited by London anglers?

Second: did not a great many of the fish, viz., 2000 lb., weighed-in by the members of the North-Western Angling Club, come from the Welsh Harp (not fenced), Elstree, &c., and were not many of these fish bream full of spawn, after June 16, 1880?

Third: did not Littleport, Cambs, help to swell the total?

Fourth: the N. W. A. S. is said to have fifty members. Will Mr. L. B. inform us how many members have not weighed 30 lb. of fish each during the season?

Fifth: would not half the calculated weight be considerably more than the actual, perhaps some other club or clubs will inform us how many of their members weigh-in under 20 lb. of fish during the nine months they have open?

Sixth: who is right, Mr. Editor, L. B., H. K., or you?

To arrive at the truth, it will also be necessary to extract fish taken from strictly private waters, as they considerably swell every club's gross total.

It may interest your readers to know I travelled over 1000 miles, including the return journey, in the early part, eight weeks, of last season, and only weighed 10 lb. of fish, yet many of our members did worse.

Our best takes, both this season and last, were had by members who fished the Welsh Harp water, a water continually fished by hundreds of anglers, and a water practically unfenced, but then it is not netted. I think this speaks for itself.—I am, &c.,
F. MALCOM.

40, Ludgate Hill.

INFORMATION WANTED.

SIR,—Can you tell me the nearest angling club to Waltham Green? Is "The Angler's Diary," published once a year? [Yes, Ed.].—I am, &c.,
3, Cedar Road, Waltham Green, London, S.W.,
July 18, 1881.
H. BELWARD.

A KEEPER ON THE MUNDELLA ACT.

[Mr. Geen also asks us to publish the following.]
SIR,—I feel fast to express myself to you through been uneducated, but I know you will excuse me when I tell you I could not scarcely write my name when I left school. I want to tell you I can fish, and have been a fisher all my life, and my mother's, family, and father's also, so I think and hope you will condescend to read my few remarks. First, I sent a letter to the FISHING GAZETTE aprechtateg your letter wich apeired June the 4th, and in veariance with the editor's whear, he says fish for eel all the year, and roach, breem, &c., when in season I do think and that he, Mr. Editor, do not know much about the nature of fish, or he was saying so as party feeling, and as if I could have him at the rive with me, say from first of March untill the first day of July, I think I could convince him that what he says is very wrong. Now, burbot spawn in March, and that's the night liners season to catch them in the Trent, but you know that class is allways after eel, make eel a migratory fish, and then look how you can protect any other fish. I hope no other place is trubled as we are on the Trent, with a lot of vagabonds and men that I know can use the rod well, "nets, blows up, night lines, spears," comet's robbery's, and snares of all sorts. I am sorry to say I know lots of them, thears twelve of them somnosed to Southwell for next Friday for night lineing in the Trent betwixt Hoveringham and Fiskerton, they have a lawyer, the case came on two weeks ago, and put of, in order to make eel migratory. I should like to see a time when no night lines would be legal at night, or fishing of any sort that could be done by daylight, and thears only one sort, that's eel netting, it cannot be worked to any advantage in the day-time, back to size and season; if I was the law-maker for the Trent, I should have no pike taken, either by one or the other, from the first of March untill the first of August, and pirch March first to July the first. I would not allow any one to take by any means any roach, breem, chub, barbel, &c., from the first of April to the first of July, when I would then allow all but pike. I wish you was with me, sir, "My late master, Rd. J. Hardy, Esqr., of Nottm.," has fished with Mr. Jardine and Mr. Wheelodon's best schoolers in the neibourhood as a poor man's, "and I can assure you that non of them would either catch a fish or eat one out of season or out of size." My hand trembles, I have take could, and I have got a very bad back, with getting wet last Thursday, fishing with my new master, Charles T. Jacoby, Esqr., Nottm. Park. Please excuse my bouldness, and beleve me to rest.—I am, &c.,
JOHN FOSTER, Fisherman.

P.S.—I said in my letter to the FISHING GAZETTE, that I was at the exebition, and the only thing that did not please me was men goin fishing, &c. I have taken in the *Field* over twenty-five years, I have also taken *Land and Water* sometimes, and now I have taken the FISHING GAZETTE for over two years. I have had every *Field* for over twenty-five years, and all my children has lern thear first letters out of the *Field* newspaper. I have got a few artickes put in it, but not a quarter of what I have sent. I have a son named Izaak Walton, I gave his mother the choise, either Francis Francis or I. Walton. I can bost of my childeren, to give you an idea I am fond of fishing. What bosh one hapens to see, for instance, wheare a cospondant sineing, "W. H. L.," in a leader for this GAZETTE. I am writeing from wheare he says the Trent is not much polluted. "Now, sir, I can asure you it is to the reverse, but I think you now, that theares plenty of filth, and very little fish in it. If you don't, I am sorry to say I do. For, if theare was anything aproching the number of fish as used to be, I should then be well of," for then I should have a dozen gentlemen to one, now. Gess, then, the result.—I am, &c.,
SPORTSMAN'S FRIEND.

[We put this amusing epistle in as it stands. We should think this keeper must be very good company, and we should like to have a day's fishing with him, when he gets his Trent a little cleaner. We do not want to catch fish out of season, and we have no great desire to eat even the best of the coarse fish when in season. After what our friend says of the state of the Trent, we should decidedly not like either to catch or eat any of his fish. We might suggest to this Trent keeper who looks after a stretch of preserved water on the Trent, that, perhaps, he is not quite so unbiased as he thinks, he probably (and his master also) objects to the presence of poor anglers on the river. Against such a formidable array of piscatorial knowledge, including apparently his maternal ancestors and his own children, we admit our knowledge of the subject has no chance. He seems to think that the Trent is the chief river in England, and that any legislation should be made to suit his views and those of his burbot.—Ed.]

THE MUNDELLA ACT.

SIR,—The committee of the above association have unanimously passed the resolutions adopted at the Conference of Anglers in London, on June 27th, in respect to the Freshwater Fisheries Act, and would wish that a clause should be inserted as follows: That it shall be legal to take eels and flounders during the close season in tidal waters with the rod and line only from sunrise to sunset. If this proposed alterations is allowed, I think there will be no necessity for either Mr. Wortley or Sir J. Baily's Amendment Act, as it has given the greatest satisfaction here, and I think will also give universal satisfaction to all honest and fair anglers, but may not stop the mouths of the pocket filling and pot hunting party who call themselves anglers. Wishing you every success.—I am, &c.,
T. WALKER, Sec.,
Sheffield Anglers' Association.

24, Blue Boy Street, July 3, 1881.

HOW HE KNEW IT WAS A BARBEL.

SIR,—Last week one of the oldest anglers in our club—the Westbourne Park Piscatorial Society—invited me to join him in a punt, bream fishing in the Thames. This offer from a noted bream fisherman was not to be sneered at, especially as I had never taken a Thames bream or knew where to find

one; accordingly, away we went in the evening to spend a night on the Thames. Who has spent a summer's night on the Thames that does not wish to go again? The glory of the setting sun, the magnificent scenery—lit by a thousand gorgeous and ever changing colours; the stars, as they appear at first, one by one, lit by some invisible hand. Here and there the tall trees, like giants, stand between us and the horizon—their motionless forms reflected deeply below the waters—the solemn silence, save where the ripple whispers under the dark bushes or the trout rises, breaking the surface of the water into a ring of ripples—with the silver moon rising behind while the sun is going down in our front—not straight down in the east to rise in the west. Oh, no; he goes obliquely down a little below the horizon, never withdrawing his light completely, and appears again apparently, from our view, about 500 yards from where he disappeared. To endeavour to portray the glory of the rising sun were folly. So to earth again.

The reward of our patience was two bream, 6½ lb., and four eels at five in the morning, not a touch after. About twelve o'clock in the day, after having had a nap in the punt, B. suggested it was very hot and quiet and wished we might have an adventure. "If only," said he, "some big fish would run away with my rod and you were to fall in the water getting it out." I agreed with the former proposition but objected to a bath with my clothes on, and hoped something might turn up. About half an hour later, while lying down attempting to keep myself cool, Mr. B. exclaimed "Look here!" I jumped up. I just saw about three parts of a rod with a great fish on it and nearly caught hold of it. Said he, "It must be a big fish; it pulled the rod up stream too fast for me to get hold of it. Keep a look out for the rod. Somebody's broke away, rod and all; I'll get my drag out." Out came his drag with a strong cord attached, and for a quarter of an hour Mr. B. dragged, first from the boat and then from the island, while I was looking in all directions for a sight of the rod. Mr. B. finished up by hooking the root of a tree, and lost his drag. "It's a barbel," says B.; "I know it's a barbel. They're so strong. No other fish would take a rod up stream like that." We settled down again for half an hour—not a bite. "Well," said I, "I shall go minnow fishing; if I can get one I may get a perch," and got on the island, where I had previously tried, but could only get bleak. I looked for a little rod I had left on the grass; it was gone. "B.," said I, "seen my rod?" "What rod?" says B. "Why," said I, "I fitted up one to catch minnows. It was the landing net handle with a top joint, screwed in, a drawn gut line, float, and very small hook covered by the chrysolis of a gentle." "Oh," says B, "that explains all," and we were pitying the poor fellow who got broke away. I may explain I had laid my rod on the grass with the tip just over a shallow place about an inch deep. For some time we wondered how a big fish could get to the very small bait, but came to the conclusion a minnow must have found it and, becoming hooked, went out into deep water, where some large fish—not a barbel—must have seized him and pulled the rod into the river. So we had our wished-for adventure—without a ducking—with no more harm than the loss of tackle. If any one of your readers should hear of such a rod being found at Shepperton he may find an owner in the secretary of the Westbourne Park Piscatorial Society.—I am, &c.,
H. ADEANE.

11, All Saints-road, Westbourne Park.

TENCH FISHING.

SIR,—I started last Thursday week for a few days' pond fishing in the Weald of Kent. Arriving by the South-Eastern Railway at my station about half-past eleven a.m., I had a delightful walk of seven miles through roads and lanes bordered by high hedges, glowing with honeysuckle and wild roses in profusion—the hop gardens on all sides looking flourishing and the crops, particularly oats and beans, very fine. In the afternoon I strolled out with the rod and had rather bad luck, losing first both hook and bait with a large fish, and then another fish—a tench of at least 4 lb. weight—which I succeeded in getting to the shore, but broke away whilst I was endeavouring to get my fingers into his gills. I had no landing net with me, unfortunately. However, next morning I did better. In a neighbouring pond my brother advised me to try, as he had turned in there some thirty tench about two years ago, I took three tench weighing ¼ lb. and lost another. This pond, which is an isolated, dark, and melancholy-looking place, has been fished by us very often for years past, but nothing taken there except one or two large roach. The fish, when turned in from a pond in an adjoining field, were no longer than one's hand and weighed, perhaps, some two ounces each, so that it is really surprising that they should have reached 1 lb. and 1½ lb. each in so short a period as two years.

A day or two afterwards my brother and self landed from the same water, in about two hours, seven fish averaging about a pound each. All these fish were in splendid condition, and when baked with veal stuffing (the fashion of the country) formed, I can assure you, no mean addition to the good things of the table. I took during the week, besides some other smaller tench, several nice eels and some perch and roach, but the conclusion I have come to from my visit is that it is well worth while, when, during tench fishing, you find a pond overstocked with small fish, to turn what you take into another pond, no matter whether your own or your neighbours, with the certainty in a year or two of having good sport if no one has found out your bank, or rather pond, of deposit.—I am, &c.,
AN OLD ANGLER.

170, St. Paul's-road, Canonbury, N.

BY THE THAMES-SIDE.—Let the tourist angler, while rambling along the Thames-side, near Caversham (Reading), cast one loving look towards the hill where now stands the residence of one of the Crawshay family. It was here, abouts, though nearer to the river, that in the then mansion upon this property the unfortunate Charles I. took his final farewell of such of his family that happened to be staying at Caversham. There, a little higher up the Thames and over the chalk hills of Mapledurham, Charles II., while hiding from his enemies, wiled away the time by playing at bowls. It is a good many years since I visited this charmingly-retired spot, and the walk thereto is a good "pipe-opener," but the beauty of the surroundings more than compensate for this wayside trip. Monarchy in those days somehow or other got into a mess; but we all ought to be grateful to our ancestors for struggling so bravely to win some of the liberties we have since enjoyed. The "Merry Monarch" doubtless was first charmed by the wit and beauty and talents of Nell Gwynne, and afterwards loved her as much as he was capable of doing. Ah! Nell was no vulgar, common-bred girl, although she had once sold oranges on the steps of Drury-lane Theatre, then played upon its classic stage, and finally induced the king to leave a noble inheritance to England's soldier pensioners at Chelsea.—W. F.

CLUB REPORTS.

WEST CENTRAL ASSOCIATION OF LONDON AND PROVINCIAL ANGLING SOCIETIES.

This association held its usual monthly meeting on the 15th instant. Mr. Bonvoisin and Mr. Beckett in the chair and vice-chair respectively. The meeting was not so well attended as usual, owing, no doubt, to the tropical heat of the last week, which has, I think, had to answer for a great many laches amongst all ranks of society; twenty-three clubs were represented notwithstanding. After the minutes of the last meeting had been passed as read, the chairman, addressing the meeting, stated that at the last committee meeting the differences between the Prince of Wales and the Princess of Wales Angling Societies had been explained and settled to the satisfaction of such committee, therefore the matter would now end. The Pictorial Angling Society having been provisionally enrolled at such committee meeting, such enrolment was confirmed. The Society of Caxtonian Anglers was also enrolled with this association. Mr. Murphy then called attention to the "Foster Fund," and asked the hon. secretary whether the money subscribed to such fund had been handed to the widow, whom, he informed the meeting, was in very deep distress. The hon. sec. in a few words explained what had been done in the matter and what he proposed to do. Secretaries having lists still outstanding are earnestly requested to forward them to either of the hon. sec.'s of the fund (Mr. T. Hoole and Mr. R. Ghurney) without further delay. It may be interesting to many to know a little as to the number of tickets issued by the association, the hon. sec. announced that 1728 had up the paesent been granted. The question having been raised whether anything had been done relative to an earlier train on Sunday, on the G. W. R., it was ultimately proposed by Mr. Starr, seconded by Mr. Claydon, "that the secretary be instructed to communicate with the G. W. R., asking for an earlier train to be run to the stations on the upper waters of the Thames." The chairman then informed the meeting that on the 12th instant a deputation consisting of Messrs. Spreckley, president of the T. A. P. S., P. Geen, president of the W. C. A. L. and P. A. S., Clench, president of the Richmond A. S., R. Ghurney, secretary of the U.S.A., C. C., and himself, waited by appointment on Sir J. Bailey, Bart, M.P., and were most courteously received. The resolutions passed at the conference recently held at the Society of Arts were laid before him, and the deputation urged him to strike coarse fish out of his proposed Salmon Consolidation Act altogether, and leave them to shift for themselves. He, in reply, informed the deputation that was impossible owing to the mixed up nature of the Act of 1878, but if they could get another Act passed embracing such resolutions and such clauses only of the Act of 1878 as were of any use to the angling interests, and let the old Act go, he should be most happy to be of service to the angling fraternity. There being no further business to bring before the meeting, the hon. sec. then proceeded to call the roll, the following societies answering thereto:—Anglers Pride, Bostonian, Cadogan, City of London, Cambridge Friendly, Cobden, Caxtonian, Duke of Norfolk, Golden Barbel, Good Intent, Hammersmith United, King's Cross United, Norfolk North-Western, Prince of Wales, Princess of Wales, Pictorial, St. John's Wood Piscatorials, South London, United Marlborough Brothers, Waltonians and Westbourne Park Piscatorials.—G. TREADWELL.

18th July.

AMICABLE BROTHERS' ANGLING SOCIETY.

A great many went out to try their skill, but owing to the extreme heat left off early. Messrs. Thorpe and Wood tried together, the former got 7 lb. roach, the latter 6 lb. ditto. Mr. Arnold, roach and dace from the Thames; Mr. Howlett, 3 lb. roach from the same water, one roach over 1 lb.; Mr. Patrick, 6 lb. roach and bream from Dagenham; Mr. Moir, 3 lb. tench; Mr. G. Carrington, 2 lb. 2 oz. perch.—J. WOBBEDGE.

July 17, 1881.

ANGLERS' PRIDE ANGLING SOCIETY.

The above society was well represented on the 17th inst. by the following members, who weighed in:—Mr. S. Wall, with 6 lb. 13 oz., one roach scaling 1 lb. 5 oz.; Mr. J. Deeley, jun., 4 lb. 5 oz., bream and roach, one bream 2 lb. 6 oz.; Mr. Haines, 2 lb., bream; Mr. H. Scutt, 1 lb. 14 oz., chub; Mr. Soar, bream; Mr. T. Fiddes, roach; Mr. Mallett, roach; and Mr. Marshall, bream. Total weight, 18 lb. 9 oz.—E. MALLETT, sec.

July 19, 1881.

CITY OF LONDON ANGLING SOCIETY.

The following members weighed-in fish on the 17th:—Mr. Mortimer, 5 lb. 4 oz. of roach and bream from Amberley; Mr. Castell, near 4 lb. of bream from Dagenham; Mr. J. Chambers, roach from the Roding; and Mr. Perry, bream from Amberley. The next return visit of the United London Anglers will go to the above society on Tuesday, July 26th, at Coger's Hall, Bride Lane, Fleet Street, where they will find everything cool, but the welcome. We are fifty yards from Ludgate, and five minutes' walk from Farringdon Road Stations.—CAS.

EXCELSIOR ANGLING SOCIETY.

Several members of the above Society were out on Sunday last, July 17, the most successful being Mr. C. White with a handsome tray of perch; Tudenhams, roach from Woking (by the bye, he brought word that a great quantity of fish were lying dead on the water. Can you account for this?) J. Smith had also a very handsome show of rudd (about 7 or 8 lb.), also roach and perch; Mr. Blackman, perch likewise.—A. THOMAS, sec.

GLOBE ANGLING SOCIETY.

The Annual Dinner of this society will take place on August the 14th at the White Horse, Bery, near Amberley. On Sunday, the 17th inst., there was a capital show of fish, Messrs. J. J. Holmes and C. Russell having some very fine roach and bream from Amberley.—J. CHURCHMAN.

July 18, 1881.

GREAT NORTHERN BROTHERS ANGLING SOCIETY.

The following members weighed some very fair roach and bream from Amberley:—Mr. J. Watling, 5 lb. 1 oz.; Mr. J. Fitch, 4 lb. 13 oz., 1 roach 1 lb.; Jennings, 2 lb. 11 oz.; Painter, 11 oz.; Hewitt, 1 lb. 13 oz. From the Wey:—W. Theobald, 5 lb.; Parkin, 1 lb. 6 oz.; J. K. Fitch, 2 lb. 3 oz.; H. Watling, 2 lb. 2 oz. From the Welsh Harp:—Mr. Patman, 8 lb. bream and carp. From the Mole:—Mr. S. Smith, 3 lb. 6 oz. A sad occurrence

took place at Broxbourne on Sunday last. Mr. C. Perkins (better known as Bumpy), a very old and respected member of the society, fell dead when in the act of casting his fly in the New River. Another sad event has taken place in connection with this society. Mr. Mayes, father of a young family, an energetic member of this society, died on Wednesday last, after three days' illness. He leaves a widow and ten children. Mr. W. Mayes is the eldest. A joint benefit is in contemplation for Mrs. C. Perkins and Mrs. Mayes, for which we have offers of great support.—J. A. FITCH, jun., sec.

THE GRESHAM ANGLING SOCIETY.

President: the Right Hon. Lord George Hamilton, M.P.; vice-presidents: Major the Hon. E. R. Bourke and Mr. Alderman and Sheriff Fowler, M.P. Season 1881-2.—Arrangements have now been made by which members have the full right of fishing Mr. Godfrey's water, Thorney Broad, West Drayton, and Messrs. Day's water, known as Ford's, at Park, one station beyond Tottenham. In both cases members have precisely the same privileges as are granted to the regular subscribers to those waters, free of any payment, but the Gresham railway privilege ticket must in all cases be produced when required. Prizes.—A considerable number of prizes are offered for competition, arrangements for which will be made by a special prize committee, and the prizes distributed at the close of the season. Gentlemen desiring information or wishing to compete, are requested to communicate with the secretary, or, if possible, attend the meetings of the Society. Meetings.—Monthly meetings having been found inconvenient, the interval being too long for practical work, the members now meet weekly, each Thursday evening, at 7 o'clock, and a resolution will be submitted at the meeting on the 4th of August, making this one of the society's rules. The committee trust members will attend largely, that the weekly meetings may be rendered as successful and useful as possible. Subscriptions.—Gentlemen who have not yet paid their annual subscription are kindly requested to forward the same at once to the secretary, that the list of members may be made complete, and the railway privilege tickets duly issued.

July 21, 1881.

HAMMERSMITH UNITED.

Only a very few of our members have ventured out during the hot weather, and takes have not been heavy, mainly consisting of dace, perch and bleak. It is proposed to have an excursion by road into the country early in September, and as the number is limited, members wishing to go are requested to send in their names immediately to Mr. H. G. Penny, hon. sec.—VORTEX.

July 18, 1881.

IZAAK WALTON ANGLING SOCIETY.

On the 10th inst., Mr. E. W. Turner had a nice tray of roach, the heaviest weighed 1 lb. Mr. C. Green also had roach on the same day. The Wednesday members dined at Mr. Lyndsell's, the Pied Bull, Stanstead, St. Margaret's on Wednesday, the 13th inst., the chair was ably filled by the treasurer, Mr. A. Rogers, faced by Mr. H. Butt, a splendid repast was placed on the table, and was very much enjoyed by all present, after the cloth was cleared, a hearty vote of thanks was accorded to Mr. Lyndall for the manner in which he entertained the members of this society. Mr. J. Hilliar, sen., showed some beautiful roach on Sunday the 17th inst, the largest scaled 1 lb. 7½ oz., he also had perch. Mr. W. H. Mechem had roach on the same day, Mr. T. Ward had bream, Mr. G. Bliss had bream, Mr. E. W. Turner, bream. On Wednesday, 20th inst., Mr. J. Hilliar, sen., had 9 lb. 10½ oz. of bream; Mr. J. Hilliar, jun. had 12 lb. 15½ oz. of bream, the heaviest weighed 1 lb. 12 oz.; Mr. G. P. Rolt had chub.

July 17th, 1881.

THE LARKHALL ANGLING SOCIETY.

The takes of fish for the week are as under:—Mr. G. Watkins, jack, perch, roach, and barbel, 15 lb.; Mr. King, chub, 8 lb. 11 oz.; Mr. Caplin, barbel, from Sonning, 18 lb. 9 oz., one fish scaling 7 lb. 6 oz., which is in the hands of Mr. G. Watkins for preservation, and will shortly be added to our rapidly increasing collection.—W. TUCKER, hon. sec.

July 19, 1881.

LIVERPOOL ANGLING ASSOCIATION.

At the ordinary weekly meeting, held on Thursday evening, the 14th inst., it was resolved that there be a competition on Bank Holiday, August 1st, in Marbury Mere, Northwich. Members who intend taking a part in the excursion must inform me at least seven days beforehand as arrangements will have to be made with the keeper in time; other parties will no doubt apply, and we must be first in the field to secure what boats there are.—RD. WOOLFALL, hon. sec.

July 19th, 1881.

ORIGINAL CLERKENWELL PISCATORIAL SOCIETY.

The members of this flourishing club had a variety of fish last Sunday. Mr. Obbard chub and dace from the Lea; Mr. Neagus had excellent sport again with the roach in the Stort; Messrs. Edginton, Laundry, Drew, Lucy's (two), had roach, bream, and perch from Pulbore. Quarterly night, Monday next, July 25.—THOS. WM. LUCY, secretary.

PATRICROFT SOCIAL ANGLERS SOCIETY.

The first angling contest in connection with the above society took place on Saturday last, 16th inst., in the Bridgewater Canal, when 280 anglers took part in it. The day being bright and clear with a very slight breeze caused many residents to crowd the banks of the canal to witness the unusual sight of 280 anglers entering into peaceful rivalry for the prizes (23 in all) which were given by the treasurer of the society, Mr. Adam Oldfield, Spinner's Arms, Liverpool Road, Patricroft to the value of £10, viz., £6 10s. in money, and £3 10s. in value. The arrangements were very satisfactory, but owing to the late arrivals of the Oldham and Hollinwood Anglers, it was 4.30 before the draw commenced, this took an hour, and after allowing an additional quarter of an hour for each angler to get to his place, time was called at 5.45, two hours being fixed upon for the duration of the match. It was soon apparent that small captures would be the result, for although during the week the roach had been well on the feed very few were taken during the match, the highest weight (the first prize) being only 7 oz. and 8 shot, and the lowest prize taken 2½ oz. and 5 shot. The prizes consisted of a cruet stand, rod, copper kettle, clock, teapot, knives and forks, carver and fork, basket, reel, bait can, canary and cage, spoons, landing net, looking glass, garden seat, pocket knife, comb and brush, and cork seat. The successful competitors were:—1st prize, William Atherton, Farnworth, £3 with 7 oz. and 8 shot; 2nd prize, E. Withnall, Bardsley, £2 with 6½ oz. and 3 shot; 3rd prize, R. Shilleta, Eccles, £1 with 5½ oz. and 8

shot; 4th prize, R. Platt, Bolton, 10s. with 5 oz.; 5th prize, J. Clare, cruet stand, 4½ oz. and 5 shot; 6th prize, T. Sunner, Plank Lane, 4½ oz. and 9 shot; 7th prize, J. Matthews, Ringley, 4 oz. and 9 shot; 8th prize, J. Heaton, Salford, 4 oz. and 7 shot; 9th prize, R. Banks, Bolton, 3½ oz. and 9 shot; 10th prize, J. Humphrey's Clifton, 3½ oz. and 4 shot; 11th prize, J. Flitcroft, Bolton, 3½ oz. and 7 shot; 12th prize, J. Westhead, Plank Lane, 3½ oz. and 2 shot; 13th prize, Grundy, Tyldsley, 3 oz. and 8 shot; 14th prize, J. Thompson, Oldham, 3 oz. and 1 shot; 15th prize, E. Roe, Clifton, 2½ oz. and 6 shot; 16th and 17th prize, left without names, 2½ oz. and 1 shot; 2½ oz. and 11 shot; 18th prize, J. Clegg, Plank Lane, 2½ oz. and 11 shot; 19th prize, J. Fish, Patricroft, 2½ oz. and 10 shot; 20th prize, W. Walker, Farnworth, 2½ oz. and 3 shot; 22nd prize, C. Douglas, Oldham, 2½ oz. and 10 shot; 23rd prize, H. Dunbar, Pendleton, 2½ oz. and 5 shot. The 21st prize was not claimed, 2½ oz. The last eighteen competitors selected their own prizes; an arrangement which met with general approval.—W. R. R.

July 19.

PRIDE OF DERBY ANGLING CLUB.

The members of the above club held their first match this season on Saturday last in the Eggington Canal, the following members being the successful prize takers:—1st prize, J. Bland; 2nd prize, W. A. Martin; 3rd prize, W. Tunncliffe; 4th prize, J. Hutton; 5th prize, F. Tunncliffe; 6th prize, J. Newsem; 7th prize, J. Grimley; 8th prize, W. Elliott; 9th prize, C. Hardy; 10th prize, T. Stafford.

[Very glad to hear it, and hope you will recommend the paper to anglers who don't take it yet.—ED.]

July 20, 1881.

STOKE NEWINGTON ANGLING SOCIETY.

We had another good show of fish on the 17th inst., and great credit is due to the members for their perseverance notwithstanding the tropical character of the weather. The following is the exact result of the competition:—Mr. Edward North, 9 lb. 10½ oz. roach and bream; Mr. T. Gretton, 6 lb. 8 oz. bream; Mr. W. Webb, 1 lb. 10 oz. roach and bream; Mr. E. Morrow, 14½ oz. dace; Mr. T. Millington, 7½ oz. perch; total, 19 lb. 2½ oz. Again an improvement on the previous week.—THOS. GRETTON, Secretary.

P.S.—On the 19th inst. Mr. J. Wakett had a fine take of bream, weighing 17 lb.

July 19th, 1881.

SOUTH LONDON ANGLING SOCIETY.

Mr. Head was at Amberley yesterday, and got nearly 4 lb. roach; Messrs. Buck, Gearing, and Goody went to Thames Haven fishery, once famous for its quantity of rudd, but found, owing to a high tide in January, the sea came in water, and killed the rudd. They found some eels. They say they are the only fish in it now. I should not have troubled you with such a short report, but by letting the state of the water being known, save any other anglers loss of time and trouble.—G. H. FIELD.

July 18.

THE EXETER ANGLING CLUB.

It was expected from the numerous post-cards forwarded to members and friends we should have had a very large meeting last evening, but owing to the excessive heat, and a counter attraction in the shape of a "circus" troupe, which is generally well received by Exonians, our gathering was but limited; at any rate, business proceeded favourably, and some half a dozen names were placed upon the minutes for next Monday to be enrolled as members. The club, as you perceive above, has for various reasons, and in accordance with the members' wishes, been altered, and for the future will be known as the E.A.C. A few dishes of fish have been shown, but to "plod through sunshine or through rain" is all very well, but when you add the excessive heat and sunshine, together with the rivers and ponds very low, it is not encouraging, and accounts for the small sport.—FRANK GOSDEN, hon. sec. *pro tem*.

July 19, 1881.

UNITED LONDON ANGLERS.

The return visit of the Eastern District in connection with the United London Anglers' Central Committee was paid to the Hoxton Brothers, Jane Shore, High Street, Shoreditch, on Monday evening last, July 18th. The chair was occupied by Mr. H. Du Costu, Hoxton Brothers, the vice being ably filled by Mr. M. Say, of the Amicable Brothers. Though the night was intensely hot, there was a very full meeting, twenty clubs being represented. The next visit will be paid to The Great Northern Brothers, due notice of which will be given. A revised list of the Eastern District Visits will be ready by the next Central Committee Meeting on Monday, August 8th. Secretaries of clubs who wish to be enrolled on the new list will oblige by informing your humble servant, R. GHURNEY, 10, Baaches Street, Charles' Square, Hoxton, N.

WALTONIAN ANGLING SOCIETY.

'Tis easier to deserve than to command success. Several of our members out, takes very poor. The best by Messrs. Malcolm and Roland about 3 lb. and a half each from Pulborough.—C. J. MARRIOTT.

July 19th, 1881.

WESTBOURNE PARK PISCATORIAL SOCIETY.

The return visit, No. 1 District, will take place at the above house on Tuesday, August 2, when members of angling clubs are invited to spend an evening with the members of this large and flourishing society.—H. ADKANE, sec.

WEST CENTRAL.

A fine show of fish, and the best this season, were exhibited in the club-room of the above society, Cross Keys, Theobald's Road, on Sunday last, from the catches of the following members:—Mr. Berry was the champion of the day with a splendid take of trout, 17 in number, from Tunbridge Wells; Mr. Taylor came next with a good catch of bream from Amberley, one weighing 3 lb. 8 oz. and another 3 lb. (this is not Mr. Taylor's largest bream this season, as he took one a fortnight ago scaling over 4 lb.); Mr. White had 6 lb. of roach from Pulborough, all good fish; Mr. F. Beard also had a nice take of roach from the same place, weighing from 4 oz. to 1 lb.; Mr. W. Wilcockson weighed some fish from Byfleet, one being a fine bream of 3 lb.; Mr. Mathie, fishing at Kingston on the previous Wednesday took 7 lb. 8 oz. of dace and a small barbel 1 lb. 8 oz.—R. I. BEARD, jun., sec.

RIVER REPORTS.

MID-THAMES.

"Give me mine angle. We'll to the river."

SHAKESPEARE.

A pleasant change has come o'er the spirit of the elements, for the weather is cooler, the water is ditto, and the fish are evidently grateful, and are accepting freely the good things wily piscators are offering in the shape of lobs, blood worms, gentles, paste, frogs, and rotten cheese. Gudgeon are biting at last, as I hear of takes of 20, 25 and 30 dozens within the past few days. Chub are affording good sport, the best bags being made with the fly, early and late in the day. Roach are still shy and out of condition, and jack should not be attempted until late in August. Tourists, campers and pic-nic-ers should now come down and see the river, for old Father Thames is looking his best, and his surroundings just now are simply glorious.—MARLOW BUZZ.

Thames (Goring).

Water very low; want a few days' rain. Perch are biting; taking about 3 dozen a day, very good ones. Gudgeon are biting very well; jack not on much.—JOHN RUSH.

Thames (Kingston).

I have done a little better this week, morning and evening—four to five dozen roach and dace, from five to eight in the evening. My son has been chub fishing early three mornings; seven, five, and twelve fish from 1½ lb. to 3 lb. a fish. A private boat has got some nice chub. I saw five fish that would weigh close on 4 lb. each. I have not done anything with the barbel. I have heard of one punt having two that would weigh 8 lb.; I did not see them. I hooked five, but lost them; I should say they were hooked foul, as no tackle was broken, and we were fishing with all drawn gut.—JOHN JOHNSON, sen.

Thames (Richmond).

This has been a fine week for the followers of Izaak Walton, and all those who have patronised our old river Thames have been very successful (at least, in the tidal waters), the dace feeding well with a camel barbel. To live up the sport all the punts have been out most days with good success; and I think I can say that each punt has averaged 8 doz. dace each day. Any club member wishing to have a day's fishing with me will have a good opportunity next week, as I am only ordered for Tuesday, which is a little unusual, though I am sure to go out, but I should like to go out with Club members, so as they can produce their takes at the various club rooms, as the gents I fish with are nearly all people who don't belong to clubs. My charge is ten shillings for a day's fishing, and find bait and tackle, but I have an objection to more than two gentlemen in the punt.—JOHN BUSHNELL, Fisherman.

Thames (Windsor).

Water here is as low as I ever remember it, and as a consequence, angling is bad. The only things worth trying are the chub and perch, the latter in the weirs with worm, former with fly or whipping. I have seen no good bags this week. Richard Gray, with Hockley, Esq., had about 20 lb. of chub, and Pace, at Etonwick, with a patron, had a brace of jack, about six pounds. Lumsden has been taking some capital dace with one of 'which I managed yesterday evening to get a nice conditioned jack (male) in the old Windsor Weir, scaling when weighed this morning, just nine pounds. This was the first wetting of a line by me this season and until there is a good drop of rain shall not try the barbel, of which we have plenty, but at present it is useless trying them.—B. R. BAMBRIDGE.

Ancholme.

In connection with a few friends I paid another evening visit this week to this river. We caught a few small perch and eels, but no roach or bream. These fish are evidently not yet on the feed. Not being able to obtain in a dace or roach for bait, I trolled awhile for pike with a small perch. I had one run, but failed to land the quarry, as the fish was never hooked.—THOMAS FORD.

Coquet (Northumberland).

On the 16th, Albert Dobson killed a salmon, 6 lb.; George Wharrier one, 3 lb.; Stephenson Thompson killed a good creel of trout with minnow; George Wilson a splendid dish of ten trout, 4½ lb. The wind blew from the west. A good ripple on the water for fly-fishing.—A. GLASS, Angler's Inn, Weldon Bridge.

Dove (Derbyshire).

The river is now low and clear, but some fair sport has been had with the red caterpillar at dusk of evening. Scarcely anything has been taken at midday since our

last; but the moths, dun, cut, and coachman, as also earlier the pale wing duns and whites, have been instrumental in landing some fair takes upon all the most frequented lengths. The netting fraternity are now busy almost every evening, and great numbers of fish are daily exposed for sale in the small market towns. Good sport with the coarse fish at Rochester. Several heavy pike (from the Dove) of 7 to 10 lb., taken with Gregory's Windsor bar spinner; 5½ brace chub, scaling 15 lb., were taken with the red caterpillar on Friday. Rain is badly wanted for minnow spinning and midday fishing generally.—THE SPLODGER.

Exe (Exeter).

In the first two lines Courtley graphically says:—

"The thirsty earth drinks up the rain,
And drinks, and gapes for drink again."

But "query," when shall we get the rain? After the long drought, angling is looking quite forlorn, and the prospects at present have a gloomy aspect, and for the sake of those Waltonians who really make fishing their sole study, as well as for the general prosperity of us all, we sincerely hope that gentle showers with the present almost tropical heat, will, combined, mature the produce of the land, as undoubtedly it would the water, by giving an impetus in the way of freshets, and causing the speckled beauties to take a wider survey of their, at present, "hole-in-the-wall" quarters. Above the tidal portion of the river little or nothing doing; plenty of salmon waiting to go up, and as this is the season for cleaning out the head and tail race of the mill, also the leats, numbers of trout and so-called "truff," also "parr," pike, roach, and dace have been taken *ad lib.*; one fine trout of 5 lb. was among the number. I really think these men should allow a royalty on all fish that are salmon. Trout and parr to be returned to the river as soon as taken, at any rate, all those of undersize. The net fishermen are doing very well in salmon, and the estuary men in all kinds, from small turbot to dabs, &c. Mackerel are more plentiful, but very small (tossies), and fetch a long price. Prawns are coming much finer, but in lobsters and crabs a great falling off. Thermometer, in shade, 90°, in the sun, 124°; wind, N.W., and not the slightest indication of rain.—FRANK GOSDEN.

Lochawe.

Lochawe, as regards salmon-fishing, has given great encouragement to anglers, in spite of the many steam-launches that ply unceasingly on the lake. As an instance of the good fortune anglers have had, we may say that on the Port Sonachan Hotel waters alone last week seven salmon have been landed. All the above have been caught with trout rod and fly.—W. J. CAMERON.

Medway (Tonbridge).

The water is clear and low, and rain is very much needed, as we have not had a run of water since the opening day. The sport, though tolerably good, is nothing like it will be after a good rain. Bream and roach are well on, the former taking a well scoured worm. A large number of exceedingly heavy fish were captured during the week; owing to the hot weather they are caught best in the early morning and late in the evening. One angler this week, before breakfast, secured a dozen bream and perch. Good sport may now be had in either of the swims above the town if properly ground baited.—YE MEDWAY WATER RAT.

North Lincolnshire.

My son, from London, caught a fine dish of twenty-one trout on Wednesday last. I landed six on Saturday, and caught a large dish of perch in capital condition from Croyby Lake. I am glad to say the small beck which I began to stock in 1876 now shows fruits. I got up by moonlight on Monday morning last, and landed thirteen nice trout before six o'clock. Amongst them was one *fontinalis*, raised from last year's fry. This weighed ½ lb., and is the first I ever caught. It was a beautiful little fish, in the pink of condition. By the way, the trout caught on the Wednesday were preserved in glacialine, advertised in your columns. They were sent to London on the following Monday, and my friends declared they were perfectly sweet and wholesome. If the fish can be kept in this way during the present tropical heat the Antitropic Company has achieved a triumph indeed.—THOMAS FORD.

Ormesby Broad.

The weather this week has been all that could be desired. Bream, roach, and rudd are now well on the feed, and many gentlemen down fishing. Amongst the most successful are two gentlemen from London, Mr. G. A. Liastead and Mr. Whitby. They are landing large lots of bream, roach, and rudd; bream from ½ lb. up to 3½ lb. weight. On the 16th, 50 lb. of bream, besides roach and rudd. On the 17th, 98 bream, weighing 80 lb., and some good roach and rudd. I wish all those visiting our broad would follow the example set by these two gentlemen—that is, by returning all small fish caught to the water again. Any gentleman desirous of a good day's fishing had better give the Ormesby Broad a look up. Good boats and bait are to be obtained, and every attention.—S. RICHMOND, Proprietor, Sportsman's Arms, Ormesby Broad, near Yarmouth.

Suir and its Tributaries, Clonmel (Ireland).

There are great numbers of peal still running up the river, and some have been caught with rods, but the last few days the water has got so very low that very little sport has been had. The cots are only getting a few odd ones. The corresponding week last year we had a fine flood, and great numbers were caught. The river wants a little fresh again now, both for the salmon and trout fishing. There is a desperate amount of poaching going on at present, both day and night. There was some good trout fishing on the Anner this week. The favourite flies are spider wrens.—DORA.

Swale.

The tropical weather proves unfavourable for day-fishing, but good catches may be made with worm in the early morning and late evening in the Becks. Dabbling with blow or flesh fly will be found most killing under bushes and in shady places. Few trout are ever caught during sunshine except with the green drake, and that fly is now nearly over for this season. Have your readers tried the grey goose dun? It is a capital fly for both trout and grayling just now. It is made as follows:—Body, lead-coloured silk; legs, dark dun goose tackle; wings, starling's quill, varied in shade with yellow and straw-coloured bodies and lighter tackles. It may be fished almost to the end of season.—THOMAS FORD.

Trent (Alrewas).

We have had a beautiful and agreeable change in the atmosphere during the past week. The almost tropical heat has been succeeded by more genial summer weather, and our anglers are beginning to reap the advantage of the present change. With the water as bright—if not as pure as crystal—and the

thermometer standing at 145 degrees, fishing has ceased to be remunerative in every sense of the word. Roach and dace are now getting in better condition, and afford good sport; some excellent baskets have been had from the Trent at Alrewas, weighing from 7 lb. to 20 lb. each, and the fish of excellent sample. On Monday Mr. Seal had from this noted spot ten good perch, a brace of chub 4 lb., and a lot of fine roach, some over 1 lb. A friend fishing with him took a brace of jack—the largest fish weighed 9 lb., and was in capital condition for the early season, ten eels and some fair perch—the latter, by the way, are excellent in colour, and entirely recovered from spawning operations. Two good days are reported of Mr. Thornton, who basketed on the first day nearly 20 lb. of roach and dace, and on the second 11 lb. of the same fish, principally with stone bait, which are now, I am sorry to say, almost out of season, for I consider it one, if not the best, all-round baits used for angling; every kind of fish will take them, and the sample is always better than when maggot fishing. It was reported to me on Thursday that the river, although very bright and low, the fish are fairly on. Mr. Bullock had a capital basket of roach on Wednesday, and succeeded also in landing a good trout $3\frac{1}{2}$ lb. on fine roach tackle; a capital performance. Barbel are still knocking about on the shallows. A nice fish of 6 lb., besides some good chub and perch, was taken at Alrewas last Saturday, by Mr. Adams Parken—worm fishing—worms now are at almost starvation prices, owing to the continued dry weather, and gentles will be found the best bait for all-round fishing for at least another fortnight. A friend of mine writing from Newark on Wednesday remarks of the good salmon fishing in the Trent in his neighbourhood. On Monday 14 fish were taken; the largest fish weighed 36 lb., the remainder averaged 12 lb. each fish. He winds up by inviting me to share his hospitality, bring my tackle, and go in for salmon fishing. This looks very well on paper, but scarcely good enough in the Trent for me.—JAMES GREGORY.

Trent (Newark).

The water is remarkably low, and is in middling condition for all round fishing. The weather is rather more genial than last week, and rodsters are now in full swing. Most kinds of fish seem to be biting very nicely, and the prospects for the next few days are pretty favourable—that is, if the anglers operate in a proper manner and in a suitable swim. Several nice catches of roach have been had during the week, with both gentles and plain bread paste, the latter killing the biggest fish. Choose a moderately deepish swim, just over a lot of weeds, and the water not very rapid, and if the ground baiting has been attended to, I think a basket of roach will be the result. Barbel have been taken with scratchings for bait, but not in any very great quantities, a few odd ones being the extent of the takes as yet. Worms, as far as I can learn, have not yet succeeded in deluding the barbel, and so I should advise anglers not to go to the expense of a lot of worms yet, but stick to the scratchings. Chub are now beginning to get under the boughs, and can be taken both by bait and fly, the wasp grub being about as good a bottom bait as any if getable, or a small piece of white scratching or a bunch of gentles. A large blue bottle fly or a humble bee on the surface during the heat of the day will perhaps be as seductive as anything for chub. Some fairish catches of bream have been had with worm; but as an old angler remarked to me the other day, they are yet very soft and flabby, and will be all the better for another week or two's rest.—THE TRENT OTTER.

Trent (Nottingham.)

Although the river still remains very low, the temperature during the last few days and nights has been much better, which has caused the fish to take more kindly to worms, more especially the barbel and bream. The former are now getting so numerous in the Trent that I feel satisfied that some great catches will shortly come off; in fact, the fish are now biting well, and the effects of a moderate baiting seems to answer the purpose very well in places where the water is not deep and plenty of stream. In the locality of Hazelford, which is perhaps one of the best spots for barbel fishing at this season of the year, during the last few days some capital sport has been had. One gentleman took fourteen nice fish without a baiting, and another, ten with only a small quantity of worms. Bream, on the upper part of the river, are now fairly on the feed, more especially at Weston Cliff, and the rodsters who are fond of bream fishing should take the present favourable opportunity. Roach are beginning to take malt and wheat, but not freely; the maggot seems to be doing the most execution. I have nothing to report as regards pike and perch fishing—both fish seem dead off feed.—W. BAILEY.

Wye and Derwent (Derbyshire).

Both the Wye and Derwent are very low indeed, and the greatest care must now be taken to keep the fish, or a serious loss will be the consequence. Extra strength at night is now required; in fact, I may say these rivers should scarcely ever be left, especially in the night time, as both rivers have a very fair quantity of fish in them, both trout, grayling, and a great number of coarse fish. Sport still continues very bad with the artificial fly in the middle of the day, especially on the Wye; but still some few anglers have been picking up good fish of an evening, chiefly off the Derwent, and baskets from 3 to 8 brace per angler have been made, especially by those that have been wading and fishing up stream. The killing flies have been the honey dun, bumble, black, and sand fly, dishing with the little black fly has been followed with good results in the middle of the day, and some fine pound trout have been taken all up and down the Derwent, several baskets having from three and a half to seven brace per angler. Those gentlemen that have ponds will never kill. Their display of trout of an evening with the following flies, viz., red palmer, ribbed with gold twist; body, peacock head, tail, with orange silk, and pure red, cock's hackle over it. The fern fly, orange silk of a deep colour; wings from fieldfare, with a pure red hackle for legs, bound twice round the head, and brought once behind its wings. You may rib this fly with gold twist, and it makes the red spinner. Trolling with the natural minnow has been followed with fair success on the Derwent, and some fine trout have been killed late in the evening, chiefly off the Darley Dale Club water. The bottom fishers have fished very little during the past week. Rain is much wanted; in fact, we shall have no really good fishing before we have a regular good downpour.—GEORGE JAMES EATON.

Yore (Yorkshire).

This river has again run down to its summer level, and there is consequently very little doing in the day time. There are, however, some few anglers who are killing a brace or two of trout in the early morning and the evening, one gentleman telling me that on Tuesday night he got three very nice trout and half-a-dozen dace with fly, there being a slight breeze to ruffle the surface of the water. As a rule, however, at present the game is not worth the candle.—FRANCIS M. WALBRAN.

THE PISCATORIAL SOCIETY'S ANNUAL SUMMER DINNER.

THIS popular dinner took place on Thursday evening at the Ray Mead Hotel, Maidenhead, on the banks of the Thames. Mr. Deacon's hotel is most charmingly situated, and the room set apart for the guests was a long one with French windows opening on to the lawn. Mr. James Lander, the hon. sec. of the society is to be congratulated on his very able and complete exertions for the comfort and pleasure of the visitors. From all we heard every one was thoroughly well pleased. Dinner commenced at six o'clock, with Mr. J. G. Andrews in the chair, faced at the other end by the vice-chair, Mr. Norman F. Harrison. After dinner, Mr. Andrews proposed the toast of the Queen, and most enthusiastically was it responded to. He then gave the society, and spoke of its great success, and regretted the absence of some gentlemen who had been unable to attend, especially one who had been most successful in introducing new members, Mr. W. B. Adlington. (Hear, hear.)

Mr. Rolfe next proposed the press, and Messrs. J. P. Wheeldon, W. H. Brougham, and R. B. Marston responded.

Mr. Pearce, the venerable and highly respected father of the society, in a few pleasant words, proposed the Thames Angling Preservation Society, and Mr. Brougham replied in his usual happy manner by alluding to the Royal feather which the Thames Angling Preservation Society had now got in their cap in the shape of the Prince of Wales.

The Vice-president then proposed the Chairman, and the company gave Mr. Andrew's abundant testimony of their appreciation of his "jolly good fellowship"; in replying Mr. Andrews said that the only thing he ever regretted in connection with the Piscatorial Society was that he had not joined it sooner, and had thus missed so many pleasant meetings like the present.

Mr. Goodger next proposed the vice-chairman, Mr. N. F. Harrison, mentioning that it was at Mr. Harrison's suggestion they had made a change in their place for the summer dinner, and every one he felt sure would admit that nothing could be more pleasant than the place they were in. (Hear, hear.) And also the dinner had been first class. (Hear, hear.)

Mr. Harrison replied that he was very glad the members were pleased at his suggestion of the Ray Mead Hotel. He was sure Mr. Deacon would do all in his power to make anglers comfortable, he was a man of the right metal and would have great pleasure in trying and taking their metal to any extent; but he (Mr. Harrison) trusted, for the honour of the society, none of the members would try and return the compliment and take Mr. Deacon's metal, in the shape of the "spoons;"—(laughter)—if they did, he should advise them to "run" for it, and hoped they might not get "caught." (Laughter.)

The speeches were all commendably brief. At a signal from the chief, smoke began to curl up from every wig-wam, or rather angler, and the company then dispersed into the garden and strolled about, listening to Messrs. Harrison and Victor Emmanuel's fine singing. Some few went fishing, but after such a dinner the fish were tolerably safe.

As the shades of evening came on Mr. P. Rocco sent up some splendid rockets, which had a very fine effect over the water.

Amongst the gentlemen present were Messrs. H. L. Rolfe, J. P. Wheeldon, Pearce, Huggett, Wheatstone, P. Rocco, H. Gray, J. Lander, W. H. Brougham, R. B. Marston, J. G. Andrew, N. F. Harrison, P. Lemann, Dr. L. Thomas, Dr. Coates, Dr. Corfield, Captain Alfred, J. Hirsch, Turner, Goodger, Cross, Victor Emmanuel, H. H. Brown, Gillatt, F. Walker, and many others whose names we were unable to get.

Much regret was evinced at the absence of Messrs. T. Sachs, W. B. Adlington, Ross Faulkener, M. Hazeland, Dr. Brunton, and other well known members.

THE CLEVES EXHIBITION OF SPORTING APPLIANCES.

THERE is being held at Cleves an International Exhibition of Hunting and Sporting Appliances, which, though it has not attracted much attention in this country, is worthy a passing notice in the columns of this journal, from their being there exhibited a very fine collection of fishing appliances. These are contained in a large case, and form an interesting and instructive display. Some of the fish hooks are very curious, though the Redditch manufacturers are entirely unrepresented, which seems somewhat strange, considering the goodly show they made at the Berlin and Paris Exhibition. On the Central Committee of the exhibition are to be found the names of Lord Claud Hamilton and Mr. Charles Henry Parkes, the chairman of the Great Eastern Railway; and the Great Eastern Railway Company, with their usual consideration and kindness, have afforded increased facilities for all who may desire to visit the Cleves Exhibition.

We may mention that Cleves is celebrated for its mineral springs and for its old castle, built in 1346, and which stands on a hill in the centre of the town, and all our readers will remember Anne of Cleves. One thing in the exhibition is worthy of special remark. In one group there is not a single picture of any merit that is not English.

LOB WORMS.—In consequence of the difficulty experienced by London anglers in procuring lob-worms, Mr. Gillett, fishing tackle maker, of No. 40, Fetter Lane, has arranged to keep a constant supply; also of other worms and gentles, &c.—ADVT.

HOTEL CHARGES TO ANGLERS.

ONE of the best attractions for riverside houses is undoubtedly moderate charges combined with good cooking and attendance, and without this no hotel keeper ought to complain if he is wanting in support. If there is an excessive charge a day's fishing becomes a really expensive luxury. There is an evidence of this in an angler's statement who caught 5 lb. weight of fish at an expense of £2 13s. 3d., the odd money representing a little over the puntman's charge. The party consisted of two anglers who went down one night, slept together in a small room, and the meals they had were supper, breakfast, and lunch in the most simple style, and they returned home early in the afternoon of the second day. As a matter of course they paid their *little* bill, and with a determination to make no quarters there again. If the anglers are to be inflicted with these charges, it is no wonder the river should be deserted, and fishermen should complain that no one comes down. If the Thames is to be made popular to the punt anglers, the proprietors of hotels should adopt a tariff of charges that would attract them to their houses, and punt anglers, whilst they are not of a niggardly turn, thoroughly detest overcharges. Take, for instance, a supper with only cold beef and bread, and a charge of half-a-crown each, and a breakfast of underdone bacon and two eggs at the same price. These items are too much, especially as the anglers, as a rule, do not rest there, they go in well for lubrication, and an hotel keeper should bear in mind it is not the meat only on which he should look for a profit, but it is the wine and sundry glasses of grog that comes after it. The object of referring to hotel charges to anglers is not to be regarded as a general complaint—although a special case is referred to in this instance, as it has been sent by an angler—it has rather to be looked upon as “a word in season” to those who practise expensive tariffs—and to stimulate, if it is possible, a most necessary supplement to the efforts of the various preservation societies who are making the river so attractive to anglers—that is moderate charges to anglers by all the proprietors of riverside houses. B.

CLUB AND OTHER JOTTINGS.

By L. B.

THE River Lea, beloved of wielders of Sowerbutt's eighteen-foot poles, continues very bright and low; and what is as bad, if not worse, the want of a push of water has caused the weeds to grow to such an extent that below the surface presents the appearance of an aqueous forest. With such a state of things it is not to be wondered if there is almost nothing doing. The anglers of some of the favourite reaches are not, however, to be denied, and at such a place, for instance, as the broad water, above the lock at St. Margaret's they positively swarm.

The water has been drawn off at Tottenham and Waltham, during which time it was carefully watched by Messrs. Ghurney, Bick, High, Bagley, Scott, and Oram, members of the Lea Preservation, and holders of the Conservancy warrants.

Apropos of the last-named place (Waltham), the public right of fishing from the tow-path in a certain portion of the river has been challenged, the fishery rights has claimed by a Mr. Arthur Wheeler, of the King's Arms, Waltham, at one time a prominent figure at London club meetings, one of the original founders of the East Central Committee, secretary of an old-established angling society, and an indefatigable worker in obtaining the preservation of the Lea. As Mr. R. Murphy, supported by the East Central Committee, and representing the public angling interests, has, after due notice, fished the water, refused to pay for so doing, and been duly served with a summons, it would be manifestly unfair to comment upon what is really and acknowledgedly a friendly test case.

It was only the other day Mr. Harry Brookwell received the congratulations of his friends upon the capture of the champion trout of the season, and now this excellent and fortunate angler is credited with the capture of a handsome trout 9 lb. 10 oz., also from the Lea, at Hoddesden.

A sad piece of news reaches me from the banks of the said Lea. On the 17th, while fly-fishing, Mr. Parkins of the Great Northern Brothers Angling Club, dropped down dead. Deceased who was better known among his intimates as “Bumpy,” leaves a wife and little ones; he was a member of the Anglers' Benevolent Society, and I trust the Committee will deal with his case as liberally as the state of the funds and other considerations will allow.

From Yalding some very fair takes of roach and bream have been had, the first-named fish particularly running a good size.

The monthly meeting of the West Central Association of London and Provincial Angling Societies was held on Friday last. The provisional enrolment by the working committee of the Pictorial Angling Society was confirmed, and the Society of Caxtonian Anglers was enrolled; some routine business was also gone through, but nothing of moment was before the meeting.

Some enormous takes of bream have been had from Huntingdon and the Ouse district. When I say enormous takes, I mean eighty, ninety, or 100 lb., and more at one sitting. The annual subscription to the Huntingdon Water is 10s. 6d., which, I believe, includes the privilege

of introducing a friend, but if further particulars are wished for no doubt they could be obtained upon application to Mr. Howson, the Secretary of the Huntingdon Preservation Association.

From the Stort, at Burat Mill, I hear of one or two very good takes of roach.

Last Sunday I went over and paid a visit to Mr. Greville Fennell, who has been very ill indeed, but is, I am pleased to say, getting better. Mr. Greville Fennell has kindly promised to paint a picture each year for the Anglers' Benevolent Society, to be utilised by them in a manner most likely to be advantageous to the funds. In anticipation, I see Messrs. Ghurney, Beckett, Murphy, and other members of the committee, their faces wreathed in smiles as they read this, or hear it announced.

Mr. F. C. Clench, the Chairman of the Richmond Piscatorial, has been elected on the committee of the T. A. P. S., the chief ground for such election, apart from his undoubted ability and zeal, being that Mr. Clench is a representative man. This is as it should be. The more purely representative men the T. A. P. S. and similar bodies have on their committees the stronger in every sense, and the more entitled to claim public support will they become.

Apropos of the river Thames and the T. A. P. S., how progresses the scheme first mooted some years ago of obtaining the abolition of netting in the lower waters, I mean towards Kew and Isleworth? From all sides I hear that in spite of the perfectly legal netting continually going on, the fishing is, if anything, better than in the jealously guarded water above Richmond Bridge.

ANGLING AT LOCHINVER.

A CORRESPONDENT writes:—Those who have once found their way to Lochinver are pretty sure to find themselves there again, particularly if they happen to be devoted to angling, admirers of scenery, and capable of appreciating pure, bracing air. For all these Sutherlandshire will hold its own against most counties, but as a resort lovers of angling have found, and probably will always find, it beyond comparison the best fishing region of Scotland. To say a word of and to anglers who come to Lochinver appears expedient. Some ply their rods in the lakes and get trout in abundance, trout of every size, salmo ferox, and so forth. This amusement being free, however, is not appreciated by the class of “sportsmen” here referred to, and they rush away to the Kirkaig or the Inver, paying twelve shillings and sixpence a day for the privilege; but although they flog the pools with the utmost ardour, the fish do not seem to accept their part of the entertainment, and the day ends with an empty basket; while probably the smoking-room of the hotel rings with grumbling of “Only saw one, two, or three fish,” or perhaps, “Did not get a single rise.” The fact is, however, and every true angler knows it, that much patience and considerable judgment are necessary on the banks of a river, let that river be where it may; but some men go at their angling as a matter of business, looking for the value of their 12s. 6d. or more—threshing the water when the sun makes it a perfect blaze of gold, and not a breath of air is stirring it.

On the other hand, those who choose the early morning hours and those of shady evening, fishing patiently and judiciously, will seldom or never come back without salmon or grilse, unless, indeed, as not infrequently is the case, an accident occurs to rod or tackle through some defect in either, or the fish being insufficiently hooked, several instances of which happened in the writer's experience in three days' angling on the Inver and Kirkaig—Thursday, Friday, and Saturday last. Of course, in dark days, when there is a westerly wind, success is probable at any hour; and indeed the writer, who is more eager than he is proficient in the art, got all his fish between noon and 5 p.m., there being some exceedingly bright hours during which attempting to angle were folly. There are twenty-one pools each on the Kirkaig and the Inver, and it is here frankly stated that on almost all of them fish were seen to rise to the fly, although they did not “take” it.

To give some idea of what has been done during the last week, on most days of which a cloudless sky and hot sun with still air prevailed, the following details may be given:—On the 4th inst. Mr. Maitland, Dundee, landed a 7 lb. grilse on the Inver; Mr. J. Brown, Hamilton, had three sea trout, aggregating 9 lb., on the same river. Next day the Hon. C. Erskine got two grilse, of 5½ and 7 lb., on the same stream. The same gentleman, on the 8th, had a salmon weighing 9 lb., also on the Inver. On the Kirkaig, Mr. Campbell Ross had a salmon weighing 8½ lb., and a grilse of 6½ lb., on the same day. He also lost a grilse which was not sufficiently hooked. On the 9th inst. Mr. Ross, on the Inver, landed two salmon of 7½ and 6½ lb. respectively, and a sea trout of 2½ lb. He lost a very fine salmon after six minutes' play—a similar misfortune happening to him on the 7th inst. with the only fish he hooked on the Inver. It may here be stated that the most effective fly on the Kirkaig was the “Highlander;” while the “Jock Scott” divided honours with it on the Inver. The Hon. C. Erskine, who is one of the most devoted and patient anglers seen in Lochinver this season, lost a fish on the Kirkaig on Saturday.

It is worth noting that the river Culag, which is at the door of the hotel of that name, is free, and, probably because it is so, is not fished on as it deserves to be; for although a short and rather burn-like stream, it is rarely without salmon, which are frequently seen on it working their way up to the loch (Culag), and good anglers get fish on it, while those who are indifferent at the craft and go further afield “come empty away.”

On the flags in front of the Lochinver Hotel are a series of drawings cut on the stone—profiles of salmon caught on the rivers in the imme-

diate neighbourhood, and also of fine trout got in Loch Shimas-kaig. In some instances the weight of the fish, the date, where, and by whom caught are given in this somewhat unique arrangement; and Mr. Brown has ordered the "pictures" to be renewed.

Quinaig and the Suilvein mountains attract the notice of all visitors, and ascents to them have been attempted by members of the Alpine Club, but mist has interfered with some. The view from the top of Suilvein is something very remarkable.—*Scotsman*.

NOTES FROM SHEFFIELD.

NOTHING doing this week is all the cry; the water too low and fine, and certainly they are quite right in that cry. The tropical weather we have had the last week or two has made fishing during midday almost impossible, fishing early in the morning and late at night being the only time that one can take fish. The water, too, is in a very bad state, so much of the fine flannelly weed having grown of late that your line is completely covered with it every throw in, that a good day or two's rain is a thing "devoutly wished for."

The Woodland View Angling Club, Turners' Anvil Inn, fished their match on Monday last, at Saxilby, 40 to 50 taking part therein. Mr. Crawshaw winning with 2 lb. 13 oz.; 2 lb. 11½ oz, taking second prize. One of the members, Mr. Rhodes, during the match hooked a fine bream of about 6 lb., but only having very fine roach tackle on, unfortunately lost it. One man, after the match was over, and the sun a little less bright, took in a very short time, over 16 lb. of good roach.

Mr. Deakin's, the Old Mill Tavern Angling Club, competed for their annual prizes in the Fosdyke, near Drinsey Nook on Monday last, from 60 to 70 friends and members going down; the first prize, a very handsome timepiece, being won by Mr. William Londe, with 4 lb. of fish. The wives of the members and friends spent a very pleasant afternoon at the Drinsey Nook Inn, and thoroughly enjoyed themselves.

At Mr. Jos. Westnadge's, the Brave Old Oak, Mr. Henry Barlow showed a very good dish of roach, caught at Saxilby, weighing over 31 lb., many of the fish weighing 1 lb., at the Rose and Crown Club, Paternoster Row. Mr. John Tomlinson had also a good show from Saxilby, 10 bream weighing 28 lb., and 16 lb. of roach.

The only barbel I have seen this season was caught on Monday last in the Trent, near Laneham, by Mr. Storrs, who had also a bream of the same weight, viz., 5 lb. His other fish was a miscellaneous catch, weighing 30 lb.

RED SPINNER.

GRAYLING TAKING THE MINNOWS.

SIR,—A.R.I.E.L., in his interesting article on Dovedale in last week's issue, introduces the above subject and mentions the fact that very many anglers are incredulous about it being the case, but, as a grayling fisher of many years' experience, I can vouch for the accuracy of his statement, for, at the very least, I must have caught a score of these fish at different times when spinning the minnow for trout. Since reading his article I have "looked up" the subject, and find that in all the instances, with the exception of one, they were taken in low, bright water with the finest tackle and the smallest of minnows; on the solitary occasion, however, the water was coloured, and with a small phantom I killed three large grayling in one stream. I believe that A.R.I.E.L.'S. solution of the mystery is the correct one, and have always had that opinion myself, viz., that it lies entirely in the anglers' style of spinning, as I have met with very old fishermen who said that they never heard of such a thing; in fishing for grayling you must strike at the moment or it is of no use, and when fishing upstream in low water I have always seen the gleam of their white throats as they turned at the minnow, striking at once; not so, however, when I have seen the yellow side of a trout, for I always let them turn away with the bait before I strike, so that possibly this may in some measure account for the diversity of men's opinions on the subject, but I hope that this will bring forward some other grayling fisher's experience on the subject.—**FRANCIS M. WALBRAN**.

THAT PIKE.

TH' other neet a lot on us geet tawkin abeaut fishin' an' among other wonderful tales tow'd as *facts* wer th' follerin':—"It's a gud mony yers sin, i' fact aw wur a lad at th' toime, but aw' believe it's a fact ut it did occur, fur aw dunno think as th' chap ut tow'd me ud tell a lie at any price, an' aw remember it as weel as if it were bu' yesterday. Well, yoa o' know wheer Delamere Forest is, if yoa dunnot yoa owt do. Well, ther a pit i' th' forest as wer once't fill'd wi' o' soarts o' fish as afforded gud sport an' amousement to mony a follorer o' owd "l Zack's," till o' sumheaw a lordly pike geet introdooed into th' pit, as gradually grew not only i' bulk bu' authority, till at length he'd driven every other fish eawt—or takken 'em in, which yoa loike—an' wer laft wi' th' whol pit to hissel', sich a supreme glutton wer he that not even ducks appeas'd his voracious cravins, an' mony a one as bin seen to suddenly disappear, well, yoa may just think what soart of a fish he wer when aw tell yoa ut one day one o' th' keeper's childer wer passin' th' pit, an' he actually jump'd up an' snap't at th' child, this so zasperated th' child's fayther ut he determind ut Mester Pike should no longer "lord it uncontrolled above his betters," an' decided that th' moost fittin' way to put an eend to o' his pranks ud be to shoot him; bu' bless yoa, that fish hadn't lived o' them years for nowt, it knew that mon's murderous intent, an' though he fair haunted th' pit bi neet an' day, double-barrel loaded gun i' hond, ne'er a glimpse o' th' fish cud he get, an' it wer bu bi akcident 'at th' pike wer nabb'd at th' last. A donkey as wer o'erta'en by thurst made to this pit to slacken it, and whol i' th' act o' drinkin' th' pike made a dash at, an' seized owd o' th' donkey's nose, to which it held fast, an' tugged hard to drag him into an untimely and watery grave; but his donkeyship stubbornly refusin' to be led thus by the nose backed off, an' th' pike, still hangin' on, wer drawn on to th' bonk, wheer it're discovered next day stretched stark an' stiff in a poo' o' donkey's blud, whol th' donkey itsel' lay full length gaspin' for breeath, wi' th' pike's teeth still fixed i' his nasal organ. Moor hist'ry sayeth not, nobbut this pike weighed *seventy-eight pounds; neww then!!!*

AN UNREALISED DAY-DREAM.—I thought as a boy how I should like to be Lord Craven, if only for a day or two, just to go to his lordship's water with an unlimited number of live minnows and my rod and line, just to astonish the shoals of perch between the "first bridge" and the lock at Hampstead Marshall. I feasted my eyes often and often upon the serried rows of these handsome fellows, but dared not wet a line. I even envied the boatmen who "laid up" for the night in the private water, and wondered if "bargy" ever dropped a few night lines around his "vessel" and got all to rights very early, before the two watchers behind the bushes in the side stream could see what was up. A few of these perch got away in the Newbury water at times, and then—I had my revenge.—**W. F.**

TAKE OF BARBEL FROM THE KENNETT.—Mr. Fred Hurley and Mr. F. Goslett, fishing with Holdway in the Kennett on Friday, July 8th, caught upwards of 70 lbs. of barbel, besides perch and roach.

A NATURAL FISH TRAP SPOILED.—For twenty years and more there has been near the head waters of the Little Sulphur Creek a peculiar rock formation in the bed of that creek, known as the "Natural Fish Trap." It was a place salmon could reach by darting up the rapids, but once in, they were secured prisoners, and the first lucky person who happened along after a spring freshet was sure of a prize. As many as fifteen salmon have been taken out of this trap at one time. After this, he who captures a salmon in that creek has to work for it, for the fish trap is no more. During the late heavy rains, the earth beneath the immense boulders that formed a part of the trap was washed away, and the huge mass of rock, weighing more than 30 tons, moved its ponderous form down stream a few feet, greatly to the regret of the ranchmen living in the neighbourhood.—**The Healdsburg Flag**.

GREGORY'S SPINNING BAITS.—"The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived. Address, James Gregory, Vyse-street, Birmingham.—[Adv't.]

ANGLING.

Now ready, third Edition.

THE ANGLER'S INSTRUCTOR.

By Wm. BAILEY.

A book on the best modes of Angling in English Rivers, Lakes and Ponds, and on the habits of the fish, besides all the latest practical hints on many things that have not up to now been made public, to be had of W. Bailey, 170, Kirke White Street, Nottingham. By post, 2s. 9d.

THE

CHEAPEST ROACH ROD

USED BY ALL NOTED ANGLERS.

Booth's Five-joint Bamboo Roach Rod, 12 feet stand-up rings. The lightest rod in use.

PRICE 4s. 6d.

Sent to any part of the kingdom by the maker,

H. BOOTH,

88, PROSPECT STREET HULL.

Fac Simile of Label.
1oz, and 2oz. packets.

This Tobacco is specially adapted for Cigarettes.

This fine tobacco is also manufactured into cigarettes, which for delicate flavour and aroma cannot be surpassed. They can be obtained in packets, containing ten each, from the best dealers. Price 6d per packet.

(THE DEVONSHIRE RIVERS.)

FISHING TACKLE, &c.

DEVONSHIRE FLIES (GOOD in ANY STREAM), 1s. 6d. per dozen. Flies made to pattern. A large stock of Rods and Tackle of all kinds. Some choice SPLIT CANE RODS by "Copham;" bargains. The Devon and other artificial Baits, Reels, Lines, Gut Casting Lines, Fly Books, Wading Stockings and Trousers, Baskets, and every other requisite. Address, **WILLIAM MUDFORD**, Fore Street, Tiverton, Devonshire. Ticket depôt for the Tiverton Fishing Association.

Just published. Price one Shilling.

TROUT-FISHING,

With FLY, MINNOW, WORM, &c.

BY

THOMAS FORD,

130 different Flies, with ways of manufacture and seasons for use. Post free from Author, Caistor, Lincolnshire. Agents wanted. Best Trout Flies 2s. per doz. Fly List, one stamp.

NOTICE.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., must be addressed to the Editor of THE FISHING GAZETTE, No. 12, Fetter Lane, London, E.C. and should reach the office not later than Tuesday morning.

Contributions are solicited, but the Editor will not undertake to return rejected MSS., unless accompanied with a stamped addressed envelope.

Correspondents are requested to write on one side of the paper only and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to no notice will be taken of such communications.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls, and of the following, amongst other Fishing Tackle Dealers in London and the Provinces:—

Messrs. Alfred and Son, Moorgate-street.
Messrs. Price and Co., 8, Seymour-street, Euston-square, N.W.
Messrs. Williams and Co., Great Queen-street.
Messrs. Gee and Co., St. Andrew's-street, St. Martin's-lane.
Messrs. Gee and Co., Gray's Inn-lane (near Holborn end).
Messrs. Little and Co., Fetter-lane, E.C.
Messrs. C. Kewell and Sons, 107, St. John-street-road, E.C.
Messrs. Kewell and Co., 1A, Conduit-street, Regent-street, W.
Mr. J. Richards, 97, Church-street, Paddington.
Mr. W. Leader, 30, Upper Marylebone-street, Portland-place, W.
Mr. — Clark, 35, Wells-street, Camberwell.
Mr. Geo. Read, 91, Goldsmith's-row, Hackney-road, E.
Mr. A. Bulmer, 62, Wandsworth-road.
Mr. F. Oliver, 188, Great College-street, Camden Town.
Mr. J. E. Gold, 284, Waterloo-road.

SATURDAY, JULY 30, 1881

A GRAND INTERNATIONAL FISHERIES EXHIBITION
IN LONDON IN 1883.

A MEETING was held at Fishmongers' Hall on Tuesday last, at which the Marquis of Exeter, Sir John St. Aubyn, M.P., Mr. Birkbeck, M.P., Sir Cunliffe Owen, Sir Andrew Lusk, and other gentlemen attended, for the purpose of considering the

advisability of holding a Grand International Fisheries Exhibition in London in 1883. A sub-committee was appointed to arrange further details, and to convene a public meeting, which it is expected will be held at the Mansion House, under the presidency of the Lord Mayor. A large number of noblemen and gentlemen have promised to support the movement, and the Fishmongers' Company have voted liberally towards the expenses and the guarantee fund. Government support is expected, and also royal patronage; under these very favourable auspices, and judging from the great success of the Berlin and Norwich Exhibitions, we have no hesitation in saying that the London International Fisheries Exhibition of 1883 must prove an enormous success.

WHERE SHALL THE INTERNATIONAL FISHERIES
EXHIBITION BE HELD?

WHERE shall the International Exhibition of 1883 be held? One gentleman—the originator of the Norwich Exhibition—asked our opinion on this point, and at the same time suggested the Crystal Palace. We told him at once that, if it could be secured, it would undoubtedly be by far the best place, and the mere fact of the exhibition being held there would contribute in a very high degree to its success. In the first place, it is a building which is known all over the world; secondly, it already possesses one of the most attractive features of such an exhibition—a splendidly appointed and stocked fresh and salt water aquarium; thirdly, its spacious courts afford every facility as regards space; fourthly it has so many attractions, apart from any the fisheries exhibition would hold out, for inviting visitors; and thousands who might not care sufficiently for a purely fisheries show to travel far to see it, would do so if they could combine a visit to the far-famed Crystal Palace at the same time. The lakes in the grounds would afford abundant room for the practical exhibition of all kinds of fishing boats, models, fish-passes, fish-hatching apparatus, &c. But we might dilate to any length on the peculiar and special advantages which the Crystal Palace offers the promoters of a grand International Fisheries Exhibition, and we will only add that we are certain the Crystal Palace Company, as well as the promoters of the exhibition, would find it a very paying affair, especially as, from the interest he always evinces in the subject, it is quite probable that H.R.H. the Prince of Wales who opened the Norwich Exhibition, would willingly do the same for an International affair of the same kind.

MY FIRST GRAYLING OF THE SEASON.

ON a fine June morning, accompanied by a brother of the angle, I was marching along the high road leading from the railway station towards a little rural village situated on the banks of my favourite stream (the Wiley). We were disappointed, in not meeting a trap at the station, as we expected, and as we turned each corner of the road looked out eagerly hoping it would make its appearance, as we found it hot work walking, loaded with our rods, creels, &c., but a draught of new milk obtained at a roadside inn put us all right, and we made light of the four and half miles of good road which we had to cover before reaching our destination. It was a lovely morning, all nature was dressed in its gayest apparel, the skylark was trolling its morning song as it hovered over the luxuriant fields of wheat and barley through which our road lay; the thrushes and summer migrants which tenanted the hedgerows in the meadows, and the withybeds, which here and there fringe the clear pellucid stream (of which we got occasional glimpses), were vieing with each other in their outbursts of melody.

When within one hundred yards of our goal we met John and the expected trap, the letter announcing our coming not having arrived in time for an earlier start.

The usual greeting having been exchanged with our kind host, and the inner man again refreshed, it was only a short time before we were by the riverside trying to kill the first grayling of the season.

We commenced fishing some splendid water running alongside of the Sarum Road. It was a dull morning with a westerly breeze, but the water was as bright as gin, and although I saw several good fish rise I got nothing worth basketing for the first half hour, the banks being encumbered with willow pollards, and the wind, which was strong, was blowing across the stream against me, so that I could not get out line enough; but by and by a bend of the river put me in a more favourable position and I had the advantage of a bed of tall rushes through which I crept, and they formed a capital screen. The spot I knew from past experiences to be a favourite one for grayling, and there they were, four or

five of them, one after the other, rising splendidly, their big dorsal fins showing above the water as they came to the surface. A long line was wanted to reach them; again and again I tried, but my fly would fall a yard or two short; I let out more line, then I got hitched in the rushes behind; but at last, after several failures, I got well over a beauty. There was a gentle rise, the fly was sucked in, and I found I was fast in a good fish, which, after a sharp fight, was brought within reach of the net, and I landed a nice grayling upwards of 1 lb. weight; two more good ones, and a well conditioned trout of $\frac{3}{4}$ lb., fell victims to my rod before I was joined by our host and my friend. The contents of our baskets having been displayed and commented, on we proceeded to lunch; that duty fulfilled, we indulged in a quiet smoke and watched the fish as they lay in the crystal stream. At one spot near a foot bridge we counted thirteen grayling ranged along by the tail of a weed as orderly as soldiers on parade, and under the shadow of a willow bed, we could see huge fish lying, both trout and grayling.

After this rest we once more made a start, and tried every known means to entice these fine fellows, but without success; and beyond a lazy movement of the tail, they remained motionless, until a bungling cast sent them scuttling away to the shelter of a weed. We then fished up a tributary of the main river, but the sun was shining brightly, and the water was low, it was hard work to get a rise; and it was only by fishing with a very long line, using the finest tackle, and an exercise of that quality for which anglers are proverbially noted, that I managed to kill three nice trout, varying in weight from $\frac{3}{4}$ lb. to 1 lb each. About four o'clock old Sol once more hid his face, and we returned to that part of the stream which we had fished in the morning, as I was anxious to basket one of the leviathans we had then seen. I had just got well into work, when I heard a tremendous shouting proceed from my brother piscator, who, in attempting to follow in my footsteps across a bit of boggy land, and forgetting that what would support ten stone would not fourteen, got stuck fast, buried in black mud up to his waistcoat and there he was obliged to remain, until released by the strenuous efforts of our host, who dragged him out, none the worse for the mishap, if you except the detriment to his new knickerbockers which he sported for the first time on this occasion. After this little episode, I again devoted my attention to the grayling, and succeeded in killing a beauty a trifle over 2 lb., it was a noble fish, but, on comparing, I found I was beaten by our host, who had taken one 2 $\frac{1}{2}$ lb., and my friend another an even match for mine. At half-past five, John arrived at the river side with the trap, and I was compelled to bid a reluctant goodbye, and rattle away to the railway station.—RED ANT.

FISHING NOTES FROM GERMANY.

(Translated from the *Deutsche Fischerei Zeitung*.)

THERE is a very appreciative notice of the late Frank Buckland in the *D. F. Z.* for July 5.

There is also an account of a Fisheries Exhibition at Speier.

An American dodge for preserving artificial flies and gut from moths and decay, is quoted from "Forest and Stream." The writer recommends the use of a glass bottle, and the idea will at once recommend itself to every angler.

Dr. Sedlitzky, of Salzburg, recommends the addition of four drops of a solution of 1 gram of salicylic acid in 300 grams of water to every 100 grams of water in the aquarium, and says this will keep the fish healthy without changing the water. Those who sell live bait should make a note of this; the addition of even a little plain salt is said to be of great benefit.

SUMMER DINNER OF THE FRIENDLY ANGLERS.

THE "Friendly Anglers," which, as an angling society, is considered second to none in London, held its summer dinner at its favourite old quarters, the New Inn, Eton Square, Eton, on Saturday evening last. The chair on the occasion was occupied by Mr. F. Hoblyn, and the vice chair by Mr. T. Barwell. The attendance, which was over forty in number, included Messrs. W. Paine (Treasurer), C. M. Le Good (Hon. Sec.), A. H. Hunt, L. Brown, W. Hodgkinson, H. Craggs, W. B. Taylor, N. Henderson, W. Barwell, G. Gillatt, W. Grant, G. Newson, T. King, H. E. Blockley, G. P. Batson, Victor Emanuel, Thomas Cliff, R. A. Hoblyn, J. Page, T. A. Allard, J. Bloxam, W. H.

Brougham, C. H. Woodhall, W. B. Korner, G. Clark, W. Dawson, F. Berry, F. H. Howard, J. P. Wheeldon, C. Little, Dr. Thomas, A. R. Newson, S. Peet, P. Sharp, F. Sharp, R. L. Pugh, E. G. Griffiths, J. Mitchell, &c., &c.

Of the dinner itself it would be impossible to award too much praise—it was of a thoroughly English character of fish, joints, poultry, &c., placed upon the table in the highest perfection of cookery—Mrs. Goddard, the proprietress of the hostelry, being her own *chef*, thereby guaranteeing to the "Friendly Anglers" a complete continuance of the same excellent spread for which the New Inn, in the days of the late Mr. Goddard, the well known and respected fisherman, has for a long period of years been conspicuously famous. It was first of all arranged, from the extreme heat of the weather, to have a cold dinner, and instructions were sent to Mrs. Goddard to that effect, but she would not hear of a departure from the old custom under any circumstances, and the instructions were not, therefore, carried out. The wines were of the best vintages, and everything was accordingly satisfactory.

The Chairman, after giving the loyal toast of "The Queen and the rest of the Royal family" and the hearty singing of the National Anthem, gave the important announcement that all who wished could smoke, and the weed was soon profusely indulged in, the exception of non-smokers being remarkably few. In the midst of a general atmosphere of smoke, the Chairman proposed the toast of the evening, "The Friendly Anglers," which, he remarked, was simply drinking "our noble selves." They were the oldest and most efficient angling club in London, with a museum of fish and of members that could hold their own against any other society. Indeed, without any degree of arrogance, he could lay claim to its being second to no other angling club in England, and for a period of forty-five years it had fully maintained that high position.

The toast, being coupled with the name of Mr. Henderson, was drank with great enthusiasm.

Mr. N. Henderson, in his reply, said that fishing had always been his delight, and it was the greatest satisfaction to him to know he was connected with so good a society in which existed so many efficient anglers in the most perfect bond of good fellowship.

The Vice-Chairman, in brief but appropriate terms, gave "The Visitors," who he was glad to see amongst them on that occasion, and after bearing further testimony to the efficient position of the Friendly Anglers, coupled the name of Dr. Thomas with the toast.

Dr. Thomas, in a few well-chosen words, replied.

The Chairman then gave "The Press," to which they were all indebted, and he had the pleasure of calling upon Mr. W. H. Brougham to reply first, and then Mr. J. P. Wheeldon to follow, who, he had no doubt, would tell them about torpedoes and steam launches.

Mr. W. H. Brougham said he felt from the remarks of their excellent chairman, he had to keep on the silent waters of the Thames, leaving the troubled ones to his friend, Mr. J. P. Wheeldon. He would first of all tell them that about three weeks ago the Thames Angling Preservation Society had received 2000 young fry of trout from Huddersfield, and the report from the river keeper that week was they were all healthy and strong, and the place at Sunbury so well suited them, they had already doubled themselves in size. A further consignment of 1500 trout, and some acclimatised char had been received the day previous from the same neighbourhood. The Thames had now become a royal river, and he hoped the prospects of the fishing were all that could be desired. He had been connected with the London Press for over fifteen years, and it would always afford him pleasure to record the doings of the Friendly Anglers. It was the first of their summer dinners he had attended. He had never sat down to a better dinner, or enjoyed himself more, and he hoped they would give him another chance of coming again.

Mr. J. P. Wheeldon said he had been connected with *Bell's Life* for eight years, he had done all he could to record his doings in a profitable manner, not omitting to tell them of his bad days, and when he had got good ones he always tried to make the best of them.

Time was now fast gliding on, as most of the guests had to leave at ten o'clock. Mr. Berry proposed "The Chairman," and Mr. Newson "The Vice-Chairman," in brief but flattering terms, and they were both as briefly responded to.

Mrs. Goddard was called into the room, and received quite an ovation, the chairman assuring her they were all well satisfied with her capital catering, and she had given them a most excellent dinner. There was a generally expressed wish she would long be spared to cater for them, and so make their summer dinner, as it always had been, an event to look forward to. Some excellent songs were contributed by Messrs. J. Bloxham, T. Cliff, F. Berry, J. P. Wheeldon, Victor Emanuel, &c.

HARDY'S PATENT WINCH-FITTING.

AT the late Norwich National Fisheries Exhibition one of the best of the new inventions of interest to anglers was the new winch fitting of Messrs. Hardy Brothers, of Alnwick, Northumberland, the patent for which has been purchased by Messrs. Allcock and Co., of Redditch, who will manufacture it, and put it in the market as soon as possible.

The accompanying wood-cut so clearly illustrates the affair, that we shall not require to say much about it.

It will be seen at once that the brass plate on the winch for holding it to the rod, instead of being held by brass rings, as is now usually the case, is slid along the grooves, A A, in the new fitting (which is let into the butt of the rod), and is held in place by them and by the locking bolt, C. Here, then, we have a fastening which offers the following great advantages:—

1. The winch can instantly be attached to or detached from the rod. Every angler knows what a nuisance the old rings are, very often either too loose or else too tight. Now fishing with a winch which feels loose and may fall off at any moment (when wading, too!) is worrying, and breaking one's knife or nails over a "stuck" ring to get the winch off is worse.

NO. 1203.—HARDY'S PATENT WINCH FITTING.

A A, Grooves to hold Plate of Winch. B, Plate Stop. C, Locking Bolt.

NOTE.—Slide the reel plate under grooves, A A, till bolt, C, springs into its place.

2. The winch is held perfectly firm, and the ordinary blister raising brass rings are absent, so that one can grasp the rod quite close to the winch.

In its present form it cannot be applied to a rod having a cane butt. We think, by making springs B. and C. of a little different shape, it could easily be adapted to all rods. We have written to Messrs. Hardy suggesting one or two little improvements—at least, we think they are improvements.

Of course there are some drawbacks. Fortunately, nothing is perfect in this world, and anglers who use this winch-fitting in future (that is, in its present form), will have to have their winch plates made to fit it; but any brassworker will do that for a few pence. We advise Messrs. Allcock to sell it by itself, apart from the rod, as few anglers will care to get a new stock of rods in order to get any special winch-fitting. That there will be a great demand for it here and in America we are quite certain. Messrs. Hardy are practical men, and have another good thing in store for the angling world.

OUR FLY AND BAIT CASTING TOURNAMENT.

WE are glad to say we have received many promises of support in getting up the above, from influential anglers and others, and we trust shortly to be able to announce when and where the tournament will be held. See last week's paper for particulars of the affair, which is to be held in aid of the funds of the Anglers' Benevolent Society.

A NEW FRESHWATER FISH.

A FACT.

THE description by W. S. L. of how he secured a "cat fish" in the Tees near Rokeby Hall, calls forcibly to my recollection a circumstance which has a lasting impression upon my prejudices respecting most advertisements of the blandishments of "preserves" to be disposed of by unconscientious proprietors. I went down into Hampshire with the late Rev. W. C. R., who, being attracted by a seductive advertisement in a sporting paper, was desirous of taking a mile and a half of trout water, in which it was stated that the trout abounded in considerable numbers, that a net had not been in it for several years, and reference was made to names of gentlemen who had made prodigious catches of fish. My advice was that we should visit the water without any previous intimation. This we did. The miller was the lessee of the mill, the tail, &c., which he claimed rightfully, to the extent named, and his landlord was a gentleman of undoubted probity on the hills close by. We had no permission to fish, and,

therefore, appeared on the scene without any tackle. A little below the mill tail was a wooden bridge. On this we posted ourselves, and while there, to our no little admiration and surprise, we observed at least twenty brace of trout apparently on the feed, with their heads up stream, watching for food coming down with the current.

Suddenly the mill water was turned off, and the mill tail became shallow. Three undoubted trout were seen, like rats, to bolt and take to their holes—a well known habit. But the larger majority fell upon their sides and lay on the sandy gravelly bottom, without apparent life or motion. Our suspicions were aroused, but not to the extent of the exposure that resulted. We waded into the stream and found, what? That every one of the majority of these trout were artificially secured by silken thongs or by single hair to pegs, and that the action of the current gave them all the appearance of vitality. We took the liberty of bringing one away with us, and afterwards found that they were sold by an india-rubber manufacturer at the west end of the town, who was likewise a successful simulator of decoy ducks, towards which many an aspirant yokel has expended much shot on the broads of Norfolk and elsewhere.

As I do not expect this statement will receive ready credence,

my name, in confidence, is in the possession of the Editor of the FISHING GAZETTE, who has free permission to give it as corroboration to any one interested beyond idle curiosity. But I may further state these artificial trout, without any purpose to deceive, have, in certain waters, and under the windows of large mansions, been adopted as a decoration. *Verb. sap.* CREEL.

[This is almost as good as a Yankee story about a bull-frog, which will be found in our columns this week. "Creel" is a gentleman, and we believe him.—ED.]

ALMOND BLOSSOM.

Love, will you regret the flowers that lie
Scattered, and wet with tears from April's sky?
They are not dead—the flowers can never die.
They are the gladness of a world unworn;
They sleep and waken with it, night and morn,
And laugh our dreams of ancient days to scorn.
O'er the wide gulfs that part us from the past,
O'er ruins of great works designed to last,
The lightly woven chain of flowers is cast;
And odours of old gardens, faintly blown
From legendary days and shores unknown,
Blend with the breath of those our hands have sown.
Of Milton's world how much was doomed to pass!
And yet we linger on the daisied grass,
And pluck the flowers he plucked for Lycidas,
And still the spring-time crowns a waiting land
With tender bloom. Nay, Love, 'tis you who stand
With almond clusters in your clasping hand,
And all the sunset heaven behind your head;
'Tis you must pass, an unknown way to tread,
And leave the flowers. If I had long been dead.
Yet came from sleep of twilight centuries,
The almond blossom 'neath these vernal skies
Should welcome me again, but not your eyes.
The rosy petals, drifted on the breeze,
Might strew, as now, the turf beneath the trees
As now? No, not as now. Because to these
Pink spray of almond, for a little space,
Your musing smile, your blossom-perfect face,
Give a supreme and solitary grace.

—Harper's Magazine.

ROYALTY AND FISHERIES—ORIGIN OF THAMES— CASTING TOURNAMENT—CHUB-FISHING.

EVERY ONE desiring the advancement of our fisheries must see with pleasure the marked interest our future sovereign takes in them. The Norwich Exhibition owed much of its *eclat* to the presence of His Royal Highness, and now we find his name associated with the welfare of the Thames. I felicitate B. on his pleasant announcement of this fact, for to me it augurs many prospective benefits anglerwards—if not immediately, certainly at some future time, when the prince's *bonhomie* and goodwill shall have merged in the King's favour, practical intent and power.

But, dear friend B., why did you head your article "The Royal River of Thames?" Why the preposition? Says John Stuart Mill, in his "System of Logic"—"A stone is not the stone of anything; the moon is not the moon of anything, but simply the moon." So, say I, as far as the word Thames is concerned, the "Royal River" is not *of*, but simply *the* Thames.

Possibly, however, B. fell into the error which has been, and still is, common concerning the origin of the name of our grand old river. In Spencer's time it was even supposed that the joining of the upper stream with the Thame at Porchester—this upper part being termed Isis—furnished the word Thames. But this is a distinctly erroneous impression. In the earlier documents relating to the river the term Isis is never found, and its origin probably comes from the Latin word which named the river *Tamisis*.

The river was, as the reporters say, "from time immemorial" called Thames or Tams, even when reference was made to that upper part, far away from the junction with the Thame. According to Gibson's Camden's Britannica, 1772, "in an ancient charter granted to Abbot Aldhelm, there is particular mention of certain lands, *cujus vocabulum Temie*, near Somerford, which is in Wiltshire. Moreover, the Saxons spoke of Temese—whence our Thames, without doubt, and further, all historians who mention the incursions of Æthelwold into Wiltshire (A.D. 905), or of Canute (A.D. 1016), tell us that the troops passed over the Thames at Cricklade. No thought of the junction with the Thame occupied the mind; and therefore, friend B., if you supposed our Thames to be *of* that Thame, disabuse your mind in the future.

Bye the bye, in the King's Library at the British Museum, there is a remarkable old print, republished in 1624 by J. Norden, and said to be of Elizabeth's reign, which depicts the existing London Bridge, with its shops and other buildings. Written on the seemingly rapid water, wherein are some struggling individuals, evidently just turned out of their boat, are the words TAME-ISIS FLUVIUS VULGO TEMS.

The republisher of this print thinks fit to tell us in a note that the first London Bridge was supposed to have been built by the daughter of a ferryman who had amassed considerable wealth by the plying of his trade. This bridge was, however, burned in 1136—Stephen's reign.

Capital idea that, of a fly-casting tournament, Mr. Editor. I am given to understand that these events in America are productive of rare amusement; but then the Yankees never do things by halves. English anglers, on the other hand, are so smug and easy-going that it requires a strong dose of Geen or Francis to raise even a sleepy eyelid. Where a German or Frenchman would tear a passion to tatters in the discussion of a political measure bearing on the most trivial concern in which he is interested, your English angler allows himself either to be led by the nose, like a sleek, sleepy fat bull as he is, or openly professes he doesn't care a big D which way it is. *Ergo*, I'm sadly afraid as to the success of such a competition as you suggest, though I'm sure I wish it every success.

Chub-fishing ought now to be in full swing, and as it is a fish which can almost always be sought for and captured in the Thames—during the season, of course—I think it is a pity more brothers of the rod do not learn the Nottingham style of fishing for him. (How is it that Thames chub seem running smaller than of yore? Three and four pounds seem the limit. Wm. Bailey, of Nottingham, says he once took a chub of 6 lb. 14oz.)

I have been trying these fish myself at Walton of late, and got excellent sport under the boughs the other side of Sunbury weir.

I was exceedingly pleased with the behaviour of a new rod built me by Mr. Slater, of Newark-on-Trent. I have had Nottingham rods galore from all the makers, but I don't really think I ever handled such a prettily behaved weapon. Mr. S. was a medallist at the Norwich Exhibition.

J. HARRINGTON KEENE.

NOTICES OF BOOKS, &c.

OFFICIAL REPORTS ON THE INTERNATIONAL FISHERY EXHIBITION AT BERLIN, 1880. Part I. FISH CULTURE. Part II. MARINE FISHERIES. Berlin: Paul Parey. 1881.

THE high expectations which were raised by the announcement of the forthcoming series of official reports on the International Fishery Exhibition held at Berlin last year are doomed to some disappointment. In the first place it was impossible not to hope great things from the experts and specialists charged with the duty of writing these reports. But to some extent such hopes still seek fulfilment. In the second place, although these reports have already tarried over long on their way to publication, no one would be likely to regret a little additional delay if the interval had been spent in closer revision of the press. For the text, as it now stands, is sadly imperfect and harbours a larger number of irritating and misleading inaccuracies than should be found in official publications issued by authority. And further, if we are justified—as there is some reason to fear—in assuming that the two parts just published are fair representatives of the intended scope and purport of the series as a whole, it is not easy to banish certain uncomfortable misgivings with regard to the stability of the memorial which is now being erected in commemoration of one of the most successful of recent international exhibitions. So far as concerns the actual material employed, there is no cause for complaint either on the score of quality or insufficiency of bulk; it is the manner in which it is built up that will provoke wonder and remark, and these not of the most favourable kind.

The series is divided into five parts, of which the two named above are now before us; the remaining parts being promised during next autumn. In the first part, Herr H. Haack, director of the Imperial Piscicultural Establishment at Hünigen, in Alsace, deals with the subject of fish culture, so much only excepted as refers to the United States, which portion is undertaken by Herr Max von dem Borne, who also describes the principal objects connected with angling. Herr K. Michaelis compresses all he thinks fit to say on fish passes into four pages, but in the absence of diagrams of every kind, he must not wonder if his remarks fail to reach the audience which they would be most likely to benefit. The second part, on Marine Fisheries, is written by Dr. M. Lindeman, the recognised standard authority on this subject in Germany. Dr. A. Metzger will describe the present condition of Freshwater Fisheries in the third part, to which Professor H. Nitsche will append his report on Pearl Fisheries. The whole of the fourth part will be taken up by Dr. H. Dohrn's reports on the heterogeneous collection of articles known by the name of Fish Products. And lastly, the scientific division will be represented in the fifth part by means of papers on ichthyological and cognate subjects by eminent authorities like Drs. Hermes, Magnus, von Martens, and Wittmack, &c.

Neither must we forget to mention an anonymous *deus ex machina* who assumes editorial functions, and modestly slips in a foot-note here and there. Nevertheless we fancy most persons into whose hands these official reports are likely to fall, would rather he betrayed his existence in a bolder and more imposing form—one more in keeping with the generally accorded privileges and bounden duties of an editor. For instance, had he provided some semblance of uniformity in matters of constructive detail, how vastly more pleasing would be the general effect of his labours. At present, for want of a well-devised plan, accepted and agreed upon by his collaborateurs beforehand, the diversity of method pursued is distinctly the reverse of charming, while in point of convenience it leaves much to be desired. Moreover, each contributor being left to his own devices is apt to encroach on the domains of his fellows. Thus, we find included among Marine Fisheries, a detailed description of the gear employed in dragging for coral. If pearl-fishing is deemed worthy of a separate report, justice demands that a similar distinction should be awarded to the no less important industry of coral-fishing. Elsewhere the angling tackle exhibited by the Chinese is summarily dismissed from notice on the plea of its exclusive use by working fishermen. Yet only two pages back may be found a detailed account of angling tackle used by the Malay population of the Dutch East Indies, which is most certainly not used for sport, but for profit. Inconsistencies of this description are frequent, besides other

blemishes which might have been prevented by the exercise of a little forethought and care. In some reports, the catalogue numbers, whether taken from the official, or some one or other of the special catalogues issued at the time, are carefully reproduced, in others, these useful aids to reference are dispensed with altogether. The first method, for many and obvious reasons, is the better one by far; if only because it affords readier means of correcting the too frequent mutilations of exhibitors' names and addresses. On an outer page we are informed that the publishers have desired to consult the convenience of such persons as might be specially interested only in particular sections of the exhibition, by issuing the official reports in separate parts, each part singly purchasable, and therefore presumably complete in itself. The result, however, is not so satisfactory as the attempt was praiseworthy, for in the two parts before us, it is no easy matter to discover where the completeness comes in, seeing that neither contains the faintest trace of a table of contents, or an index of any kind whatever. It should not be left for us to point out that in a work like the present, teeming with proper names and isolated facts, a full alphabetical index is an adjunct of prime and absolute necessity. The illustrations accompanying the text are tolerably numerous, and on the whole well done. Some drawings of fishing vessels, evidently copied from not too carefully proportioned models, are harsh and formal in the extreme; and if in some cases the intricacies of standing and running rigging, and the nice adjustment of sails, have passed the comprehension of the draughtsman altogether, we suppose that must be set down to the fact that the great soldier-city on the Spree is not precisely the spot whence exact knowledge of nautical technicalities may reasonably be expected to proceed.

But the absence of the looked-for excellence and completeness of the reports in the sense specified above, does not entirely diminish our gratitude or delight at their appearance. After all, imperfections apart, they must perforce contain a vast amount of admirable matter, which, if not presented in the most desirable garb, is much too important to be lightly cast aside or neglected. On a subsequent occasion therefore, we propose to bring forward a few remarks on the present condition of fish-culture, for which we have been unable to find room at present.

CLUB AND OTHER JOTTINGS.

By L. B.

A SPECIAL meeting of the committee of the Thames Rights Defence Association was convened by circular for 21st, Simpson's Hotel, Strand, at 4 p.m. Neither secretary, chairman, nor committee men, excepting Messrs. Clench and Bonvoisin, turned up. These two gentlemen, after waiting exactly one hour, left their cards on the table, and adjourned to the "Gaiety" Buffet to imbibe a cooler and exchange views on the extremely evanescent nature of certain prominent piscators' zeal. Some grand lots of fish continue to be had from the Norfolk Broads, the London anglers' cry, however, is we can't get them up to town so as to show them at our clubs. Why not try "Glacialine"? A gentleman on whose veracity I can rely, assures me that during the recent tropical weather, with its help, he kept a large piece of salmon so that it ate quite sweet, and cut perfectly firm after many days.

Bank anglers are having a bad time of it in the Thames just now. Launches, row boats, weeds, and, above all, low and bright water, so that the few fish which will bite are mostly out in the stream where long lines and long rods won't reach them. Those who can afford punts and attendants, are versed in the mysteries of the Nottingham style, and fish fine and far off, are here and there getting fish, and deserve them.

The wily lobworm is just now at a premium, and the happy possessor of two or three mossy tubfulls of wriggly ones is a man whose friendship is to be carefully cultivated. I know such a one, and hope next week to avail myself of his frequent invitations and have a day with him.

What the search after that great chimera, the "Philosopher's stone,"—in which numberless fortunes were swallowed up, and many valuable lifetimes wasted—was to the middle ages, the attempt to stock the Thames by means of artificially bred or purchased trout may be said to be in the piscatorial world during the present decade.

It was only a few months ago that we heard of the imminent dissolution of the Eton and Windsor Association, two neighbouring associations, however, came to the rescue. Advice, and, unless I am much mistaken, assistance of a pecuniary nature was tendered and accepted, the angling fraternity was appealed to and responded more or less handsomely. Now we hear that about 130 Wycombe trout of various sizes up to 1½ lb. have been turned into the Thames by the Windsor and Eton Society

about Monkey Island and below Boveney, Windsor, and Old Windsor Weirs, and that more are expected shortly.

If these fish have been given to the association, of course there can be no objection, but if they are to be paid for out of the association's publicly subscribed funds—all I can say is it is pitiful, and puts one in mind, say, of a man who spends his substance, to the detriment of his wife and family, upon the culture of lilies and sunflowers. When the association have an efficient staff of really well paid keepers; when their ditches are all carefully watched in spring and at flood times; when the laws respecting undersized fish are strictly enforced; when they are in a position to offer and pay substantial rewards for the detection of wrong doers; when they have seriously considered the rapid decrease of that game fish, the perch, the artificial breeding of which is easy, and which even if purchased of a certain size would only cost a tithe of what the trout do; when they have satisfactorily solved the question whether, as bream are a fish which grow in weight and increase in numbers rapidly, and in running waters afford fair sport, a serious attempt to stock their portion of the river with them would not prove beneficial; when they have done all these things, and many others which the welfare of the river may require from time to time, and have, moreover, an ample balance in hand, then, and not till then, it will be time to consider the advisability or otherwise of launching forth upon trout-culture experiments: at present it is not merely my opinion, but I positively state that I know it to be the opinion of nearly all Thames anglers with whom I am brought into contact, that the so spending of money is waste, and waste of the most regrettable kind, since, as I stated before, it is so sadly wanted for other purposes.

On 24th at Monkey Island, Mr. Alfred Mayman had a splendid take of dace, about 12 lb. Messrs. Job and Bonvoisin, at Richmond, did not fare so well, their joint take amounting to about 4½ dozen of roach and dace. The united efforts of Messrs. Geen and Hoole fishing, continuously, in a previously well baited portion of the Mole from 5 p.m. on Wednesday till 5 p.m. on Thursday, resulted in a catch of two bream, four perch, six roach, and about 4 lb. of eels, total weight 10 lb. Mr. T. Hoole had also some hours' fishing in the Reading waters on the evening of 24th, and morning of 25th, and though Mr. Butler, the courteous secretary of the Reading and District Preservation Society took him to some of the most likely spots, the result was, to use his own words, Nil! I mention the above to give the readers of the FISHING GAZETTE a fair idea of the sort of sport the bulk of Thames anglers are getting just now. I don't mean to say that professional fishermen's reports are purposely misleading; but in their very natural anxiety to make a fair show they too often record two or three really good takes, omitting all mention of the numerous microscopic bags and possibly still more numerous blanks; the anglers take the two or three good catches recorded as fair samples of the general sport, go down expectant, and come home disappointed. From the Welsh Harp good takes continue to be had, though the cooler weather of the last few days has knocked the bream off a little.

I had intended to have answered Mr. Malcolm's questions *re* club gross-weight this week; but I find them so full of misquotations, so irrelevant, and that in two or three cases inferences are drawn from statements considerably at variance with facts, that doing so would entail the writing of a very long letter, and I must therefore ask Mr. Malcolm and your readers generally to give me till next week.

TRENT SALMON.—Mr. W. Kelly, fishmonger, Newark, exhibited in his shop on Tuesday, eight fine salmon, caught in the Trent by Mr. Losco Bradley, in the North Muskham and Holme Fishery. The largest scaled 30 lb. The whole lot were in good condition and colour. We understand that on last Friday evening, Mr. Kelly received notice that Mr. Bradley had had another take of twelve fine salmon, which were on view in Mr. Kelly's shop on Saturday. The largest weighs 31 lb.

ANGLERS should always be provided with something to take away the swelling and poisonous effect of the bites of insects. They should also have with them something to apply to a cut or sprain. Pond's Extract reduces the swelling and inflammation, stops bleeding and pain, and hastens the healing process in case of any wound or sprain; and it has no equal for application to the bites and stings of insects. Therefore never go on a fishing excursion unprovided with a bottle of Pond's Extract. It is for sale at all chemists, at 2s. 3d., 4s. 6d., and 8s. 6d. per bottle.—[ADVERTISEMENT.]

GEORGE JAMES EATON, of Starkholmes Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[ADVT.]

TO ANGLERS.—W. J. Cummins, Fishing Tackle Maker, Bishop Auckland, is now prepared to forward to anglers his Illustrated Catalogue, which is not only a Trade List but is interspersed with practical hints, useful directions, and valuable information gathered by the river-side from twenty years' experience. The stock consists of his unrivalled Salmon, Trout, Grayling, and Pike Rods, Lines, Reels, Baskets, Artificial Baits, Fly-books, Landing Nets, Gaffs, and last, but not least, his celebrated TROUT FLIES which for killing powers stand unequalled. Every article kept in stock is of the very best description.—[ADVT.]

RIVER REPORTS.

MID-THAMES.

"O, the gallant fisher's life,
It is the best of any!
'Tis full of pleasure, void of strife,
And 'tis beloved by many."—I. Walton.

Heavy rain storms in the valley of the Thames have much improved the height and colour of the river, and nearly every class of summer fishing is fairly successful. Chub can be obtained early and late with the fly, and are in every district of Mid and Upper Thames, thereby affording good sport to experts, but do not refuse cheddar, stilton, or gorgonzola for luncheon, or a baby-frog or an enticing slug about kettledrum-time. Roach are very wary, and the better ones located fast in the weeds; but still a little coaxing fetches them. Perch are to be had with minnows and red worms, from well-chosen boughy or piley swims. Barbel want, as yet, a lot of coaxing; and this class of fishing wants not only a well-lined rod, but a "too awfully utter" well-lined pocket to present much attraction for the ordinary impecunious angler. Dace, in sharp streams, are feeding well, and seem to be more of herrings than usual of late seasons. At Bray, Maidenhead and Cookham, fishermen have been very busy, decent takes of roach, chub, and perch coming to hand. Colonel Cox has been very successful amid the trout in the Thames and on the Wycombe stream, and I am promised a detailed account of his sport, which shall be duly chronicled in "Ye Gazette." At Hurley, Mr. Sykes is daily slaughtering big chub and perch, and being run hard in bloodthirstiness by a Mr. Palmer.

THURSDAY EVENING.—River in fair height and colour for all-round fishing. Weather—simply real jam!—MARLOW BUZZ.

Thames (Goring).

Water very low and clear. Perch have been biting very well. Six days' fishing with Mr. Hue, of 231, Camden Road, Holloway, London. Best day, 15 lb. of good perch, one trout, 2½ lb. On Tuesday last four jack and some good perch. Roach coming on better; jack not much.—JOHN RUSH.

Thames (Halliford).

River very low, and water getting bright; good for allround fishing with judicious baiting. Some heavy bags can be had; I have been out six times since I last wrote. The first day Mr. Yarborough caught five eels, seven bream and some roach and dace, ledgering. Second day: two barbel, eleven bream, one jack, seven eels, two perch, and roach and dace, ledgering. Third day: Ten perch, one eel, three dozen roach and dace, and five bream. Fourth day: Mr. Palmer, thirteen bream, three barbel, three perch and two dozen roach and dace. Fifth day: Mr. Balentine, seven dozen roach and dace, two perch and three bream. Sixth day: Mr. Palmer and friend, four jacks and five dozen roach and dace.—GEORGE ROSEWELL.

Thames (Kingston).

My son in three days got 7 lb. 5 oz. and four dozen of roach and dace a day. I have only been out after four o'clock, and averaged four dozen fair fish, and a stray chub 2½ lb. There are plenty of large fish showing themselves, but will not feed.—JOHN JOHNSON.

Thames (Richmond).

The river is in splendid order for fishing now, and the prospects are very good. The fish have been feeding well all the time the tide water is running, but as the tide gets low the fish drop off feed a little. C. Brown has been getting some bream and a few barbel. Since my last report, I caught 17 barbel and a great quantity of dace. All the punts have been doing well during the week.—JOHN BUSHNELL, fisherman.

Thames (Shepperton and Weybridge).

Prospects of fishing are very good. Mr. F. Purdue, two days, 11 doz. roach, dace and gudgeon; Mr. H. Purdue, one day, six bream and 3 doz. roach and dace; W. Rogerson, fishing with Mr. Cooper, of Fieldgate Street, Whitechapel, two days—first day, 7 jack (two of 6 lb. each, the smallest 2½ lb.), and 8 perch; second day, 5 perch and 1½ doz. roach and dace; fishing with another gentleman two days, 9 doz. roach and dace and 2 bream.—W. ROGERSON.

Thames (Sunbury).

T. Stroud, out one day, six dozen roach, and 10 bream; A Stroud, two days, eight dozen roach, one trout, 3 lbs., and six bream; J. Stroud, four days, best day, twelve dozen roach and bream; Mr. Lukyn took a splendid trout with a fly, 5 lb. ¾ oz. There have been three more trout taken at Sunbury this week by different gentleman, average about 3 lb.—ALFRED STROUD.

Thames (Windsor).

Water here still presents a sickly state, in many parts appearing quite stagnant and as low as I ever remember the Thames in the neighbourhood; notwithstanding, very fair sport has been had, though very many have gone empty away, but this arises chiefly from being strangers to the water. When in the hands of good fishermen, very few have had reason to complain, considering the unhealthy state of the water. Richard Gray, with Hockley, Esq., of 84, Old Kent Road, has had some good sport, one day taking 30 lb. of chub and barbel, besides a nice show of gudgeon, which are too early to try with the hope of a good bag. From that quiet, old-fashioned quarter, Cookham,

Godden tells me the roach are or have been very well on the feed; last Sunday, he had, with Jones, Esq., 20 dozen of good roach and dace; Tuesday, with Sharp, Esq., of London, 12 dozen; and on Wednesday, 10 dozen, with a brace of perch, largest 1 lb. This, to many of your readers, may appear extraordinary, but when I remember how madly they came at it in a short afternoon I tried them with Godden last winter, they would think nothing of it. I brought away over 23 lb., and this on a rough, unfavourable day. To those who like roach, chub and perch fishing, I say, Cookham is the place, and, in my opinion, Godden is the man, as a better roach fisherman never trod a punt—this not my opinion alone, but the opinion of a great many whom I know. In that small piece of jack water, where I had the pleasure, the other evening, of landing a nice jack of 9 lb., Lumsden has had two more, from exactly the same spot, going 7 lb. and 5 lb. At Surly Hall, three jack, going 10 lb., 4½ lb. and 5 lb., have been had; and very close here, some good ones have come to grief. At Datchet, the landlord of the Morning Star (Skelton), an enthusiastic and good fisherman, has been showing his patrons sport, with two gentlemen, taking about 20 lb. of roach and a nice chub of 4 lb. From Egham, I learn the trout have been getting into trouble. Mr. Rowles, a well-known local enthusiast, taking three in the Weir, going 2½ lb., 3½ lb. and 4 lb.; and Mr. Heard, of the same place, a jack of 12½ lb.; there must be a happy family in that weir. Some nice perch have been fancying the taid end a lob worm, and paid dearly for it, as I have been some very nice dishes taken from the Windsor and Old Windsor Weir, and among the roach was one scaling 1 lb. 3 oz. Chub have not been had of any consequence as regards size, but a goodly lot in numbers. Gudgeon are coming to the rake, though they will be more worth trying in about a fortnight, when Water Oakley Reach, Datchet Reach, Windsor Weir, and many other well known places, will undoubtedly shell out well, though rain is sadly wanted to improve all Thames angling. Soon after we get it we shall expect something big in the way of barbel, of which there are plenty; and not many yards from Windsor Bridge, I hope to get among the brown of them some fine mornings in August and September.—B. R. BAMBRIDGE.

Ancholme.

The roach are now getting into condition and beginning to feed. My little boys had a good catch on Saturday last; gentles seem to be the favourite bait at present; later on they will take worms and paste. The bream as yet are hardly on the feed; a good fresh is needed to benefit the all-round fishing.—THOMAS FORD.

Dove (Derbyshire).

Notwithstanding the frequent showers of the past day or two, the river continues very bright and clear. Should, however, the present weather prevail a little longer some rare sport may be safely anticipated with both fly and bottom fishing. Several heavy dishes have been taken this week with the brandling worm, bush fishing, i.e., casting live worms at the extremity of a fine fly cast; the said worm being impaled upon a Stewart's worm tackle of three hook power. Nine brace was the numerical strength of one creel from the Dovedale water on Thursday. These were chiefly extracted from the surging waters at the foot of the numerous falls; several baskets of almost equal calibre have been since taken upon the same length in a similar manner. The evening flies, viz., the pale evening white and dun, and the red spinner continue to tell well after 6 p.m., baskets ranging from four to six and a half braces nightly.—MENTOR.

Exe (Exeter).

Tis raging noon; and, vertical, the sun
Darts on the head, direct, his forceful rays
O'er Heaven and earth, far as the ranging eye
Can sweep, a dazzling deluge reigns, and all
From pole to pole is undistinguished blaze.

JAMES THOMSON.

The weather for some weeks past during the middle and after-part of the days has been excessively hot, and very few anglers have cared to turn out, even "the very streams look'd languid from afar," but thanks be "Pluvius," in the shape of gentle showers has come to the rescue, but not of sufficient quantity to have slaked the thirsty earth, therefore, we have no fresher down yet; but the old proverb says: "It is an ill-wind that blows no one any good, therefore, at this time of the year, when rain is short and the river low, a clearing out of the head and tail race of the mills, and leats takes place, and with regard to that portion of the work, much good is done, and what was done was duly set forth in THE FISHING GAZETTE, of last week, to which I now wish to add the more necessary work that has been completed, and about to be completed at the various weirs on the "Exe," from Thorverton to St. James's Weir. Salmon pool, these weirs I have inspected, with our late lamented friend, Mr. F. Buckland, whose ideas and suggestions were kindly imparted to me, and I only wish he could have known what alterations were being made. J. M. Martin, Esq., O.E., of this city, and to the Board of Conservators has kindly informed me that the following weirs have received every attention as to repairs, &c., at which we must all feel pleased. Thorverton weir has been completely repaired and finished. Cowley Bridge pass will also be completed in a day or so. Stafford's weir is about to be considerably improved, which will be a grand improvement. The dam at Blackaller weir is being touched over; this dam, or, as I term it, playground, seems to answer very well; but for all that, I think, Mr. Buckland's idea of a diagonal board would yet be of great service. Trews's weir is to be repaired forthwith; and, although the ladder is efficient at certain states of the water, salmon, &c., still persist in jumping at the weir at their old spot, between the ladder and the wall on the west side, where there was originally a dip net. Salmon pool ladder, which has always been condemned by Mr. Buckland, is to be taken away, and a diagonal board placed in its stead, and take it in any light you like, as there are several ideas upon it, it will be a decided improvement, and in the hands of Mr. F. M. Martin, must prove a decided success; better news of sport next week.—FRANK GOSDEN, Exeter.

Lea (Cook's Ferry).

In reading the remarks made in THE FISHING GAZETTE, of last week, speaking of roach, the writer selected the river Lea as the best waters near London, which was fully proved on Sunday, for most of the anglers had large takes of every fine roach, many scaling over one pound. The members of the Edmonton and Tottenham fishing club turned out on Sunday, and went in for roach; some took to the Hide, some the old river; and at the meeting in the evening, there were a great show. Mr. George Stephen, surrounded with roach; Mr. Collyer went in for perch, and got three; Mr. Munro, perch and tench that made them look again; Mr. Richard and Company, with roach and eels, and a fine show he presented; and considering the great pains the last-named member always displays in his work, and as there are many young

members in this enterprising club, it will be well for them to follow his example, and from him they will learn how to do it.

P.S.—On Sunday last we had a nice bream taken from our waters small, but in good condition.—S. SEWELL.

Lea (Enfield.)

Mr. Dixon and a friend had a nice basket of chub from my pool on Saturday. Water then low, a little fresher now.—W. SWINDEN.

Medway (Tonbridge.)

In the early part of the week there was a good deal of execution done amongst the bream and roach, but after a thunderstorm on Tuesday the wind was very cold, and prevented the fish hanging on at all as they should have done. On Monday night Messrs F. Roser, G. Payne and B. St. J. Waghorne took 17 large bream after 6 o'clock, and the next morning, before the rain, Mr. Waghorne got near Barden a carp of 3½ lb., as well as some bream, and a second carp dealt with him in tackle. A match was fished on Wednesday below the town. The place was a bad one, and the weather altogether wrong. As the result, Mr. J. Eller, who took one roach only, won the first prize. When the weather becomes warmer and the wind changes there will be good sport.—YE MEDWAY WATER-RAT.

North Lincolnshire.

More rain is needed to give the water-courses a thorough cleansing. The green drake is over, but a few representatives of this fly in its second stage (the grey drake) remain. My London friend to whom I consigned the first *Pontinialis* caught by me, speaks of its edible qualities thus:—"It was like salmon both in colour and taste, only if anything richer." I am making arrangements to supply both ova and fry of this fish and the common trout during the coming season, and shall be glad to book orders for best strains, only at reasonable rates.—THOMAS FORD.

Suir and its Tributaries, Clonmel (Ireland.)

Notwithstanding the extreme lowness of the water there are quantities of peal still running up. The nets during the day do not fish at all, but there are such numbers of peal selling about the town every morning that it is quite evident the poaching is going on worse than ever. Some few fish have been taken by the rods. Mr. Clibborn was successful every day last week at the Bridge stream, and another gentleman up the river got nine peal in one day. The trout-fishing isn't very good at present; late at night a few large trout are killed, but as we have had some rain last night and to-day, we expect some good catches to be had.—DORA.

Swale.

The recent refreshing rains and lower temperature proving a blessing to the angler, and some fair baskets have been made by local fishermen, chiefly with the dorel and ant-flies. The second hatchings of the spring flies will soon come on. Amongst these none are better than the freckled dun and blo brown.—THOMAS FORD.

Trent (Alrewas.)

Our Midland rivers may now be considered in first-class order for all round fishing. Heavy storms of rains have visited this district since my last report, which has materially benefited the river, and our trout stream, which, by the way, in some places had almost ceased to run. Our keeper writes that the water is a little higher than the preceding week; plenty of fish to be seen, but rather shy at feeding, which cannot be wondered at, considering the cold nights we have lately experienced. The following takes are reported: Mr. Sam Mee, some good roach, two dozen perch, and a fine grayling; Mr. Thornton, 9 lb. roach and dace; Mr. Savatard, 7 lb. roach; Messrs. Ricketts and E. Fletcher, 25 large roach; and Mr. Phillip Antrobus, 9 perch, and a couple of brace of trout. The latter was taken from one of the tributaries to the Trent. A spot which has proved a fish El Dorado to Mr. Antrobus this season, both in point of quantity and quality. Messrs. Adams, Parker, and E. Hooper had their usual day's legering last Saturday, a miscellaneous basket of barbel, chub, eels, perch, and roach was the reward to the diligent and patient Waltonians. With favourable weather a strong contingent of our Birmingham anglers will wend their way to the various reaches on the Trent. I anticipate the pleasure to chronicle great successes of my piscatorial brethren. Barbel should now feed if the spot is well selected, and properly, and judiciously baited with some good lobworms, which by the way, are now plentiful, and I have no doubt, prove the most killing bait the next week.—JAMES GREGORY.

Trent (Newark.)

We have had several very nice showers during the last few days, and the water has risen a few inches, but only a very few. A good four or five feet rise would do the river a world of good; but I suppose we must be thankful for small mercies, and wait patiently. The water is still very clear, and the very finest tackle must be the order of the day for all classes of angling. The report I sent last week will do very well for this, only anglers might try creed wheat and malt for roach, in addition to the plain bread paste and gentles mentioned therein. Some very nice roach have been taken with the before-mentioned baits this week. Chub can be taken with the wasp grub, and fly fishers ought to be in it, as the water is in capital trim for that class of sport. Barbel fishers can now ply their avocation until further orders, scratchings and worms being the bait for that class of fish. I have not yet seen a good catch of barbel, but I have heard of one or two good takes with worms and scratchings. The angler can take his choice of these two baits, but one thing I will say, use the very finest tackle you dare. The bream have been biting very nicely this week or two at worms in the dead water of the Newark and Muskham Fishery Association, and some of the members have been having a rare time of it. Mr. Cubley had a very nice basket last Saturday, the majority being fine fish, and I was informed that several more of the members had baskets as good, and I believe the sport continues good up to the present time. I, like several more anglers down here, would ask the question, where are the dace? Up to the present I have only seen two dace, and anglers who have done a lot of fishing since the season opened tell me that they have not yet seen a single dace this season. Pike fishing will now commence in earnest, and those anglers who spin the natural bait would do well to use one of "Gregory's Archimedean spinning tackles." They are the very best flights that I have ever seen or used, and anglers after once using them will never use the old sorts of flights any more, but stick to "Gregory" for ever. The salmon fishing mentioned by Mr. Gregory last week was netting, not rod fishing. I enclose a cutting from the *Newark Herald*. If Mr. Gregory will bring his tackle down here, and come and share my hospitality for a few days, I think he will be able to have some good fishing, and he will also get a cordial welcome.—THE TRENT OTTER.

Trent (Nottingham.)

We have had some heavy rain in the neighbourhood of the Trent, but not sufficient to effect the river, the only difference it made was the weather was more favourable for rod fishing; and, although the water did not rise by the frequent showers, it seemed to sweeten the water, and the finny tribe must have felt the change, or they could never have come on to feed in the manner they have done during the last few days. The roach fishers, who visited Willington and Burton-on-Trent, were not prepared to find the fish so eager to feed at malt and wheat, and were agreeably surprised when they were catching them nearly every swim. The anglers with worms have also been doing good work among the bream, and at Weston some very good catches have been made; one basket contained ten bream, averaging 3 lb. each; and a tench, 2 lb., the latter is seldom caught out of the river, but are to be found in most of the backwaters. Now, we come to the doings of the barbel fishers, who have been very busy with worms. At Sawley, a gentleman took one of 7 lb., besides several others, without any baiting; but the best catch of the week comes from a noted spot, about three miles below Nottingham, the professional being, Mr. J. Roper, in company with a gentleman. The place had been previously baited, with a thousand worms; and, on the following day, the fish bit in about six feet of water that ran fast, the fish bit nearly every swim. The result of the day's sport being thirty-three barbel, weighing 120 lb., quite enough for one day. I could mention several more smaller catches that have been made with worm, but what I have just stated will be sufficient to show that barbel are now well on at worms.—W. BAILEY.

Wye and Derwent (Derbyshire.)

Since my last report we have had a very great deal of thunder-clouds hanging about daily, with very little rain falling, which has caused the fish to feed very badly at either bottom or top during the week, and only small creels have been the order of the day. Grayling are beginning to rise nicely both on the Wye and also on the Derwent; seven brace of decent sized grayling were killed near to Whatstandwell last Saturday afternoon with the honey dun bumble and small Derbyshire red flies. I hear of one of the members of the Chatsworth Club killing a fair basket of good trout with the small house fly by dibbing under the bushes and trees. The bottom fishers on most parts of the Derwent have killed a few fish during the week, chiefly with wasp grubs and gentles. Wasps' nests are very scarce this year in Derbyshire. Rain is much wanted, and we shall have no really good fishing until we have a fresh on these rivers. Barometer falling; rain threatening.—GEORGE JAMES EATON.

Yore (Yorkshire.)

This river remained low and clear until Monday, in the afternoon of which day a nice fresh came down, the result of a thunderstorm which passed over the district. There was a grand water for both fly and minnow fishing on Tuesday, and some good dishes of trout were killed, but no very large fish have come under my notice or that of my correspondents. The Wharfe was also flooded on Monday morning, but was too thick for anything beyond worm fishing; the orange dun, black silverhorns and red ants are the most likely flies to afford good sport at present, and the fern fly sometimes kills well during this month.—FRANCIS M. WALBRAN.

ANSWERS TO CORRESPONDENTS.

H. D.—When we tie hooks on to gut or hair, we do it thus:—First, wax with shoemakers' wax a piece of floss silk very fine, then give it three turns down to the beginning of the bend of the hook; then bite the end of the gut (after wetting it well), so as to flatten the end a little, then place the end so flattened, along the inside of the shank, and bind it to the shank with the waxed silk. Get a perch hook on gut tied at a shop and carefully unfasten it by cutting one end of the binding thread, you will then see how the thing is done.

CORRESPONDENCE.

[We do not hold ourselves responsible for opinions expressed by our Correspondents.]

MULTUM IN PARVO.

SIR,—My last letter was closed in the fond hope that I was free, and so I was as jubilant as a manumitted sprite could be at the delicious prospect of an outstretched idleness under the rustling leaves of summer during the rest of that hot weather. But 'twas a hope too good, it seems, to be true. However, 'tis a little cooler now.

The request of your correspondent, "A Constant Subscriber"—that I should describe the tackle I use when fly-fishing with the spinning-minnow, and the line I find equally useful for both fly and minnow—is a very natural and reasonable request. And I hope to comply with it before very long.

In the meantime I have a suggestion to make. You assure me I am quite mistaken in supposing X. to have been the first inventor of overhand fly-fishing minnow-spinning. You say that it—and with it the use of the finest of tackle—has long been practised on the Yorkshire streams. Now you and I, mine Editor, shall not fall out over those affirmations or either of them. *Palmarum qui meruit ferat!*

"He who would adorn
His envied temples with the Isthmian crown
Must either win, through effort of his own,
The prize, or be content to see it worn
By more deserving brows."

But I must (*cum permissu*) venture just to whisper in the editorial ear—not so awful as that of *Dionysius*?—that X., though no underhand fellow in general, is decidedly not so over-hand a minnow-spinner with the fly-rod as you imagine, and that the absence of a lead is no part of his system. And now for my suggestion, which—not in a whisper—is this, that any angler who claims, either for himself or for any other, the earliest invention of fly-fishing-spinning should now come forward, and describe in distinct and complete detail that art of arts in which he prides himself on being a proficient. Then your readers—when my description of the art, as invented and practised by X., is added—will possess the advantage of having before them—so I venture to think—two or more widely-differing systems, from which to take their choice.

And X. and I shall perhaps then learn a wrinkle or two; for neither of us pretends to be infallible, nor is either too old to learn.

Lastly, I desire to acknowledge my deep sense of all those kindly-cordial compliments with which the last week's FISHING GAZETTE presented me. I felt there was a most delightful more than "double number" of them; and, for a final confession, I own that, their sources considered, they have made me very proud, and perhaps slightly vain.

"Fit audience let me find, though few."

But yet a very large, if not, indeed, the lion's share of them—nearly all that practical part which relates to grayling taking the minnow—I could not but know was the due of X., and I have, therefore, passed on all that heavy parcel of praise to him—the Master—with as much appreciation and pleasure as I would feel were I retaining it all honestly, as my own especial perquisite.—I am, &c., A.R.I.E.L.

July 25, 1881.

[We do not for a moment wish to rob A.R.I.E.L.'s friend of any of the credit that may be due to him—we merely mentioned to A.R.I.E.L. that the system of fishing very finely indeed with the natural minnow, without lead, and by throwing overhand or in the ordinary way, has been practised by many anglers for a long time past; and, in fact, on the Wharfe especially is it the case, we understand, when the water is very low and bright. We doubt not A.R.I.E.L.'s friend's method is peculiarly his own, and we, as well as hundreds of our readers, await impatiently good A.R.I.E.L.'s recital of the nature of this gossamer spinning tackle and deadly spinning style.—ED.]

THE FENCE MONTHS.

SIR,—As I am not a member of any angling club—their late hours not suiting my habits, and from little other motive—I may perhaps be considered presumptuous in a desire to penetrate yet farther than does Mr. F. Malcolm into the leaves of the weighing-in books of these friendly associations.

Mr. F. Malcolm asks whether, "Did not many of the fish, viz., 2000 lb., weighed-in by the North-Western Angling Club, come from the Welsh Harp Fishery (not fence), Elstree, &c., and were not these fish bream full of spawn after June 16, 1880?"

I am at a loss to see the force of this question; for under my convictions, impressed by those unwritten laws which instinctively influence the actions of a true sportsman, such fish ought to have been returned to the water, whether it was during the fence months or otherwise, and I should have been very sorry to have sat in company, in either boat or on bank, with a man who would have retained them.

Doubtless L. B. has raised a question of great value, and one which will, like all enquiries into truth, bear good fruit. He may have outstript his numbers; I doubt whether he has. But Mr. Malcolm is doing good service in challenging his facts.

One of the bearings of such an investigation is the oft-repeated assertion (and to me fallacious postulate), that no water can be "fished out" by fair angling with rod and line. I could name numerous instances; some thirty becks and tributaries, once of great renown in Westmoreland and Cumberland, in which the proprietors have not only closed the angling for from two to four years, to let the water recover, but have been propagating new stock during twice as many. To come nearer home, have not the fisheries of the Rye House and Beningfield's, at Broxbourne on the Lea, Godfrey on the Colne, been so depleted as to require supplies from various sources? Again, is not the Thames an example, where at Windsor, Reading, Abingdon and Marlow, adult trout at considerable comparative expense, have been introduced into the stream, to supplement the chances of the sport of the angler, to say nothing of the literally hundreds of thousands of poor salmonid fry, which have been sent adrift without mercy or thought, to become the prey of predacious fish.

And what does L. B.'s, H. K.'s and Mr. Malcolm's contributions directly point to if we are to get a close approximation to the truth of the gross weight of fish caught by London anglers in Metropolitan waters? viz., that the weighing-in books of the respective clubs should require and enter the locality where captured, as well as date to be stated, and the weight of undersized fish unduly introduced into the club.

While upon this latter subject I would say that, although few members of a well-conducted club would hazard the introduction of undersized fish into the club room, there are many whom it is known basket almost anything, and know where to get rid of them before entering the tavern where the club holds its meetings. This is notorious, but the "honour" and character of the respective clubs—I am not speaking of all—is concerned, and therefore any member is "mum" when this leprosy is alluded to.

Not many months ago a man was brought up at one of the East-end police courts, who stated that he made part of his living by going round to the various taverns in which angling clubs were held, to buy up the fish left or ready for sale by the members. The landlords and waiters were naturally glad to get rid of the offal, and this being known the more needy were not long in entering into an agreement with the collector (an agent of the Jews), and now, the "gaff being blown," even boys and women go angling, as a new source of profitable occupation.

Doubtless we shall have next week a reply from L. B., who would scarcely never have ventured to fish in such deep and troubled waters without plumbing his depth.

You will doubtless see, Mr. Editor, that the whole question, which threatens greatly to develop itself, bears forcibly upon the gross weight system.—I am, &c., CREEL.

NEAREST ANGLING CLUB TO WALHAM GREEN.

SIR,—In reply to your correspondent, H. Belward, I beg to say that the nearest one I know of is the Hammersmith United, an old established club, held at the Builders' Arms, Bridge Road, Hammersmith. The meeting night for election, &c., is every Thursday, at about 9 o'clock. Any information may be obtained from the hon. sec., Mr. H. G. Penney, jeweller, King Street, Hammersmith. H.

NETTING AT AMBERLEY.

SIR,—I think it my duty, for the information of the readers of your valuable paper, to bring the following to their notice:—Having spent the last week at Amberley, in Sussex, for the purpose of a week's fishing, I noticed, while fishing with a member of the Izaak Walton Anglers, on three successive days, three men netting the river and selling the fish which they caught. This happened in the afternoon, and they boasted that nobody could stop them. The

size of the net was about 30 to 40 yards in length, and, I believe, the property of Mr. Lee, of Houghton Bridge.

I shall be pleased if you will kindly publish, so as to bring it before the several angling associations, who, no doubt, will take the matter up.

Mr. Bates exhibited, July 23rd, a splendid take of bream from the Welsh Harp; Mr. Rudkin roach from the river Abbey.

Mr. G. Taylor, a splendid show of roach and bream from Amberley, one roach scaling 2 lb. 6 oz., sent to Mr. Miller, of East Street, Walworth, to be preserved.—I am, &c., GEORGE TAYLOR, sec.

Club Room, 1st Surrey Angling Society, Warner Road, Camberwell.
July 27th.

JAPANESE ROACH ROD.

SIR,—I quite agree with your remarks as to a Japanese rod 14 to 20 feet long, and strengthened as suggested, being first-rate for roach, but do not know where to procure one of the requisite length. Can you, or any of you readers oblige me with the information?—I am, &c., T. H.

[We bought the last Messrs. Carter had a fortnight ago, but doubtless they can get them to order.—ED.]

WHERE CAN THE JAPANESE RODS BE HAD?

SIR,—Will you kindly inform me where the Japanese cane telescope rods can be had, and whether there is any angling club in London for youths.—I am, &c., ROACH ANGLER.

[We think it would pay some good firm to get a stock of the Japanese rods put brass ferrules and winch fittings on, and a stronger top, and sell them at 5s. or 6s. each. Messrs. Carter of St. John Street Road did one for us for 5s. the other day.—ED.]

FISHING IN KESTON LAKES.

SIR,—Will you inform me through your correspondence whether there is any good carp or roach fishing in Keston Lakes (Bromley, Kent).—I am, &c., PECKHAM RYE.

[We believe there is good fishing there.—ED.]

FISHING IN SHROPSHIRE.

SIR,—Will you or any readers of the FISHING GAZETTE be kind enough to tell me what sort of fishing there is to be had at Coalport, in Shropshire, on the Severn, and the best baits to use for bottom fishing and spinning, also do you require a license?—I am yours, &c., W. ILLINGWORTH.

Summer Hill, Bucknall, Stoke-on-Trent, July 7th.
[You will get good coarse fishing of all kinds—perch, jack, roach, dace, &c. You must get a license to fish for trout, but it only costs one shilling, we think, for the season. The Severn is a capital river for the coarse fish anglers.—ED.]

WHERE CAN WE DINE?

SIR,—Would any of your numerous correspondents and brothers of the angle kindly recommend an inn or hotel where about a dozen or more club anglers could obtain a decent plain dinner within about twenty miles of St. Martin's Le Grand?—I am, &c., A. W.

CLUB REPORTS.

AMICABLE BROTHERS ANGLING SOCIETY.

Mr. Medcalf, 3½ lb. of roach and bream, from Pulborough; Mr. Moir, 3½ lb. roach and bream, from Dagenham; Mr. Patrick, 2½ lb., from the same water; Mr. Howlett, 3 lb. 10½ oz., from the Thames, one very nice roach, weight 1 lb. 3 oz. The members will fish a pegged-down match at Dagenham on Sunday, August 14.
J. WORLEDGE.
July 24.

ANCHOR AND HOPE ANGLING SOCIETY.

On the 24th inst. members went to Amberley, returning with a splendid show of roach and bream. R. Smith, 8 lb.; A. Shakel, Mr. Scott, W. Streetan, D. Davis, C. Daniels.—A. SHAKEL, sec.
July 25th.

BATTERSEA FRIENDLY ANGLING SOCIETY.

The members of this old-established club fished their first match of the season on Sunday last, at Woking, for prizes presented by the host, Mr. T. Pettit, Queen's Hotel, Queen's Road, Battersea Park. Thirteen members competing, all being ambitious to win the opening. On weighing-in at the club-house it was found Mr. F. Newton was first, with 2 lb. 13½ oz.; Mr. G. Mumford, second, with 2 lb. 1½ oz.; Mr. Sewell, third, 1 lb. 14 oz.; Mr. Martin, fourth, 1 lb. 6½ oz. At a special, on Tuesday, the secretary read out the names of donors of prizes to be fished for during the season, as follows:—Mr. Burgess, £2 2s.; Sir T. Lawrence, £1 1s.; Mr. T. Pettit, £1 1s.; Mr. F. Duncan, £1 1s.; Mr. G. Mumford, £1 1s.; Mr. H. Martin, £1 1s.; Mr. W. Excell, £1 1s.; Mr. Bulmer, 10s. 6d.; Mr. A. Ansty, 10s. 6d.; Mr. T. Gloster, 10s. 6d.; Mr. Milsted, 10s. 6d. The committee has fixed dates for the contests for the above prizes, which can be seen at the club-house. The next match takes place at Wraybury on August 14th.

CITY OF LONDON ANGLING SOCIETY.

The following members weighed fish on the 24th. Mr. Castell, bream, from Dagenham; Mr. Mortimer, bream and roach from Pulborough; Mr. J. Chambers, roach, from the Roding; Mr. Hales, carp, from a pond in Kent; and Mr. Fowler, roach and perch, from Henley-on-Thames. Our return visit on Tuesday, 26th, was a success. Our large club-room being well filled with company; Mr. Langdon, in the chair, faced by Mr. Shearman. After some capital songs, by Messrs. Langdon, Shearman, Head, Hales, Benning, C. Watling, W. Hewett, Boyce, Jennings, Ghurney, Page and Juchau, the roll was called. The following clubs being represented:—Amicable Brothers, Amicable Waltonians, Hoxton Brothers, Great Northern, North Western, City of

London, Waltonians, Odds and Evens, Convivial, Star, Little Independent and Bermondsey Brothers; also the following clubs not on the United Anglers' list, Bostonian, Buckland, Clerkenwell, Piscatorials, Duke of Norfolk, Jolly Piscatorials, Original Clerkenwell Piscatorials and Peckham Brothers. Nineteen clubs being represented. We will return their visits at the first opportunity. Copies of Mr. Benning's last new song, called "Fisherman's Luck" can be had at the above club, at a small charge.—CAS.

CLAPHAM JUNCTION ANGLING SOCIETY.

Several of the members were out on Sunday last, but only one turned up—Mr. Turner, with a very fine take—3 bream weighing 9 lb. 1½ oz. and 10 lb. 14½ oz. of roach, in all 19 lb. 15½ oz. Members are requested to attend on Thursday next for important business.—E. WILSON, sec.
July 25th.

GREAT NORTHERN BROTHERS ANGLING SOCIETY.

We fished at Dagenham on Sunday last for seven prizes. Fifty members and friends started overnight by road. A most enjoyable day was spent, but the throw of fish was very bad. The winners of the prizes are named in their order. Messrs. Cherry, W. Watling, Hutchings, R. Watling, J. Fitch, W. Jennings and W. Parkin. The following members also had fish:—Messrs. Hewitt, J. K. Fitch, Painter, Young, C. Hill, C. Warren, Walker, Butler, J. Warren, Patman, Cooper, Reynolds, sen. and jun., Theobald, S. Smith, Phillips and H. Watling. The next Eastern District visit will be paid to this society on Tuesday, Aug. 9.

J. A. FITCH, jun.

P.S. In your report last week signed "B.," you state that it was Mr. C. Parkin that died on the banks of the New River. It should have stated Mr. C. Perkin.

[We should be much obliged to Mr. Fitch, jun., if he would kindly describe the Dagenham fishery. How large is the water, average depth, what fish does it hold, and is there any charge? Also, if there is an inn there, and how one gets there?—ED.]

EXETER ANGLING CLUB.

The weather much improved, having had a few showers, and the air is much cooler. The fishing not up to much, and several members have gone in for perch fishing with minnows, Mr. C. Blake and a friend taking between four and five dozen between them on two consecutive afternoons, Mr. J. A. Kelly also taking some capital creels of fish, and many of fine size. He continued to take them as long as there was a shot in the locker (minnow in the bait can) and had to give up for want of more bait, thus showing that the welcome change has put them on the feed. I hear of some dreadful doings near and about Salmon Pool, numbers of dead fish being seen floating about, including salmon and trout. Many are the versions abroad, and as I am not in possession of the facts at present will refrain from giving you my own ideas this week, but hope to do so in my next. It has caused quite a sensation amongst others beside the angling fraternity.—FRANK GOSDEN, hon. sec. *pro tem.*
July 26.

EXCELSIOR ANGLING SOCIETY.

The members of the above society were out on Sunday last, Mr. Paine having an excellent show of perch and tench, one of the latter scaling about 2½ lb.; Mr. Hopkins, a good show of barbel, roach, and dace; Mr. Tudenham, tench and dace; Blackman, a very handsome tray of barbel of about 14 lb., one fish weighing close on 4 lb. On Saturday, 16th, from four to eight, Mr. Snow fishing with Richard Watford, at Weybridge, had 7 barbel, weighing 21 lb., and 3 bream, 7 lb., a large perch, and a very fine eel. On the following Wednesday by himself, 3½ doz. of fine roach and dace. On the Thursday, with Richard Watford, 4½ doz. roach, three weighing 1 lb. each. On Friday 6 doz. and 9 roach, dace, and bream. Saturday, before eight, 3 doz. roach and dace.—A. THOMAS, sec.

HAMMERSMITH UNITED.

On the 21st inst. Messrs. Geen and Hoole weighed in a number of bream, roach, &c., from the Mole Mr. Johnston also had a good tray from Datchet. On the 24th several members were out. Among the most successful may be mentioned the following:—Mr. Pitts, chub, perch, &c.; Mr. Penney, roach; and Mr. Peachey eels, perch, and roach, all from the Upper Thames. Mr. Steadman also made a decent show from Shepperton, and Mr. Lewis had a few from Isleworth.—VORTEX.

July 25.

KING'S LYNN ANGLING ASSOCIATION.

The fishing in this neighbourhood has been very much like what was reported from almost everywhere else—slow. But this week, with the return of cooler weather, has seen a change for the better. We, however, want a good twelve hours' rain to put the freshwater fishing in anything like good order. Many of our members have been out since Tuesday last, and have met with varying success. The fishing in the tidal water of the Ouse has yielded "the quantity." Mr. J. Marshall, Mr. Exley, Mr. Freeman, Mr. Spencer, and others made good bags this (Saturday) afternoon, when, for about an hour, the fun was fast and furious—but "the quality" has been taken in the fresh water. Mr. W. King, however, earle on Thursday morning last made a good bag of bream, the fish ranging from 3½ lb. downwards. The trouting round here has been, in spite of the long continued drought, fairly successful when sought in the early morning and late evening.

H. BRADFIELD, Hon. Sec.

July 23.

LITTLE INDEPENDENT ANGLING SOCIETY.

We have had a few small takes the last week, as under:—Friday, Mr. E. Barr, bream, 7 lb. 6 oz., perch, 6 oz.; Saturday, Mr. Parker, dace, 5½ oz., perch, 9 oz.; Sunday, Mr. Hopton, roach and bream, 5 lb.; Sunday, Mr. G. Watson, roach, 1 lb. 9 oz., dace, 2 lb. 6 oz.; Sunday, Mr. Hurwood, roach, rudd, &c., 1 lb. 12½ oz.; Sunday, Mr. Humphrey's, jack and dace, 1 lb. 7 oz.; Sunday, Mr. Grey, roach, 7 oz. On Sunday next we compete at Ellstree for four prizes.—W. BROWN, hon. sec.

Russell Arms, Bedford Street, N.W., July 20, 1881.

LITTLE INDEPENDENT ANGLING SOCIETY.

We had a nice show of fish on our tables on Sunday evening, and the four prizes competed for at Ellstree were won as follows:—First prize, Mr. Mead; second, Mr. Barr; third, Mr. W. Kelley; fourth, Mr. Gray; all tench and

roach. Every kindness and attention was shown us by the proprietor of the water, Mr. Hill, who presented us with a donation of 10s. towards a further competition. The following members likewise weighed-in from the same place:—Messrs. Watts, Parker, J. Kelley, F. Moore, Harbert and Heelas. From the Ouse:—Messrs. Hopton, Letch and H. Moore weighed-in a splendid show of bream, 50 lb. 13 oz., and 1 lb. 9 oz. bream.—W. BROWN, hon. sec.
July 27.

LIVERPOOL ANGLING ASSOCIATION.

The second excursion to the Llanymynech took place on Wednesday, the 20th inst. Over 30 of the members availed themselves of the opportunity of enjoying a day's exercise of the "gentle craft" in the waters of this first-class river for all-round fishing. If you use the fly there are splendid streams over which you can cast your flight and lure the trout and grayling from their native element; if the worm or the gentle be your forte there are deep swims and eddies in which the chub, perch, and roach love to roam, and out of which it takes all your knowledge and skill to land them. Unfortunately the late hot dry weather had caused the river to be very low and clear, and it was simply by the exercise of science and perseverance that a fish could be moved. Some of the party went on the preceding day, but the greater number left Liverpool at 6 a.m. on the morning of the match, and on arrival at Oswestry were conveyed to their destination by road, the six miles' drive through the beautiful Welsh scenery being much enjoyed. After refreshing the inner man at the Cross Keys Hotel, the trysting place, the note of preparation was sounded, the conditions given out, and off they went, a *peaceful* army bent on conquest. Seven p.m., with five minutes' grace, was the appointed time for weighing in, and at that hour most of the piscators had made their appearance. The clerk of the scales got to work, and the various creels having been examined and their contents weighed, it was found that the following were the prize winners:—Mr. F. Roberts, fishing jacket; Mr. Ramsbottom, fishing boots; Mr. F. Wood, one guinea rod; Mr. Boulding, half-guinea reel. Two other prizes were not awarded, though Mr. Woodfall had a trout which, if it had been kept damp instead of being allowed to dry, would certainly have turned the scale at the prescribed limit, and won him a guinea rod, for, dry as it was a blade of grass would have made it the weight. However, accidents will happen, and it is no use crying over spilled milk. Some dissatisfaction was expressed at the two lots of prizes going to professionals, and at their being allowed to compete unconditionally against the others, and it will be for the committee in arranging future excursions to see that in this respect all are put on an equal footing. The next move was to the dining-room, and here Mr. Baugh had served up an excellent repast, to which full justice was done by all who partook of it, and as nothing restores good humour so well as a full paunch, peace and goodwill was the universal feeling. The party was then mustered (and peppered), and each took his seat in the vehicle provided to take them the six miles back to Oswestry, during which cigar and pipe were brought into play, and the cup of enjoyment was complete. All arrived safe home highly pleased with their day's outing.—R. WOODFALL, hon. sec.
Liverpool, July 26,

ORIGINAL CLERKENWELL PISCATORIAL SOCIETY.

Several members of the above society were again successful last Sunday. Mr. Laundy, with 17 lb. of roach, perch, and bream, and Mr. J. Drew, bream, from Pulbore; Mr. Obbard, dace, and G. Drew, roach, both from the Thames; Mr. W. Gorsuch, sen., had some roach and dace from the Stort. There will be no meeting on Monday next, being Bank Holiday, but members can weigh in.—THOS. WM. LUCY, secretary.
July 26th, 1881.

PECKHAM BROTHERS.

On Sunday last several members of the above society put the Stort to tribulation for fish to enable them to win the prize given by Mr. Minard. After taxing the merry stream from sunrise to sunset, Mr. Gendle was declared the winner. Messrs. Minard, Page, Stidolph, and Williams also had fish. "Never mind, Page, better luck next time when we have the wasp grubs." —PIXIE.
July 27, 1881.

ROYAL PISCATORIALS.

On the 24th a series of prizes was competed for, conditions being "Go where, and fish how you like." Messrs. Canton and Smithers visited their favorite shop at Windsor, and succeeded in getting some chub. Mr. Dale "on the fly" with the fly at Hertford succeeded in getting some dace, which landed him at the head of the pole for 1st prize. The next competition that will take place will be the special competition, and will take place on Thursday, August 11th, and will take place in one water, the members all going together. The following is the list of prizes for that occasion:—1st (Mr. Taylor), a silver cup; 2nd (Mr. Pemmeller), £2 2s. od.; 3rd (Mr. Sawyer), a perambulator; 4th (Mr. Cotton), a timepiece; 5th (Mr. Taylor), a meerscham pipe. —PIXIE, London.
July, 1881.

ROYAL PISCATORIALS.

Result of competition at 11.30 this evening, Mr. Canton, roach, among which 1 weighing over 16 oz. Fish expected later on from Mr. G. Lee and Co. Gentlemen requiring wasp grubs can now be supplied by applying to T. Haydon, Coleman Street, Camberwell, he has several nests he can blaze at a minute's notice. J. Haydon is well known among the anglers of this end of the town.—PIXIE.
July 21.

STANLEY ANGLERS.

Several of our members have been out lately, and have shown in some good takes of fish. Amongst the number the following have been very successful:—Our President (Mr. C. P. Wheatstone), with bream, 19 lbs. 13 oz., largest fish, 4 lb. 3 oz.; Mr. A. Wrightson, jack, from the Welsh Harp, largest 8 lb.; Mr. W. R. Humby and D. M. Humby, some takes of nice bream, and last, but not least, our old friend, Tommy Parsons, with some capital takes of dace and ch. Capital fish. I hope to send you a good report next time, as Mr. C. P. Wheatstone and Messrs. Humby have presented valuable prizes to be fished for on Bank Holiday.—C. LAIDLAW, hon. sec.
July 23rd, 1881.

ST. JOHN'S.

A number of our members were out on the 24th, but the following only had fish:—Mr. C. Fudge, jack, roach, and dace, from the Lea; Mr. Pledge, roach, and dace, from Boxmoor; Mr. W. Winch, bream, from the Gulf (all tin); Mr. A. Hunt, some fine bream, from the Harp, one fish 3 lb. 5 oz.; Mr. Ruishon, roach, and dace, from the Thames. I wish to inform all members that were not at the last general meeting that Mr. Leach gives a very handsome album to be fished for in August; and that it was made a rule that members showing undersized fish of any sort in the club room shall be fined one penny on every fish. The fines to go to the preservation fund. What do you think?—[Quite right.—ED.]—F. THORLING.
July 25th, 1881.

STOKE NEWINGTON ANGLING SOCIETY.

On the 24th inst., Mr. Edward Morrow weighed-in 3 lb. 5 oz. roach and bream; Mr. T. Gretton, 3 lb. 1 oz. bream; Mr. W. Webb, 1 lb. bream; Mr. Edward North had a quantity of live tench. On the 26th inst. yours obediently had 4 lb. 8 oz. roach; Mr. W. Mecham will give a prize for the heaviest gross weight of fish weighed-in during the month of August. Messrs. Morrow and Gretton will also give prizes for the heaviest specimen roach and perch taken during the same time. Sunday fishing only.—T. GRETTON, secretary.

SURREY PISCATORIALS.

On the 20th Mr. Beckett visited Rickmonsworth, and succeeded in getting 18 lb. 15 oz. of fine roach and dace, nine of the former weighing just 1 oz. under 9 lb. I omitted to mention in my last that Mr. Moore gives £1 1s. 6d., and Mr. Boalch a pair of shoes, value 10s. 6d., for honorary members only, competing on the 1st August. This will make five prizes given for that date. 27th, Mr. Beckett another nice show of chub, roach, and dace. On the 10th, August, a competition will take place for various prizes, including one for the best specimen fish taken from the bank.—PIXIE.
July, 1881.

TRAFALGAR ANGLING SOCIETY.

This society had their trays well filled last Sunday. Mr. J. Smith, bream; Mr. R. Gaze, bream; Mr. R. Oliphant, dace; Mr. J. Gaze, roach and perch; Mr. J. Inglis, roach; Mr. J. Humphries, roach; and Mr. T. Morris, roach. Notice.—Members of this society are informed that there will be no meeting on Sunday night next, but they will be entitled to weigh in their fish on Monday night, August 1, for the two days.—R. GAZE, Sec.
July 25.

WALWORTH WALTONIANS.

On the 14th Mr. Weatherhead was fortunate enough to get a nice show of perch from Kingsbury. Mr. Delehay also succeeded in getting from Pitsea some carp and rudd on the same day. On the 17th Messrs. Brown, Bedford, Cain, Piolaine, Schwartz and Renault were at Amberley, they managed to get some fish, but owing to the influence of the weather and the surrounding delightful scenery they did not arrive in London in time to weigh the fish in the society.
July 21.

WALWORTH WALTONIANS.

On the 21st Mr. Weatherhead had some nice bream and perch from Kingsbury. On the 24th Mr. Boalch succeeded in winning Mr. Piolaine's £1 1s. 6d. prize with 9 lb. 6 oz. dace and roach from Richmond. Mr. J. Bedford in for Mr. Iron's 10s. 6d., with some dace, four of which turned the scale at 9 ozs. each. Messrs. Bayley, Cain, Delehay, and Irons also exhibited fish. The following prizes will be competed for on the 21st and 1st August (bank only, public, or private), 1st (Mr. Fox), a writing desk; 2nd (Messrs. Harris and Norris), a leg of mutton and trimmings. Members wishing to go away on Saturday can do so by conforming with rule 10. Those members are requested not to forget the ice with their fish on Monday night. The following prizes are given for the gross weight of fish taken on four Sundays during August:—1st (Mr. F. Grigg), side of bacon; 2nd (Mr. C. Beale), a £1 1s. 6d. hat. "Now, my friends, these are the prizes that will save you your 'bacon,' and put a roof over your head. Be up and doing!" Pixie knows where to find the wasps in embryo.—PIXIE, London.
July, 1881.

WALTONIAN ANGLING SOCIETY.

On the 24th, the following gentlemen weighed in:—Mr. Roland, 9 lb. 7½ oz.; Mr. Waltham, 2 lb. 2½ oz.; Mr. Malcom, 8 lb. 4½ oz.; Mr. Rushbrook, 11½ oz.; Mr. Good, sen., 2 lb. 8¼ oz.; Mr. Good, jun., 2 lb.; Mr. Greenfield, 2½ oz.—A. J. MARRIOTT.
July 27.

POPE.—It is sometimes said that our fresh water fish are insipid when cooked for eating. Exception must, however, be taken in favour of perch and pope. A young angler the other day walked from a south-west suburb to and from Moulsey, but the only fish he could tempt to take his bait were a dozen pope. These little fish he cooked next day, and really the flesh was firm, white, and nice eating. Trout, dace, and gudgeon are, of course, very good when properly cooked, but roach—beyond the pleasure of catching them—are commonly woolly and tasteless. The said aspirant only saw one good-sized fish caught all day, and that by a puntman and in water comparatively undisturbed by boats.—F.

GREGORY'S SPINNING BAITS.—"The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived. Address, James Gregory, Vyse-street, Birmingham.—[ADVT.]

Mrs. F. Y. BROCK, Artificial Fly Dresser, 4, Mill-street, Conduit-street, Hanover-square, London, W. A stock of best flies always on hand; Flies made to pattern. Lessons in fly making given.—[ADVT.]

NOTES FROM SHEFFIELD.

THE great change during this last week in the weather from almost tropical heat to nice cool weather has made a wonderful improvement in the fishing, the rains having done a deal of good in improving the waters where the majority of Sheffield anglers fish.

The reports from Dunham, Laneham, and Torksey, on the Trent, all agree that the river is now in splendid condition, and would amply repay any trouble taken in well baiting.

From the Whitham all anglers state they never saw it in better condition, and the good takes of fish this week proves the report to be correct. Mr. George Smith taking 40 lb. of roach, and Messrs. J. Dodds and Brown, 30 lb. and 28 lb.

At the Brave Old Oak, Mr. Wastnedge, Charles Street, there was a very good show of fish from Saxilby, Mr. Thomas Miles, weighing 20 lb. of nice roach; Henry Barlow, 10 lb.; Alf. Proudly, 9 lb.; and Joseph Wastnedge, 5½ lb.

At the Norfolk Arms Club several of the members showed in nice dishes of fish; Mr. C. Pearce, weighing 15 lb.; Mr. J. Lee, and others having similar catches; Mr. J. Tomlinson showing 32 lb. of fish.

At the Rose and Crown Club, Mr. Wm. Baker had a very nice catch of bream and roach, the bream weighing over 20 lb. and 10 lb. of roach; several other catches were also shown.

At the Cup Inn (Mr. Mosley's, Paternoster Row), there were some good dishes shown by Mr. Chas. Mosley, R. West and others.

On Monday last, betwixt twenty and thirty clubs fished their annual matches in the various waters around Sheffield, over 1600 anglers going down by the several excursion trips to Keadby, Boston, Lincoln, Saxilby and Brigg. The following clubs fishing Boston:—The Woodman Inn, Slater's United Brothers, the Willow Tree, the Sheffield Temperance. The Hodkins Arms Club going to Lincoln; the Star of Brunswick and the Robin Hood Clubs fishing Saxilby. The following clubs going to Keadby:—The Spring Tavern, the Florist, the Fir View, the Great Gun, the Petre Hotel and the Woodland View. The Albion Club, the Nunnery Club and the Bay Horse Club going to Brigg. The Albion Club members mustered sixty strong, and forty-two of them succeeded in taking fish. Mr. T. Winter taking the first prize with 3 lb. 1½ oz.; Mr. J. Smith, second, with 3 lb. ½ oz.

Mr. J. Sanderson gives £40 to be fished for at Crowle, in the Keadby Canal, open to all England, and I have no doubt a strong muster of anglers will take part in the contest.

RED SPINNER.

TROUT POISONING.

FOR some time, indeed for several years now, instances have become common of trout streams being poisoned in the South Yorkshire and North Derbyshire districts, especially in the neighbourhood of the extensive collieries which abound in that locality. The last few days have, however, furnished two instances of an aggravated nature, which it is to be hoped will lead to greater vigilance on the part of the police and possibly the stoppage of this dastardly practice. Throughout the district named there are a very many very pure streamlets, which come down from the extensive grouse moors above, and which form, from their purity, admirable trout streams. Many of these streams have of late years been extensively cultivated by gentlemen who own the property through which they pass, and in some instances a good deal of money has been spent over their protection and the supplying of fry from a distance to increase the stock of fish they contain. During last year several cases were reported in the FISHING GAZETTE, amongst which was one where a tributary of the Derwent, at Hathersage, belonging to Mr. Cammell, was poisoned and the fish nearly all destroyed. At times since, other streams have suffered, and notably about Chesterfield and Dronfield, and indeed at many points along the valley of the Rother, and also of the Erewash, as far as the coal district extends. This week information has reached the West Riding police that a fine trout stream on the Nottinghamshire border of the Riding has been poisoned and hundreds of fish have been destroyed. The stream mentioned is one leading down a pretty little gorge amongst the limestone rocks, called Anston Stones, about a couple of miles from Kiverton Park Station, on the Manchester and Sheffield main line of railway. This has long been noted as a very fine trout stream, and the other day it was discovered to have been limed. The property through which the stream runs is owned by the Duke of Leeds, but his Grace, we believe, lets his sporting rights here to a gentleman residing in the locality, and for whom a good deal of sympathy is expressed by neighbouring anglers. The matter is being enquired into by the police. In connection with this matter it might be mentioned that there is a rumour that during the feast held at the adjoining village of Todwick one night, several trout were disposed of for beer at the public-house, and it has since transpired that the proprietors of a neighbouring colliery served out to their employes a quantity of chloride of lime for disinfecting purposes during the hot weather, and it is supposed this has found its way into the Anston brook. It is also thought these circumstances may lead to the detection of the offenders. A similar instance has just occurred in a mountain stream some ten miles above Sheffield, but still in the same county. Some years ago a very disastrous flood occurred in the town of Sheffield through the bursting of a large waterworks reservoir at Bradfield, seven or eight miles above the town. The stream to which the fish poisoners have this time turned their attention is the one that fed this identical reservoir, and the point at which the damage was done was some mile or a mile and a half from the site of this unfortunate dam. The stream is known locally as Dale Dyke and runs through a grouse moor occupied or owned by Mr. G. H. Shaw, a

surgeon at Sheffield and a well known and enthusiastic sportsman and angler. This gentleman has been at a great deal of trouble and expense in stocking it with fish, and though he may not have made full use of its resources himself, his friends and, in many instances, his delicate patients, have derived unstinted pleasure from it, and by many who have tried it is described as one of the best, if not the best, bit of trout fishing in South Yorkshire. On Sunday last it was found that, either early that morning or the night before, probably during the night, the stream had been lamed, and hundreds of trout were lying in the brook and coming down with the water, dead. No trace of the miscreant has yet been found, but it is to be hoped the police, who have the matter in hand, will be successful in this instance also. Seeing the very great and general respect in which Mr. Shaw is held in the locality, it seems hard to believe that the outrage is one arising out of spite, but it is viewed as more a poaching affair than anything else. It is hoped this and other outrages of a similar character will stimulate the police to greater exertions to stop the practice.

THE COOKING OF CARP.

IN *Food and Health*, Mrs. Amelia Lewis, editing that useful paper, writes that there are various ways of cooking the carp in an appetising manner, which are: 1. To plain broil it. 2. To stew it in gravy. 3. To bake it when stuffed.

1. To plain broil it.—Scale and clean the carp well, dry it, wrap it round with a piece of larded paper and now put it on the pan that has been slightly greased. When done sprinkle a few drops of lemon juice over it, if you prefer it.

2. To stew it in gravy.—Make a gravy with a small piece of melted butter, some flour stirred into it, add a couple of shallots chopped very fine, some peppercorns, mace, two cloves, salt, and now amalgamate with a little warm water. Put in additionally some claret or port, or, if you do not wish to use these, some malt vinegar and a spoonful of sauce or mushroom catsup, also a couple of lemon slices. Place your carp into the sauce, either whole, cut in half, or in pieces, according to its size, cover up tight and let gently simmer for half an hour or so. Some put a few slices of ham under the carp. The carp and gravy, eaten with potatoes, salad, parsnips and cabbage stewed or mushrooms make a very good dish.

3. To bake carp when stuffed.—Clean the carp and prepare your stuffing, some bread, finely-chopped suet, a little parsley and thyme, a small chopped onion, pepper, salt and nutmeg, chopped lemon peel, moistened with the yolks of two eggs, stuff the fish with it and tie up.

Wrap the fish in greased paper, and either place butter in tin, or some lard or a few slices of bacon. Place this in oven or cover over on top. When done, make a brown gravy with fat in the pan, and pour over the fish, or eat dry, if you prefer.

Beetroot salad or potato salad can well be eaten with it. Also mashed or fried potatoes, and various vegetables, green peas or beans.

The flesh of the carp represents among fishes the tastiness of the fowl among poultry or the pig among the meat of the domesticated animal. It is savoury, aromatic, and also nourishing to a degree, and carp will become a very valuable fish food.

IMPORTANT FISHING CASE.

ON Tuesday, a case of considerable importance was heard relative to the right of fishing from the towing-path of the river Lea. Mr. R. Murphy, the secretary of the Good Intent Anglers was summoned by Mr. Wheeler, of the King's Arms, Waltham, for being in the main cut opposite the Government Factory, and refusing to pay when requested. As we have before mentioned, this partakes somewhat of a test question, and the court was filled with many well-known anglers, who evidently took a very keen interest in the matter. Mr. Corbie, the clerk of the Lea Conservancy, and Mr. Childs, the engineer, attended on behalf of that body, and Mr. Alsop appeared for Mr. Murphy. Several solicitors were present on behalf of the Crown. Mr. Wheeler was the first witness called, and said that he leased this portion of the river from the War Office, and on July 11 Mr. Murphy came down, and intimated to him that he intended to fish, and refused to pay when requested. The solicitor for the defence took objection to the form of the lease, but the case proceeded. Mr. Clarke was next called, and said he had leased a portion of the water since the year 1858. The portion in dispute he had never laid claim to, as it was a new cutting made about ten years ago. Several fishery cases were quoted, and a long legal discussion ensued. Major Tovey gave evidence as to the rights of the War Office, but no deeds were submitted. Mr. Gorbie was next called, and said he knew the piece of water well, and gave Murphy permission to fish it. They used to take little notice of the fishery cases, but so many attempted claims were now made they were compelled to do so for their own protection. They always kept their rights alive. The solicitor for the Crown said that the Government claim their right to the fishing through being the owners of the bed of the river. The magistrates retired to consider the case, and after a short absence decided that the summons be dismissed, as that portion of the towing-path belonged to the Lea Conservancy, and Murphy had their permission to fish. The two other summonses taken out by the Lea Conservancy were withdrawn.—*Sporting Life*.

A NOVEL SUGGESTION.

IF we are to have an International Fishery Exhibition in London could we not utilise it in an educational direction so as to leave those who frequented it better informed regarding the natural history of fish after their visit and inspection of its contents than previous to their presence. What, may I ask, do the majority of anglers know of the various changes—I had almost written transformations—of salmon, excepting from the illustrations in expensive works far out of their reach? It may be answered by some, And what do they care? But my reply to this is that there exists no item of such information, however insignificant, which has not in its development one universal bearing upon the whole penetralia of pisciculture. Again, it may be inquired how is this to be done? The Norwich Exhibition has given us a distant but unmistakeable hint. On one of the stalls were a salmon and a joint of meat, if I mistake not, preserved in a fresh and, it is said, an improved condition, by the Glacialine process of the Antitropic Company, of Glasgow, and which attracted the especial attention of His Royal Highness the Prince of Wales. We further learn that after these perishable articles had been exposed in the over-heated and crowded building for a week they were ordered to be cooked by the Committee, and the unanimous decision after the repast of those gentlemen was that both fish and flesh had undergone as severe an ordeal as it was possible during such weather to submit them. Now what has this to do with my preface? Merely this, that the date of the opening of the Exhibition in London being known, those throughout Europe who have scientific sympathies at heart, should forward from their respective localities properly preserved specimens of salmonidæ, salmon, trout, grayling, &c., with date when taken, whence from, and any particulars of supposed importance, however apparently trivial. We all know, for instance, how trout differ in contour, colour, and markings, from separate localities; and, therefore, what, to a naturalist or intelligent angler, could be a more gloriously instructive and suggestive lesson than to see before him the specimens of those fish from their several native waters properly labelled and designated? Thus, with salmon, the whole of the parr theory—which is still, with many, a mental myth—might be elucidated and rendered clear. F.

FROGS CROAKING—FISH NOT BITING.

A HARTFORD gentleman who owns a farm in Windham, near the renowned old frog pond, tells of a fishing incident in his experiences, at the historic pond sometime ago, which to all who are familiar with the range and expression there is in frog tones may be worth relating. He says he was having excellent luck in catching fish, pulling out one big perch after another until a large old bullfrog—a sort of batracian patriarch—came up out of the water, took up a position on a rock a few feet away and began a deep and mournful croaking. This was taken up and repeated by others—for “Colonel Dyer” and “Elperkin” too have their lineal descendants still flourishing in that famous old pond.—until a regular croaking chorus was heard all around the pond. From this time the fish did not bite; not another one was hooked. The angler tried to dislodge the basso profundo; and finally, by throwing his hook freshly baited upon the stone near him, the frog took the bait and the fisherman tried to land him by an over-throw. But in the fling-up, the heavy old frog became detached from the hook and shot up in the air apparently fifty feet. As he came down and heavily struck the water, apparently very much astonished at his aerial trip and sudden fall, with such a whack, he grunted out with almost human distinctness, but in tones deeper than any of the bulls of Bashan, the one exclamation—“Great Scott!” and then disappeared. After this occurrence the frog serenade stopped, and the fisherman continued angling with his former good luck.

The above is fathered by the Hartford *Times* and is too good to remain local. We expect that some of our “unlucky” anglers will soon be trying the “croaking frog” dodge to account for poor baskets. Given a fisherman, and the “reasons why” come at command. The “Great Scott” of that old batracian sounds as sonorous as an expletive used by an angling friend of ours, whenever he loses “the biggest one I ever had hold of.”—*Afield and Afloat*.

LOB WORMS.—In consequence of the difficulty experienced by London anglers in procuring lob-worms, Mr. Gillett, fishing tackle maker, of No. 40, Fetter Lane, has arranged to keep a constant supply; also of other worms and gentles, &c.—ALVT.

THE KENNET, &C., AT NEWBURY.—A brace of M.P.'s are among the new members who have joined the Newbury Angling Preservation Association, and fished the waters. There is comparatively little traffic now in the "Cut," and as the borough authorities are at last going to divert all objectionable matter from the river, the trout and general fishing here will in time be unexcelled. Several anglers have acted on the "tip" given in THE FISHING GAZETTE. There are few inland localities of greater interest than this, alike to the angler, the literary man, and the student of history. Any angler, however, who is worthy of the name of sportsman, should be as especially careful not to injure or disturb any young bird or wild game animal he might perchance come across, as he would be to return a fish out of season, or one too small to retain. People are beginning at last to understand this sort of thing all the better; now that it cuts both ways!—GAUZY.

ANOTHER BREACH OF THE SALMON FISHERIES ACT AT CHRISTCHURCH.—At the Petty Sessions at Christchurch, Hants, on Monday, before Mr. Farr, J.P., and four other magistrates, Frederick Fane, Esq., of Moyle's Court, Ringwood, was fined £8 and £1 is. 8d. costs, for using a net without a license in May last. Mr. Trevanion, of Poole, appeared for the Avon and Stour Board of Conservancy (who instituted the case), and said that defendant was until recently a member of the board, but now withdrew from it. The evidence went to show that the bailiff caught defendant and a party fishing in the Avon, and told him he would report him, and on the following day the secretary of the Board received a letter from him (defendant) applying for a license, which Mr. Trevanion said was after the offence was committed.

SINGULAR INSTANCE OF THE VORACITY OF THE PIKE.—On Wednesday a curious incident occurred on the River Suir, near Tulla Bridge, about a mile from Thurles, which showed in a remarkable degree the voracity of the pike. A number of ducks were swimming on the river, when one of them uttering a loud "quack" was seen suddenly to disappear, a commotion being immediately afterwards discernible amongst the remainder of the flock. Some young men, going through curiosity to the spot where the duck had vanished, found near the bank of the river an enormous pike floundering about, and so utterly helpless that they had very little difficulty in landing it, when, to their astonishment, they found the duck, which it appeared the pike had seized, but was of course unable to swallow. The monster, whose insatiable voracity had caused its death, weighed nearly forty pounds.—K.

[The above appeared in *Land and Water* recently. Ireland is the place for big pike.—ED.]

"Papa," said the son and heir of an acquaintance of mine, "may I go a-fishing?" "Stuff!" said the busily-engaged parent; "get away, get away, don't bother me about fishing." Towards evening a miserable piece of humanity was brought home wrapped in some bits of old sacking, which was all that covered his nakedness. "Found him roaming on the bank of the drain, sir, without his togs," said the party who had brought the object home. It is not known for certain how this promising juvenile became in this Adam-like state, but it is supposed that the fishes not biting, he had gone down to hook 'em on, and during this employment somebody had taken a fancy to his clothing, picked up the same and bolted.

1st AWARD MELBOURNE EXHIBITION, 1881. DAY, SON AND HEWITT'S STOCKBREEDERS' MEDICINE CHEST.

FOR ALL DISORDERS IN HORSES, CATTLE, CALVES, SHEEP AND LAMBS.

In this chest are the following matchless and world-renowned remedies, all that a Farmer can require to cure disease amongst his Stock and keep them in fine, healthy, and buoyant condition:—

"CHEMICAL EXTRACT," for Wounds, Swollen Udders, and Ewes Lambing.
"GASEOUS FLUID," for Colic, Scour, and Debility.
"RED DRENCH," for Cleansing Cows and Ewes, &c.
"RED PASTE BALLS," for Conditioning Horses.
"BRONCHOLINE," for Husk, Hoarse, or Cough.
"GASEODYNE," for Heaving or Paining.
"ALCOHOLIC ETHER," for Colds and Chills.
"CARMINATIVE CHALK," for Diarrhoea in Lambs and Calves.
Price of Chest, with "Key to Farriery," £2 10s. 6d., carriage paid. Each article can be had separately.
Patronised by Royalty, and used for over 40 years by the Leading Agriculturists of the British Empire.

CAUTION.—See that the Name of DAY, SON AND HEWITT is on all Bottles and Packets.

DAY, SON AND HEWITT,
22, DORSET ST., BAKER ST., LONDON, W.,
AND WANTAGE, BERKS.

VOLUMES OF THE FISHING GAZETTE, FOR 1878, 1879, AND 1880.

On receipt of P.O.O. for Twelve Shillings, we will send any of the above in handsome cloth cover.

N.B.—ONLY A FEW REMAIN UNSOLD.

Orders to be sent and to be made payable to R. B. MARSTON (at the Fleet Street P.O.),

FISHING GAZETTE OFFICE,
12, FETTER LANE, LONDON.

With FLY, MINNOW, WORM, &c.

THOMAS FORD,

130 different Flies, with ways of manufacture and seasons for use. Post free from Author, Caistor, Lincolnshire. Agents wanted. Best Trout Flies 2s. per doz. Fly List, one stamp.

Orders taken for Ova and best Trout Fly, best strains only.

DIPLOMA OF HONOUR AT THE NATIONAL FISHERIES EXHIBITION, NORWICH, 1881.

Hines' Spring Plummets.

Small size, 6d.; Large do., 7d. Post Free. The Trade supplied.

AGENTS WANTED IN EVERY TOWN.
Address—THOMAS HINES, The Bazaar, Adelaide Street, Norwich.

THE SPRING PLUMMET.—Mr. T. HINES, the inventor of this useful fisherman's accessory, has received a highly satisfactory testimonial of its worth from the well-known anglers, Messrs. A. G. JARDINE and H. L. ROLFE.

FISHING GAZETTE Plummets, 8d. each post free.

(THE DEVONSHIRE RIVERS.)

FISHING TACKLE, &c.

DEVONSHIRE FLIES (GOOD in ANY STREAM), 1s. 6d. per dozen. Flies made to pattern. A large stock of Rods and Tackle of all kinds. Some choice SPLIT CANE RODS by "Copham;" bargains. The Devon and other artificial Baits, Reels, Lines, Gut Casting Lines, Fly Books, Wading Stockings and Trousers, Baskets, and every other requisite. Address, WILLIAM MUDFORD, Fore Street, Tiverton, Devonshire. Ticket dépôt for the Tiverton Fishing Association.

ANGLING.

Now ready, third Edition.

THE ANGLER'S INSTRUCTOR.

By WM. BAILEY.

A book on the best modes of Angling in English Rivers, Lakes and Ponds, and on the habits of the fish, besides all the latest practical hints on many things that have not up to now been made public, to be had of W. Bailey, 170, Kirke White Street, Nottingham. By post, 2s. 9d.

NOTICE.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., must be addressed to the Editor of THE FISHING GAZETTE, No. 12, Fetter Lane, London, E.C. and should reach the office not later than Tuesday morning.

Contributions are solicited, but the Editor will not undertake to return rejected MSS., unless accompanied with a stamped addressed envelope.

Correspondents are requested to write on one side of the paper only and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to no notice will be taken of such communications.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls, and of the following, amongst other Fishing Tackle Dealers in London and the Provinces:—

Messrs. Alfred and Son, Moorgate-street.
Messrs. Price and Co., 8, Seymour-street, Euston-square, N.W.
Messrs. Williams and Co., Great Queen-street.
Messrs. Gee and Co., St. Andrew's-street, St. Martin's-lane.
Messrs. Gee and Co., Gray's Inn-lane (near Holborn end).
Messrs. Little and Co., Fetter-lane, E.C.
Messrs. C. Kewell and Sons, 197, St. John-street-road, E.C.
Messrs. Kewell and Co., 1A, Conduit-street, Regent-street, W.
Mr. J. Richards, 97, Church-street, Paddington.
Mr. W. Leader, 30, Upper Marylebone-street, Portland-place, W.
Mr. — Clark, 35, Wells-street, Camberwell.
Mr. Geo. Read, 91, Goldsmith's-row, Hackney-road, E.
Mr. A. Bulmer, 62, Wandsworth-road.
Mr. F. Oliver, 188, Great College-street, Camden Town.
Mr. J. E. Gold, 284, Waterloo-road.
Mr. D. W. Willoughby, 21, Lombard-market, Battersea, S.W.
Mrs. F. Y. Brocas, 4, Mill-street, Conduit-street, Hanover-square, W.
Messrs. Gillett and Co., 40, Fetter-lane, London.
Mr. Alfred Young, "The Golden Perch," 174B, Oxford-street, W.
Mr. T. Barnett, 26, Church Street, Lisson Grove, N.W.
Mr. J. Smith, 7, Tottenham Court Road, London.
Mr. Edwin Stevens, Newsagent, 220, Kentish Town Road.

SATURDAY, AUGUST 6, 1881

BARBEL FISHING.

By J. P. WHEELDON.

IN a recent holiday paper, written expressly for a capital holiday number of the FISHING GAZETTE, I had it in my mind to say something about barbel fishing, but want of space prevented me doing so. I therefore take the opportunity of adding

something in the present number. It is, to my thinking, the most exciting, the most exhilarating, as well as the most uncertain sport, that can be sought after near home. Frankly, I think, there never swam such an awful sly old customer as your barbel, nor one that requires more skilful management to induce him to bite freely; or, at that other supreme moment when the keen steel first pierces his leathery snout. Not even Walton's "Water Fox"—the crafty carp—can beat him for cunning, while he is, beyond all comparison, the very gamest of the game. Once hooked, on anything like fine tackle, and a big fish will give even a very experienced fishman plenty to do before the final ceremony of scooping him into the landing net takes place. Given a heavy powerful stream, round the jutting corners of a bank for instance, "all overgrown with meadow sweet, and beauteous flowers of fragrance wild," and Master Barbel, particularly if he has arrived at years of discretion, and weighs five to six pounds, is by no means to be sneezed at. Every little game under the sun will he try to play. Every dodge by which instinct prompts him to try lustily for freedom will be placed under contribution. First, he rushes down the stream with the speed of an arrow released from a tautened bowstring. The instant he finds, in the hands of even a good man, that the winch line has travelled just as fast as he did, and that he is no nearer home, sweet home, untrammelled and unfettered, than he was before, then my lord tries to bolt under a shelf or jutting bit of the bank. If he gains such a stronghold, he will try desperately with might and main, like grim death, to hold on. If there is none such, ten to one, one feels him pulling hard at the end of the swim, and now and again, if one's hand is very sensitive, there is a smart jar upon the tackle. That is, likely enough, caused by a flourishing aloft of his powerful forked tail, and trying with all his vigorous dexterity to sever the detaining gut link. How keen must his rage be when such efforts are defeated, and he finds that the paltry little thread that he had treated with such disdainful indifference at first, still holds him fast by the nose. Occasionally, but very rarely, at this point, he treats himself to an indignant spurt up from the depths of the hole, and a rush for a glimpse of daylight. It is doubtless done with a view to seeing if the sunshine will cast any better and more hopeful light upon things in general, and the bit of gut in particular. This simple and early move in the annals of barbellling is generally a faint-hearted one, and it will be found that he blinks the daylight and turns "funky," such as a nice clean boy, with a clean collar and hair curled, just arrived at Mr. Slappam's Academy for Young Gentlemen, might be expected to do when the bully of the school blusters up, and enquires, "Now, youngster, would a jolly good punch in the eye refresh you? because, if it would, you're welcome to it."

Beware, though, aspiring barbeller, of his little game when he goes down again. If it is found that the gut unaccountably and curiously "gives," without any apparent cause or reason, at any one time during the fight, it will be at this very moment. My own conviction is that the line, being a long distance away from the point of the rod, and hence held at a great angle, the fish does try, and not unfrequently succeeds, in striking it with his muscular tail, and thus dissolving the partnership. I have heard it mooted (nay, more than mooted), asserted, in the most positive and efficient manner, that such theories are all moonshine, and that fish never consider, think, or reflect, call it as you please. That if they ever do release themselves from the hook, by any apparent stratagem which succeeds, it is always the result of a happy accident for the hooked-fish, but never that of design. As a rule, upon such occasions, I have generally held my peace, because positivists of this class are very hard to convince, and frequently the game is hardly worth the candle. I should yet like to meet an observant man who could convince me, in spite of thousands of instances I have seen to the contrary, that fish do not reflect in some measure, or that their sagacity, at least, to use another phrase, is not pretty equal to a good many of the habits of reflection supposed to exist among so-called observant men, because it would really save a good deal of valuable time at present elaborately spent in trying to deceive them.

However, to resume a little mild reflection upon our crafty friend. Once safe and sound at the bottom again, after his late trip towards the clouds, and his next move is most frequently a desperate rush up stream. I need hardly suggest the extreme advisability of keeping the winch going in reeling up slack line just as fast as the fish himself is moving, nor, when he nears the punt, the necessity of giving him a sharp reminder from the butt of the rod, that it would be more seemly on his part to keep at a respectable distance. If he finds that the line is the least atom slackened, a very favourite move is that of making a sudden and determined rush clear under the moored craft. Once let him accomplish that, and I'm open to bet my boots that nothing satisfies him until he has embraced the punt pole as an object of his dearest love, and succeeds in affectionately winding

the line round it as a parting tribute. As a rule, it is a parting one, and the only cause I can suggest in such an unhappy fix is to get a taut line and hold on tight, push the reel down, beyond the under edge of the punt, and then steadily pull at him. If he is clear of any impediment to return, the toothache thus established will be much too strong and powerful in its symptoms to bear any trifling with. Back he shoots again with the speed of a hunted panther. Keep him then under the point of your rod, and play him, if possible, from the wrist. Occasionally he will have reel line, and saying him nay becomes dangerous. Well, give it him, and get it back as soon as you conveniently can. When he is entirely spent and worn out, not an atom before, if you are fishing for sport and not for the sake of filling the well, put the net under him, and, as you dish him into the well, don't forget to uncork the beer-bottle in his honour.

ST. LUBBOCK'S DAY AT THORNEY BROAD.

THE showers of Saturday, and the rain of Sunday, were by no means encouraging to the excursionist looking forward to his day's outing on St. Lubbock's day, however gratifying, for obvious reasons, to the mind of an honest angler. With mingled feelings of regret and pleasure we started for Thorney Broad; regret, that the weather was not more propitious for the toilers of the world's metropolis; and pleasure, that the fishing prospects were somewhat improved by the downpour that had taken place. We need not narrate in detail, all the humorous adventures one inevitably meets with on a public holiday, or the delays inseparable from an occasion when your fishing apparatus has to be got through a bustling crowd. The train "disgorged" us at West Drayton, whence we take our "hook," a pleasant quarter of an hour's walk finding us in the interior of what Mr. Wheeldon once no doubt properly and poetically described as Mr. Godfrey's "snuggery." After a slight refresher, we cast round, ultimately selecting our "swim," not a very easy matter with so many anglers already in possession of the field. The spot chosen was between the house and the railway bridge, on the opposite side, but which could not well be fished without the aid of one of those ponderous old punts in use on this water. To this we return, after partaking of Mr. Godfrey's ordinary, a wholesome meal, which an angler may be satisfied with, but which would go down with more zest if the dinner-service were rather less antique. Let this be attended to, the house brightened up inside, and the outer weeds kept down with a little judgment; then, commend us to Thorney Broad, where, given fair conditions, we should have no fear of an empty bag. Our take on Monday was certainly not large, rather the reverse, but this was due to common angling contingencies. The water is good, the fish are there, and, if not very numerous, certainly run large. Like some fishermen of old, we toiled hard, our ground bait was well in, and the roach, bright, silvery fellows, just coming on, when down, down, down, came the rain, during which, in spite of perseverance and a macintosh, not one touch could we get. Standing in our punt, we could but exchange a sympathetic nod with our brethren ashore, as returning in ones and twos, with saddened features, they looked up to the leaden sky. These formed a representative assembly, in which anglers of all grades were to be found. There were medical, legal, mercantile, and business men, including some true Bank anglers, who leave but one kind of ledger behind. Returning, we meet piscators from Pangbourne, and other quarters of the Thames, whose pleasure had been marred by the small boats, or destroyed by steam launches. One worthy rodster exhibited his greatest take, in the shape of an alpaca umbrella, which, with true Waltonian instinct, he had fished up, and knew it to belong to an angler. It was satisfactory, however, to know that our bag was not quite a blank, and that we had the pleasure of weighing some capital roach at the close of St. Lubbock's day.

GRASSHOPPER.

PISCATORIAL CHIPS.

"THE ROYAL RIVER OF THAMES."

ONE word, first of all, to my talented aquatic colleague J. Harrington Keene, in reference to my adopted title of the "Royal River of Thames." He is as well aware as I am that the lower portion of the river is governed by an old charter or Act of Parliament, and I suppose I have acted on this point, as I have legally to do on all others connected with it, in defining the water as the "Royal River of Thames." If I have adopted an obsolete title, and it is not as proper as it ought to be, he will, I am sure,

pardon me for using an antiquated expression, and I will promise him not to offend again.

MORTALITY AMONGST THAMES TROUT.

As the great J. L. Toole would say, in one of his famous characters: "It is enough to make one wild, it is." Methinks I hear some one say, "What is all this about?" Why, within about one week four large Thames trout, from 8 lb. to 12 lb. each, have been picked up dead in a little more than a mile of water between Walton and Halliford, and one of a pound at Chertsey. It is enough to make any one wild to lose such Thames treasures in such a way. The question, I apprehend, now is this: "What is the cause of it?" Is it because there has not been enough of stream for them, and the water, like a duck pond, has become rank and impure? This, to my notion, is one great cause. The readers of the FISHING GAZETTE will remember about a month ago a trout of 8 lb. leaped into a rowing boat at Halliford with quantities of lice upon it. The river for some time has been excessively low and without any rainfall to freshen it up—the bed of the river and the weeds must have been very impure—and trout, which are a clean feeding fish, must have mortally suffered. If there is any other cause, perhaps some good friend who writes in a good natured style, like Mr. Keene, will explain it.

FLY FISHING FOR THAMES TROUT.

Mr. Alfred Stroud, of Sunbury, is not only a thoroughly good fisherman, but he is always to be depended upon. He writes, last week: "I have seen more trout this week rising in the Thames at a fly than ever I have seen before, and those who are fond of fly fishing cannot do better than come and try for them." He not only gives chapter, but verse, and amongst his proofs he repeats: "Mr. Lukyn took one of the prettiest trouts I ever saw, with a fly $5\frac{1}{2}$ lb." Bravo! Alfred Stroud, I long to have another day's fishing with you, and that before many weeks are over, if I can find a day at liberty. I hope some one at least has profited by his advice and been successful in getting some nice fish. I was really glad to hear of Mr. Lukyn getting a trout, as I was beginning to think he was going to make a duck's egg this year, but he has at last made a straight stroke. Trout have been caught with a fly in the Thames up to 12 lb.

MORE TROUT FOR THE THAMES.

Mr. B. Littlewood, of Huddersfield has really become a public benefactor to the Thames. His introduction to Mr. Thomas Spreckley, at the Norwich Exhibition, has proved a substantial reality. His first gift of 2000 strong healthy young fry of trout, after being placed in the Sunbury Rearing Stream, now under the entire management of the Thames Angling Preservation Society, have given such positive proof of their adaptation to the new home, that head river-keeper Henry Walters reports in the limited time of two weeks they had grown double their size. And now, again, good Mr. Littlewood sends 1500 more, including some acclimatised char, and they are all alive and swimming at Sunbury, a most beautiful sight to witness. Mr. Littlewood came up on purpose to the Thames Angling Dinner, and Mr. Spreckley took him down to Sunbury the day after to see the home of his babies. This is not only gratifying intelligence to the Thames anglers, but they will thoroughly appreciate the unselfish liberality and goodheartedness of Mr. Littlewood, at a time too, when all the hopes of this season were gone. Let me offer to our good friend, Mr. Littlewood, the Thames anglers' best thanks, and if he were only amongst them they would give him musical honours as well.

THE EXTENSION OF TIDEWAY FISHING.

Our capital friend "L. B." is one of the most energetic of men—he is a thorough angler—and more than that he is one of the anglers' best friends. He inquires, and I admire him for it: "What has been done to get the river preserved between Richmond Bridge and Kew Bridge?" or in words to the same effect—I will answer him as far as I can. It is not for the Thames Angling Preservation Society to make the alteration, but the Thames Conservators, and so soon as the opportunity presents itself of getting the Board to move in the matter it will be done. For some time the Conservators have had their hands more than full of other and most important matters, and it was impossible for them at the time to take up this question. The consideration of it will be on the agenda of the next Thames Angling Preservation Society committee meeting on the ninth of August, and it is intended that when the Board has returned from the holidays in which they are now embarked, an application will be made for them to receive a deputation from the society on that and other subjects connected with the Thames.

PISCATORIAL DINNER.

One of the best chips in connection with the Piscatorial Society is undoubtedly their annual dinner at the Holborn Restaurant,

and the only question that arose last year, as to its continuance at that famous establishment was that of the size of the room, as the attendance had overgrown the accommodation. In consequence of the popularity of these banquets at the Holborn, the members had risen from about fifty or sixty to one hundred and twenty, and there would have been more last year if the saloon had been large enough. It is now well known that the proprietors are making extensive alterations, and included in these is the erection of a room where three hundred guests can be comfortably seated. I have made several inspections of the works in progress, and have been much struck with the sound character of the work done by the builders, in which the Dennet concrete is largely employed or utilised in fire-proof construction. Already great progress is made, and for the next banquet of the Piscatorial Society there will be plenty of accommodation with the safe guarantee that the *menu* will be, as it has hitherto been, of a highly satisfactory character.

B.

NOTES BY THE EDITOR.

FROM the avidity with which the Colne trout rose at a large black palmer we were using the other evening we can recommend our fly-fishing readers to give the "sweep" a trial.

Mr. J. Warrington Wood's bust of the late Mr. Frank Buckland will shortly be placed in the Museum of Fish Culture, South Kensington. Mr. Wood, who was commissioned by the "Buckland Memorial Fund" to execute the marble bust, has completed the preliminary work, having finished the clay model of the bust in a highly satisfactory manner. This will be shortly forwarded to Rome, where Mr. Wood will carry on the work of modelling the marble bust.

London anglers should make a note of Dagenham Lake and its piscatorial attractions. Mr. Fitch, jun., has, in answer to our enquiry, kindly given a description of the place in our correspondence columns this week.

The river weed on the bed of the Colne we found last Monday to be full of animalculæ; some large enough to go on a small hook. Anglers will find them a very killing bait. We watched the roach standing on their noses feeding on them.

The best places to try for roach in the Colne now are the deep back waters close to the main stream; bait with a little bread and bran mixed; we got some fine roach in this way on Monday, and so did a lady angler who was with us; the fish bit best towards evening, and paste was the bait, made from quite new bread.

In fact, the bread was hot from the oven. New bread makes a most tenacious bait, but care must be taken to use only a very small bit, and let the point of the hook protrude the least bit in the world. If this is not done, this new bread paste is so tough that in striking the hook is prevented from catching the mouth of the roach. We often use this new bread paste.

With regard to the Japanese roach rods, our remarks in the tourist number applied to the rod in the ordinary form, and not in the telescope form. For a lady's use nothing could be better than these Japanese rods, and yet they are strong enough to kill almost any fish if properly used; that is, if a lance-wood top and light ferrules are added to them. The great secret in roach-fishing is prompt but gentle striking, and we are certain this is far more easily effected with a long strong light rod than with a long strong heavy one. We would not recommend them for punt anglers unless they be ladies, as the Japanæsthetic wand is, of course, not adapted for rough work.

In the aquarium department at the "Zoo" there is now a most interesting angler-bird—the American diver. This little fellow has a long, sharp beak. The keeper throws a few small live fish into the little pond, and our "diver" instantly dives in and pursues a fish with incredible swiftness. He transfixes his victim on his spit-like beak, and then he comes out of the water, throws the fish off his beak into the air, and catches and swallows him head first.

The capture of a perch in the Serpentine the other day is, perhaps, only the first fruits of a piscatorial harvest. A correspondent of the *Standard* cites Mr. Frank Buckland as having given the opinion "that under judicious management a fine head of fish might be grown in this lake for the benefit and amusement of anglers." A considerable quantity of fish was netted in Mr. Buckland's presence when the lake was emptied in 1869, including a solitary lake trout.

GRAINING FROM THE WEAVER—JAPANESE RODS—EELS AS POACHERS—THE LUMINOUS FLOAT—CASTING TOURNAMENT.

I HAVE again been favoured with specimens of the graining, by Mr. Ridgway, of Manchester, and I thank him very much for the three fish, which arrived quite safely and in capital condition. Mr. R. tells me in his letter that the fish were taken from the river Weaver, at Halton, near Frodsham, the maggot being used as bait.

The graining (*Leuciscus Lancastrensis*) is a beautiful dace-like fish, and is essentially local in its distribution. It is known in the lakes of Neufchatel and Thun, and in some parts of the Mersey and Lancashire Alt, as well as in the Weaver. The fins are larger than those of the dace in proportion, and so are the scales, which are beautifully striated, and in the specimens referred to numbered 48 in the lateral line. It seems to me a great pity the fish is not cultivated, as, from particulars I some time ago obtained from an old angler who had taken them frequently, they are trout-like in their gameness and general angling qualities.

In *no* Japanese rods. I am by no means certain that the bank rod is any the better for ferrules and rings—so far as this make is concerned at least. I don't quite see how the chief feature of these rods—their collapse, joint within joint—can be rendered rendered available if ferrules and rings are added, and I expressly state in my book that I regard this collapsibility as of value. "After your roach is played to exhaustion," I say, "the form of the rod, from the availability of its collapse, joint by joint, allow of the landing of the fish without the necessity of rising from your seat and receding from the water, to the detriment of sport, which is incontestably the case with the ordinary rigid rod." The angler who cannot kill a roach on a tight line, has yet to learn the fine art of this kind of fishing, which Walton ascribes as particularly the specialty of Londoners.

Now I want to draw the attention of Thames anglers in particular, and all anglers—listen, Sheffield, and let us hear from you, Mr. Guest!—in general, to the subject of eels. I strongly object to the preservation of these fish at all, and I say this with all emphasis. Eels are the devourers of spawn of all kinds of fishes, the devourer of fry innumerable—the very daughters of the horse-leech, crying give! give! and with insatiable maws picking up the choicest of the natural food of roach, perch, barbel, pike, *et hoc genus omne*. In daylight they lay in covert; at night they prowl, seeking what they may devour.

You bait your barbel swim like a foolish man, at night. *Anquilla* with the sharp nose cometh, and not alone, and gorgeth himself with your opal and coralline annelids at 10s. a thousand—and this under the very noses of the somnolent barbel. Your bream swim is rendered similarly abortive, and woe to the chances of multiplication if the insidious eel molest your trout beds or the fry.

I have taken, on lines and in baskets, as many as 30 lb. of a night in summer time out of the Thames. Nor is this an uncommon amount. I conferred last night (Sunday) with a well known and very successful Thames angler, and he believes that eels figuratively make cobwebs on the bottom of the water. That they breed in fresh water can admit of no reasonable doubt. The old idea that it was necessary for them to descend in order to increase—cannot be sustained. Lakes falsify the theory. In them eels of all three of the species known to British waters increase and multiply without reciprocal communication with the salt water at all.

Let eels, therefore, be considered "fish of prey," and, like the heron and kingfisher, be treated as an enemy. I am not quite sure that eel lines are permissible, unless the layers of them are known to be sportsmen in their very natures—and there are yet some such fishermen on the Thames.

Anyhow, let the eel be exterminated in our metropolitan streams, whether by line or basket. He is a ruthless marauder and deserves no commiseration. As a layer of lines of a great deal of experience, I can candidly say that night lines were productive to me of very few fish other than eels and roach. The scare about trout-catching is founded on very slight grounds.

Talking about eel fishing: I had occasion the other night to try a very sultry nook for these toothsome creatures, and it occurred

to me to use a float—a luminous painted one, which Mrs. Williams, of Great Queen Street, kindly asked me to test. It answered splendidly, and I never missed a bite. I'm not sure, however, I did not illegitimately "burn the water," Mrs. W., judging by the way the tench came up to look.

* * * * *

Glad am I that the casting tournament is likely to be a realised fact, notwithstanding my growl last week. I would suggest that a smooth lawn be used—say the Star and Garter, Richmond, or John Bond's, at Kingston—and that a prize be given for he who can throw off the reel a barbel float, baited hook, most gracefully and furthest, as well as those mentioned.

* * * * *

There are some who cannot do this, Mr. Editor, with grace, and the casting of a dry fly from the Nottingham rod might be tried.

J. HARRINGTON KEENE.

EELS v. SNAKES.

I HAVE been reading with much pleasurable interest that excellent work "The Practical Fisherman," recently produced by Mr. J. H. Keene, which is worthy of its name, and deserving of all the appreciation it may meet with. It supplies information which would be otherwise inaccessible to those who cannot command the use of a large selection of works on angling. Reading his various tales and captures of fish, reminds me of an anecdote told me by a friend who has just returned from fishing at Woodford Bridge, near Holsworthy, some few miles from which there is an old man, who, in the season, gets a portion of his living by taking eels at night time by means of lines, which with a canvas bag slung at his left side completes his outfit. This old fellow has a mighty knack of putting the head of each eel, when taken from the hook, into his mouth, giving it a severe nip; placing his left hand into the bag to hold it open drops the eel into the same from his mouth, retaining the hook with line in his right hand, thus securing it from loss in the dark. Only a short time since the old chap had a remarkable good catch, and returning home left his bag of eels until the following day. When upon turning them out to select the large from the small, to his great surprise there was a snake nearly three feet in length, and, as might be naturally expected, the venerable fisherman has quite given up biting eels' heads and fishing by night.

Exeter.

FRANK GOSDEN.

HOW I SPOILT A GOOD FISH-STORY.

LAST season I visited a large pool formed by throwing a dam across the lower end of one of the beautiful little valleys so numerous in the Staffordshire moorland, which is said to contain good perch and trout. After trying to tempt the former with a worm, and meeting with indifferent success, I grew tired of the monotonous occupation of bottom fishing in still water, and rigged out some light spinning tackle to try if that would yield better sport. I had not made many casts before a man came to me in great trouble. He had left his rod to fish for itself; lent it indeed, like an usurer, for his profit and the fishes' destruction, as good Izaak Walton hath it; when the eager borrower, not content to take the bait alone and remain to repay principal and interest with his life, had made off with the whole capital of the lender, in the shape of rod and line complete. Seeing the distance to which I could throw my bait, the man thought I might recover his tackle for him; but when we reached the place it was already too far off: the rod, a ten-foot sapling from the nearest wood, was moving rapidly across the pool, there about 400 yards wide and nearly three times as long, every now and then dipping under water as the fish who had borrowed it made a vigorous plunge. Seeing that I could not reach it, I went on with my spinning, taking an occasional glance at the rod, now in mid ocean; away it went, sometimes in one direction, sometimes in another, but always keeping at a respectful distance from the banks. By this time several other anglers had been attracted to the spot and were watching the cruise of the rod, busily speculating as to the size of the monster propelling it, and trying to decide from its antics whether the said monster were a giant trout or an enormous perch. After about two hours I returned, and found the man still patiently waiting in the hope of recovering his wandering tackle which at last, after a long circuit, was approaching the place from which it started; in a short time it was within thirty yards, and in a few throws I had sent my line over it. Steadily, amidst the breathless suspense of the bystanders, I drew rod and line ashore; when, seeing that the desperate resistance expected by all was not made, some exclaimed, "He's off after all," while others declared

that the fish was exhausted by his long struggle with the rod, and so could not make another effort. At last I grasped the sapling. Would it prove strong enough for the last rally of the gallant fish? It did, and out I drew a perch; not the leviathan for which every eye was looking, but a game little fellow of a quarter of a pound. Had I not seen the fish and his performance, I could not have believed that it was possible for him to tow a heavy rod at least half a mile, as he certainly did.

Now, sir, had this fish escaped would not a wonderful story of his size and ferocity have been told round all the country side? In a week he would have been credited with pulling the man in as well as his tackle, and in a few years the story of the Lilleshall Parish Clerk would have been eclipsed—the furious fish would have swallowed the man himself.

And this is how I spoilt as good a fish-story as ever was told.

A GARDEN OF WILDINGS.

YOUR review of this work by that close admirer of Nature, Francis George Heath, and its suggestions, so closely accord with what I have so often humbly urged upon my brother anglers for years past, that I almost, in my conceit, fancied I was reading the re-echo of my cherished sentiments.

Let me ask, what portion of a lordly domain with its pleasure gardens kept up with every excess of expense is that which claims and rivets the attention of the lover of sylvan scenery more than that portion appropriated as a wilderness, left with slight superintendence, and almost studied negligence, to its own sweet will. Therein the whole family of ferns, the fox gloves, the endless variety of mosses, the bashful violets; and other countless groundlings revel in the luxuriance of liberty, and, in the absence of the gardener's art arrange themselves in "the charm of distracted order," amidst which the man who delights in plants can never feel himself alone.

Two years ago I joined one of the Amberly excursions, and while upon the banks of the Arun, and before quitting the water, made a collection of several descriptions of grasses principally of aquatic growth. These, upon my return, attracted the attention of my fellow passengers, by some of whom I was asked what was I going to do with that "rot," "rubbish," and my pets for the time had to bear many other opprobrious and unflattering epithets. To me, however, they were as choice a bouquet as that clasped by a woman on her bridal day, composed of exotics culled from the richest conservatory.

Amongst my companions, there were, as happily there generally are in a mixed company, one or two intelligent and willing minds really willing, from either curiosity or interest, to listen to a few observations which I hazarded regarding the rubbish I held in my hand; and as I drew forth stem after stem, and pointed out the different characters of each, I found, very shortly, a rapt audience. They admitted after a while that they saw beauty and design where they never expected to find it, and soon my bundle of "rot" was diminished by more than one half, having been, by individual request, divided amongst all, without an exception.

I improved the occasion by telling my hearers that it was a surprise to me how any one with eyes in their heads could pass altogether indifferently by, or altogether neglect, wild plants and flowers. That these were the earliest thing of beauty that every child who treads a green field, or wanders along a streamlets course takes to itself. It loves the flowers as it were by instinct; and this love is the best and sweetest portal to the memory. Get your children to cultivate it, and you will find how quickly the young will learn and retain, not the names merely of their favourites, but their peculiar fragrance, and, mayhap, some of their peculiar properties. Herein is God's handwriting—a wayside sacrament—that we should welcome in every fair face, every fair sky and every fair plant and flower, drinking it in simply, earnestly, with all our eyes.

"Why," I remarked directing my attention to a well known angler who was listening most attentively, "I was near you on the bank when you exclaimed, 'What a nice smell of peppermint,' and yet you were ignorant that you were at that moment crushing the aromatic essence under your feet out of the plant, there, wild and neglected, from which this useful medicament is extracted."

The object of my short discourse was not to induce my listeners to dip into botanical science, but I wished their affections to be drawn to, and engaged upon, those lovely objects which, when in the open air, are spread in such lavish luxuriance at their feet. In a word, to allure them to visit the poetry of Nature; to walk over the flowery fields, occasionally stooping to examine the beauties through which they occasionally wade knee deep; to wander into old woods, contented with the delight they produce, without looking too closely into their wonders; to ramble on the margin of rivers, and, while they angle, spare a few minutes

now and then to look upon the exquisite world in which they live.

That my observations were received with favour by this limited audience, I have since had proofs. It was but the other evening, in a club-room to which I was invited, I was reminded by one of its members of the present of the grasses *en route* from Amberley; and that he, and many others, never went down without bringing away sufficient for his wife to refresh the mantel, and enough to spare his neighbours, by whom this style of household decoration was much appreciated. F.

CLUB AND OTHER JOTTINGS.

By L. B.

THE heavy rains of the past few days will greatly improve the fishing; the lowness of the various rivers, etc., was getting quite serious. From the Thames reports come to hand that the fish, which ought to be getting into fair condition, were in many cases covered with parasites, and that a large number of Thames trout had been picked up dead or dying. At the Welsh Harp there is always a certain amount of mortality among the fish during a hot, dry summer, and this season has proved no exception. How is it that the mortality is less among the bream, of which there is a goodly stock, than among the other fish? Perhaps some of the readers of the FISHING GAZETTE can explain?

From the Lea a few takes have been had—a very few, I am sorry to say, thinly scattered over a long distance, to make up a show. Ponder's End, Waltham, Broxbourne, Rye House, St. Margaret's, and Ware each contributing a decent take or two, which stood out amid an army of blanks or next to blanks. Those who visited the Stort, however, fared much better, but the fish required a lot of sorting, and the rule had to be used frequently.

The usual 2s. 6d. day ticket to Amberley and Pulborough, issued on Sunday last, could upon payment of an extra 1s. be used for the return journey on the evening of Monday 1st, Bank holiday, the fearful weather of Sunday, however, caused scores who had intended to avail themselves of this, to hurry home on Sunday evening. Apropos of Amberley and Pulborough, some giants continue to be had from here. Among others, Mr. Taylor is credited with the capture of a bream, over 7 lb., and a roach, over 2 lb. 4 oz.

I am glad to hear that the roughs who recently assaulted Mr. George Oram, one of the most energetic Lea bailiffs at Tottenham, have been summoned before the Stratford police magistrates, and fined heavily.

The Sheffield Angling Association has issued a circular to the members of the clubs enrolled upon its books (who will be admitted only upon production of card of membership) requesting their attendance at a most important meeting, to be held in the Temperance Hall, Townhead Street, on Thursday, August 4th. Chair taken at 8 p.m.

I hear that a movement is on foot to bring forward again the question at the various associations of extending the issue of railway concessions to anglers' wives—if the attempt is made, we shall hear some amusing arguments for and against. On the last occasion a claim was made that the concessions should be granted not merely to the wives of members of angling societies who choose to avail themselves of it, but to members' mothers, daughters, and sisters, I even think that mother-in-laws were included. The present attempt, however, is much more within the limits of reason—it may or may not be acceded to, but if the former, I feel sure it will not be defeated by the votes of anything like the overwhelming majority it was on the previous occasion.

Some decent takes of roach and bream continue to be had from Yalding, some of the roach running a good size.

At the Welsh Harp, sport has varied considerably, several good takes have come to my knowledge. Among others one of eleven bream, weighing within a few ounces of 22 lb., by Mr. T. Adams, of the Golden Barbel Angling Society.

The monthly meeting of the East Central United London Anglers' Committee will be held at the Bald Faced Stag, Worship Square, on Monday evening next.

Some fine dace and one or two good chub have been had at Thorney Broad; the big roach, however, continue very shy. Apropos of Thorney Broad, I heard an angler lamenting bitterly the other evening. Did I ever heard of pigs eating fish? he queried. Oh, yes! Well, on July 31st he was fishing at West Drayton, and had captured several fine dace, which he incautiously left on the bank, while he went in search of needful refreshment. Judge his horror on returning just in time to see piggy leisurely devouring the last bit of the silvery spoil of his rod and line. Nothing but a few scales left to mark the place where they had been. I

fear that piscator's blessings were borne on the wind for some distance, and I am glad I was not fishing within, say, a quarter of a mile of him.

Concerning the talked-of International Fisheries Exhibition, a circular has been issued, convening a public meeting to be held at the Fishmongers' Hall, London Bridge, on Friday August 5th, at 3 o'clock precisely. It is at present proposed that the exhibition should take place in the City during the year 1883. The circular is signed by the Prime Warden of the Fishmongers' Company. [We trust the Exhibition may be held at the Crystal Palace.—Ed.]

NOTES FROM SHEFFIELD.

THE Sheffield clubs are just now in full swing fishing their matches, as the number of anglers and their friends going away to fish on Monday last was upwards of 1,600, a very large proportion of them going to Boston, the others to Lincoln, Saxilby, &c.; over 700 more went to Keadby, where Mr. Jarvis Sanderson gave £40 to be fished for. The day was beautifully fine and all that could be desired. There were 235 competitors in the match, and, after fishing the usual time, the following were declared the successful prize-takers:—

(1st) £10 5s., Jno. Glaves, 2 lb. 5½ oz.; (2nd) £8, R. Bickerdyke, 2 lb. 4 oz.; (3rd) £6, Dan Coward, 2 lb. 3½ oz.; (4th) £5, C. Plant, 1 lb. 10 oz.; (5th) £4, C. Challenger, 1 lb. 9½ oz.; (6th) £3, R. Spill, 1 lb. 6½ oz.; (7th) £2, W. Northeast, 1 lb. 5 oz.; (8th) £1, W. Tyas, 1 lb. 4½ oz.; (9th) 15s., B. Crockett, 1 lb. 4½ oz. There was also a large number of valuable minor prizes:—

The Raglan Fishing Club, Mr. C. Parker's, fished their annual match at Boston on Monday last, and were very successful, Mr. Parker taking 5 lb., Mr. Batty 4 lb. 9½ oz., W. Kitchen 4 lb. 8 oz., and T. Wild 4 lb. 7 oz.

At the Cup Inn there was a very good show of fish, as usual, the principal dish being shown by Mr. Mosley, viz., 14 lb.

At the Brave Old Oak there were some good dishes of fish shown by Messrs. T. Miles, H. Barlow, and the landlord, Mr. Westmadge, who had a very nice dish of roach of 10 lb.

Last week a fishing match of a rather unusual character took place at Keadby, all the competitors belonging to the "gentle sex," being, in fact, a party of ladies from Mr. Wright's, Petre Hotel, Lord Street Park, who had agreed to fish a match amongst themselves for a number of handsome prizes. The water was very rough, but I am very pleased to state that the whole of the 14 competitors succeeded in taking fish and completely distancing their "lords and masters," who were fishing at the same place, Mrs. Yates proving the winner with 13½ oz., 10½ oz. taking second prize.

The waters wherein the members of the Sheffield Angling Association have the right to angle are already showing the advantage of protective laws. A few years ago nets were constantly at work, and any angler was lucky who could show a few fish at the end of a day's trouble and expense; but now, thanks to the clause prohibiting the sale of fish during the close time, anglers can show some reward for their labour. But there is still much to be done to improve not only the Fisheries Act; but to break through the habit of taking undersized fish. Would any angler believe that in many of our club matches there is actually a prize given to those who catch the smallest fish? This is a practice I hope will be abolished. There is a scale laid down by the Sheffield Association, but I am sorry to say there is very little notice taken of it, and we can only hope that now our waters are getting better stocked, that the anglers will get larger fish, and then perhaps they will let the small fry alone.

RED SPINNER.

THE CRAYFISH HATCHING ESTABLISHMENT.

MR. CHARLES CAPEL sends us a catalogue of the piscicultural apparatus and appliances, ova and fry, as supplied by the Cray Fishery, Foot's Cray, Kent. The catalogue is illustrated, and contains practical advice on feeding and management. Mr. Capel will forward it gratis to any one interested practically in the subject, and we can advise any one so interested to get it.

FOLLY THEATRE.—When a young lady is found sitting in a conservatory with a young man's arm round her waist, "How very imprudent!" is the observation made by her friends; but if the young lady is a married woman, "How dreadfully dreadful! how awfully awful!" is the exclamation. A play called "Imprudence" has just been produced at the Folly Theatre, which, from all accounts, is well worth a visit and promises to be a great success. As I have not yet seen it, I don't know if the carrying off of another fellow's wife is a necessary portion of the play, but in this hot weather it would be a relief if some one would take Mrs. — just to the seaside. See Great Eastern Railway advertisement for a suitable train.

TO ANGLERS.—W. J. Cummins, Fishing Tackle Maker, Bishop Auckland, is now prepared to forward to anglers his Illustrated Catalogue, which is not only a Trade List but is interspersed with practical hints, useful directions, and valuable information gathered by the river-side from twenty years' experience. The stock consists of his unrivalled Salmon, Trout, Grayling, and Pike Rods, Lines, Reels, Baskets, Artificial Baits, Fly-books, Landing Nets, Gaffs, and last, but not least, his celebrated Trout FLIES for killing powers stand unequalled. Every article kept in stock is of the very best description.—[Advtr.]

RIVER REPORTS.

MID-THAMES.

"Variety's the very spice of life
That gives it all its flavour."

—COWPER.

There is plenty of variety just now on the river in the shape of rowing, bathing, picnic-ing and its accompanying flirting, gondolaing, camping-out, and a thousand and one other delightful pastimes incidental to fine weather on the "silver streak" called Thames. Last, though not least in my estimation, of these pastimes, is angling, which has variety in every way—pleasant companionship in friend or civil boatman, delightful surroundings of rippling stream and many-coloured woods, expectation in every swim, a pliant rod, a pliant attendant, and—I had almost forgotten those necessary adjuncts to a perfectly-appointed punt—a jar of well-cooled ale and a copious supply of fragrant tobacco. What more than these pleasures can piscatorially-minded man require, except success?—and this can be deserved, if not commanded. Now to business. Roach are still very shy and seem best tempted with paste rather than with gentles or worms. Chub continue to take the fly well, a black or white palmer or bee having the most attractions in the upper districts; but, alas! that I should have to record it, a "Marlow Buzz" seems mostly taken in in Mid-Thames; perhaps, however, Mr. Editor doesn't mind it! I saw on Bank Holiday a pretty sample of chub, which had been taken between Marlow and Hurley with the fly, all fish under a pound having been returned. Perch are feeding best on worms, but spinning an artificial minnow will repay, as the better class of fish can thus be got from weirs and weedless waters. From Bray, I hear that some capital catches of perch, chub and barbel have been had, the latter fish requiring much attraction in the lob-worm way. At Cookham, good fishing has been had in the Hedsor fishery, and from Odney and other back waters, the main river having been too much disturbed to fish with any success. At Bourne End and Marlow, the fishermen have been busy among the perch and gudgeon; and at Hurley, Messrs. Bennett Brothers, with Colonel Wilson and Mr. Mott, have been playing havoc amid the perch, rats and moorhens. A party of gentlemen (Mr. Curtis, Mr. Mason and Mr. Tom) went down to the Hurley waters a few days ago to fish, but the sport was interrupted by Mr. Tom falling into the river and being gallantly rescued by Mr. Curtis, Mr. Mason assisting in the wringing and hanging the gentleman out to dry on a friendly clothes-line—no eventual harm came of the emersion, but the brave fishermen were knocked off their perch, and I have freedom to state, gave their minds to wetting the inside to dry the out.

THURSDAY EVENING.—Weather delightfully fine, with breeze from the west. River in good summer order for all-round fishing.—MARLOW BUZZ.

Thames (Goring).

Water in very fair condition. Perch biting very well; roach coming on better. Best day 10 lb. of good roach and 4 jack.—JOHN RUSH.

Thames (Halliford).

The river is now in good order for all-round fishing, different gentlemen fishing with me this last week, and their takes have been as follows, viz.:—First day, Mr. Crepps, four dozen roach and dace, one bream, and a small jack; second day, Mr. Bennett, ten roach and dace, and eleven bream; third day, Mr. Jeff, only three dozen small ones; fourth day, Mr. Palmer (ledgering), eleven barbel, and three eels, four chub, and three large bream and one small one, and three roach, and a perch, altogether weighing about 40 lb.—GEORGE ROSEWELL, fisherman.

Thames (Richmond).

The river is in very good order for fishing now, but with this fine weather the water will not be long in getting very bright. We have been fishing between Isleworth and Brentford all the week, and have been catching a great quantity of roach and dace, in fact all the fish seem to drop low down the river every day. Two of our punts have been fishing as far down as Strand-on-the-Green, which is half a mile below Kew Bridge, and have been catching the finest roach I have seen this season, a lot of them growing $\frac{3}{4}$ lb. to 1 lb. each. The sport this day (Thursday), is as follows:—H. Mansel, 15 lb. of roach and dace, J. Crain, 18 lb. of roach and dace, J. Bushnell, 23 lb. of roach and dace. There were more bank anglers at Richmond, on Monday, than I ever saw before, there must have been quite one hundred.—JOHN BUSHNELL, Fisherman.

Thames (Sunbury).

Water in good order for all-round fishing. Prospects good. T. Stroud, three days, best day 6 dozen roach and 6 chub. A. Stroud, two days, best day 5 dozen roach and 10 bream. J. Stroud, six days, best day 4 dozen roach 1 barbel and 4 bream.—ALFRED STROUD.

Thames (Twickenham).

I must apologise for not sending you the last two weeks' report, but it has not been, as our local reporter for the *Referee* says, for want of news he has been silent. I am pleased to say I have been so fully employed on the river that I have not had time to put pen on paper. The river is now in splendid

condition, the rain on Sunday greatly improving it. I have had about 30 punts out each week for the last three weeks, and their average taking is about 20 lb. each punt. Jem Hammerton, one day with Mr. Howes, 24 lb. roach and dace, and one day with Messrs. Howes and Goodwin, 36 lb. of ditto. These fish was weighed in at the Richmond P. S. House, with Messrs. Hanon and Faggater, of Prince Blucher Inn, one day 33 lb. and one perch, 13 lb. Pert Hammerton, one day with Mr. Pender and friend, 20 lb. roach and perch, and one day with Captain Smith, 26 lb., three barbel, one day with W. Loft, Prince Albert, 22 lb., and with Mr. Spreckley, treasurer of T. A. P. S., eight dozen five fish in four hours. Mr. Spiers, one day with Mr. Jacobs, of Covent Garden, 36 lb. two barbel. Mr. Gaunt, sec. Richmond Piscatorial Society, 18 lb. roach. Two gentlemen, half day, 18 lb. Mr. Cook, 22 lb. fine roach.—A. PERRIN.

Ancholme.

All fish with the exception of pike are well on the feed. Gentles seem to be the best bait for roach, but they took paste very freely last week. Perch take the very largest worms the best. There have been some very heavy catches of bream in the neighbourhood of Brigg, and a small trout was found in a hole of one of the drains which had been run off. Query: Is this one of the wanderers that I have recently turned adrift into the various feeders of the main stream? I understand that a few trout have also been obtained in a similar way at Market Rasen. These have probably dropped down from Bayon's Manor, the seat of Admiral D'Eyncourt.—THOMAS FORD.

Barle and Exe (Dulverton).

Last Sunday we had a good fresh down which have long been wanted, as certainly these rivers have been lower this season than I have seen them for the last four years, and old inhabitants say lower than for years past. Monday they were in rare order for both fly and minnow, and some large baskets of roach, which weighed over 10 lb., with the minnow. Heath caught 20 very nice fish with the fly. The day was showery (evidently thunderstorms somewhere), and I noticed that during the shower the fish sported best. Fine weather has again set in, and the rivers are falling and getting bright, but we never know when they might rise again, as a thunderstorm upon Exmoor sends down a fresh when we have not had a drop of rain here. Flies taking best are the small blue upright, yellow dun, cow dung and red spinner. A few salmon have made their appearance in the Exe.—W.

Colne (Thorney Broad).

The water is now in fine condition for all kinds of angling after the rain we have had. During the past week there have been some fair takes of roach; amongst the best may be mentioned Mr. Heynon, 1 dozen roach, all over 1 lb., some of them 1 lb. 8 oz., and several others (names not known), have taken some good roach, dace, perch and a few jack. Anglers should take advantage of the present state of the water to give the roach, dace, &c., a trial. Bait for roach with paste, and ground bait with bran and bread.—E. GODFREY.

Cromer.

I took a run to Cromer, and was pleased to hear from the men what a good voyage they had made with crabs and lobsters; the same story from the station master and every one connected with the town that I came across. The first man I met said he would like to drink my health; but that is the usual way of these fishermen. What a comfort to get their bellies full, and instead of the miserable sum formerly carried home they now make a good living. I met with some first-rate ale at Pugh and Sons, the Albion, in Church Street, and when I go again mean to have luncheon there, as my pocket can't stand the enormous hotel charges near the beach. On the platform at the station I saw a lady going back in consequence of the *very light* charges for lodgings at Cromer. This is a great mistake on their part, as without scenery there is really nothing to recommend Cromer, which is a very dull and stupid town. The railway company gives every facility, but that is all you can say about it.—ESOX LUCIUS.

[Perhaps "Esos" will kindly answer the query about the hire of a yacht which appears in our correspondence this week.]—ED.

Dove (Derbyshire).

The fishing is now in full swing. Trout and grayling are rising well at the multitudes of winged insects that whirl in ceaseless activity over the water's surface. Some exceptionally good takes are reported from both up and down stream. The best killing fly is the small coachman. This is well known as a capital night fly, but until recently its merits as a day fly have been unknown. When dressed the size of ordinary gnat, and used upon a very fine cast, it is found deadly in the extreme. 16½ brace was the joint product of two rods upon the fishing club water a day or two since, all being taken with this fly, whilst several creels of seven to ten brace have been taken with it above Dove-dale. Eight brace were also taken with the blood-red caterpillar at Hartington on Friday evening last. Minnow spinners have been doing fairly well since my last.—THE SPODGER.

Exe (Exeter).

The river is certainly in much better condition than it has been for some very long time. The heavy downpour of rain causing a deal of drainage and surplus land water to come down, and with only a few inches of water running over the weirs, it is astonishing with what eagerness the fish avail themselves of pushing upwards. Some very fine fish have done so, and two splendid fellows from Topsham were brought in the other day weighing together nearly 40 lb. The fishermen have little to complain of up to now, and I have no doubt they will doubly exert themselves as the season draws to a close; with a few more showers the rodsters may yet have a chance, but up to this date have done very indifferently. Trout are showing up in numbers, and perch, roach, and dace are well on the feed, but sizeable fish few and far between. Some splendid carp are seen in the canal, 8 lb. and 10 lb. each, but they are cunning beggars. See the "Practical Fisherman" by J. H. Keene.—FRANK GOSDEN, Exeter.

Exe (Tiverton).

The river is still very low and clear, we have had a good deal of rain, but not enough to rise the river. The land requiring the greater portion of it, being very dry. Trout sport very well toward evening. The flies killing best, are the halfstone, coachman, red ant and blue upright. There is very little prospect of any salmon, unless we have had a flood. A few old fish have been seen, evidently been in the river a long time.—WILLIAM MUDFORD.

Lochawe.

On August 1 Mr. A. McKinnon, Glasgow, succeeded in landing another grilse and a salmon, the former weighing 7 lb., the latter 12 lb.—both were caught with grilse fly. The lake is at present very high, and all the streams in

flood. Can any of the readers of the FISHING GAZETTE tell me the name of any other freshwater lake in Scotland besides Lochawe in which there are seals?—W. J. CAMERON.

Medway (Tonbridge).

This week a great deal of execution has been done amongst the bream and roach by the rodsters. The rain of Monday has made the water in capital trim. On Monday T. Jampson and G. Hewett got $\frac{1}{2}$ cwt. of bream and roach above the town, and good bags have been made in other parts. The weather and water are just the thing for bottom fishers, and for those who love a fly there are plenty of chub. Prospects never looked better.—YE MEDWAY WATER-RAT.

Ormesby Broad.

The weather for the past week has been very fine. The rain of last Sunday has brought the fish well on the feed. There have been a large quantity of fishermen out having very good sport, most of them taking very fair baskets. Amongst the most successful were Mr. Watts, of London, now at Ormesby, having caught 6 stone weight of fine bream, roach, and rudd in two days; and Mr. Elliot and friend, from London, caught 3 stone of fish in six hours. Any of the followers of old Isaac Walton wishing for good fishing, good boats, had better give the Ormesby Broad a look at the Sportsmans' Arms Inn.—S. RICHMOND.

Severn and Teme (Worcestershire).

These streams are low and fine; in fact, I have not seen the Teme so low for years, and fish are plentiful, the chub run large, and many have been taken, 2 lb. to 4 lb. each, with the fly and gentle. Grayling are now coming upon the fords. Mr. Guilliam landed 3 $\frac{1}{2}$ lb., myself taking 3 $\frac{1}{2}$ brace of fine fish in good condition. There are not many trout taken the last few days; they are shy and not to be caught in the day time, unless it is a few small fish; the old blades are not to be caught napping. The roach are coming on the feed. I saw two dozen Mr. A. Bosworth caught with the paste; the same angler weighed in 14 lb. of chub. The flies for the grayling just now are the hare's ear, red ant, pale blue and willow; the coachman if stormy. There are large salmon up the Teme; they have not been able to pass the wear at Bransford, therefore they have not been to sea since last autumn.—J. A. GRIFFIN.

Suir and its Tributaries, Clonmel (Ireland).

We have plenty to tell of the amount of poaching going on, and the town is full of peal, selling every day about the streets. The river is swept by nets every night, and even in the mill races there are cots every morning netting and gaffing the fish. Last night they killed 44, and the night before 84 salmon. The men do not care to fish at all during the day, they kill so many at night. It is a pity nothing can be done to stop this wholesale slaughter; if it continues, this splendid river will be quite drained out. People say, on enquiry, that there are no funds to pay bailiffs; why not make the gentlemen who let their fishing on the upper waters contribute something towards the preservation of the lower part? Bylaw they are expected to give a tenth part of the proceeds. Mr. Mansfield, notwithstanding all the poaching, has been successful in taking fish every day he went out. Dr. Campbell and others got a few fish, principally peal of 6 lb. Trout-fishing is not improving, it could scarcely be otherwise, as they are using trig-nets and cross-lines for catching them, and selling them wholesale to fishmongers. The only chance to get a fine trout is about nightfall.—DORA.

Swale.

The ant flies are falling off. The August or cinnamon drake is now beginning to appear. It is made as follows:—B. cinnamon—brown silk; L, red hackle; W, light brown hen's feather. This is a fine fly, and nearly as large as the March brown. The chief execution will, however, be done by dibbing in the beck.—THOMAS FORD.

Trent (Alrewas).

The river is in capital order for angling, and the fish feeding well at both gentles and worms. An excellent basket of fish, 17 $\frac{1}{2}$ lb., was taken on Wednesday by Mr. W. Reynolds, in fact all our members have had a glorious week. I will send details in time for your next issue. Many thanks to my confere, "The Trent Otter." I will not fail to give him a call when I arrive in his locality.—JAMES GREGORY.

Trent (Newark).

The water still continues very low and bright, but is in fairish condition for general angling, and fish may be caught by carefully attending to the ground baiting and the employment of the very finest tackle. The bream are still biting in the Muskham fishery waters, and catches varying from 1 stone to 6 stone have been had. Mr. Neal and Mr. Chatterton have had 10 good barbel each, the biggest fish being taken by the former gentleman, which weighed a very trifle under 10 lb. (a very nice fish), worms, I believe, being the bait. Anglers having time on their hands should see about baiting a favourite barbel swim, and I advise worms this week. Roach are now biting at grain bait, and also at gentles and paste.—TRENT OTTER.

Trent (Nottingham).

As regards the condition of the water the river could not possibly have been in better condition for all round fishing, though the weeds, which have grown very thick on the bottom, are becoming very troublesome. Still some excellent catches of barbel have been made, one take of thirteen fish, weighing 50 lb., was a nice sample; another at Colwick, of nearly 100 lb., was also worth looking at, both catches being made with worms for bait. This was done at the latter end of last week. At about the same time the anglers at Sawley had been doing some good work among the bream and roach, the former took worms well, and the latter malt and wheat. The best catches are now being made with worms, and the demand for this bait is at the present time very great. Luckily the weather has been in favour of the worm getters, consequently the price has not gone up too high, and any quantity of worms may now be obtained at a reasonable price, averaging from 3d. to 6d. per 1000. Monday (Bank Holiday) was a lovely day for outdoor sports, and the items of angling news I have to give of the doings of our rodsters on that day will doubtless surprise some of your readers. Fancy twenty rods at work at Ratcliff and not a single fish caught, and the same number at Stoke and Burton with similar results. The first-named place is only suitable for winter fishing, and why our rodsters should be so foolish as to select such places in the middle of summer I cannot understand. A London practical angler told me that he thought there were some Trent anglers who were first-class rodsters, but, as a rule, I think they are no better than fishermen on other rivers. I replied, perhaps in the last issue of the FISHING GAZETTE, when a correspondent said he was surprised that

anglers did not practise the Nottingham style more. What did he mean by such a remark? I must conclude by stating that none of the fish are feeding well except barbel.—W. BAILEY.

Waveney (Beccles).

The river is now in splendid condition, the beautiful showers we have had preventing it from getting too bright. All that is wanting now is a goodly number of anglers to come and take some of the fish (roach and perch) that are literally swarming. Several splendid takes have been had lately. Messrs. Chase and Hooker, on Saturday afternoon, took 18 lb. of roach. Mr. Block, of Norwich, on the same day, landed a tench weighing 26 lb. 8 $\frac{1}{2}$ oz. Mr. Winch, postmaster, of Norwich, whilst fishing near here last week, succeeded in landing nearly 50 lb. of roach in five hours. Mr. Hawker, of the Hampstead Angling Society, was fishing here on Monday, and expressed his astonishment at the immense quantity of fish and at their unusual size. Mr. Balls, of London Road, Beccles, on Tuesday, had a splendid bag of roach, several of the fish going over a pound each. Boiled wheat, paste (white or coloured), and gentles, seem the best bait now for roach, whilst perch are taking the worm freely, several excellent ones having been taken within the last few weeks. A few jack have been taken, but the weeds are too much protection for him to be easily got at yet.—C. B.

N.B.—There is plenty of accommodation in Beccles for anglers, and some splendid sport may be obtained, the fishing being entirely free the whole length of the river.

Wye and Derwent (Derbyshire).

The Bank holiday piscators have had a first class time of it during the past week, especially those who have followed bottom-fishing, for there has been some very large baskets of fish killed, chiefly off of the Derwent with worms gentles, and wasp grubs. The wasp grubs taking the largest quantity of fish. Several better trout and grayling being over a pound apiece. One of the season ticket holders (of the Darley Dale Club), killed an eel of 2 $\frac{1}{2}$ lb. with the worm on fine-drawn gut, close to Darly Bridge last Monday besides some more fish. Fly fishing is now first-class on both rivers, both morning and evening, and some handsome baskets of fish are being killed daily; the killing flies have been the small honey dun bumble, grey goose, red spinners, and small cinnamon, or sand flies. The latter end of last week, two gentlemen anglers killed 20 brace of fish (both trout and grayling) with the fly in the Derwent, on F. C. Arkwright's water, below Cromford Bridge. The trolling fraternity have been killing some nice trout on the Derwent, during the time the river has been discolouring, with the natural minnow. Sport on the ponds has been first-class during the week, with both bottom and top. The killing flies for ponds are the bumble, red spinner, and spider flies.—GEORGE JAMES EATON.

Yare (Norwich).

First-rate bags have lately been made on this beautiful river, especially near Norwich, Coldham Hall, and Buckenham Ferry, and there is no doubt there will soon be as good fishing as ever. Bream, pike, roach, and rudd soon fill the bags, and it is very pleasant to have a quiet chat with these hard-working men before the train comes up. There is good fishing everywhere, and at all events their bags show this very plainly, as they are very glad to let you see their catch. I believe most of these fish are fried when they get home.—ESOX LUCIUS.

NOTICES OF RODS, TACKLE, &c.

FROM Mr. S. Bigg, Fishing Rod Manufacturer, of 33, Russell Street, Covent Garden, W.C., we have received two capital rods for notice. A four-joint trolling rod, and a four-joint fly rod. We consider them very good value indeed, for the price they are sold at, thoroughly strong, well-made, serviceable rods. Mr. Bigg also sends us some samples of his stock of prime old brown hickory. We quite agree with him that there is no wood so suitable for fly rods as good brown hickory. When really good, it curls round the plane like copper wire; it is lighter than greenheart, and has the spring and almost the strength of steel, we prefer it to the most expensive split cane rod we have ever seen. In our opinion there is too slow a recovery in the action of a glued-up split cane rod, and we can never throw the fly so accurately or pick it off the water so quickly as with a fine hard wood rod; and against a wind the hard wood will do ten times the work. Mr. Bigg, we are glad to see, has adopted our suggestion about advertising the Alexandra fly, and he is also London agent for Warner's most capital seat fishing basket, which we recommend to the attention of bank anglers as being a very light strong basket, making a capital seat at the roach swim. It is far preferable to the old-fashioned heavy wooden box. When any of our readers are in the neighbourhood of Russell Square, they should drop in and see Mr. Bigg's stock. He is a practical angler as well as manufacturer of rods and tackle, and that, in our eyes, is always a great recommendation.

THE following incident occurred at the recent Bagshot Bazaar. A young gentleman thought he fancied a certain article exposed for sale at one of the stalls, and he was certain he fancied the lady who presided at the stall. He remarked, therefore, that he thought that particular article very pretty. The lady said, "Yes, it is very pretty. My mother sent it." "Ah, really?" pursued the young gentleman, determined to discover the name of the owner of the eyes that had bewitched him—"Really? Let me see—I think I have met your mother. Her name is—" "The Queen!" answered the lady. The young gentleman did not wait for the last train from Bagshot.

ANSWERS TO CORRESPONDENTS.

H. G. CRICKLEWOOD.—Both at Cantley, Buckenham and Brundall you will find comfortable anglers' inns close to the water. Host Brown at Brundall will make you very comfortable and put you on the right spots for the fish, though you cannot go wrong very well if you ground bait freely. You moor your boat to the long poles each contains, by sticking them in the ground at each end, parallel with the current (not across it, as in the Thames style). If you get out just beyond the point where you can see the water plants below you—and you can see them two or three feet below the surface—you will find as a rule that you get a hard bottom to fish on, and a good deep swim. You must plumb the depth carefully and frequently every quarter of an hour at least, as the tide, in rising or falling, will of course affect your depth. We always use two hooks, the top one about a foot from the lower hook, and this top one we bait with small worm or gentle. In this way we have often taken very fine roach and perch, when those fishing with one hook, for some reason, could not do much. See that your ground bait is perfectly fresh, as the boys who usually make it up at the inns are not always above saving themselves the trouble of making fresh if they have any by them; for this reason at the end of a day's fishing always throw all your ground bait overboard in the place you may think of fishing next day. Lob worms are good bait for big bream. You will get good jack by spinning the *American* spoon from your boat as your friend rows it along. It takes about an hour to get to Brundall from Lowestoft. We generally have a swim in the German Ocean before breakfast, then take the ten minutes to nine train from Lowestoft to Cantley (stop by signal), or Buckenham, or Brundall, or where we may be going, and get back to Lowestoft by the last train, but we have slept and fed at many of the inns on the rivers, and have always been comfortable. The Norfolk air gives one an appetite for anything, and meat, poultry, bacon and eggs, butter and beer we found very good; tobacco, cigars, or wine you must take with you. We prefer Lambert and Butler's sun-dried honey dew; you can smoke it as long as you like and it never bites, and if you keep it, as we do, in the air-tight wrapper it is sold in it will keep moist to the last. Take some braided fuses with you, the local sulphur matches will spoil any tobacco. Your ordinary tackle will suit the Norfolk fishing. There is good sea-fishing from the pier in the autumn. The sunsets on the rivers and broads of Norfolk and Suffolk are something grand, and the fish seem to take your float down into a sea of molten gold, silver, opals, emeralds and sapphires. Fond as we are of trouting in the hills, we never enjoy fishing more than on the Norfolk rivers and broads.—ED.

R. M. & A. G.—Go from Liverpool Street Station to Brundall Station, near Norwich, and *via* Colchester. At Brundall Station, you are close to Coldham Hall Inn, on the river Yare. You cannot do better for quiet good roach and perch fishing. You will find the perch at the entrances to the many dykes, which run into the river. Mr. Brown charges 1s. a day for boats, and has good beds, and will feed you well. See our other answers to "H. G." about this subject this week.—ED.

CORRESPONDENCE.

[We do not hold ourselves responsible for opinions expressed by our Correspondents.]

THE FENCE MONTHS.

SIR,—I am glad your correspondents' calculations about the gross weight of fish taken by London anglers from the few rivers accessible, as "L. B." stated, round London have been challenged.

I thought at the time 303 tons some odd hundredweight was rather absurd. In fact, I put it down as anglers' weight.

One question Mr. Malcolm asks with reference to the bream at the Harp. I can answer that bream had not all spawned, for I took several full of spawn after the opening of the season, 1880. I have fished the Welsh Harp water for many years, even before it was subscription. It is a wonderful water considering it is open all the year round, and fished by thousands of anglers night as well as day—

"But still they come."

The Thames, with all its miles and miles of water, fails by comparison. Netting, no doubt, is at the bottom of it all. Oh! if we could but stop the netting.—I am, &c.,

E. WHITE.

Great College Street, July 30th.

THE FENCE MONTHS.

SIR,—I have a few remarks to make in relation to the letter on "The Fence Months," from your correspondent, "Creel." The first point raised relates to the weighing-in of gross weights. Before this controversy began, I was happily unaware of the vast burden of ignorance under which so many falsely-called anglers labour. I certainly did not know that ignorance was abroad to an amazing extent, but the amount is culpable; I soon thought I had ascertained that it was sublime, but, alas! I find it has exceeded the limits of sublimity; and is, in fact, ridiculous. Let us scrutinise some of the logic of the sapient. Mr. "L. B." estimates the annual take of fish by Londoners at 303 tons, 13 cwt., 2 qrs., and, from this dubious total, which, he says, speaks eloquently for itself, he is led to think that all thinking men will agree with him, that "there arrives a time," &c. There certainly does too often arrive a time when men doggedly refuse to reason, preferring the far more easy process of thinking—thinking they know what to their benighted minds is unknown. Mr. "L. B." pray what is your knowledge of algebra? Do you, indeed, expect to solve the following equation: $y - 303 \text{ tons} = x$, where y is the total of fish in the river at the beginning of the year, and 303 tons the total weight caught during the year? Do you, indeed, expect us to have profound veneration for your argumentative acumen, showing, as you do, yourself impotent to adduce further data of any weight as to the value of y ? When you can give an approximate knowledge of the worth of this quantity, one may have a much greater esteem for your arguments relating to x .

Furthermore, I know, from true data, that the number of fish in rivers and ponds is far greater than most anglers believe. Small mountain burns—little pools, which the ordinary fisher only believes to hold six to a dozen fish at the most—often, on being emptied by the poacher, are found to contain fifty or more denizens of various sizes. In Scotland, Wales and Norway, I have known the

fish so numerous and close to each other in their stations in the pools of rivers, that it is a marvel how each could possibly obtain food for maintenance of life, without consideration of growth. In the two former places, I have known this so much the case, that the average of a good day's fishing in some streams seldom exceeded ten to twelve trout, to the pound; of a bad day's sport, on one or two occasions, as low as sixteen to the pound.

Again, I have known diminutive ponds, some without either outlet or inlet, and only a few yards wide, containing rudd in some cases, or roach and other coarse fish in others, to such an enormous extent, that capital sport could be had through a prolonged period without any sensible deterioration, either in quality or quantity. My own experience of such rivers as the Thames, Kennet, Cam, Irton, Ithon, Yare, and other sluggish waters, where coarse fish abound, leads me to unreservedly express the opinion that the protests of the sapient, the Protectionists, are but a vapouring from brains of heated liquidity, notable for the absence of the solid. When I see the fish swarming before my eyes, the water at the surface a mass of ripples from the undulating circles of countless dace or bleak; further, in the deeps something similar, but not quite so marked, taking place, owing to aerial evolutions of roach, rudd or chub; or, on some colder day, nothing stirring above, but schools of thousands of fish side by side, jostling each other almost, but quiescent, along the sides of piers and stakes of banks and breakwaters—simply myriads, not one of which will notice a bait dropped, however adroitly, amongst them! When I see all this, and am asked to believe or give assent to the most arrant misrepresentation relating to piscatory matters, I can only reply, you ask too much. I must believe the evidences of my own senses, whether I believe that of my own creel or not; for the contents of the creel in itself, is no proof of the relative contents of the waters. Thus, if I can disbelieve the testimony of my own creel, I can, likewise, justly disallow the revelations of THE FISHING GAZETTE'S "Creel." And now, worthy receptacle of fish, whether you be made of osier, tin, wood, or leather, I must deal with you! This creel is one of a new variety, which, being squeamish at the reception of a fish in spawn, feels a loathing for the captive, suggestive of the action of disgorging. It would be well were all anglers provided with such a creel, one that would repudiate all spawned, ill-flavoured, rank-fleshed fish, but certainly not luscious and fat individuals, with roes still perfect.

Come "Creel," come with me to Westmoreland and Cumberland, and let us put to the rigid test your assertions. I should know something of some of these districts; come, name your thirty beck and tributaries, name also the proprietors, we can then judge whether or not your deductions are gleaned from true premises; whether or not your proprietors have attributed to the true causes the alleged dearth of fish; or, in fact, whether dearth, or an inordinate greed for famishing fish caught by an unskilled hand, was or was not the cause of the three years liberty obtained for the fish!

Mr. "Creel," you have to take into consideration the increased drainage in the districts to which you allude, rendering the streams much less during the greater part of the year than heretofore. You have to regard the much more sudden rushes of floods, carrying away spawn and aquatic food for the fish; the much greater variability in the height of the stream, sometimes causing the spawn to be deposited in places which soon are left dry, at others in water too deep for successful development of the ovum. The increase in the amount of deleterious soluble substances which find their way into the water from various manures, farmyard and hamlet drainage, as well as the lead mines of the lake and adjoining districts, must likewise not be neglected. The handiwork of the poacher with lime, grappling, net, spade, dynamite, and sledge hammer must not be forgotten; for when you remember all these things—these agents which to you, Mr. "Creel," may appear puny—you will discover that the apparently inconspicuous facts—which are too true to be the subject of attention of the Protectionists, who love the sensational—dilate as you bestow more attention upon them, so as to reach the firmament in absolute magnitude like the released Afrite of the Arabian tales.

I observe that "Creel" and one or two others by inference attempt to transfer what they consider the ignominy of catching small fish from the Christian angling delinquents to the ultimate Jewish recipients. All I have to say in this matter is that it would have been as well if your correspondents, Mr. Editor, had not endeavoured to make such pusillanimous onslaught on a race which, for intellect, thrift, and honourable record, would undoubtedly if weighed in the balance excel their own.

ROBERT BALDERSTON.

FENCE MONTHS.

SIR,—I am sure Mr. Geen, Mr. Bonvoisin and other really earnest and energetic anglers will excuse me for saying that their enunciations, practical as they are, and perhaps more of value at the present moment, were long since anticipated. Here, for instance, is a paragraph I stumbled over in the Bodlean—it is from the pen of the ancient writer, Androvicius, which I translate into the vulgar:—"It is at the spawning season that the depredations of the poacher are carried on on the largest scale, when the fish are the most easily taken, and when they are of the most value for keeping up the supply, and of the least value as articles of food; and, if I may add another consideration, when the season of the year is least inviting to the angler's sport." Dr. John Day, M.D., F.R.S., I find quotes this in his "Physiological Researches," 1863, p. 223.—I am, &c., F.

[It is for the reason that the poacher is so active during the fence months that we would like to see anglers on the rivers then to stop the poacher.—ED.]

FLY-CASTING WITH THE SPINNING MINNOW.

SIR,—In answer to "A. R. I. E. L." I must briefly state that, although I do not by any means lay claim to originality in adopting the fly-casting action of throwing the minnow, still I must acknowledge that, although I have seen no other angler employing this device, I have myself, when the exigencies of circumstances suggested a mode of casting different to that commonly practised as advisable, departed from the customary track, and resorted to fly-casting with the minnow. That this mode may be successfully employed I am fully convinced by that great test of theories called practice; and I can therefore endorse "A. R. I. E. L.'s" remark that the method is killing. I must, however, own that my success in this respect may partly be due to the fact that I am far more proficient with all modes of fly-casting than with the manner of depositing the minnow gently at great distances, characteristic of the angler proficient only in minnow spinning. Were I to enter into the details of the different ways in which I modify the fly-casting method, I should also have to describe minutely all the different devices I employ in casting the artificial fly, which of itself would fill several numbers of the FISHING GAZETTE. From this infliction I will spare both "A. R. I. E. L." and your other readers, Mr. Editor, and merely state, for the benefit of the casual reader, that I use

both the direct-return and horizontal casts as simple methods of delivery ; or in cases of obstruction to the rear I have found it advisable to switch with the minnow, drawing the bait close to my feet, throwing, as with the fly, when trees or bushes, &c., prevent the rearward or lateral development of the line. The trace used is of the finest gut, and weighted minnow with small swive ls. The rod employed is one of Blacker's, 12 feet 2½ inches long, of four pieces, the three lower hickory, the top of rent cane such is not to be had in recent weapons; weight of rod, less than 12 ounces; stiffness considerable for small resistances; pliancy wonderful under great strains. The line patent, finest twisted silk and hair, obtained from Hutchinson, of Kendal. The reel, patent multiplier of Reuben Heaton, of Birmingham, simply incomparable in principle, but capable of still further improvement. The angler in attendance.

THE RAVEN.

DAGENHAM LAKE FISHERY.

SIR,—In answer to your questions (July 30) respecting the Dagenham Lake fishery water: the water is about 200 acres; depth, average about 6 feet. I have plumbed 23 feet of water. Fish: Bream, roach, rudd, tench, carp, jack, perch, and eels. The charge is 1s. per day for bottom or jack fishing. The nearest inn is the Chequers, five minutes' walk from the water. Station: Rainham, on the London, Tilbury and Southend Railway, or from any station on the North London Railway, is about two miles from the water. Brocket's van starts from the Bald Faced Stag, Worship Square, Finsbury, every Saturday night at twelve o'clock during the summer months; fare there and back, including fishing, 3s. The principal fish are roach and bream, neither of which attain a large size. It is very rare that a bream is taken over 3 lb.; roach, the largest I have seen, was taken by one of our members, weighing 1 lb. 8 oz. Perch are, I consider, the *finest* fish in the water, but are seldom fished for. I know of the following fish that have been taken, weighing respectively 3 lb. 9 oz., 4 lb. 8 oz., and 5 lb. 3 oz.* Jack I have seen up to 16 lb., but I believe there are fish almost twice this weight in the water. Carp, tench, and rudd are seldom caught and are about the ordinary size.—I am, &c.,

J. A. FITCH, jun., sec.

Great Northern Brothers' Angling Society, Robin Hood, Southampton Street, Pentonville, August 2.

* This fish was taken on Saturday, and weighed 5 lb. 3 oz. on the Wednesday. [Many thanks.—ED.]

YACHT WANTED FOR THE NORFOLK BROADS AND RIVERS.

SIR,—I should be glad if some of your Norfolk correspondents would inform me who would be the best person to apply to (in the event of my being able to visit Norfolk this summer) at Norwich or elsewhere for the hire of a yacht and a respectable man for cruising on the broads; also, what would be the likely cost of same per week?

At a hurried visit to the Norwich Exhibition I noticed two or three models of boats suitable for fishing in Norfolk and Suffolk waters. Have any full-sized boats been made after these models, and, if so, where can they be seen or hired? When does the Fisheries Exhibition at Yarmouth close?—I am, &c., August 1.

[Will some East Anglian reader kindly answer the query about the yacht? We believe the Yarmouth Exhibition will be open for another week.—ED.]

WHERE CAN WE DINE?

SIR,—I can strongly recommend "R.W." and friends to go to E. Godfrey, Thorney Broad Fishery, West Drayton; the place embraces all that an angler could desire.—I am, &c., P.

[We can endorse this.—ED.]

WHAT BAITS AND FLIES ARE USED.

SIR,—I beg to suggest to your correspondents who report their captures of fish that they should also mention the baits which they use. It would be of great assistance to inexperienced anglers like myself to know the kind of fly, &c., which will prove destructive.—I am, &c., A YOUNG ANGLER.

Taunton, August 3.
[We have frequently suggested this, and wish correspondents would take the hint.—ED.]

DACE IN THE TRENT.

SIR,—With your permission I beg to inform "The Trent Otter" that a gentlemen caught 44 dace with fly, weighing 17 lb. 4 oz., in the short time of two hours—60 minutes to the hour—in a private water, in the neighbourhood of Hoveringham, one day last week.—I am, &c.,

A WELL-WISHER TO A "SPORTSMAN," POOR OR RICH.
August 1st, 1881.

FISHING IN DERBYSHIRE.

SIR,—Will you or any of your readers be good enough to tell me the best hotel to stay at for fishing the Derbyshire Wye and Derwent; also if the Izaak Walton is the best hotel to stay at for the Dove—of course I mean fly-fishing—and any hints thereon will be gratefully received by me.—I am, &c., Guilford Lodge, Teddington, August 1st, 1881. THAMES.

[The Peacock at Rowsley is a good inn for Wye and Derwent, and the Wheat-sheaf, at Baslow, will be best for the Wye higher up. We have had very fine trout and grayling from both streams in August. We have not yet fished the Dove.—ED.]

FISHING AT POOLE, DORSET.

SIR,—Will some one kindly inform me if there is any fishing at Poole, in Dorset? If so, I should feel much obliged if they could give particulars in the next number of this paper.—I am, &c., A YOUNG ANGLER.

Wood Green, N.

["There is good sea-fishing at Poole. Write for particulars to the landlord of the London Hotel," so says the *Angler's Diary*.—ED.]

FISHING AT TENBY.

SIR,—Will one of your readers kindly inform me through your paper, concerning the freshwater fishing at Tenby (S. W.); what fish there are, and the best way to take them?—I am, &c., "JOHN STYX."

[At Llandilo, near Tenby, there is salmon, sewin, trout and pike fishing. There is about two miles of free fishing. The pike fishing is first class. Write to the proprietor of the Cawdor Arms Hotel for further particulars.—ED.]

A NEW BAIT.

SIR,—It may be of interest to some of your many readers to know that I have just brought out a bait for roach, dace, chub, &c., which has been found particularly successful by my friends and others for some years past.

It is also an excellent food for gold, silver, and other tank or aquarium fish. I enclose a sample for your inspection and, if convenient, your trial.—I am, &c., WM. KING.

1, New Road, London, E.,

July 30th.

[We will notice it as soon as we have tried it.—ED.]

CLUB REPORTS.

ANCHOR AND HOPE ANGLING SOCIETY.

On August 1st several members went to Amberley. Mr. R. Smith, 8½ lb.; Mr. W. Streton, 5 lb. 8 oz.; Mr. H. Scott, 5 lb.; Mr. H. Shakel, 3 lb. 15 oz.; Mr. G. Davis, 3 lb.; Mr. D. Davis, 2 lb. 8 oz.; Mr. H. Quodling, 2 lb.; Mr. C. Daniels, 1 lb. 4 oz.—A. SHAKEL, sec.

August 2.

BERMONDSEY BROTHERS ANGLING SOCIETY.

The Bermondsey Brothers have not been idle during the holiday, but have been bringing up nice shows of fish. Cann, Frost, Croker, Allen, Hulse and others showing their 1 lb. of roach and 1½ lb. of bream each and Herbert tench 2 lb. 7 oz. each.—WM. ALLEN, secretary.

August 3rd.

BIRMINGHAM AND MIDLAND PISCATORIAL ASSOCIATION.

The annual dinner of the members and friends of the association will be held at the Grand Hotel, Colmore Row. On August 9, being the anniversary of the birth of Isaak Walton, the chair will be taken by Oliver Pemberton, Esq., J.P., F.R.C.S., the president of the association.

BRIGHTON ANGLERS' ASSOCIATION.

The members of the above association held their fourth competition in the River Ouse. Twenty members were pegged down to swim, they had never fished before, which put the old hands on a par with the youngsters, but the swims proved muddy and weedy. They met with little success, the first prize was taken by Mr. Park, seconded by Mr. Artis; the other prizes were not taken. During last week, Mr. Hassell took 5 lb. of roach and 3 lb. of roach; Mr. Tree, Anscombe and Ash, killed about the same; Mr. William Saunders, while fishing for roach in the tidal water below Barcombe, was surprised to find a very large jack seize his roach, and broke him to smash. Those who saw it, declare him to weigh 20 lb. to 30 lb. Mr. W. Smith had a day in private waters, killed 7 lb. of roach, two jack, weighing 6 lb. and 3 lb. When returning on Tuesday from Barcombe, Mr. Tomkins showed me a very good bag of trout and perch, some weighing 1½ lb. Mr. Gambling, chairman of the society, went yesterday, and brought home a very pretty little catch. The water at Chichester is in a filthy condition, that nothing can be done at present.—GROUND BAIT.

BOSTONIAN ANGLING SOCIETY.

The next return visit, No. district, will be to the above society, on Monday next, August 8, when we hope to see all that can conveniently attend.—H. TAYLOR.

August 1.

CITY OF LONDON ANGLING SOCIETY.

Only two members weighed-in on the 31st, Mr. Pratt, roach and perch from the Lea, and Mr. Castell, roach from the Roding, also chub from the same water on the 1st and 2nd of August. I hear the nets have been at work very much of late in the Roding, the keepers have had the tip and are on the look out. Several of our members visited Amberley, but the bad weather, the holidays and other causes prevented them showing up.—CAS.

DE BEAUVOIR ANGLING ASSOCIATION.

We had a very fine show of fish here last club night. Mr. Allen, 31 lb. 15 oz. bream and roach; Mr. Morgan, 15 lb. perch and roach, from the Ouse; Mr. Hayter, some beautiful eels, two going 3½ lb.; Mr. Ellis, roach and chub, from the Lea; Mr. Starkey, roach; Mr. Crump, some very fine perch; and Mr. Dollamore, some nice roach.—H. R. ABBOTT.

THE EXCELSIOR ANGLING SOCIETY.

The members of the above were out in good force on Sunday, and so were the fish (out of the way); but on Monday Mr. Blackman had five or six barbel, about 15 lb., one a very handsome fish of 7 lb. 6 oz., which has been sent to be preserved. Mr. Paine also had a very nice tray of perch; Mr. Smith, chub, roach and dace.—A. THOMAS.

EXETER ANGLING CLUB.

Yesterday being Bank holiday, there was no club meeting, owing to the numerous fetes, excursions, and other counter attractions, together with the heavy downpours of rain; it was decidedly Bank holiday at the river side, and from the countless numbers of persons seen returning up to a late hour, with all kinds of outdoor sporting implements, rods and creels, were not to be numbered with them; no doubt, owing to late hot weather and the waters being so very low. Perch are taking freely, but not so freely as my friend, Mr. Harry Hems states, who is on a pleasure trip to the Far West. Writing from Chicago, he says: "When hauled alongside the pier, some boys were fishing there. A few of

us joined the fishermen, and, having borrowed lines, went to work. The bait was small minnows; tackle, simply a line with stone and hooks attached; as fast as ever these lines were let down, they were drawn up again with a couple of perch thereon. We stayed an hour, and caught many basketfuls. One gentleman caught within the hour fifty-five perch, measuring from eight to eleven inches long."—FRANK GOSDEN, hon. sec., *pro tem*.

August 2, 1881.

FREE ANGLERS' SOCIETY.

The members of the above society had their annual picnic last Thursday to Halton, near Frodsham, on the River Weaver, where they fished for the special and club prizes. As several members reside out of town, a few went by the first train and had three hours' fishing before they met the others. Twelve o'clock was the time appointed for dinner, but on assembling at the rendezvous they met with a sad disappointment, as the secretary's letter (sent off on the Tuesday) ordering dinner was stated not to have been received, consequently there was no dinner for them. Although some of the members doubted this, they made the best of a bad bargain, and prepared for a feed of bread and cheese and ale, and as Cheshire is noted for the quality of both butter and cheese, and the samples placed before them bore out their good character, and as good appetites followed a long ride and three hours' exercise in the open air, full justice was done to what was placed before them. At two o'clock the members took their allotted places, time was called, and save an occasional joke and the call "landed," little was said. At seven o'clock the match ended, when it was found that the first prize was taken by Mr. Shillitto, with a nice dish of roach weighing exactly 6 lb.; Mr. Brooks was second, also with roach and grayling; the other prize-takers were Messrs. Johnson, Collins, Mitchell, Heaton and Thomas. Before the match the early arrivals took some very nice roach and trout. Three graining were taken during the day, which I had the pleasure of forwarding to the GAZETTE office for Mr. J. Harrington Keene's examination and report. The roach were in very good condition, and bit boldly at maggot and paste in the morning, but in the afternoon and evening at maggot. Mr. Mitchell missed a fine trout through having no landing net, and getting fast in the weeds.—W. R. R.

Manchester, Aug. 3.

GOLDEN BARBEL ANGLING SOCIETY.

On July 31 the members of the above were actively at work, and brought to grass some capital shows of fish varying from 5 lb. up to over 20 lb., the gross total turning the scale at 75 lb., consisting of bream, roach, perch, chub and dace. On August 1 the members were at it again in earnest, and brought to grass over 40 lb. of good fish. On August 2 the members still stuck to their work, and brought to grass over 30 lb. of fish, roach and bream being predominant.—H. WEST.

August 3.

GOOD INTENT ANGLING SOCIETY.

There was a splendid show of fish at the club on Tuesday last, and for quality and quantity there has seldom been seen a finer show, Mr. Ephraim Richards having taken 50 lb. of splendid roach. They averaged 1 lb. each, many of them being 1½ lb., Mr. W. H. Bockett having 12 lb. of splendid dace, ranging from 12 oz. to 14 oz. They were a treat to see. Mr. Murphy had three trout, one of 2 lb., taken whilst dace-fishing with a fine hair line. It was the finest bit of sport he ever had. To save him he is to be preserved by Cooper with the hook that he was taken with, the size of the fish being No. 10, fishing with gentles. Mr. Hellens showed some capital roach from the Lea. Mr. W. Roberts, our worthy treasurer, has given his usual donation of £1 1s. to the Anglers' Benevolent Society. The members intend having their annual dinner at the Rye House on the 22nd inst.—R. MURPHY.

GREAT NORTHERN BROTHERS ANGLING SOCIETY.

The following members weighed-in fish on Sunday and Monday (Bank Holiday), from Amberley:—Messrs. J. K. Fitch, Butler and Jeffreys, roach; Mr. Hutchings, bream and roach; Mr. Major, roach; Mr. Young, 2 lb. 14 oz. bream and roach; Mr. Walker, 1 lb 8 oz. roach; Mr. Page, 2 lb. 9 oz. bream and roach; Mr. Painter, 7 lb 4 oz. bream and roach. From the Wey, Mr. Theobald, 7 lb. 4 oz. bream and roach; Mr. Parkin, 8 lb. 8 oz. bream and roach; Mr. A. Warren, 5 lb. 15 oz. roach; Mr. J. Warren, 6 lb. 13 oz. roach. The next Eastern District visit will be on Tuesday, August 9, Mr. W. Phillips chairman.—J. S. FITCH, jun., sec.

August 2.

GRESHAM ANGLING SOCIETY.

An important meeting of this society took place on Thursday evening, Mr. Bentley in the chair. Mr. Crumplen, the hon. sec., read a statement on behalf of the committee, showing a further increase of members and a substantial balance in hand. On the motion of Mr. A. Jardine and other gentlemen, it was unanimously resolved to offer the honorary membership of the society to Mr. Birkbeck, M.P., Mr. Marston, of the FISHING GAZETTE, and Mr. Wheeldon, of *Bell's Life*, all of whom had rendered invaluable services to the cause of angling. It was further resolved that the society should be represented at the meeting in furtherance of the International Fisheries Exhibition of 1883, to be held on Friday, at Fishmongers' Hall, and Mr. Frost was requested to attend for that purpose. A considerable number of prizes were announced, and a special committee, consisting of Mr. Jardine, Mr. Frost, Mr. Field, Mr. Cartwright, Mr. Parker, Mr. G. Austin, and Mr. Crumplen, were chosen to settle conditions under which they should be competed for, it being understood that no money prizes would be given, and the great feature of the society, viz., specimen fish rather than gross weight, be steadily kept in view. A very hearty vote of thanks to the committee and chairman brought the proceedings to a close.

HAMMERSMITH UNITED.

I have the following takes to report:—Mr. Hobden, from Eynsham, on the 23rd ult., one barbel, 7 lb. 6 oz., also a number of roach, dace, &c., from the same place on the 27th ult. and on August 1st. On July 29th Messrs. Hoole, Walters and Green weighed-in roach; Messrs. Mackness and Penney, roach, barbel and dace from the Thames. On July 30th, Mr. P. Geen weighed-in barbel, bream and perch, 34 lb. 4 oz. On Bank Holiday a great many members weighed-in, among the most successful being—Messrs. Pitts (Henley), Penney (Eynsham), Toms and Steadman (Shepperton), and Hitchcock (Wraysbury).—VORTEX.

August 2,

IZAAK WALTON ANGLING SOCIETY.

On Wednesday, July 27, Mr. G. Rolt had 3 lb. 12½ oz. roach, and 11 oz. dace; Mr. G. P. Rolt had 10 lb. 14½ oz. perch; on the same day Messrs. J. Hilliar, sen., and J. Hilliar, jun., also had fish, but too late to weigh-in. Mr. G. Wood had 2 lb. 10½ oz. roach, and 1 lb 6½ bream. On Sunday, July 31, there were several other members out, but owing to the inclement state of the weather they got wet jackets, and instead of coming to the club house to show their takes, they made tracks for their sweet homes. On Wednesday, August 3, Mr. G. P. Rolt was again well amongst the perch, he had 8 lb. 3½ oz. of beauties; Mr. G. Rolt had a nice jack; Mr. A. Salmon showed 4 lb. 15 oz. roach; J. Hilliar, sen., had 6 lb. 2½ oz. bream; J. Hilliar, jun., 5 lb. 3½ oz. bream.

JUNIOR PISCATORIAL SOCIETY.

On Friday last, Mr. Palmer, from Newbury, roach, 6 lb. ½ oz., dace, 5 lb. 2 oz.; Mr. Woodman, same place, roach, 5 lb. 10 oz., dace, 4 lb. 6 oz., largest roach, 1 lb. 2½ oz., by Mr. Palmer. About nine roach averaged 1 lb. Largest dace, Mr. Palmer, 8½ oz., a really fine show. A very fine specimen of a pike taken by Mr. Palmer last December, weight 20 lb., is now on show at the Club House, having just been returned from the preserver.—ALFRED H. BISLEY, hon. sec.

August 3, 1881.

KINGS' CROSS UNITED ANGLING SOCIETY.

The members of this society availed themselves of the opportunity afforded by the Bank Holiday of pursuing their gentle art. The following gentlemen weighed-in fish:—Mr. Davis, chub and roach, 5 lb. 5 oz., largest chub, 2 lb. 14 oz., from the Thames; Mr. Bell, roach and dace, 8 lb. 2 oz., from the Ouse; Mr. Morley, roach, dace, and perch, from the Thames; Mr. Burnett, roach, from the Thames; Mr. Woelfell, roach, from the Lea; and Mr. Coulson, chub, from the Thames.—G. TREADWELL.

August 3.

THE LARKHALL ANGLING SOCIETY.

Since my last report the following fish have been weighed in:—Mr. Penn, dace, roach and bream from Richmond; Mr. Nutley, dace and roach from Richmond, bream, roach and dace from Shepperton; Mr. Caplin, 23 lb. 8 oz. barbel from Sonning, roach and dace from Walton; F. Boyce, barbel, roach and dace from Richmond; Messrs. Green and Morris, bream, dace, roach and perch from Weybridge; Mr. Nicholson, perch, roach and dace from Shepperton; Mr. G. Spencer, barbel, roach and dace from Walton, perch, dace and 18 lb. 5 oz., chub from Great Marlow; Mr. Soutar, roach and grayling from Southampton, one roach scaling 1 lb. 8 oz.; Messrs. E. and M. Nixon and F. Croutel, dace, roach and barbel from Richmond; Mr. King, a fine carp, 5 lb. 2½ oz., with chub and barbel, from Datchet; Mr. Dean, bream and roach from Tunbridge. The committee dinner was held at Mr. Stone's, Ship Hotel, Hallford, on July 26th, when about twenty sat down to an excellent dinner, served in Mr. Stone's usual excellent manner. Mr. Davison's prize for the heaviest weight taken on the above day was taken by Mr. G. F. Spencer.—W. TUCKER, hon. sec.

August 22.

THE LITTLE INDEPENDENT ANGLING SOCIETY.

During the holidays several of our members have been out and taken some nice little catches. On Sunday—Mr. Watts, roach and dace, 8 lb. 6 oz.; Mr. Petrie, roach, 8 oz.; Mr. Heelas, roach, 13 oz. On Monday—Mr. Parker, tench &c., 1 lb. 9 oz.; Mr. Hopton, bream, 17 lb. 8 oz.; Mr. Letch, bream, 10 lb. 10 oz.; ditto, roach, dace and eels, 2 lb.; Mr. Goods, 1 bream, 7 lb. 11 oz.; ditto, 1 perch, 1 lb. 5½ oz. On Wednesday—Mr. Scott, roach, 2 lb. 13 oz.; Mr. Humphreys, jack, 4 lb. 5 oz.; ditto, roach, 2 lb. 5 oz.; G. Watson, roach and chub, 8 lb. 3 oz.—W. BROWN, hon. sec.

ORIGINAL CLERKENWELL PISCATORIAL SOCIETY.

The members of the above society had good takes of fish this week. Mr. Ormond, bream and roach; Mr. Lucy, sen., jack and bream; Mr. J. Drew, had roach from the Thames; Mr. Laundry, roach and bream from Pulborough; Mr. L. Gorsuch also had roach. Members are particularly requested to attend at nine sharp on Monday evening next, there being important business to bring before the meeting.—THOS. WM. LUCY, sec.

August 3.

THE PISCATORIAL SOCIETY.

The following are the fixtures for the various competitions as arranged by the committee:—

GUDGEON COMPETITION, Monday, Aug. 15.—No. 49. 1st prize, £3 3s., for the greatest number of gudgeon taken by one member with rod and line, from the Thames, on the above day only, and shown the same evening.—No. 50. 2nd prize, £2 2s., for the second greatest number. The fish for this competition are subject to the Thames Conservancy size, namely, not under 5 inches in length, measuring from the eye to the end of the tail.

BARBEL COMPETITION, Monday, Aug. 29.—No. 23. 1st prize, £3 13s. 6d., for the greatest weight of barbel taken by one member with one rod and line, from public waters, on the above day only, and registered the same evening.—No. 24. 2nd prize, £2 2s., for the second greatest weight, subject to the same conditions as the first prize. Mr. Wheatstone, £1 1s. for the heaviest fish registered for this competition.

ROACH COMPETITION, Monday, Sept. 19.—No. 35. 1st prize, £3 3s., for the greatest weight of roach taken by one member with one rod and line, from the Thames, on the above day only, and registered the same evening.—No. 36. 2nd prize, £2 2s., for the second greatest weight, subject to the same conditions as the first prize. Mr. Wheatstone, £1 1s. for the heaviest fish registered for this competition.

PIKE COMPETITION (SHENTONIAN), Monday, Oct. 17.—No. 11. 1st prize, £4 4s., for the greatest weight of pike taken by one member, subject to Rule 22 (two rods and lines only), from the Thames, on the above day only, and registered the same evening.—No. 12. 2nd prize, £2 2s., for the second greatest weight, subject to the same conditions as the first prize. Mr. Wheatstone, £1 1s. for the heaviest fish registered for this competition.

Annual Supper, Monday, Oct. 24.

CHUB COMPETITION, Monday, Oct. 31.—No. 27. 1st prize, £3 3s., for the greatest weight of chub taken by one member with one rod and line, from public waters, on the above day only, and registered the same evening.—

No. 28. 2nd prize, £2 2s., for the second greatest weight, subject to the same conditions as the first prize. Mr. Wheatstone, £1 1s. for the heaviest fish registered for this competition.

PERCH COMPETITION, Monday, Nov. 21.—No. 16. 1st prize, £3 3s., for the greatest weight of perch taken by one member with one rod and line, from the Thames, on the above day only, and registered the same evening.—No. 17. 2nd prize, £2 2s., for the second greatest weight, subject to the same conditions as the first prize. Mr. Wheatstone, £1 1s. for the heaviest fish registered for this competition.

For further particulars as regards the above competitions, see list of prizes for the present year. The competitions close at 12 p.m.—JAS. LANDER, hon. sec.

95, Sutherland Gardens, W., July, 1881.

ADDITIONAL PRIVATE PRIZES.—52. Mr. Malony, £1 1s., for the heaviest carp, not under 3 lb.—53. Mr. Marsden, £1 1s., for the heaviest tench, not under 3 lb.—54. Mr. Skinner, £1 1s., for the heaviest bream from the Thames, not under 3 lb.—55. Mr. W. H. Winton, £2 2s., for the heaviest weight of barbel, over 4 lb., shown on Monday evenings.—56. Mr. Robinson, £2 2s., for the heaviest single show by one member on a Monday evening.

TOTAL VALUE OF PRIZES.—Club, £14; Private, £82 18s.; making together, £96 18s.

PRIDE OF DERBY ANGLING CLUB.

The second match in connection with the above club took place in the Eg-ginton Canal on Saturday last, July 30, 1881, the following members taking the principal prizes:—1st, Wm Tunncliffe; 2nd, J. Moore; 3rd, W. Elliott; 4th, J. Grimley; 5th, J. Hutton; 6th, T. Elliott; 7th, J. Forman; 8th, T. Mansland; 9th, J. Bland.—W. TUNNICLIFF, secretary.

July 30th.

RICHMOND PISCATORIALS.

A handsome show of roach and dace was made on Tuesday. Mr. Gaunt, secretary, fishing with Spiers, 7½ dozen; Mr. Howe and friend, with Hammer-ton, 11½ dozen, taken at Twickenham. The dace were the finest which have been exhibited for a considerable time, and are now well on feed, and exceedingly plentiful.—J. K. G.

STALYBRIDGE ANGLING SOCIETY.

Three members of the above society, Mr. Thomas Ratcliffe, Mr. Samuel Greenwood, and Mr. James B. Udale went on Tuesday, July 26th, for three days, to Mr. William Vintnors, The Ferry Boat Inn, Dogdyke (Witham), where notwithstanding the thunder-storm of the 26th, succeeded in taking over 60 lb. of bream, roach and eel, varying from ¾ lb. to 4 lb.; the heaviest bream was weighed off by Mr. S. Greenwood, which scaled 4 lb.; the heaviest roach, Mr. Thomas Ratcliffe, 1½ lb.; the heaviest eel, Mr. J. B. Udale, 1¼ lb.—J. B. UDALÉ.

23, Bayley Street, Stalybridge, August 1, 1881.

ST. JOHN'S WOOD PISCATORIALS.

The members of the above club had a splendid show at their club house last Monday night. Five of them weighing in no less than 75 lb. 1¼ oz., from Elstree Reservoir, principally tench, some of them weighing upwards of 4 lb. each. The most successful members were—Mr. Jno. Manly, Mr. R. Blackmore, Mr. F. Bollington, Mr. Jno. Edwards and Mr. W. Field. Mr. Morant and Mr. Bridgman weighed in, from the Welsh Harp, gross weight of fish, 82 lb. 6½ oz., not bad for a club only six months old and composed of all amateurs. In answer to a question as to fishing at Elstree on Sunday, I may say, not only is there good jack, tench, perch, roach fishing, but a good supply of punts, and one of the most civil, obliging boatmen (Tom Harley) that I ever came across.—W. F. FIELD, hon. sec.

Aug. 2.

SOCIAL BROTHERS.

I am glad to be able to send you a better report this week, sport having been better and the trays well filled. On the 26th ult. Mr Monk 8 lb. 4½ oz., roach and dace; Mr. Lockyear, 4 lb. 2½ oz. dace. On the 28th, Mr. Lee 3 lb. 10 oz. roach; Mr. Valour, roach and dace. 29th, Mr. Cocks, roach; Mr. Irons, roach. All the above, with one exception, from the Thames. On Sunday, 31st, Mr. Freeman 31 lb. 3 oz. bream; Mr. Lee, 4 lb. 2½ oz. roach.—J. GOUBOT.

UNIVERSAL ANGLING ASSOCIATION (HULL).

The annual Bank Holiday excursion to Ferriby Sluice of the above old-established association took place on Monday, the 1st inst., when over 200 availed themselves of this pleasant trip to the popular resort of the Hull anglers. All the party was landed from the s.s. *Lady Elizabeth*, at the Sluice by 10.15 a.m., and after partaking of refreshments, were bent upon injuring the finny tribe that numerously abound in the river Ancholme this season, which the members and their friends undoubtedly did, and many good takes of roach, dace and bream were shown by R. Speck, W. Crossland, T. Wray, T. Mashing and other members and friends, and after angling for some time a number of the party joined their wives and friends in dancing to the merry strains of Young's string band, other sports and pastimes, which all present thoroughly enjoyed, and on the ringing of the steamer's bell the party were then mustered together, and returned to Hull, arriving at 8.45 p.m., all being highly pleased with the day's outing; and although the committee found many other counter attractions to contend with, they are pleased to find the excursion was a thorough success.—W. B. BARKER, hon. sec.

August 4.

GREGORY'S SPINNING BAITS.—"The Gregory," the "Flexible Cleopatra," the "Oxford" and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Alcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived. Address, James Gregory, Vyse-street, Birmingham.—[ADVT.]

MRS. F. Y. BROCAS, Artificial Fly Dresser, 4, Mill-street, Conduit-street, Hanover-square, London, W. A stock of best flies always on hand. Flies made to pattern. Lessons in fly making given.—[ADVT.]

THE CORPORATION AND THE FISH SUPPLY INQUIRY.

THE importance attached to the need for, and the importance of, an official inquiry into the alleged unsatisfactory supply of fish for distribution among the people of London, when the subject was discussed by the Court of Common Council, has been more than amply borne out by the voluminous evidence which has been given at the Guildhall before the Special Ward Committee. The committee, as a body, have entered into its arduous and somewhat difficult work with much earnestness. Nearly the whole of the committee have attended the sittings, and more than fifty per cent. of the number have been regular in their attendance. To give some idea of the extent of the work which has been got through, it may be stated that the committee sat for fourteen days, or seventy odd hours. Fifty-eight witnesses were examined, and their evidence covers 673 pages of a blue-book, which will no doubt be published. These witnesses included catchers, buyers, dealers, carriers, salesmen, fishmongers, fish porters, costermongers, railway officials, and several independent persons. The complaints against the existing arrangements at Billingsgate were not quite but almost unanimous. With regard to what could be done in the way of improving and facilitating the fish trade in London, many opinions were expressed, most of which were more or less qualified. Of the catchers examined, four were in favour of a central market, six were favourable to the establishment of two or more markets, four spoke strongly in favour of Billingsgate Market, two thought its present size quite sufficient, and three held quite an opposite opinion. Four of the catchers and senders expressed their dissatisfaction with the mode of business adopted by the Billingsgate salesmen. Quite 75 per cent. of the senders and catchers complained of the high charges of the companies, and said that if they were less the supply of fish would be greater. Of the railway officials three were in favour of a central market, four in favour of several markets, and one, with certain qualifications, in favour of the present market. The ten salesmen, with one exception, were for the retention and improvement of the Billingsgate Market and its approaches, the exception arguing for a central market inland, with plenty of air, light, and room. The fish porters agreed very much with the salesmen as to the need for improving the approaches and enlarging the market. How the supply of fish could be increased, made cheaper, and prevented being spoilt, occupied a good deal of attention, and many scores of questions were put to the witnesses with a view of eliciting information on the subject. As might be expected, the opinions offered were various, and in many instances conflicting. Some of the suggestions to these ends were the appointment by the Corporation of an official salesman, lowering of the rents in Billingsgate, and cheaper and more expeditious transit of fish to London, and a sufficiently large market in London, with plenty of access. The committee met on Friday to consider the evidence, when many members expressed their conviction that the most difficult part of their labour now lies before them, viz., the preparation of a report which will recommend such a scheme as will secure the public an abundance of good and cheap fish.—*City Press*.

THE YARMOUTH FISHERIES EXHIBITION.

THE awards were made in the various class of exhibits on Friday, with the following results:—Plan of fish-curing premises: 1 (silver medal), Arthur S. Hewitt, Regent Street, Yarmouth; 2 (bronze medal), Mr. H. D. Arnott, Hall Quay, Yarmouth. Best model of fish-curing premises: Mr. R. T. Softley (silver medal) the only exhibitor. Best model of smack: 1 (silver medal), Mr. Ristarick, of Bideford; 2 (bronze medal), Mr. H. Critten, Yarmouth; 3 (diploma), Mr. J. Hogg. For model of screw steam launch: S. Locket (medal). Best model of paddle steam-launch: H. Leman (medal). Special mention was made of the models of man-of-war, ships, &c., sent by Mr. K. Howlett. Fishing-boats: 1 (medal), to the contribution from the Sailor's Home; 2, A. S. Gowing; a special prize being given to Mr. G. V. Burwood, of Lowestoft, for his picture models and model of schooner-yacht worked by clockwork. Best model of boat suitable for the Norfolk and Suffolk waters: 1 (medal), J. Loynes; 2, Wright. For the best collection of aquatic birds and animals, &c.: 1 (silver medal), Mr. T. E. Gunn, Norwich; 2 (bronze medal), W. Lowne, Yarmouth; 3, Rev. C. J. Lucas, Fleggburgh; 4, W. W. Spelman; special prizes to Mr. Fielding Harmer for his case of spoonbills, and to Mr. T. Clarke, Earsham Mills, for his exhibit of otters. Smoked fish: The prizes (silver medals) in this class were distributed as follows—Bloaters, crabs and shrimps: H. Hammonds, St. Peter's Road. Salmon and red herring: I. M. Vince, Market Road. Kippers, sprats and haddocks: R. F. Seago, 21, Charlotte Street. Exports: pickled herring and ham-cured herring—C. Stacy Watson and Co., with special mention for their Digby chicks and anti-pilferage package. It should also be stated that for stuffed fish Mr. Gunn takes first prize, W. S. Chamberlin, Yarmouth, being also awarded a prize for single specimen (a pike); and specials to Master Gunn and Mr. R. B. Norman, the latter for a group of three perch. For apparatus for launch of lifeboat from Gorleston Beach, W. Bissenden takes first, and Mr. Salmon, jun., second prize.

For models of lifeboats the prizes go to Messrs. Beeching and W. Teasdel, both of whom are awarded a first prize, the latter exhibiting both lifeboat and carriage.

The judges in the different classes were as follows:—For models: Messrs. A. W. Blake, E. Harvey, and T. Beeching. Twine: Messrs. E. Harvey, J. Bracey and A. W. Blake. Lifeboats: Messrs. E. Harvey, W. H. Willis and A. W. Blake. Birds and Aquatic Animals: Messrs. T. B. Steward, F. Harmer and J. Tomlinson. Fish: Messrs.

R. R. B. Norman, R. H. Harmer and H. Bond (Southtown). Smoked Fish: Messrs. W. Dyson and T. Kelsall. Launching Apparatus: Messrs. C. Salmon, sen., E. Fleming and W. Woods. Pictures: The Committee.

The attendance during the week has not been so numerous as could be wished. The position of the Artillery Volunteer Drill Hall is an unfortunate one for an exhibition of this kind, inasmuch as it is difficult to find. Then there is the fact that the exhibition comes close upon that recently held at Norwich. These two circumstances, no doubt, militate against the success of the exhibition, which is a very interesting one and deserving of the best support of the public. The object for which it is inaugurated, namely, the benefit of the Gorleston Volunteer Lifeboat Association, ought also to commend it. On Wednesday and Thursday evenings there was a great improvement in the attendance, and it has been determined to keep the exhibition open a week or a fortnight longer, and during that time to reduce the prices so that everyone may have a chance of seeing it. We understand that Thursday evening last was a grand fashionable night, when the Mayor and Mayoress attended, and Mrs. Steward presented the bronze medal of the Royal Humane Society to Mr. Green, foreman at the pier-works, for his gallantry in saving the life of one of the workmen at the recent accident when the crane fell overboard.—*Yarmouth Independent*.

FISHING STORIES.—Miss Juliet Corson prepared a fish dinner for some New Yorkers the other day, but her art did not soothe savage breast enough to prevent the diners from telling stories after their meal. One gentleman said he caught in six hours 800 trout; another said that last summer, off Fire Island, he took in a blue fish that weighed 150 lb.; and a third, who did not look like a confirmed liar, remarked that whilst fish for bass near Nantucket, some time ago, eight bass got on his line at one time, and pulled so hard that he had to get a horse to help him to haul in. These three fishermen turned to a fourth who sat quietly during the story-telling, and one said, "Perhaps you don't believe us—perhaps these stories don't interest you?" "Oh, yes, they do," said the quiet little man "for I'm something of a liar myself."

We understand that Mr. Elliot Stock will issue a magazine entitled the *Bibliographer* in the autumn; it is to be uniform in size and style with the *Antiquary*, and will be devoted exclusively to book-lore.

LOB WORMS.—In consequence of the difficulty experienced by London anglers in procuring lob-worms, Mr. Gillett, fishing tackle maker, of No. 40, Fetter Lane, has arranged to keep a constant supply; also of other worms and gentles, &c.—**ADVT.**

GEORGE JAMES EATON, of Starkholmes Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—**ADVT.**

1st AWARD MELBOURNE EXHIBITION, 1881.

THE ANGLER'S INSTRUCTOR,

By WM. BAILEY.

A book on the best modes of Angling in English Rivers, Lakes and Ponds, and on the habits of the fish, besides all the latest practical hints on many things that have not up to now been made public, to be had of W. Bailey, 170, Kirke White Street, Nottingham. By post, 2s. 9d.

NOTICE.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., must be addressed to the Editor of THE FISHING GAZETTE, No. 12, Fetter Lane, London, E.C. and should reach the office not later than Tuesday morning.

Contributions are solicited, but the Editor will not undertake to return rejected MSS., unless accompanied with a stamped addressed envelope.

Correspondents are requested to write on one side of the paper only and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to no notice will be taken of such communications.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls, and of the following, amongst other Fishing Tackle Dealers in London and the Provinces:—

Messrs. Alfred and Son, Moorgate-street.
Messrs. Price and Co., 8, Seymour-street, Euston-square, N.W.
Messrs. Williams and Co., Great Queen-street.
Messrs. Gee and Co., St. Andrew's-street, St. Martin's-lane.
Messrs. Gee and Co., Gray's Inn-lane (near Holborn end).
Messrs. Little and Co., Fetter-lane, E.C.
Messrs. C. Kewell and Sons, 107, St. John-street-road, E.C.
Messrs. Kewell and Co., 1A, Conduit-street, Regent-street, W.
Mr. J. Richards, 97, Church-street, Paddington.
Mr. W. Leader, 30, Upper Marylebone-street, Portland-place, W.
Mr. — Clark, 35, Wells-street, Camberwell.
Mr. Geo. Read, 91, Goldsmith's-row, Hackney-road, E.
Mr. A. Bulmer, 62, Wandsworth-road.
Mr. F. Oliver, 188, Great College-street, Camden Town.
Mr. J. E. Gold, 284, Waterloo-road.
Mr. D. W. Willoughby, 21, Lombard-market, Battersea, S.W.
Mrs. F. Y. Brocas, 4, Mill-street, Conduit-street, Hanover-square, W.
Messrs. Gillett and Co., 40, Fetter-lane, London.
Mr. Alfred Young, "The Golden Perch," 174B, Oxford-street, W.
Mr. T. Barnett, 26, Church Street, Lisson Grove, N.W.
Mr. J. Smith, 7, Tottenham Court Road, London.
Mr. Edwin Stevens, Newsagent, 220, Kentish Town Road.

OR

Mr. B. R. Bambridge, 74 and 75, High Street, Eton, Bucks.
Mr. Cowan, 33, South Frederick-street, Edinburgh.
Mr. H. Whitty, 15, Basnett-steet, Liverpool.
Mr. C. J. Greene, 54, London-street, Norwich.
Mr. R. Ramsbottom, 81, Market-street, Manchester.
Mr. James Gregory, Vyse-street, Birmingham.
Mr. Wm. Bailey, Jun., 29, London-road, Nottingham.
Messrs. Nutting and Co., 70, Edgbaston-street, Birmingham.
Messrs. W. C. and J. Penny, Booksellers, Froome.
Mr. E. Perks, Evesham-street, Redditch.
Mr. J. Walsh, Bookseller, 5, Harpur-street, Bedford.
Messrs. H. and C. Treacher, Booksellers, Brighton.
Messrs. Gaynor and Son, 10, Royal-terrace, Richmond, Surrey.
Messrs. O'Handlen and Co., 48, Victoria and Temple-streets Bristol.
Mr. Wilkes, Gunmaker, Leeds.
Messrs. Cayless and Sons, Midland Tent Works, Loughborough.
Miss G. Wells, 1, Sussex-street, Nottingham.
Mr. Wm. Atkinson, Fishing Tackle Maker, Lancaster and Kendal.
Mr. John Wells, 4, London-road, Nottingham.
Messrs. Mitchell and Co., 50, Market-street, Manchester.
Mr. J. Croisdale, 56, Brigate, Leeds.
Mr. John Keeling, the Golden Salmon, 7, Digbeth, Birmingham.
Mr. John Heywood, Manchester.
Mr. John Cocks, Baker Street, Weybridge, Surrey.
Mr. Wm. Reid, Northgate, Darlington.
Mr. R. Pearsall, 11, Great Western Arcade, Birmingham.
Mr. G. T. Gibbons, 10, Bridge Street, Salisbury.
Mr. Thos. Heppleston, Manchester.
Mr. J. Perry, Minster Parade, Reading.
Mr. S. Dale, 7, St. John Street, Nottingham.
Mr. H. Booth, 88, Prospect Street, Hull.
A. W. Warner, 121, Broad Street, Birmingham.

Newsvendors can obtain the journal through their London Agents.

** The "FISHING GAZETTE" SPINNER (Registered) is sold by all the above firms.

ANNUAL SUBSCRIPTION.

The Annual Subscription, payable in advance, for the United Kingdom is 8s.; or post free, 10s. 6d.

To any part of Europe, the United States, and Canada, the Annual Subscription, including postage, is twelve shillings and sixpence.

ADVERTISEMENTS.

All communications respecting advertisements must be addressed to the Manager of THE FISHING GAZETTE, No. 12, Fetter Lane, London, E.C.

N.B.—All Remittances must be sent, and all Cheques and Money Orders must be made payable to ROBERT B. MARSTON.

The Fishing Gazette.

SATURDAY, AUGUST 13, 1881

THE SALMON AND HIS CAPTURE.

By W. J. BULLOCK.

WHAT angler has not often stood with longing eyes and vivid imagination opposite the famous marble slabs of Grove's, in New Bond Street, or at Towell's, in the Strand, or the various fish depots in the City, and while eyeing those noble

specimens of twenty, thirty, or forty pounders as they majestically repose in their scaly beauty, has not fancied himself once more beside the Scotch river, or the Irish Lee or Blackwater, with the welcome sound of the whirring reel ringing in his ears once again? How vividly he will picture to himself the first rush of one of these symmetrical beauties, and how all the old struggles of past captures and escapes will crowd upon his piscatorial imagination! There he stands, musing and meditating over his scaly favourites, until he is suddenly awakened from his joyful reverie by the sharp shrill voice of the salesman: "Salmon cheap to-day, sir." Piscator would like to know the locale from which every fish had come; how every one was captured, and tries to spy out the wound made by the fatal gaff; but several pair of keen eyes from within are now all making a dead set upon him, and one of the cheeky cleaners cries out, "This ain't the Royal Aquarium, old boy." Another ironically chimes in, "You can get a penn'orth of shrimps at the next shop." These rude allusions soon dispel all thoughts of the river bank, the Scotch loch, the Irish lake, the gurgling stream and bygone river joys, and the disciple of old Izaak soon finds himself again away in the busy unsympathetic street crowd of London. But such a ten minutes as here described is a cheap enjoyment to many a sportsman who, in early life, rang the changes with gun, rod, or in the saddle, that can only now sport upon a playful imagination of the past, by being reminded in the present through the agency of a gunsmith's, a fishmonger's, or some famous breeches builder in Oxford Street. It may not have been the good fortune of many anglers to catch a salmon, but the hope "that springs eternal in the human breast" of all is, that ere they close the fishing-book for ever such a piscatorial conquest may be an accomplished fact. We will, therefore, in this article detail the various baits, with hints on their usage, for the capture of salmon. The truly legitimate style and bait of all others is the artificial fly, and many anglers there be who scorn to use any other style of salmon fishing. But, alas! no style of salmon fishing gives more blank-day disappointments than the fly; nor does any style of fishing offer more tests of patience, for while salmon are bounding in and out of a river by scores and hundreds; while you cover some 500 rising fish in a day with your fly, yet not one, possibly, will rise at you, and you return to your hotel a disappointed man. Sympathy of numbers, however, as you travel home, mostly comes to your aid; for at the railway-station you meet some six or eight other anglers who can boast of no better luck. No, your trouting experiences have greatly misled you. When trout are rising freely, it is at some favourite fly then thick on the water. Not so with the salmon. When these fine fellows are seen springing out and dropping in two feet higher up stream they are answering some law of their nature that the fisherman can only guess at. They are certainly not feeding at any fly, nor will they look at or touch yours. The fewer fish you see springing out, the greater the chance you will feel the well-known pug of a fish, who has taken your fly without breaking the water on the surface. To any one who can throw the fly well for trout, casting for salmon will soon be acquired, the main points being to keep the line always clear of the winch handle, to be ready for a run, and when the fly is on the water to have both wrists free, and by a series of risings and sinkings of the top of your rod, to give your fly a free motion in the water. This can be done solely by a united wrist action, and makes the bait far more enticing to the fish. Always use, except in heavy water, flies rather under the average size than over, and get your flies in the locality in which you are fishing. The Irish flies have little resemblance to those used in English and Scotch rivers as regards colour, and the popular "Jock Scott," of Caledonia, is seldom seen on the cast of an Hibernian fisherman. Any one visiting the South of Ireland should consult Mr. Haines's fishing depot, Cork, where he can obtain every river information—the proper flies, etc. Mr. Haines's brother, the jeweller, is one of the best artists with the rod, and he and Mr. Dale, the hon. secretary of the Cork Anglers' Club, were the acknowledged heads of their profession. The allusion to these gentlemen reminds me that those who wish to kill a salmon must, when the fly fails, try the most certain bait of all others, viz., the worm. Worm fishing, truly, is not the fashionable and acknowledged style of procedure; but, if the truth is to be told, there are about ten salmon killed in Ireland with the worm, colley or shrimp for one killed with the fly. To any one accustomed to throw the dead bait, as in pike-fishing, long distances, worm-fishing for salmon will soon be learned, and if this plan fails to land a fish then the chances with fly are indeed remote. The method used in Ireland is as follows:—Use about a 12-foot stiff-ringed rod with reel and line as for fly. Strong salmon gut trace, with a number one or two hook. On this hook run six or eight worms of about two to three inches long, passing the hook in near the head, then up on the gut, leaving a portion hanging loose on each, and with the last worm cover the hook; then run the other worms down the gut to the shank of the hook, and

the whole will form a good-sized knot of worms. About two or three feet up the trace fasten a hank of hair line or gut on your trace as you would a drop-fly, and on the end of this fasten six to ten large duck shots, the weight to vary according to the state of the water. Thus, when these weights are on the bottom, your bait will rise and fall occasionally, and not drag the bottom as if your weights were on the trace itself. The casting is made by drawing the line to a less length than the rod, and, having all the line you want off the reel in circles on the ground at your feet, you give a jerking cast from the wrists, standing sideways and clear of the line on the ground, when the weight of your leads will carry your line through the stiff rings, and it will fall into the water 20 or 30 yards away. You now let it fish across the centre of the river bottom until you find your bait has travelled to your own side in a straight line below you. While your bait is thus travelling, the angler, holding the rod with his left hand, with the butt against his body, is frequently taking feelers through the line with his right hand, not only for the fish's bite, but also to facilitate the bait's progress with the stream. There can be no mistaking a salmon's bite for any bottom obstruction, and the line must be always kept nearly taut, to be ready for the strike. All you want in tackle is a good supply of marsh worms in a bag with some moss, a small box of split duck shot, so as to vary the weights, and some loose hooks to tie on when necessary, and a boy with the gaff. Of course, a good knowledge of the various holes and swims that are most frequented by fish is highly necessary, but this information, with tact, is very easily acquired. It is much easier to practise the cast, and make a long throw from a high bank than on a lower level. It is always most advisable to get your bait out to the opposite side of the river, and then let it fish downwards and across to the side below from which you are fishing. A steady nerve is indispensable, and a constant glance at the winch to see the line is clear; and when the first run is ended rewind all the loose line, so as to be ready for the next rush, after which he can be usually fought and played with a good stretch of line until he is brought within gaffing distance. The young salmon angler will find his chances for sport favoured most in August, as then the peal, as they are called in Ireland, have all run up if there has been any fresh of water, and these four, five and six pound fish are very game, and feed more freely than older fish. They also take the fly better. It is no uncommon thing in some of the Irish rivers for an expert to kill six, eight or ten peal in a day's fishing with worm and fly. Every one who resorts to the worm should also take his fly rod and tackle, and during the day try both. When the water is low and fine the shrimp often proves the best bait. The special tackle for the shrimp can be purchased at all tackle shops, and its method of fishing much resembles worm-fishing. Another successful plan is trolling with the colley (loach), minnow, parr-tail, and troutling. In these plans sufficient weights must be used to keep the bait well down, as salmon take the bait nearly always near the bottom, and to spin these baits near the surface, as for trout, gives little chance of success. The phantom bait is the one most used in the Scotch lakes and rivers as an artificial, and proves the best yet invented. Although I have never tried it, yet there seems little doubt that a small frog, fished like the fly, would be a killing bait for salmon-trout. Chub, perch, all take it well, and why not salmon? Possibly, it has been tried by some. If not, it would be an interesting experiment. The plan of baiting with frog was ably described by "A. R. I. E. L." in an article on frog-fishing for chub in *Thames*, last August, in the *FISHING GAZETTE*. I then saw it verified by an excellent day's sport, and can fully endorse "A. R. I. E. L.'s" admirable description and practical essay thereon. Cork, for the salmon fisher, is a good town to stay at, for there he is in easy distance of various good stations on the river Lee by train, and a stranger has little difficulty in becoming a member of the Cork Anglers' Club, and one salmon license will cover all the southern Irish rivers. The Blackwater is a grand salmon stream and full of fish, and a good river for fly-fishing. The Laune, near Killarney, is also one of the best streams for peal-fishing, and in August will give excellent sport. Nearly all the rivers on the West Coast are well stocked, from the Shannon to the smaller streams. The Galway river, that extends about half a mile from the lake to the bay, at times when the water is clear and low, presents a sight from the bridge that few will believe without seeing. Salmon can be seen lying here by hundreds, waiting to get up into the lake above, through the ladders at night, and so numerous are they that it is quite common for anglers to hook fish foul by allowing the fly to sink to the bottom. The lessee of this water will allow fishing for a fixed charge per day, but he takes one-third of the fish caught for himself, in addition to his fee of about 10s. per day. The salmon here do not often run to a large size, but average about 8 lb. each. To the tyro in salmon-fishing, I would say go to Ireland, as there your chances of sport will excel the best preserved streams in England or Scotland. If

you have any friends connected with any of the American lines of steamers, and can get a complimentary pass to Queenstown, and back again by returning steamer from New York, this is far the pleasantest way of reaching Ireland. There are some splendid fast steamers also running between Liverpool and Cork, and here you will have no difficulty in getting an hotel to suit your means, or comfortable apartments. Not that I approve or recommend the practice, but Sunday is usually a great day for Irish fishing, although not allowed by club rules. It is obtained chiefly through private permission, which it is not very difficult to get.

NATURAL BAITS.

A LITTLE explanation in a prefatory way is necessary to the proper understanding of the title of this article. By "natural baits," I mean such baits as are found in, or so near the water, as to be, in the usual course of nature, at times food for fishes. An example of a natural bait, for instance, is apparent in the caddis, or the larva of the May fly, and a type of an artificial bait may be found in the wasp grub, or bread paste. The subject, therefore, of this article comprises, those articles of food with which the fish naturally come in contact. Many of these are insufficiently valued, and some are scarcely known to the average angler, and many a good bag is consequently missed because of the want of a little knowledge, which—the late Mr. Pope of Twickenham, poet and philosopher, notwithstanding—I hold to be a very good and not a dangerous thing, at least in matters piscatorial.

Suppose—for the sake of introducing the matter in a picturesque way—I arrive at the waterside in a Robinson Crusoe-like state of self-dependence, having left at home my excellently and carefully made groundbait, worm, gentle bag, bread paste—in fact, all my bait with which I had promised myself deeds of "dering do" amongst the bottom fishes and others of the river. What is to be done? The answer is simple enough. I must avail myself of the natural resources of the water.

The *Caddis* is known to everybody in its stick-like case, and I need not remind my readers that it is in the *Thames* chiefly the larva of the alder fly. It can be found in multitudes in any shallow creek at this period of the year, and as a bait for all the bottom and mid-water feeders—barring pike, of course—ranks high with those who really know how often it is possible to fill the creel with roach by its aid when all other means fail. There are several kinds of caddis. That which I prefer, and which is whitest and fattest, is to be found in deep water, attached to boulders or sunk wood. Its shell is composed of small stones and shells glued together by the insect itself. In trout-streams I have known the trout to swallow it, case and all. When baiting with caddis, enter the hook at the thorax, and put on a couple or more according to the size of the said hook.

The *Freshwater Shrimp* (*pulex gammarus*) has never been estimated by any writer (except myself) at its real value as a bait for trout, perch, chub, roach and dace. For the two first-named fish, it is uncommonly deadly, and that often when the worm and minnow fail. I need scarcely dilate on the natural history of this lively little "cuss," except to say that it isn't a shrimp at all, but a gigantic water flea, which, like the crayfish, acts as a sort of scavenger not disdaining an occasional tiny fish, or a lump of perch spawn. It is to be found under any large stone or amongst the gravel, and, at this time of the year, a bunch of any weed drawn from the stream will furnish hundreds. Four or five on a thin wired hook is the regulation dose for perch and trout; they should be impaled crosswise, and left to kick—cruel, but necessary! I never use a float, but throw this bait as if it were a worm.

The *Horse Leech* is very common in ditches and streams all over England in summer, and is a very valuable bait for chub and perch. Barbel and roach are also excessively fond of this worm, but to perch and chub it is perfectly irresistible. Greville F. swears by it; and it was an article of his in the late lamented *Country* newspaper, some years ago, which first introduced me to this bait, since which time I have taken fish with it when no other bait would tempt. The medical leech is, of course, equally useful, but not so common as the horse leech, and consequently harder to find.

The *Cad bait*, or creeper, beloved of the trout-fisher is also a splendid lure for most bottom feeders. It is, as the readers of the *FISHING GAZETTE* must all be aware, the larva of the May fly, and is about as ugly as its imago is fairy-like and beautiful. But dear as beauty of any kind is to the true angler, he will not disdain this lizard-like crawling, creeping, dirty-coloured creature, but use him whenever found. There are several kinds of cad baits—some much smaller and less repulsive than the larva of the May fly. These are to be found in any good handful of *Thames* gravel from a rapid and moderately deep stream. The tails of weirs are

always productive above other places. Roach, dace and chub are very fond of them, especially of the smaller species, which should be impaled as explained when speaking of the gammarus.

Of course there are other insects which either drop from overhanging foliage, or fall from the banks, which are excellent for bait. These chiefly belong to the domain of the air, and to talk about them would open up the whole science of entomology. A little careful searching amongst the neighbouring undergrowth of any locality near a stream is often productive of happy results in the possession of insects of practical value. The frog, grasshopper, slug, snail, &c., are discoverable, and I need do no more than mention them to call up in the reader's mind a host of others. The above baits are, however, the chief of those with which the unprovided angler will supply his bait bag, and neither of them will fail if used with judgment. Their actual value I have tested against the ordinary worm and prepared bait in more than one instance, and the result has been very gratifying.

The *Common Mussel* of our ponds and streams is another very useful bait for chub and bream, and I have taken roach and barbel with it. The foot or that part which protrudes when it feeds should alone be used. The freshwater periwinkle-like snail, if boiled and extracted, makes a capital bait for roach also.

The only vegetable bait which grows in the water, as far as I have yet been able to see, is the *Silkworm* (*conferva rivulidis*). This can be found on any old stump or stones, and especially on the shallow parts of the weirs over which the water runs very swiftly. A piece of this simply wrapped round the hook is a capital bait for roach and chub during the early season and very hot weather, especially in rapid streams. I have found roach quite gorged with it.

In the above I have simply strung together a few memoranda as to the natural baits of our streams. I mean to give each one a severe trial and I hope other bottom fishers reading this will do likewise. I am convinced there is something new to be got out of the subject.

J. HARRINGTON KEENE.

NOTES BY THE EDITOR.

THE roach are now in splendid condition in the Colne, heads small, hog-backed, and as bright as silver. We got fifteen nice fish last Saturday evening, fishing in a deepish quiet back water and in a hole near a weir. We got them by using the new "Natural Bait," which has been brought out by Mr. King, and for particulars of which see our advertisement columns. The bait is sent out by Mr. King in the form of a scented powder. It should be made up with a little bread paste and worked well to an even consistency; it makes a beautiful white paste, and the avidity with which the roach took it amply proved to us that it is a really good thing. A threepenny packet will make enough paste to kill some dozens of roach, it adheres well to the hook, and is not dissolved by the water nearly so readily as plain paste. We can with confidence recommend it.

Mr. King's "Ceroleum" is also a very useful article. A single cake of it will last an angler over a twelvemonth, and will be found useful for waterproofing an old line (the best plan is to put a bit of the wax on a flannel, and, having stretched the line, rub it on well, and then wipe off the superfluous wax). We also find it useful for waxing the ferrule fittings to prevent them sticking, for waterproofing boats for a day's fishing in wet grass, and for various other purposes.

Doubtless every reader of this paper has noticed Messrs. Yarde's advertisement of *Salveo Pedes* in our paper for the last thirty months. If they are ever troubled with tenderness of the feet, or pains after walking in heavy boots, we can most strongly recommend them to try this very valuable preparation which has now been before the public many years. A little of it poured into the palm of the hand and rubbed into a limb aching, or stiff from hard work or rheumatism, will be found wonderfully soothing, as we know from personal experience. *Salveo Pedes* has been used for years by the Government Postal Department for postmen who suffer from tender feet. Mr. G. Yarde is one of the most enthusiastic anglers we have the pleasure of knowing.

Messrs. S. Allcock and Co., of Redditch, have kindly promised to give a rod, line, and winch, of the value of £2, at the FISHING GAZETTE Fly and Bait Casting Tournament in aid of the funds of the Anglers' Benevolent Society.

We find so many prominent anglers have left town for various happy fishing grounds that we find it necessary to postpone the

Tournament for a week or two. Mr. J. P. Wheeldon, of *Bell's Life*, has kindly promised to act as one of the judges, and Mr. Alfred Jardine has kindly promised to officiate as the other. We are in correspondence with one or two river-side hotels with a view to selecting a scene for operations.

The Black Palmer fly which we recommended last week is certainly a 'taking' fly on the Colne now for trout. After roach-fishing we noticed the trout coming on at the natural fly, and speedily had a black palmer on the same drawn gut line after removing the float and shot. We had only twenty minutes left before it would be time to pack up to catch the 9:5 train from Rickmansworth, and a drive of three miles first. The grand thing in fly, and, indeed, in any fishing, is to keep out of sight. So, noticing a good trout feeding under a tree on the opposite side we crawled flat over the dry grass, and got the palmer nicely over him, he took it instantly, and after a sharp struggle of a minute or two was in the net, a nice fish of a little over a pound; after losing a good fish which was only slightly hooked, and getting a couple of rises, we had very reluctantly to make tracks for our trap. Another half-hour would certainly have added a brace or two of good trout to our "bag." The Colne trout are in splendid condition, and fried with a rasher of bacon (by far the best way) are delicious eating.

We often hear complaints that in this hot weather it is impossible to keep fish sweet for more than a day. Why do not anglers buy glaciale powder, and carry it with them in a small pepper-box to sprinkle over the fish in the creel or bag? It will infallibly keep fish fresh for three or four days in the hottest weather and as bright as when caught.

The spring plummet invented by Mr. Hines, of Norwich, ought to be very popular with anglers. We have had one in use some time now, and find it far preferable to any of the old plummet. It is gradually getting known, but anglers are slow in adopting a new idea. At anyrate they might ask to look at it. We believe most of the London tackle shops keep it in stock, and those who do not, ought to. We know Mrs. Williams, of Great Queen Street, has a stock both in the original shape, and in the improved shape which we suggested, and which Mr. Hines at once adopted.

FISHING IN THE TIDEWAY.

ANGLING is now in full fling at Richmond and Twickenham amongst the roach and dace, principally the latter, with the addition of a few barbel. At the weekly meeting of the Richmond Piscatorial Society, Mr. J. H. Gaunt, who had been out one day and taken 18 lb. weight of fish stated that the bulk of the dace he had caught were eight inches in length. There is a capital arrangement for punt anglers at Twickenham, which is certainly a move in the right direction. Mr. A. Perrin who succeeded the late "Dorey Coxen" at the Two Sawyers, near the church, has established a system which will be hailed with much satisfaction by the rodsters. If a punt is required, and notice is received by him, he carries out all the arrangements. He supplies a good clean punt and a fisherman of good experience, such as Pert Hamerton and others. The punt is fitted up with a portable table, and in the middle of the day a hot dinner of meat, vegetables, &c., is sent up to order at the reasonable rate of eighteenpence each. When the day's fishing is over the anglers have nothing to settle with the fisherman—they go to the Two Sawyers, and Mr. Perrin gives them a bill, which includes the boat and fisherman, the dinner, and any stimulants that have been supplied, a receipt is given, and the courteous landlord hopes he shall see the anglers again. There is a large amount of satisfaction in this, as, when the fisherman is paid, whatever is given to him, he scarcely says, "Thank you;" or, as a friend of mine remarked the other day, after he had been out fishing he gave the fisherman half-a-sovereign, and all he got was a look from the fisherman, as much as to say, "Is that all?" I will now refer to the fishing, and I am sure I shall be excused from the deviation, especially as I have been requested to make the matter known by one who has experienced it, and he highly valued the arrangement. First of all, as regards Richmond, where the roach and dace fishing has been in excess of angling for dace, and taking the estimate of 13 punts, the gross weight of fish captured has been 262 lb, the lowest take being 15 lb., and the largest 30 lb. In reference to Twickenham, 13 punts have been successful in recording an aggregate of 317 lb., principally dace. The heaviest weight made in one punt was 45 lb. of dace, and the lowest 16 lb. of roach and dace. I believe the greatest weight was made in one of Mr. Perrin's punts. Pert Hamerton, who is a most expert fisherman,

in six successive days made the following returns: 18 lb., 13 lb., 18 lb., and two barbel; 18 lb., and one barbel; 16 lb.; and 35 lb. If I were to give an estimate of the gross weight and numbers taken in one week, it is just possible the figures would be doubted. From Richmond alone I have received reports of 293 lb. of roach and dace, ten barbel, about 98 dozen of roach and dace and thirty barbel. At Twickenham 317 lb. of roach and dace, and seven barbel, and 103 dozen of roach and dace, and six barbel. Now the fishing at these two places—Richmond and Twickenham—begins at about the Duke of Buccleuch's up to Stony Deep, about two miles of water, and the gross weights and numbers, from takes only, which I have received, are as follows: 610 lb. of roach and dace, 201 dozen of roach and dace, and 53 barbel. I do not apprehend the takes are exaggerated, as they have been supplied by the head river-keeper in the employ of the Thames Angling Preservation Society, nor do they include by any means all the takes of the week. I notice from the FISHING GAZETTE of last week Mr. Perrin alone has had 30 punts out in the week, with an average of 20 lb. each day, which would make a total of 620 lb. weight of fish by the boats from the Two Sawyers alone, besides what have been taken by other Twickenham fishermen, and these are a considerable number. Mr. Thomas Spreckley, the treasurer of the Thames Angling Preservation Society, was out in one of Mr. Perrin's boats for four hours, and took eight dozen of good fish, and that gentleman assured me they were all magnificent specimens of the finny tribe. Now where is there a river that can give anglers more sport in roach and dace fishing than the portion of the Thames at Richmond and Twickenham, known as Tideway fishing. To a stranger this will have to be explained, as I expect it will be read all over the United Kingdom, the Continent, and the Colonies, wherever the FISHING GAZETTE finds its way. In the tidal waters, as the tide recedes or advances, there is a constant finding out of the depths, as the fishing is all on the bottom, and when the tide is at flood angling has to be discontinued for one hour. If this stoppage occurs in the middle of the day it makes a nice interval for refreshments, but this depends on the state of high water, which varies every day. When it is high water at London Bridge about two hours is to be added to the time there for Twickenham, and this information is generally noted in the daily papers. I have no more to add to "Fishing in the Tideway," than to express a hope it will long continue. I believe this portion of the river is supplied with a good sample of professional fishermen—and the angling is not so expensive as above the locks. To those who like to enjoy quiet and good scenery, the upper portion above Teddington is the more attractive; but for actual sport at the present time, and plenty of society, Richmond and Twickenham are the best.

B.

THE PROPOSED "FISHING GAZETTE" TROUT-FLY AND SPINNING-BAIT TOURNAMENT.

YOU, Mr. Editor, suggest that a smooth lawn be used; very good, but what if there be any wind stirring, and the artful caster wait for a gust? I am led to make this remark because, when I was hon. sec. to the Piscatorial Society, in 1871, Mr. Francis Francis proposed a casting tournament which came off, on the day of our summer dinner, on the Green at Halliford, near Stone's Hotel, Mr. Greville Fennell being umpire.

The extract from our book is as follows: "Mr. Francis Francis gives two of his books on angling, value 15s. each, one for the longest cast of a single trout-fly, the other for the longest cast of a spinning-bait, both to be cast from a punt and measured from rod top; to come off at the summer dinner. Six casts allowed to each competitor. As Halliford was an unsuitable place to cast from a punt, we varied the instructions by casting on the Green. Mr. Skinner threw the longest fly, and Mr. Edwin Pratt, the spinning-bait; indeed, he threw it such an unexpected distance as to knock off Mr. Foster's hat, much to his friend, H. L. Rolfe's, surprise and alarm.

As regards the fly casting, those who cast in a calm, were distanced by those who waited for a gentle breeze, I therefore argue, it is not a fair test, unless it is a calm day, or general windy weather; in that case, it would be better to cast in the evening, when the wind usually abates. Our competitors used the same rods, fly, and spinning-bait.

* * * * *

An old friend of mine, an excellent judge of salmon, had a large picture painted by Rolfe in 1870, it contains salmon-trout and pike as large as in nature; my friend considers it a better picture than the one presented to Mr. Mundella, M.P. Having retired from business, and residing in the country, he has no further use for it, and it is now in my possession. I consider it one of my friend Rolfe's best studies of salmon and trout.

A piscatorial friend has sent me a copy of a weekly sporting paper with the following lines concerning the late Norwich Exhibitions marked for me to read:—"The Piscatorial Society bagged the first prize, as also Mr. Jardine for the finest individual collection; but, is it true that the £20 should have been divided?"

* * * * *

The following from the *Norwich Argus*, of April 23rd, will set that matter right. The editor, after alluding to Mr. Jardine's exhibit, and great skill as an angler, calls attention to his two fine 36 lb. and 37 lb. pike in one case, then adds: "of the other eight pike, we must select Mr. G. Lodge's (query, Ledger) 28½ lb. and Mr. Knechtli's three in one case, weighing 62 lb., caught within one hour. Among Thames fish, Mr. King's Thames trout of 12 lb.; Mr. Nuthall's two cases of carp of 15 lb. and 10 lb. Mr. Gaut's two cases of a 12 lb. barbel, and 6 lb. chub. The award to the Piscatorial Society was £15, a silver medal and two diplomas. Mr. Jardine, £15 for his exhibit, £5 for his 26 lb. Irish trout.

THOMAS RANSOM SACHS.

HINTS TO VISITORS TO THE CONTINENT.

THE fundamental blunder of English tourists is that (like the Americans) they always try to do too much. Belgium or Holland, followed by the Rhine and Switzerland, the tour finishing by a few days in Paris (when Paris is intolerable, for no one with a grain of *savoir vivre* would willingly go there between May and October), are pressed into four weeks. There is a hot, dusty journey almost daily, meals are scrambled over, not a moment of leisure or rest is enjoyed, and after a vast outlay, the travellers return as jaded and exhausted as though they had been engaged in an arduous campaign. How much better it would be to divide this regulation tour into sections. The Rhine one year, Heidelberg and the Black Forest to the Falls of the Rhine the next, a portion of Switzerland the next. Under ordinary conditions nothing is really seen of the beauties of each district. The Rhine in a day is preposterous, for its best scenery mostly lies in the country behind the banks. To "do" Heidelberg, Baden, and Strasburg each in an afternoon is equally absurd and unenjoyable. People should do things in a leisurely and rational fashion. Having chosen the scene of your tour, you should get to the starting-point with the least possible delay, and then devote just as many days to each place as you can enjoy. The purchase of either Murray or Baedeker (or both) should be the first step—most other guide-books are worthless; then a rough plan of the intended tour should be made, always allowing several days for contingencies; you may wish to repeat an excursion, the weather may be bad, or you may hear on the spot of expeditions not named in the guide books. Don't on any account be induced to hamper yourself with "circular tickets," which confine you to a particular route all through. In the choice of hotels, it is necessary at the start to depend on the guide-books; their recommendations are *bona fide*, but hotels often change hands in these days, and sometimes a house with a name degenerates with startling rapidity. In sending to order rooms, it is essential abroad always to specify not only the number of rooms, but the number of beds; and if the place is on a river, lake, or mountain, to state whether or not a room with the view is desired, as they are generally first in demand, although not expensive. Each member of a party should be limited to one stout portmanteau. Much luggage is not only very troublesome, but a serious source of expense; the charge for its conveyance is enormous, and every porter who touches it is entitled to demand a fee for each article; indeed, the "tip" system is now carried to intolerable lengths, except at a very few places. The head waiter, the man under whose special charge you have been, the porter, and at least one chamber-maid all stand about waiting for vails, and the men who clean boots expect and ask for them, as, although "service" is always an item in the bill, they are usually dependent on the liberality of visitors. Even the attendants on the hotel omnibus expect tips. Baths are always to be met with in decent hotels, and if there is a river there are certain to be baths in it, so it is unnecessary to carry one about; but a portable cane armchair is very desirable, for at most inns the garden seats are miracles of discomfort, and on the Rhine and other steamboats there is only the choice between a wooden bench and a campstool. A table d'hôte is a long hot business, even if the dinner is good; it is far better to order dinner at your own hour, but not *à la carte*, or you will be fearfully fleeced. Tell the waiter you want a dinner at from three and sixpence to four shillings (you must pay according to the hotel charges), and you should get a good and more than sufficient repast. At "tourist hotels" never order high-priced wines. When on the Rhine take Brauneberger, or Niersteiner (white), or Walporzheima (red), with a jar of the natural seltzer. The excellent and cheap Baden wines (Markgräfer and

Affenthal) between Heidelberg and Bale, and Bordeaux, or the Swiss Champagne (very drinkable with seltzer) in Switzerland, may be ordered anywhere with confidence; but except at hotels which have a local reputation for their cellars (such as the Disch at Cologne, the Golden Star at Bonn, and the Anchor at Coblenz) it is mere folly to order Marcobrunner or Liebfrauenmilch, Johannesberg or Scharlachberger. Sea-fish is always to be met with at hotels, however far inland, but on no account should turbot or sole be ordered on the Rhine or in Switzerland, as fresh-water fish of the best quality can usually be got with little trouble. If you wish for trout, impart certain orders as to its cooking, or it will be boiled to rags. In ordering breakfast or supper for two, always order "portion" for one, or if for three or four, for two, or you will find the people quick to take advantage of your ignorance, and enough will be sent up for three times your number, for the whole of which you will have to pay. "Strong" coffee or tea should always be ordered, and there will be no cream with the latter unless specially asked for, except in the Black Forest and in Swiss country inns. Take a large piece of very dark green cloth (the stuff used for blinds) to fix up in your window, or you will wake with the dawn, as the ordinary outside blinds do not keep out the light, and with the sun comes an intolerable heat. Of course, fanatics who rise at five do not require this; but I speak to people who are rational enough to wish to be comfortable, even although they are touring. Never start without a few books. Lever's "Dodd Family" is the best travelling novel I know. It is well, too, to order a weekly newspaper to be sent to meet one, as English papers are not always to be seen, and people languish for news. The *Pall Mall Budget* is the best for this purpose.

It is no use to give advice where to go—people must suit their tastes; but Holland is not pleasant during the four summer months nor indeed are any large towns, and it always seems to me that the best plan is to put up either at a small country place, or at a town where there is plenty of cool shade and fine scenery all round. Endless picture galleries and churches are odious in summer.

I prefer Coblenz, Heidelberg, or Freiberg, to Brussels, Cologne, Frankfurt, or Mayence. The Black Forest, Ardennes, the Swiss country inns are not so pleasant after July, as they are invariably overcrowded; this is also the case with the Swiss mountain hotels. Of the Rhine country I may have something further to say. Schlangenbad and Schwalbach are two charming places, within a walk of each other—the one buried in hills and woods, the other open and bracing, but with plenty of shade behind. Heidelberg, so eulogised by Lord Beaconsfield in "Vivian Grey," is a quiet, beautiful town, and all round are excursions without end. A month would quickly pass here, and in hot weather there is always the Castle terrace, and the adjacent woods, and the walk to Wolfsbrunnen, where you can have a fish dinner of various kinds of trout, cooked in different ways, which you will have the pleasure of seeing caught and then killed by a blue-eyed nymph who looks so tender and sentimental that one could imagine her fainting at the sight of a black-beetle. Freiburg is excellent head-quarters for the lower part of the Black Forest, and the Pfau Hotel is one of the best in the country. Baden depresses all who remember the old days, but the delightful scenery all round is unchanged. Comfortable lodgings can be obtained on very moderate terms in the pretty villas on the road to Lichtenthal. The Schweizerhof, at the falls of the Rhine, is a place where a hot week may be pleasantly passed. You can sit on the shady terrace with the cataract in full view, but the Rhine is expected to be very low this autumn. Dresden is out of the question at this season, and the Saxon Switzerland is overrun with German tourists after June. Further south there is the voyage down the Danube (which ought not to be hurried over, as the scenery on and behind the bank is magnificent), and then delicious Ischl, with its pine wood, and its mountains, and its clear rapid river—three months would not exhaust the excursions of the district. The Italian lakes are odious after June. As to Switzerland, for ordinary people who do not go in for climbing, and who dislike crowd and bustle, June and July are the best month. It is absurd to undertake the long and troublesome journey to the Engadine, unless at least a clear month is to be passed there; but when this time can be spared, there is no place in Switzerland where the scenery is more beautiful, or the air more exhilarating. The ascent of the Rigi is disappointing; and Lucerne and Geneva are terribly hot and dusty. Instead of spending a month in travelling, let the only journeys be out and home, and stick to one district, and then the tour will really be enjoyed. The Flushing route is the best to Germany—going through to Bonn or Coblenz—but if the mail is preferred, the best place to break the journey is Spa. Brussels is hot and glaring in summer, and its hotels are dear and bad: but a week or two will quickly pass at Spa, for its woods are charming and all the country round is most picturesque. There is a new route to Bale in twenty hours,

but incomparably the best way to Switzerland is from Paris to Neuchatel by Pontarlier. It is a common delusion in England that "nobody" travels first-class abroad; but in the second, you will find the herd of tourists of all countries—and if first cannot be afforded, people had much better travel third at once. The fact is that first-class is just as commonly used as with us.—*Truth.*

OH, THOSE STEAM LAUNCHES!

ANOTHER clause of an indictment against these dangerous vessels navigating a narrow and tortuous river like the Thames was framed a week or so since in the *Field* from the pen of a writer who has been always careful of his facts. He states that the wash left by these vessels in scouring the shallows close to the edge of the river, cast up a great number of the fry of fish, always to be found in an inch or so of water, which fry are left by the receding wave to perish, and become the food of the rooks and other fish-feasting birds. Fancy such a slaughter occurring all the way up the river, and on many portions on both sides of the Thames! Need we look for any other cause of the depletion of the fish resources of the river? If so, we must at least place this wholesale mode of fish-butcherery amongst the principal ones. Since the letter in question appeared in our contemporary, the fact has received confirmation from eye-witnesses at Streatley, Reading, Pangbourne, and other districts, whose attention being thus called to the circumstance have watched the passage of these steamers, and noted the destruction of the fry that followed in their wake.

Nor is the charge that these vessels disturb and set loose—thus rendering abortive—the proper and profitable fecundation of the spawn of fish, fallacious. Such a consequence needs no argument. It would be a wonder if it were otherwise. It is a fundamental law of fish nature, that the ova should rest for a certain period in the spot in which it is deposited, and all experience proves that if removed from a situation which instinct has selected for such purpose generation no longer has a chance, and incubation is frustrated. Now, as the beds of aquatic vegetation are the principal localities selected by the fish for the apparently safe protection of the ova, how, we would ask, is it possible that these beds can remain as nature intended, if one vessel after another ploughs through their erst matted fastnesses, and sends, partly crushed, adrift their valuable contents? The spawn of salmon and trout being comparatively buried beneath the surface is, to a certain extent, out of the reach of such mischief. But the popularity of the Thames does not rest upon its salmon or its trout. It is a question, if it did, and a single instance of the gravel coverlid of the bed of the former fish being shown to be washed off by a steam launch, the Legislature would not be up in arms, Professor Huxley actively proving his late appointment was not a sinecure, and the ghost of dear Frank Buckland haunting the cabins of these mischievous and dangerous overgrown toys.

WEEDY SWIMS.

AN angler, within the reach of whose voice G. F. happened to be on the banks of the Colne, was anathematising in no measured terms, and in far from dulcet tones or refined language, the forest of weeds which denied him an opportunity of finding a swim, when his flow of invectives was arrested by G. F. observing "Do you see no good in that luxuriance of aquatic vegetation?" The reply cannot be put in print. The printer can, however, faintly represent it by dashes and asterisks, with a very liberal abundance of D's. In the evening G. F. was challenged as to the good of these sub-aqueous plants to the angler. His reply was short and definite. Firstly, they afford shelter to the fish to spawn in; secondly, without their shade the water in tropical weather would be intolerable to the fish; thirdly, the cool shade of the flags and flat-leaved plants was as necessary to pike and carp as any artificial protection to man or woman against the glare of the sun's rays; fourthly, they act in restraining the current, and thereby keep up, more particularly in summer, a greater body of water; fifthly, their chemical effect upon the water is to keep and preserve it pure; and lastly, and not the least important influence they bear, is to generate and cherish insect life, upon which fish exist and thrive, and without which they would languish and die. G. F. was suddenly stopped here by the man he was more especially addressing, or, more truthfully, speaking at. "Shut up, master," he cried. "I've heard enough. I will never damn the weeds any more, as they dam the water." The wretch was the punning veteran, C. H.

RIVER REPORTS.

MID-THAMES.

"Think naught a trifle, though it small appear ;
Small sands the mountains, moments make the year,"—YOUNG.

The above pretty idea may have little to do with angling which thousands of folks look upon as idle trifling, but if they had had an opportunity of visiting old Father Thames during the past week and seen the hundreds of eager banksmen, the dozens of punts, containing laughing children gleefully catching gudgeon, besides the dozens of boats or punts wily at work in the boughs after chub or perch, and they would have been convinced that the trifle had become the mountain, and fishing, as it really is, an institution! The river is now in the very pink of condition for all kinds of summer work, and most Thames fish seem fairly on the feed, their appetites having been freshened up by the recent rain, which has acted evidently like hop-bitters on their fishy palates. Roach and jack are the two exceptions, for these scaly gentlemen are very shy. With regard to jack, it does not matter, for I think it a pity to angle for them until September or October; but why should roach reject all advances? unless it is that they are having a jolly blow-out on the luscious weeds, and from which very few respectable roach will wag a fin. Perch are well on, ditto chub, ditto barbel, with lavish diet of worms. From Pangbourne and Maple Durham I hear of grand takes of chub with the fly, and pretty baskets of perch with lob or red worm. At Henley, Mr. Pugh on one occasion from Marsh Pool, had 30 lb. of barbel, and a trout of 3 lb., and on another day, thirteen barbel, scaling 69 lb. Mr. Goslet with Rush, 57 lb. of chub and barbel from the same pool. At Magpie Island, the perch and gudgeon have been taken in great quantities and of a fine size. At Hurley, the Masters Lawrence out with Curtis did not get much, with the exception of one of the young gentlemen who got a ducking, but was not daunted at that, for he ran home three miles to put on dry toggery, and then returned to wet a line instead of himself. These same gentlemen on Tuesday, out with Hatch, caught 10 dozen gudgeon. Mr. Bennett, in the Hurley waters, has had some pretty perch with an artificial minnow, best fish scaling 3½ lb., having gone to town to be Madame Rachel! d. Mr. Brooksbank, in the Hurley waters, has taken during the past week some 20 lb. of perch, best 2 lb., and two tench weighing respectively 2½ lb. and 1½ lb.; these fish were exhibited at Mr. Rodwell's, the Bell Inn, Hurley, and excited the admiration of natives and visitors. Thursday evening.—Weather inclined to be stormy; the river cannot, however, be injured by this, in its excellent trim.—"MARLOW BUZZ."

Thames (Goring).

Water in good order for all round fish; prospects better; jack, roach and perch biting very well. My best day, fourteen pound of good perch, four jack.—JOHN RUSH.

Thames (Halliford).

The river is now in good order for all-round fishing. Different gentlemen fishing with me during the last week. Their takes have been as follows, viz.:—First day, Mr. Palmer, jun., caught over thirty-five pound weight (ledgering), viz.: nine barbel, three chub (one going four-and-quarter pound), three perch, four roach and seven eels; second day, Mr. Goodale, one jack, three perch, one eel, and some roach; third day, Mr. Spencer, six dozen roach and dace; fourth day, Mr. Jeff and a friend, four-and-half dozen roach and dace; 5th day, Mr. George Palmer, five nice chub (one going over four-and-three quarter pound, and two weighing about six pound), one bream (of two pound), and three eels.—GEORGE ROSEVELL, Fisherman.

Thames (Shepperton and Weybridge).

Water still low, but in very good condition for fishing. The fish are on the feed better, and likely to be for the next few days. Mr. H. Purdue, three days, 7 doz. roach and dace, 3 barbel and 4 perch, largest 1½ lb.; Mr. F. Purdue, four days, 5 doz. roach, dace and barbel; Mr. W. Rogerson, four days—first day, 20 barbel and bream, weighing over 30 lb.; second day, with Mr. King, fishing with phantom minnow, took 2 trout of 4 lb. each, and rose a large one fishing with a fly, but missed it; the other two days, 5 barbel and 1½ doz. large roach fishing for barbel, 3 chub, 1 perch of 1 lb., and a jack of 4 lb.—W. ROGERSON.

Thames (Sunbury).
